Both boars and gilts of best breeding. Now booking orders for spring pigs. Can furnish pairs or trios.
**WM. NEUENSCHWANDER, Gaston, Ore.**

**When you write to advertisers be sure to state that you saw their advertisement in this paper.**

## HOLSTEIN CATTLE

### PRODUCING HOLSTEINS

In purchasing foundation stock secure those from proven ancestry. They are the kind that bring large returns from the sale of their offspring as well as from the sale of milk and cream.

We offer for sale twenty of the kind that are seldom offered at public sale. Most of them are granddaughters of King of the Pontiacs and from dams with semi-official yearly records up to 598 lbs. for junior two years, 670 lbs. for junior three years and 813 lbs. for mature cows. These records made under practical dairying conditions. The heifers range in age from six to thirty months. Those of proper age have been bred to a 33-lb. bull. The pedigrees of many of them are without a blank for two, three and four generations. If you are in the market for unusual animals, grasp this opportunity.

Prices range from $350.00 to $600.00 each, with proper discount on sales of more than one animal. A liberal discount will be made on a sale of all to one customer. Copies of pedigrees will be sent to interested persons.

**The Greenbank Farm** 800 Leary Bldg. SEATTLE, WASH.

### Registered Holsteins

Young calves, born last July and later; also 1 30-lb. bull, ready for service, whose sire, dam and sire's dam have all been grand champions at one or more state fairs, and full brother to his sire and full sister junior champions at a state fair. Here is production and type we hear so much about. Could also spare a few cows.

**H. R. BOOMER, New Plymouth, Idaho.**

**MOOREHEAD RANCH.**
Registered Holsteins.
Herd sire, Model Annie De Kol Segis, grandson of the famous King Segis. We have no bulls of service age, all having been sold, but we have some splendid young stuff, from 6 to 8 months old, coming on. If you are looking for real foundation stock, write us for particulars and pedigrees.
**MOOREHEAD & HOBSON.**
Breeders of Purebred Holsteins.
Outlook, Wash.

### 365-Day Holsteins

24,667 lbs. milk—1026 lbs. butter—is the s. o. advanced registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.
**THE HERD WITH YEARLY RECORDS.**
**WESTERNWOLD RANCH.**
**Prineville, Ore.**

### Registered Holsteins

Glenwood herd offers for sale a few A. R. O. cows with records up to 24.32 lbs. Also a few bred heifers.

**A. H. BUCK & ED HOLM.**
Snohomish, Wash.

### LaConnor Flats Stock Farm

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams; butter, 1 year, 1080.82 lbs.; milk, 24,380.3.

**J. H. HULBERT, Mt. Vernon, Wash.**

### Record Holsteins

Young bulls, some of them ready for service, by a sire whose 5 nearest dams average 26.17 pounds butter, or another with 29.67-pound dam, and out of high-record A. R. O. dams. Priced to sell.

**ERNEST WERNER, AURORA, ORE.**

### HOLSTEIN HERD FOR SALE

As I will sell or rent my ranch this spring, my entire herd of registered and high-grade Holstein cattle is for sale. For particulars as to breeding and prices, write
**W. FRED HARPER.**
New Plymouth, Idaho.

### Bargains in Bull Calves

Sired by Segis Riverside Pontiac, that sold in Pacific international sale, 1914, for $1025, and whose dam has A. R. O. record of 31.47 lbs. butter in 7 days; 118.89 in 30 days, and big records all through his pedigree.
**ERNEST JOHNSON. Scappoose, Ore.**

### HOLSTEINS

Well bred young bulls for sale.
**THOS. CARMICHAEL. Gaston, Ore.**

**REGISTERED HOLSTEINS**
Bull calves for sale with good A. R. O. backing.
**BEEBE BROS., R. F. D. 2, Rupert, Idaho.**

## ABERDEEN ANGUS

### Yakima Herd of Aberdeen Angus

In the famous valley of the Yakima is one of America's greatest collections of the breed.

At the recent Chicago International our breed won 1st on aged herd, 2d on young herd, 1st on calf herd and 2d on get of sire. All stock exhibited, except 2, were of our own breeding. We have an exceptionally good lot of yearling bulls for sale. To introduce our stock in this section we are pricing them within reach of small breeders and range men.

**Congdon & Battles**
Otto V. Battles, Mgr.
North Yakima, Wash.

### Aberdeen Angus Cattle

**A. H. EAGLESON & SONS.**
Boise, Idaho.

## BROWN SWISS CATTLE

### Brown Swiss Stock Farm

Breeders of Brown Swiss Cattle, the Farmer's Dairy Cow. Young stock for sale.
**THEO. BRUGGER, Route 3, Gresham, Ore.**

## SHORTHORN CATTLE

### SHORTHORNS

A few young stock for sale by such noted sires as Precious Goods, a son of the great Golden Goods, and Scottish Sunrise 2d.

**R. E. BOYCE, Baker, Ore.**

### FOR SALE

A choice lot of pure bred Shire stallions, coming two years old; also pure bred yearling Shorthorn bulls. Address

**WILSON RANCH, Rocklyn, Wash.**

**WEST SIDE AUGUSTUS (514271).**
heads my herd of registered Shorthorns and D. S. Poll Durhams. West Side Augustus by Count Augustus was first prize winner at Intermountain Stock show, Salt Lake, 1917. Stock for sale. Correspondence solicited.
**R. A. PARSONS. Blackfoot, Idaho.**

### LELAND BROTHERS

Breeders of top registered Shorthorn cattle. Correspondence solicited.
**WENDELL, Idaho.**

### H. H. Schildman

breeder of registered Shorthorn cattle, Hampshire sheep and big-type Poland China hogs.

**Filer, Idaho.**

**REGISTERED SHORTHORN COWS,**
Young bulls and heifers, sired by Scotch bulls: liberal terms.
**CALDWELL CATTLE CO., Caldwell, Idaho.**

**In answering advertisements don't fail to mention this paper.**

### Herd Bulls

Imported Doune Radiance No. 609412
and
Gainford Perfection No. 442173.

### Hercules Shorthorns

We can supply you with choice, well grown bulls and females of breeding age. Your inspection of our herd is invited. Visitors always welcome.

**Day & Rothrock Company**
205 Exchange Bank Bldg. Spokane, Wash.

## POULTRY

### White, Buff and Blue Orpingtons

**(Capt. De Bathe Strain.)**
**Speckled Sussex and Anconas. All Single Comb**

Aldrich strain Orpingtons, Sheppard Anconas. My birds took first prizes at all leading shows of Pacific Coast. Prices for stock, eggs and chicks reasonable. All from best laying birds. Finest lot of cockerels I've ever raised. A few choice Rhode Island Red cockerels.
A few White Holland and bronze turkey toms for sale.

**IRA N. DeLINE, Olympia, Wash.**

### State Winners of the Blue

Barred Rocks, White Leghorns and Black Minorcas. Prize winners, with the laying habit. Choice cockerels at $5 each. Eggs, $3 and $5.

**WILBER CLAYTON, Payette, Ida., R. 1.**

### White Leghorns

Baby chicks or hatching eggs from hens hatched from stock whose trap-nested records average 259 eggs per year. Special rates on lots of 100 and over.

**MOUNTAIN BROOK POULTRY FARM.**
Mr. and Mrs. W. A. Newton,
Myrtle Creek, Ore.

### Rhode Island Reds & Whites

Rose comb and S. C. blue ribbon winners. Utility and show stock. Limited number of cockerels, $5 each. Bronze turkeys and Toulouse geese. Blue ribbon stock. Egg orders booked. Write for mating list. No baby chicks.
**HIGHLAND FRUIT & POULTRY RANCH.**
J. Nonnenmacher, R. 3, North Yakima, Wn.

### BABY CHICKS

Rhode Island Reds, White Leghorns. Don't wait until March or April to order and then be disappointed because you can't get them. But order now from our heavy laying strain. Send card for price list.

**MAPLEBROOK POULTRY FARM.**
Box 3, Southworth, Wash.

### S. C. R. I. REDS

Buy your breeding stock and hatching eggs from a strictly commercial flock of heavy layers, that produce profits even with feed at war-time prices. Drop me a card today.

**MRS. ROMINGER, Underwood, Wash.**

**PATRIDGE WYANDOTTES.**

Full blood Lincolns, Romneys, Corridales and Hampshires. Ewes and rams, small or large lots. For sale by

**H. STANLEY COFFIN,**
Breeder and Importer. Yakima, Wash.

## TAMWORTH SWINE

**ROUND KNOLL RANCH NO. 3.**
Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.
**Bliss, Idaho.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Feb. 4.—Enlarged receipts at the leading Missouri markets did a good deal to ease corn prices today after some gains had been scored as a result of severe low temperatures and owing to a dearth of peace news. The market closed steady at the same as Saturday's finish to a shade lower, with March $1.27 and May $1.24 7-8. The outcome in oats was also virtually unchanged, but for provisions varied from 5c decline to a rise of 7c.

Although arctic conditions in Illinois and eastward greatly hindered delivery of corn, conditions elsewhere, especially in Missouri and Iowa, were fairly good. As a consequence, primary receipts taken as a whole exceeded to a material extent the corresponding total of a year ago. Before this fact was known, however, bulls had an advantage, as receipts here were disappointing.

Railway congestion in the east acted as a weight on the oats market.

In provisions increases of western stocks largely offset the effect of higher quotations on hogs.

**Chicago Futures.**

## Portland Market.

PORTLAND, Ore., Feb. 4.—An all-around weakening of the butter market is noted. Print and cube prices have dropped a cent and the buying price of butterfat has been reduced 2 cents. A steady decline from now on is expected. Lower San Francisco prices were mainly responsible for the drop here, and also the condition of the condensed milk business. An overproduction of canned milk is reported and some of the condenseries in this state have closed down while others are preparing to do so.

Eggs advanced when the snow came. The eastern demand continues and at the same time shippers in the country are apparently holding back supplies.

Dressed meats, which are very scarce, have climbed to record prices and poultry is also selling high.

The improvement in the hide market east encourages local dealers, but prices here have not yet been raised.

Hops are selling in a small way at 18 cents for the best grades.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $61.50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $57; brewing, $61.25; rolled, $66@68.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50; grain, $22.

Eggs — Oregon ranch, case count, 51c per dozen; candled, 52@53c.

Poultry—Hens, 23 1-2@25c; ducks, 30c; turkeys, live, 25c; geese, 16@18c.

Butter—City creamery, prints, 52@53c per pound; cubes, extras, 48c.

Cheese —Tillamook triplets, 25c; Young Americas, 26c.

Dressed meats—Veal, 19 1-2@20c; pork, 20@20 1-2c.

Hops—1916, nominal; 1917 crops, 17@18c.

Potatoes—Oregon, buying price, $1@1.15 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 50@55c.

Beans—Buying prices: Oregon white, 9@10c; colored, 8c.

## The Wool Market.

BOSTON, Feb. 1.—The Commercial Bulletin tomorrow will say:

"The last week has been a quiet one in the wool market, although not altogether uninteresting. Some business is being done more or less steadily, so that prices keep fairly firm. Manufacturers report fair business on newly opened civilian fabrics."

Scoured basis:

Texas—Fine 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California—Northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon—Eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70.

Territory—Fine staple, $1.85@1.90; halfblood combing, $1.70@1.75; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.60.

## Portland Wheat.

PORTLAND, Ore., Feb. 4.—Chief interest in the grain market just now centers in barley, owing to the urgent export demand. Buyers are bidding as much in the country as here, but there is little left to buy from farmers. The export orders, it is said, are more than enough to take care of all the barley left in all hands in the northwest. There is also some demand from millers, but those now making barley flour are understood to have enough of the cereal on hand.

Oats are firm and though $61 is still being quoted on the board here there have been bids in the open market several dollars higher, with farmers very firm holders.

Hay is ruling steady at current prices.

## Sheep Clubs Added.

Sheep clubs will be added to the industrial club projects in Klamath county, Oregon, for the new year.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1.25@1.50 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, 2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.25 box; Wageners, $1@1.50 box Rome Beauties, $1.75 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.65 box; Stayman Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 49c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snowcap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Winconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Dressed Poultry**—Hens, 30c lb; broilers, 32c lb; old roosters, 14@17c lb; ducks, 20@23c lb; geese, 20@23c lb.

**Hide Quotations.**

**Green Cows and Steers**—25 lbs and up, 11c; salted cured, 14c; green bulls and stags, 10c; salted cured, 12c; kip, 15 lbs. to 25 lbs., 16c; calf skins up to 15 lbs. 23c; dry flint hides, 30c; dry, salted, 25c; dry calf skins, under 10 lbs. 28c; dry sheep pelts, 30@35c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

**Top Price for Oats, Barley.**

PULLMAN, Wash., Feb. 2.—The highest prices for oats and barley ever offered in this vicinity are available to farmers. D. F. Staley this week disposed of 65 tons of barley and oats to the Interior Warehouse company, receiving $60 a ton, or $3 a hundredweight.

## Seattle Market.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle.

Eggs—Local, 47@48c per dozen.

Poultry—Live hens, fat, over 4 lbs., 25c lb.; 4 lbs. and under, 25c; old roosters, 16c lb.; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.; springs, live, 25c lb.

Butterfat—58c lb.; dairy butter, 35@36c.

Beef—Buying prices: Prime beef steers, 11@12c lb.; cows, fat, 9@11c lb.; heifers, 10@11c lb.

Hogs—Light, 18x20c lb.; heavy, 17@18c lb.

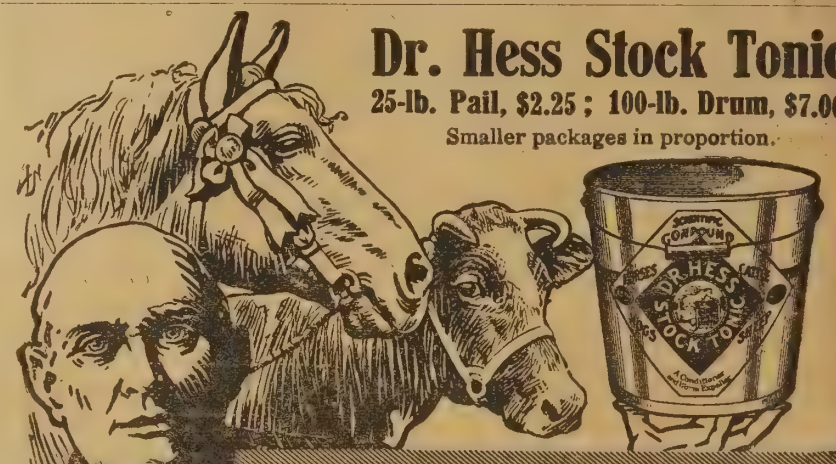
Veal—Fancy light, 14@17c lb.; heavy, 12@14c lb.

Hides — Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 6 lbs.), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 10c lb.; dry full wool sheep pelts, 36@39c lb.; salt bulls, 12c lb.

**SELLING PRICES.**

Feed—Scratch, $74 per ton; all grain chop, $69 per ton; oats, $66 per ton; rolled oats, $65.50 per ton; bran, $33@34 per ton; shorts, $36@37 per ton; soy bean meal, $67 per ton; whole corn, $67.50 per ton; cracked corn, $74 per ton; alfalfa meal, $35; rolled barley, $66.50; sprouting oats, $68 per ton; Milo maize, $70 per ton; white gyp, $75 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $30@31 per ton; straw, $15.



Butter—Washington creamery extras, cubes, 52c lb.; do bricks, 53c lb.

Eggs—Fresh ranch, 52@53c dozen.

Potatoes—Puget sound, $1.25@1.35 per cwt.; eastern Washington, $1.50@1.60 per cwt.

**LINSEED.**

DULUTH, Feb. 2.—Linseed, $3.53½@3.65½; May, $3.53½ asked; July, $3.48; October, $3.14 bid.

**Dr. Hess Stock Tonic**

**25-lb. Pail, $2.25; 100-lb. Drum, $7.00**

Smaller packages in proportion.

**You buy my Stock Tonic from a dealer in your town at rock-bottom prices.**

## Condition Your Stock Drive Out the Worms

**Spring is here**—your animals have long been on dry feed and as grain, hay and fodder do not contain the laxatives so abundantly supplied by grass, they are apt to be out of fix.

Now's the time to feed Dr. Hess Stock Tonic to **your horses,** to condition them for spring work, so that when the sun shines they will be rid of their old coat, full of stamina and ready for business.

And don't overlook the spring **pig crop**—the money-makers. Start them off free from disease—free from worms, by a course of Dr. Hess Stock Tonic.

**Your cows** will be benefited by Dr. Hess Stock Tonic, and it will keep your **feeding cattle** right up on their appetites during the finishing period.

Excellent for **ewes** at lambing time.

Dr. Hess Stock Tonic contains laxatives to regulate the bowels, diuretics to remove dropsical swellings, tonics to improve the appetite and increase digestion, and vermifuges to expel worms.

There's a dealer in your town that will supply you with Dr. Hess Stock Tonic and guarantee it to do these things.

**Dr. Hess & Clark, Ashland, Ohio**

**Dr. Hess Poultry PAN-A-CE-A will help make your hens lay now**

**Dr. Hess Instant Louse Killer Kills Lice**

## Western Canada.

Western Canada is declaring that the cereal crop for 1917 was the most valuable one ever harvested; the returns from all classes of live stock being satisfactory. The wool clip was not only greater than in any previous year, but the price obtained was double that of 1916, which in turn was almost double that of the year before.

**Earning Value of Ship.**

The earning value of a ship is now from $400 to $500 a day.

### FARM LANDS—WANTED 654

WILL PAY CASH FOR GOOD FARM, 50 to 400 acres, not over 50 miles from Spokane. Give lowest price and location in your letter. B 9, Pacific Northwest Farm Trio, Spokane, Wash.

### FARM LANDS—FOR RENT 657

FARM FOR RENT.

The Greenbank company will consider leasing its modern, complete dairy and breeding farm at Greenbank, Washington, on the shores of Puget sound, about forty miles north of Seattle.

There are about 250 acres in a high state of cultivation; fenced and cross-fenced, and much of it tile drained. There is an additional 100 acres, or thereabouts, fenced for stump pasturage. There is a milking barn for 60 cows, a large separate sleeping shed with a capacity for about 100 head and numerous other buildings sufficient to care for the usual number of young stock. There is also a large piggery. Water is piped by gravity to all of the buildings and corrals. There are separate five-room cottages with modern conveniences for all permanent help. The land is exceptionally fertile, two fields of oats last year yielded 96½ and 110 bushels respectively to the acre. The land is high and not subject to overflow. Most of it is dry throughout the entire winter and suitable for pasturing. The climate permits plowing during all of the winter months and spring seeding during February and March. A considerable acreage is seeded to winter grain and most of the plowing for spring seeding has been completed. The mows are nearly filled with hay and straw and about 100 tons of corn silage is in the silo.

A lease of the property will be given to responsible persons for a number of years, to be operated as a dairy farm. For further particulars address us.

THE GREENBANK FARM.
800 LEARY BLDG., SEATTLE, WASH.

### FARM LANDS—Wanted to Rent 660

WANTED—TO HEAR FROM OWNER OF partly improved or cut-over land for lease or sale. Give description, location and lowest cash terms. Address G. N. Johnson, Gen. Del., Seattle, Wash.

REO
"THE GOLD STANDARD OF VALUES"

# This New Reo Light Four Is a Handsome Motor Car

AT THE NEW YORK SHOW, in January, the Reo exhibit was, to an even greater extent than ordinarily, the mecca of the crowds.

YOU'D THINK, PERHAPS, that at the National automobile show, and especially in the world's greatest metropolis, where dealers and buyers go to see what is latest in construction and design, that the ponderous multi-cylinder machines would attract the most attention.

ON THE CONTRARY, there was vastly more interest shown in the types of cars that are designed to supply that great American need for a practical, economical, five-passenger touring car or three-passenger roadster.

THIS YEAR, more than ever before, buyers are paying less attention to fads and more to practical things. More to cost of upkeep than to first cost.

AND THIS REO—this new Light Four—stood out above all the rest.

IT IS SUCCESSOR to the greatest four-cylinder automobile ever built—that wonderfully efficient, wonderfully sturdy Reo the Fifth, that for eight years maintained its supremacy.

THIS IS A REFINEMENT of that great car. All fundamentals have been retained and every detail has been refined to the last degree.

IN A WORD, this latest Reo represents all that has gone before and just that much more of Reo experience.

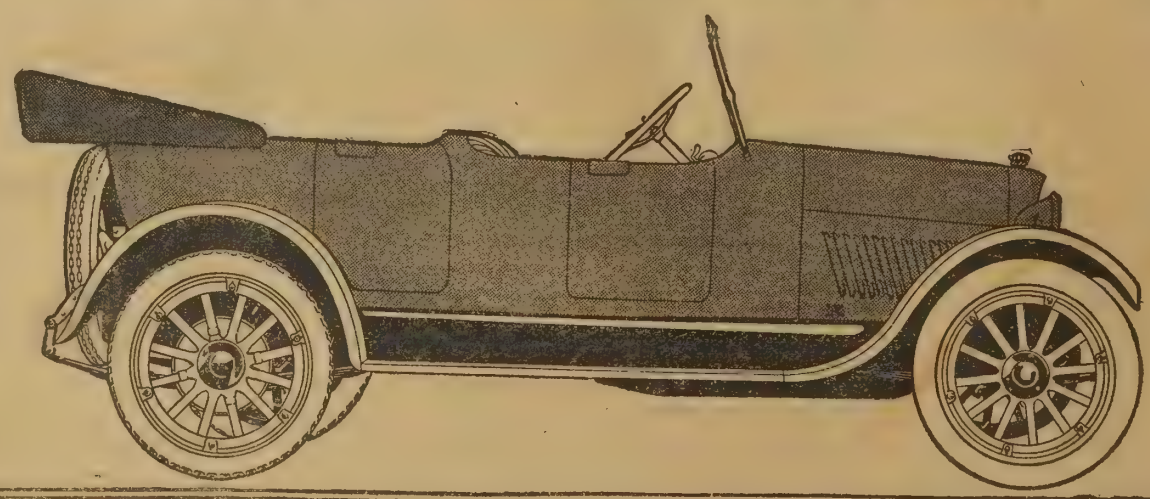
THIS IS A REAL CAR—a full five-passenger Light four. Not a skimpy—not a little four.

IT DOES SEAT FIVE full grown adults—you don't have to use a shoe horn to get them in.

BODY DESIGN IS BEAUTIFUL—it is up to the minute in every line and curve and in every detail of upholstery and finish and appointments.

IT IS JUST THE CAR you would specify if having one made to your own order.

FOR HERE ARE COMBINED roominess with economy of operation; beauty in appearance with sterling mechanical quality;



AND LOW UPKEEP—that quality for which Reos have always been famous.

OUTPUT IS LIMITED—must be this year, for we also are doing our part to assist Uncle Sam.

SO YOU'LL HAVE TO HURRY. Make your decision—see your Reo dealer, and place your order well in advance of the time you will want delivery, else you will surely be disappointed.

TODAY—won't be a minute to soon.

**Reo Motor Car Company, Lansing, Michigan**

# Can't Run Western Farm on Eastern Training

The above is a picture of Mrs. D. W. Brown of Battle Ground, Clarke county, Wash., with her pet calf and horse. Mrs. Brown writes: "I was raised on a Michigan farm and find that my early training in Michigan does not do me much good in Washington. I lived for some time in that splendid city of Spokane and then came out here on the farm. My husband is a veterinary surgeon and therefore I am more interested in live stock, but we raise enough to feed our stock. Our cows feed our hogs, and I have fine success with getting eggs the year around when my neighbors on either side get none. I attribute it to making my chickens work. I never feed them more than once a day and then just an hour before roosting time."

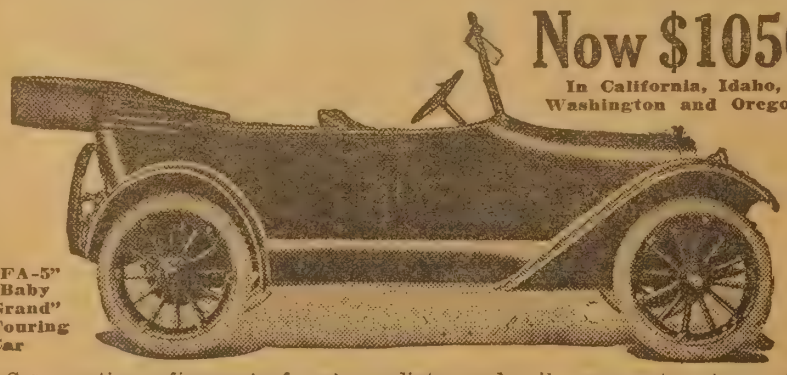
**No. 7 Light Delivery ..... Now $740**

CHEVROLET one-ton trucks are sanely designed, properly constructed and built of known material. The result of long and careful study of motor truck transportation problems. Appreciating the responsibility attached to the manufacture of a commercial unit, we have subjected these trucks to the most gruelling tests. They have been driven the distance across the continent and back again: put to road tests and load tests. And from these tests we know just what the trucks will do under the most trying conditions.

Sturdiness of each vital unit making up the running gear is a striking feature of the truck. Each one is meant for plain, hard work. Axles, front and rear; motor, clutch, transmission, frame, springs—all have been designed with the idea of giving steady, uninterrupted service.



THE NEW CHEVROLET ONE-TON WORM-DRIVE TRUCK.

**SPECIFICATIONS**

# Would Destroy Farm Loan Bank

## *Mortgage Bankers Attack It; O'Shea Replies to Their Criticisms*

Ever since the federal farm loan bank began operations nearly a year ago private financial interests of certain classes, primarily those that have been doing a farm mortgage business, have shown desires to undermine and overthrow it. One shot in attack on the farm loan system was heard last week when the Washington State Bankers' association met in Spokane. The association took no action of any kind in the matter, but speakers on the program, especially George L. Ramsey, president of the Montana Banking corporation of Helena, Mont., criticized it vigorously. Mr. Ramsey charged that the farm loan bank was built upon an unsound principle, and that the experience of the year had shown that it could not pay its operating expenses.

For the benefit of the thousands of farmers of the four states of the northwest interested in the farm loan bank President D. G. O'Shea of the northwestern branch issued a formal statement in reply to the Ramsey attack, which occurred at the last meeting of the bankers at such time that no opportunity was given him to reply. In his statement President O'Shea declares that the farm loan bank will actually pay a dividend at the end of the current year. Here are vital parts of the statement:

"The federal land bank received a capital of $750,000 provided in accordance with the farm loan act, which capital will be returned to the government, but none is to be returned under the law until the stock paid in by national farm loan associations amounts to an equal sum. In April or May of this year this bank will have acquired the capital necessary to enable it thereafter to refund the government's stock subscription in accordance with the law, and it will do so.

**Keeps Down Expenses.**

"It seems necessary to say again that the land bank receives no appropriation; that it has to pay for everything it gets and needs, including postage, as does any other person or business; and that it is required to and will earn its operating expenses, which can be legitimately obtained only from the small margin of interest it charges the borrower over and above the interest it pays on its bonds.

"In waiving the collection of such charges the land bank has no income save interest which it collects semi-annually; hence it will show on its books no material revenue collected until after six months from the date of the first loan is completed, while during that six months and for a prior period during which forms were being devised and organizations being perfected expenses naturally were being legitimately incurred and accumulated before earnings were collected.

"There is appended herewith a statement of our operations to January 31, 1918. The statement of expenses incurred and accrued in excess of earnings collected and accrued was worked out in detail during January, and is correct, and the record and accomplishment can be considered on its merits.

"In connection therewith it can be readily determined that even under the small margin earned on loans made at 5 per cent, and the added margin to come on loans made at 5½ per cent, the land bank of Spokane will unquestionably show, even if it does not have actually collected, earnings that will make for a substantial dividend at the close of the current year. We collected in actual cash earnings in January $23,586.67, and earnings are coming in in a constantly increasing volume each succeeding day and for all time to come.

Here is the statement of the bank's business:

"Loan applications numbering 15,757 were filed aggregating $38,491,718.

"Farms to the number of 9971 were examined and appraised, of which 8487 applications were approved in the sum of $18,673,170, and 1484 applications were rejected and withdrawn aggregating $3,279,505. Many applications were approved in less sums than applied for, it appearing that the average of the loans applied for is $2443, and the average of the loans approved $2200.

"We have organized and recommended charters for 313 national farm loan associations, and have furnished supplies and labor toward assisting hundreds of other associations to organize.

"We have examined titles and approved the same and drew mortgage papers for 5015 applications, of which there was finally closed and paid 3905 loans aggregating $8,930,075; 1110 mortgages are in transit awaiting execution and return and the completion of the things necessary to protect title, satisfy former liens, etc. On such pending mortgages, aggregating $2,400,000, all work has been done but the final payment.

"The capital stock of the bank has been increased from $750,000 to $1,196,650. Farm loan bonds have been authorized by the farm loan board for this bank in the sum of $7,750,000. Loans in December were closed in the sum of $1,333,696 and in January $1,724,765.

"No charge has been made to applicants who completed their loans for appraising farms, for examining abstracts or for drawing mortgages, nor have we charged associations for blanks, forms, or postage thereon.

"The cost of service aforesaid and of the business accumulated, which will have an earning value for many years, is:

"For furniture and fixtures (equipment on hand), $7177.47.

"Gross expenses to date plus accrued interest on farm loan bonds less earnings collected and accrued, $13,319.54.

"The national government will be under no expense for the operation of the federal land banks; such bonds as the treasury department has been authorized to buy will earn for the government 4½ per cent interest, payable semi-annually. The government does pay the cost of maintaining the farm loan bureau as it pays the cost of the department under the comptroller of the currency or of the interstate commerce commission or any other bureau or department charged with the administration or supervision of business, public or private.

"Not the least virtue of the farm loan system is that none of its operations are secret; there will be no confidential loans or confidential deals. It loans money only on first mortgages on farms duly appraised by three representative farmers of the community, thereafter approved by the directors of a farm loan association that will indorse the loan; then examined by a federal appraiser sworn to do his duty and sent in from the outside to make an independent report. Men of equal talents may and do differ as to the value of lands, but where the margin is never less than two to one on the lands and five to one on the insurable improvements supplemented by a stock subscription of 5 per cent of the full loan, further supplemented by the indorsement of the Farm Loan association as a corporation, the security ever will be absolute and assured.

"The land bank makes loans not for profit, not to loan money, but to aid agricultural development and for specific, designated improvements. It does not afford an easy means to get into debt, but an easy way to get out of it. It affords honest men facilities on easy terms to acquire and improve a farm home, with assurance that they themselves will reap the crop they sow; it will enable the farmer to add needed comforts to his farm home; inspire him with hope to added endeavor; make country life more pleasant and more profitable, and thereby bring to all other classes and persons some of the benefits which naturally overflow from a contented and prosperous producing class.

"That the land bank has begun to fulfil its mission is evident, for if it were negligible it would not merit attack. It has not reached all who desire its service, as it wished to operate economically and not incur the expenses of a large organization which would have been required to serve all its applicants before earnings would be flowing in."

## Want Representation

### Farmers Appeal to the President

With a view to securing representation for the agricultural industry of the country in the carrying out of the national war program representatives of 16 farm organizations of national scope have formally appealed to President Wilson for the creation of a standing committee of farmers to be in constant touch with the administration at Washington.

After listening to the memorial President Wilson made this reply:

"I can not, of course, answer offhand so important a memorial as this, and I need not tell you that it will receive my most careful and respectful attention.

"This plan would be in harmony with the procedure already adopted by the government in other essential industries. The creation of such a commission would convince all farmers that our viewpoint was fully represented in Washington, and always accessible to the president, and would inspire and encourage them as nothing else would."

## Save the Hens!

### Government Prohibits Slaughter

In order to save the hens and pullets for egg production and chicken hatching, the national food administration has issued an order prohibiting the sale for market purposes of either live or freshly killed hens or pullets during the present spring hatching season. Until the last of April the prohibitory order will be in effect. The ruling does not interfere with the disposal of poultry that had been killed and place in storage prior to February 11, nor does it interfere with the sale and shipment of hens and pullets for breeding or laying or hatching purposes.

This is one of the first notable steps in the nation-wide movement for the increase of poultry and poultry products this year to help tide the world over the great food crisis.

## Sweet Clover

### Finds It Valuable Forage Crop

Sweet clover as a forage crop for the Pacific northwest has a strong advocate in F. R. Steele, the well-known Berkshire breeder of Grants Pass, Ore., who figures its value as pasture, in his case, at $147.50 per acre, with a cost charge of $11 per acre, including the slashing of new land. It is on slashings that Mr. Steele especially urges that sweet clover be sown, basing his views on his own experience, which is most interesting.

In the winter and spring of 1914-15 Mr. Steele had four acres of young fir and pine, four to 12 inches in diameter, slashed at odd times. This was burned in November, 1915, and the first of February, 1916, scarified white sweet clover was sown at the rate of five pounds per acre. Mr. Steele finds the white to be better than the yellow variety.

The first year there was a fair amount of pasture and about 13 head of cattle were pastured, but they had considerable feed in addition. It is the second year, or 1917, however, of which this story is a record. Five cows in milk, seven head of young stock, a bull and one horse were pastured to some extent during the winter and were pastured steadily after April first. About June first, County Agent Thompson was out at Winona ranch and advised Mr. Steele to put on more stock, as the clover was getting too high and coarse. So two more horses, two mules and one neighbor's cow were added to the herd using the pasture. The cow was taken off about the first of October and the two mules about the first of November. The balance of the stock were still on when I was there the middle of December. A few acres more sweet clover sown in 1917 furnishes a little feed, but many of the big stalks were still standing a foot to 18 inches above the ground, and there were some green leaves and quite a bit of fair pasture. Where the "burn" was the thickest, leaving the most ash, the clover showed the best stand and was the strongest.

Summing up the profit Mr. Steele puts it this way: From April 1 to October (six months pacture), five cows, average per month, per pow, $20. This includes butter sold and skim milk fed to hogs, worth 90 cents per hundred. This is an unusual price for skim milk, but Mr. Steele has proven it worth that much to him, in the grain it replaces. The heifers were grown with absolutely no other feed, and none for the bull nor mules. But horses are fed grain, but not hay. The neighbor's cow paid $2 per month; the mules, $3 each, so $16 is credited for eight head of cattle and $15 for five head of mules and horses. The only other feed the milch cows got was $3.50 worth of shorts per month and each cow is charged $3.70 per month for labor, so Mr. Steele allows the pasture $12.80 per month, as the profit on each cow, or $95 per month, as the value of four acres of sweet clover pasture for six months, which gives a total of $590, or $147.50 per acre net. The cost of slashing was $8 per acre, seed and sowing $1 per acre and irrigating $3 per acre for the season.

Of course every one would not credit the profit to the pasture, but would allow rental or pasture charges, but the result is the same. If Mr. Steele had not had the sweet clover pasture he could not have made the profit on the cows, without expensive feed, and the value of sweet clover on slashings in the Rogue River valley seems proven.

H. A.

# What Kind of Silo Is It Advisable to Build?

## *Must Be Air-Tight as First Essential; Cost, Durability and Convenience Are Considerations*

By A. B. NYSTROM

The time has long since passed when the silo was considered an experiment. All progressive dairymen realize the need of a silo as a means of furnishing succulence for the cow. Hundreds of thousands of dairymen have shown their faith in them by building one or more of them. Perhaps nearly as many would build this year if they were convinced regarding the kind to build. In this article a few of the common types of silos will be compared with the hope that it will aid some one who is contemplating putting up one this year.

### Requisites of a Silo.

Let us see what are the requisites of a good silo:

First—It must be air-tight, so as to exclude the air from the silage.

Second—It must be round and have smooth walls, so as to allow perfect settling.

Third—It must be well built and properly reinforced to sustain the outward pressure due to the weight of the silage.

Fourth—It must be deep enough so that the weight of the silage itself will exclude the air from the mass.

Fifth—It must be on a solid foundation and properly braced, so that it will not get out of plumb.

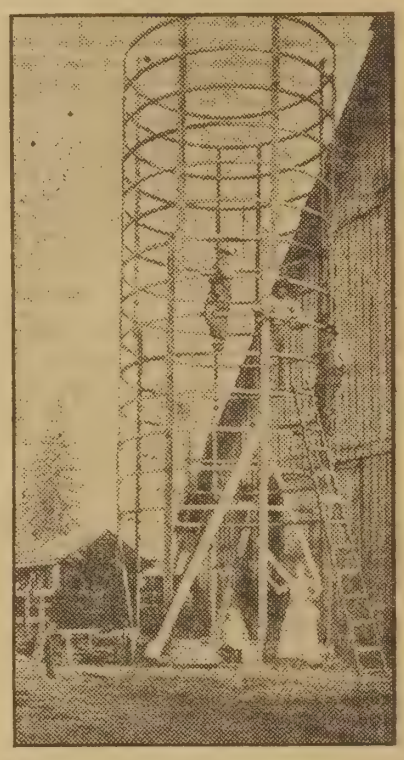
### The First Silo.

Silage is nothing more nor less than pickled green feed. The secret of its making lies in the ability to keep the air away from it. Green feed may be packed in huge piles in the open and the extreme pressure due to the weight of the mass will exclude the air from the bottom of the pile where good silage will be formed—the edges and top of the pile will mould, due to the presence of air.

The first practical silos were pit silos, or "holes in the ground." Green feed was packed in the hole and the dirt thrown back on the pile to press it down firmly. By such a silo excellent silage was made, though it entailed considerable work to move and replace the dirt covering when the silage was needed.

### Underground Silos.

An underground or pit silo can only be considered as a temporary improvement. When properly built in a well drained and rather heavy soil this type of silo will make excellent silage, quite as good as the above-ground silos. Where the soil conditions are right and where money is not available for a more permanent structure, this type should by all means be built. About the only cost is that of excavation with a small amount of cement plastering near the top. The costs run from 50 cents to $1.25 per ton capacity.



But there are two drawbacks to the pit silo. In the first place it takes a lot of labor to hoist the feed each day from the pit to the feeding floor, and secondly there is danger of the formation of deadly gas due to the fermentation of the fodder when it is first put in. In a silo above ground the circulation of air through the door openings drives out the gas.

A half-and-half pit and above ground silo is a great deal worse than a real pit silo. No satisfactory arrangement can be made for removing the silage with such a silo unless that part below the ground is only six feet or less below the feeding door.

### The Wood Stave Silo.

Of the silos above ground the common wooden stave is the most numerous, probably because it can be constructed in its entirety and shipped "knocked down" to the farmer who wants it, with directions for setting it up. It costs less than the more permanent types, yet it must be admitted that when a stave silo is made out of first-grade material, properly put up on a good foundation, and kept painted, it is as much a permanent structure as most of our dwellings and stables that are built of wood, and we know that many of these have withstood the effects of weathering for 50 to 75 years.

The various kinds and grades of stave silos differ in but a few particulars. (1) They have different kinds of doors and door fasteners; (2) they vary in the kind of tongue and groove used to keep the stave in place, and (3) they differ in the quality of material. The matter of a proper door has been a valuable talking point for many makes of stave silos because of the fact that if the doors or openings are not tightly closed, air will get in and cause mouldy silage. However, the writer is of the opinion that in many cases too much emphasis (at least so far as price is concerned) has been placed on this point by the sellers of some of the patent door silos. Let the silo builder or owner keep this in mind: The pressure on any door due to the weight of the silage is sure to be sufficient to close the opening perfectly, provided the door jam and the edges of the door are smooth and fit evenly. If the doors are made strong and to fit the openings it matters little what kind of a hinge or catch is used, or what kind of material it is made of so long as it is air-tight.

**Here is the skeleton of a wooden stave silo under construction on the P. H. Thomsen place near Centralia, Wash. No scaffold is required.**

Where the weather is likely to get extremely hot and dry at the time the silo is empty, the stave silo is not the best because the shrinkage causes cracks between the staves and consequently a loss of silage due to mould. This may be overcome however by tightening the hoops as the silage is put in and then loosening them again as the staves take up moisture and swell. Patent stave silos are of many grades. The prices usually vary from $2.75 to $4 per ton capacity outside of the foundation.

### Wooden Hoop Silos.

The wooden hoop silo can not be considered as permanent a structure as the better types of patent stave silos, but it is coming to be a popular type just now because of its low cost. It requires somewhat less material than either the stave or the Wisconsin type (described later). The sides may be built of either 1x4 matched flooring or 1x6 common, either of which can be bought at the local lumber yards. In many places in Washington the prospective builder is located near a sawmill where the material can be obtained at a still lower figure.

If the sides are made of 1x6 common it is necessary to have a double wall, built so as to break joints. The hoop material is usually made from straight grained fir three to four inches wide planed to 3-8 inches thick. The cost of erecting this type varies from $1 to $22 per ton capacity. It is a very popular type in western Washington.

### The Wiconsin Silo.

The Wisconsin type of silo is another home-made type that has proven satisfactory in all parts of the country. In this type 2x4s or 2x6s are erected as studding about 14 inches apart in a circle on the silo foundation. Two layers of boards 1-2x4 inches are then nailed horizontally on the inside of the studding, the first layer breaking joints with the second. Tar paper is usually used between the layers. To improve the appearance of this silo, ordinary siding is nailed on the outside. This also adds materially to the strength. The cost of this type varies from $2 to $2.50 per ton capacity.

### The Gurler Silo.

The Gurler silo is an improvement over the Wisconsin in that a cement plaster about 1-2 to 3-4 inch thick on metal lath is used in place of the two layers of 1-2-inch boards. This makes a more durable structure, one that is not affected by dry weather and still it is just as good as far as the preservation of the silage is concerned. It takes a little more skill in constructing this type and therefore it is slightly more expensive than the Wisconsin.

The cribbed type of silo, sometimes called the "Common Sense," has not proven entirely satisfactory. It is more expensive than almost any type of home-made wooden silos, and frequently it is difficult to lay the plank so as to exclude air. When tar is used between the planks an air-tight structure is assured, but the cost is considerably increased. The cost of this silo varies from $2.25 to $2.75 per ton capacity.

### The Concrete Silo.

The concrete silos are of four kinds, the monolithic, or solid concrete; the cement plastered, the concrete block, and the concrete stave.

The monolithic is the best and usually the most expensive. The first ones built were not properly reinforced and consequentiy cracked when filled with the silage. But now there is available information and specifications on building concrete silos, which, if followed, will insure a perfect structure that will last hundreds of years. A good point to keep in mind when constructing concrete silos is that the same amount of hoop material or other reinforcing is necessary for this type as for the wooden stave silos and that this reinforcing must be imbedded in the concrete.

Concrete silos of all kinds have many advantages over the wooden silos. The former are more durable, fireproof and do not shrink nor swell due to changes in weather. There has been some complaint from concrete silo owners from mouldy silage along the sides. This is likely to happen if care is not taken to fill up the pores in the wall. A few coatings of cement wash well brushed in will fill the pores and prevent the silage from moulding. The cost of the monolithic type is from $3.50 to $6 per ton capacity.

The cement plastered silo is not popular because it takes an expert cement man and plasterer to construct it. This silo is made by first erecting a false set of studding on a solid foundation. To this studding a metal lath is tacked in such a way as to make it possible to remove the studding later. Cement plaster is then put on the metal lath on one side, until it is about two inches thick at the top and three at the bottom. The studding is then removed and the cement plaster of the same thickness is put on the other side of the metal lath. When finished, the wall is about four inches thick at the top and six inches at the bottom. This makes a durable and very satisfactory silo when properly put up. The cost varies from $3 to $4.50 per ton capacity.

Where a machine for making concrete blocks can be obtained near the place where the silo is to be built, this type of silo is very desirable. The blocks can be made when there is no rush of other work, and they may also be laid a few at a time. In cold climates these blocks may be made hollow and thus serve as an insulation against freezing. The best of reinforcing is required for concrete block silos, and this should be imbedded in the grooves made for the purpose. A plaster of cement about one-half inch thick, with the usual coatings of cement wash, are required to finish the inside wall. This silo costs from $4.50 to $6.50 per ton capacity.

### Stone, Brick, Tile Silos.

Many of the best silos in the country are made of either stone, brick or tile. The cost of these is usually greater than of any of the concrete types. It takes an expert mason to lay the material for best results. The hollow tile silo is a good type to use where the weather is extremely cold, the cost of these types vary from $4 to $7.50 per ton capacity.

### Summarizing.

The success or failure in making silage does not depend upon the choice of silo, so long as the silo can be kept air-tight. Durability, cost of construction, ease of taking out silage, fireproofness, are points to consider in selecting the type of silo. No matter what kind is built, ample returns will come from the money invested if the silage is judiciously fed to dairy or beef cattle.

## PRIZES FOR WAR GARDEN PLANS

The Washington Farmer will give $10 in prizes for plans and directions for growing the best war garden on the farm. This includes:

1. As to size and length of rows and where and when to plant the various garden vegetables.

2. The best methods of cultivating the garden throughout the season and the best methods of fighting garden pests.

3. The best methods of harvesting, preserving and storing winter supplies of garden vegetables

4. In short, how to produce in variety and quality the largest amount of food for the farmer's family table with the least interference with other necessary farm production.

First prize, $5; second prize, $3; third prize, $2.

All entries in this contest must be received on or before February 28. Any entry received on or before February 21, and that article takes a prize, one dollar will be added to the prize.

Mail to the Editor of The Washington Farmer, Spokane, Wash.

# Evidence Against I. W. W. Is Uncovered

## *Government Agents Gather Information for Use in Trial of Leaders*

An investigation of great importance to the farmers of the northwest is now being conducted by the secret service of the United States government, whose agents are in Washington and Idaho gathering evidence in connection with the destruction of threshing machines, grain fields and other farm property by the Industrial Workers of the World. An investigation recently held at Colfax by Secret Service Agent Gibson of Washington, D. C., brought out much evidence that fits in with evidence secured when the I. W. W. headquarters were raided in Chicago several months ago. This investigation is proving that the numerous "smut" explosions which destroyed threshing machines and grain in the wheat belt of the northwest were not caused by smut in the grain but by an organized gang of I. W. W. members working in the harvest fields and reporting regularly to headquarters of the organization at various centers in the east and middle west.

Telegrams and letters have been found from the workers in the field to the headquarters telling of destruction of property and of human life. Mr. Gibson read one telegram from an I. W. W. member in California, who is now under arrest, to headquarters in Bismarck, N. D., telling of the poisoning of a sheriff in California. Long day and night letters were sent by telegraph to the I. W. W. headquarters telling of the burning of threshing machines, grain fields and other farm property by the I. W. W. "field men" who were working as laborers with threshing machines or doing other farm work for the purpose of getting opportunities to destroy property.

Orchards were reported as being destroyed by driving copper nails into the trunks of trees. Fruit was destroyed or injured in packing so that it would decay while in storage or shipment. The method of destroying fruit was unique, but simple. Men would be employed in packing houses, and when wrapping peaches or pears would squeeze the fruit, when wrapping the paper around it, so hard that the imprints of the fingers and thumb would make indentions in the fruit and it would decay where thus bruised.

Telegrams and letters were found at headquarters from workers in Whitman, Latah, Lincoln and other counties of Washington and Idaho telling of the destruction of threshing machines and grain fields in 1914 and 1915. These reports were kept on file at the headquarters of the I. W. W., and were among the tons of reports, literature and documents found when government agents raided these headquarters. Minute directions on how to destroy fruit trees, injure fruit so it would decay and burn grain in the fields and stacks and while being threshed were given.

Phosphorus wrapped in a damp cloth and inserted in grain shocks or stacks was referred to as "tooth brush and paste," and instructions on how to prepare this and how long it would take for it to burn were given in detail. The whole thing seems to have been planned by a "master mind" and carried out as systematically as any of the German methods of espionage, and reports were made regularly by all of the field agents.

Several months ago the government raided I. W. W. headquarters at all the important centers from Chicago to Seattle, and arrested more than 200 leaders of the organization, who are soon to be tried in Chicago. Among those arrested were the leaders at Spokane who had called a general strike throughout Washington, Idaho and Oregon for August 20, with instructions to all workers to "let the fruit rot in the orchards and the grain rot in the fields and let all property be destroyed." Prompt arrests of a number of I. W. W. members in Washington and Idaho a few days before the strike was to have begun killed the effort to strike, and the crops were saved, but from reports dug up in the raids of the I. W. W. headquarters it appears that the destruction of property continued "on the sly."

At Colfax Saturday Mr. Gibson and an assistant took the evidence of more than 30 farmers and threshing machine owners who had suffered fire losses in the last few years. Each witness was closely questioned, and his testimony taken down in long hand and signed by the witness. "Did you ever have any trouble with the 'wobblies'? (the name by which the I. W. W. is called) was a question Mr. Gibson asked of each witness. Men told of mysterious fires occurring in their threshing machines and grain fields and the heavy losses that were suffered in 1914 and 1915, when insurance companies refused to issue insurance policies on threshing machines because few escaped destruction. Several witnesses told of losing two and three machines in the season of 1914. The dates and places where the fires occurred were given, and these will be checked with the reports on file at I. W. W. headquarters. It is the government's plan to show, at the trial of the I. W. W. leaders, that there was a systematized plan for the destruction of property throughout the United States. Several farmers from Washington and Idaho will probably be called as witnesses before the court at the trials, which are to be held soon.

In 1914 more than 100 threshing machines were destroyed by what was believed to be "smut" explosions in Whitman county, Washington, alone. Other counties suffered heavily, but none so much as Whitman. In 1915 the loss was also extremely heavy, more than 50 threshing machines being burned in Whitman county in that season. Suspicious circumstances aroused the people to the belief that machines were being destroyed by an organized gang, and in 1916 and 1917 vigilance committees were formed and threats made that any man caught putting combustible material in grain or setting fire to machines or grain fields would be lynched, and there were only three fires in Whitman county in 1917, and these were purely accidental, the cause in each case being known.

It is believed that the government is on the right track and that the investigation now being conducted by the government agents will result in completely wiping out the gang which has destroyed hundreds of thousands of dollars worth of property on the farms, in the orchards and in the lumber camps of Washington, Oregon and Idaho in the last few years.

Mr. Gibson refused to tell exactly what evidence had been obtained, and said: "We are trying a lawsuit in the courts, not in the newspapers, but we have the right men, are on the right track, and are not going to stop until we get every one of them." He read to witnesses whose testimony was taken a number of the telegrams and letters taken in the I. W. W. headquarters shewing conclusively that the destruction of property in the west was being carried on under the direction of the leaders of the I. W. W. in Chicago and North Dakota.

To each witness, after he had given his testimony, Mr. Gibson said: "Go home and raise more wheat than you ever raised before. We need it. Europe needs it. I was in Europe when this war broke out, and my assistant here has made several trips to Europe since the war began, and I tell you that we need every bushel of grain you farmers can produce, and the government will protect your grain fields from these men who have been destroying them."

**Fabrics to Cling.**

Serge is good if it is soft; otherwise it should be barred. The fundamental thing is to get the fabric that clings to the figure. All others must be put on the opposite side of the scale. Nothing must have any chance to flare.

# Silage for Sheep

## Three Pounds a Day About Right

C. L. Smith, the veteran agriculturist of the O.-W. R. & N. company, tells me that over 400 silos were built last year on the lines of his company. These silos average about 80 tons each, the largest having a capacity of 380 tons. About two-thirds of the silos were built to furnish feed for dairy cattle.

"During the last year," says Farmer Smith, "more silage has been fed to sheep than ever before. Experience has taught that three pounds a day of silage is about right for sheep. A well-established dairy ration is 30 pounds of silage of any sort and all the say a cow will eat, together with one pound of mixed grain for every five pounds of milk the cow gives. The grain ration for heifers may be increased so long as she will respond in the milk pail. At first the heifer may not at once respond to the increased grain ration, but the problem is to stimulate her capacity for utilizing the largest amount of feed possible."

Farmer Smith met a dairyman who was feeding four pounds of barley with his hay, and was just breaking even—getting just milk enough to pay for the feed for his cows After a talk the dairyman added four pounds more of barley, costing 7 cents more for feed, and the additional milk which the cows gave amounted to 25 cents a day inside of 10 days.

Farmer Smith met a dairyman who ing the farmers' week at the university. He is never disturbed by the apparent apathy of farmers toward new methods, and he will tell you why. Among his chief reasons is the success of the campaign for corn growing which he has waged so vigorously throughout the last five or six years From saying that the Pacific northwest is not a corn country and then saying that only certain limited localities here can grow corn, farmers are confronted with corn shows with as fine corn as is grown on the continent, and the territory where corn will grow is enlarged year by year.

# Be Ready for National Farm Survey

## *Important Facts Sought by Government About Farms*

The farmers of America can do a great service to their country and themselves by cooperating willingly in the nation-wide farm survey being undertaken by the government. It will be a great aid to the department of agriculture in assembling facts upon which to work out such problems as the labor problem and increased food production if every farmer is ready to give unreserved information when the government's agent reaches him. The survey is the most gigantic of its kind ever undertaken in this country.

"The survey includes labor needed for 1918, both seasonal and year-around; the amount of live stock on hand a year ago, on hand at present, the amount to be bought and the amount to be sold," said J. C. Scott, federal labor specialist for Washington. "The farm animals mentioned in the survey are meat, dairy and work animals, and horses and mules.

"Another division of the survey pertains to farm crops planted last year, and the bushels, tons, and so on, harvested last year. It includes the amount of fruit produced last year, and estimated crop acreage for 1918. It includes the amount of pasturage available—stubble, woodland, and so on, and the amount of seed on hand and to be bought and sold.

"One of the advantages of this survey will be in the help that it will be to the seed situation throughout the country. An illustration of how knowledge of this kind will help is seen in the situation that arose in Walla Walla and Franklin counties last year. Farmers in Walla Walla county wanted to buy Early Baart wheat for next year's seeding. It happened that farmers in Franklin county had Early Baart for sale. It happened that the county agricultural agents learned of this situation; otherwise the people of Franklin would have sold their wheat and shipped it out of the country before the Walla Walla county wheatmen knew about it.

"The same is true of live stock. One community has certain live stock to sell and another wants to buy. Neither knows of the other, unless there is an intermediary or connecting agency. The United States government, through the national department of agriculture, acting in cooperation with the Washington State college, the county agricultural agents and agencies of a voluntary nature provided by the citizens in their different communities, is now seeking to provide this connecting link between different communities, so that they may help each other."

# Going After Income Tax

## *Will Enforce Payment With Greater Vigor Than Ever*

The government is going after income taxes this year with greater vigor than ever before, and people who try to evade payment are pretty certain to get into trouble.

As the Farmer has previously explained, every married individual whose net income is more than $2000, and every single person with a net income of more than $1000, is subject to this tax, and must make a report to the collector of internal revenue.

The penalties, so far as individuals are concerned, for failing to make a report at the proper time is a fine not in excess of $1000, and an increase of the tax by 50 per cent; for making a false report, a fine not in excess of $2000 or imprisonment for one year, or both, and an increase of tax of 100 per cent. Where a corporation fails to file a report at the proper time the fine is not in excess of $10,000 and a 50 per cent increase in tax is assessed; for making a false return, a fine not in excess of $10,000 and an increase of 100 per cent in tax and imprisonment of not more than one year, or both, will be the punishment imposed.

The law makes it the duty of citizens with incomes of $2000 and $1000 (single and married persons respectively) to apply to the collector of internal revenue for the necessary blanks, which they are to fill out and return. The fact that the collector may not send one a blank does not release such person from his obligation.

Government officials say that two things will make their work easier this year than in past years:

The fact that the country is at war will lead many persons who have been careless before to recognize their patriotic duty.

And citizens who know of cases where the law is being evaded are keener to report the "slackers" to the government officials. Discussing this spirit, a government official says:

"The number of anonymous communications that the office of the collector receives daily, commonly called 'squeals,' would astonish the average citizen. Some people who have thought they have succeeded in evading tax, do not hesitate to boast of it to some friend, and the result is a letter to the collector, calling his attention to that fact.

"These letters will receive prompt attention this year, and no attempt will be made to discover the source of the communication, nor will the taxpayer who is found delinquent be given any inkling as to the manner in which his delinquency was discovered."

# Stockmen Gather in Spokane Next Week

Next week, Thursday and Friday, February 21 and 22, occurs in Spokane the second annual Northwest Live Stock conference. On the following day occurs the second annual sale of the Northwest Shorthorn Breeders' association, at which approximately 100 purebred Shorthorn breeding animals will be offered at auction by some of the most prominent breeders of the northwest. Frank M. Rothrock of Sprague, Wash., is in charge of the sale arrangements, assisted by D. I. Raymond of Spokane and Frank Brown of Carleton, Ore.

W. L. Tennant of Spokane is in general charge of the conference arrangements, and has announced a program of addresses and discussions by some of the most widely known live stock authorities in America, including Duncan Marshall, minister of agriculture for Canada.

All persons attending the conference should secure railroad fare receipts, so that reduction of fare for the return trip can be secured.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Strikes Are Unpatriotic

Officials of the United States department of labor say that since the declaration of war against Germany strikes have been more numerous throughout the country than at any time in the past.

Here is conclusive proof that the proper patriotic spirit is lacking somewhere. The Farmer is not prepared to decide whether the fault lies with the employer or the employes, but it rests somewhere between them. Probably both classes are at fault—the employers in some cases, the workers in others; but whatever view one may take of it the situation is not cheering.

After months of more or less futile efforts at conciliation and arbitration the secretary of labor now confesses the need of a thorough reorganization of the department and the formulation of a broad national labor policy for the duration of the war. Accordingly Secretary Wilson will call on both sides immediately to form a joint board to meet in Washington to agree on general principles to govern their relations during the war. Each side will be asked to name a commission of five representatives, which in turn will elect one person each representing the general public, making a board of twelve members.

But why only two members to represent the general public? The public's representation should not be less than five; ten would be better, for the public has interests not secondary to those of the employer and his employes.

Labor is entitled to full consideration, but analysis of the elaborate organization of the council of national defense shows that it has had recognition out of all proportion to that given agriculture. The farmers have almost no direct representation; but nearly four pages of the government pamphlet listing the various sub-committees of the council are taken just to list the "committees of and cooperating with Mr. Gompers," president of the American Federation of Labor.

There is a sub-committee on mediation and conciliation, with 67 members; another large committee on wages and hours; another on women in industry, and numerous others of smaller membership.

There are no such committees of and cooperating with the heads of the great farmer organizations.

The farmers are expected to do their patriotic part without special pleading, and are generally living up to that expectation. They are not striking anywhere for higher prices or shorter hours. They are just simply on the job of speeding up production to provide the food that will make it possible for the United States and its allies to win the war.

## Useless to Deceive Ourselves

The British food controller has cabled Mr. Hoover that England must have from the United States 75,000,000 bushels of wheat in addition to the wheat that has been sent from this country prior to January 1. "Unless we have it I shall not be able to announce to the British people that their bread supply will hold out," added the food controller.

Mr. Hoover is exerting every possible influence to comply with the request, but in the final analysis it is up to the American people to make delivery possible. Unless they save more wheat than they have been saving in the past our allies will be short of bread.

Or, as David Lubin, American member of the International Institute of Agriculture, cables from Rome, Italy, "food is most important for the allies now. It is useless to deceive ourselves." Mr. Lubin further says:

> "I am reporting to the state department, and also to congress, that Europe's crops may be worse than last year's, and that the mobilization of women of the United States for farm work may be necessary. We should also consider plans for devoting land in the 11 arid states to grazing purposes, so that the United States will be able to supply cattle for replenishment of the diminishing stocks.
>
> "Our allies are depending upon the United States. Without its help they would reach a condition similar to that in Germany and Austria, in which there is merely food enough for the armies, with the civil populations dying off."

Just read the British food controller's cable to Mr. Hoover over again. "Unless we have it we will be unable to announce to the British people that their food supply will hold out."

That "it" means the saving of 75,000,000 bushels of wheat by the American people before the next wheat harvest.

## Moving Farm Products

In many parts of the country farmers have been alarmed by rumors that the railroads, under government direction, might refuse them transportation facilities for some of their products.

Officials of the department of agriculture conferred with Mr. McAdoo, director general of railroads, and a Washington dispatch says they were informed that the director general has not promulgated a list of nonessential farm products which would be denied transportation "and does not contemplate issuing any such order." Request was made that the department of agriculture disseminate this information as widely as possible to the farmers of the country.

The director general of railways believes that under the plan now being formulated it will be possible to provide adequate transportation for farm products this year.

This statement will be of particular interest to fruit growers of the Pacific northwest. While it is highly encouraging, the fact should still be noted that the director general has not pledged himself to provide cars. He says he has not issued an embargo on any farm products and does not contemplate any such order. But that falls a little short of saying that he will not.

## Labor Problem Will Be Solved

In a recent leter to Governor Capper of Kansas, President Wilson says that the war department has asked congress for authority to furlough soldiers for service on the farms when deemed necessary.

This is good news, not only for the farming industry, but for the country as a whole. It should prove a great stimulus to food production. It indicates clearly that the government is not unmindful of the need of the farm, and that it is planning definitely to guarantee the farmer against possible loss of crops due to labor shortage.

The government can not afford to let any food product be wasted, and it will not do so. In war times it possesses powers that it does not have in normal times. Under conditions of military necessity the administration can requisition men for industrial service at any time or anywhere. It would be inconceivable folly for it to fail to exercise any degree of power necessary to save the crops when food is the first essential of success against Germany and her barbarism.

Labor specialists are now studying the labor situation in every state in the union, with a view to insuring proper use and distribution of the labor that is available, and with the additional view to learning exactly what will be required that is not locally available. Undoubtedly there will be some pinching in some quarters, but the evidences are that the labor problem will be solved and solved in a manner generally satisfactory.

Therefore, no farmer should hesitate about planting for fear of inability to harvest. Every acre that can be put to food crop should be seeded. The government will not permit it to go unharvested.

## Washington Gleanings

The output of jute bags at the state prison this year will be a little under a million, about 25 per cent less than the output last year.

Negotiations have been completed at Sequim for the construction of the first condensed milk plant on the Olympic peninsula to cost $100,000.

State Fish Commissioner L. H. Darwin has been notified that the city of Everett has provided $6000 for the construction of a new state fish hatchery.

George Gang has sold 130 acres two miles west of Toppenish to G. Brandt for $235 an acre. Gang bought this property about a year ago for approximately $100 per acre.

The report of the manager of the Fairfield Cooperative Creamery company shows a gross business for 1917 of $32,000, which was a considerable increase over 1916.

A number of prune growers of the Blalock district have organized a union to sell their own fruit and vegetables through the Northwestern Fruit Exchange of Seattle.

The secretary's report of the Southwest Washington fair board shows the expenses for 1917 to be approximately $16,000 and a balance on hand in the fair fund of $1500.

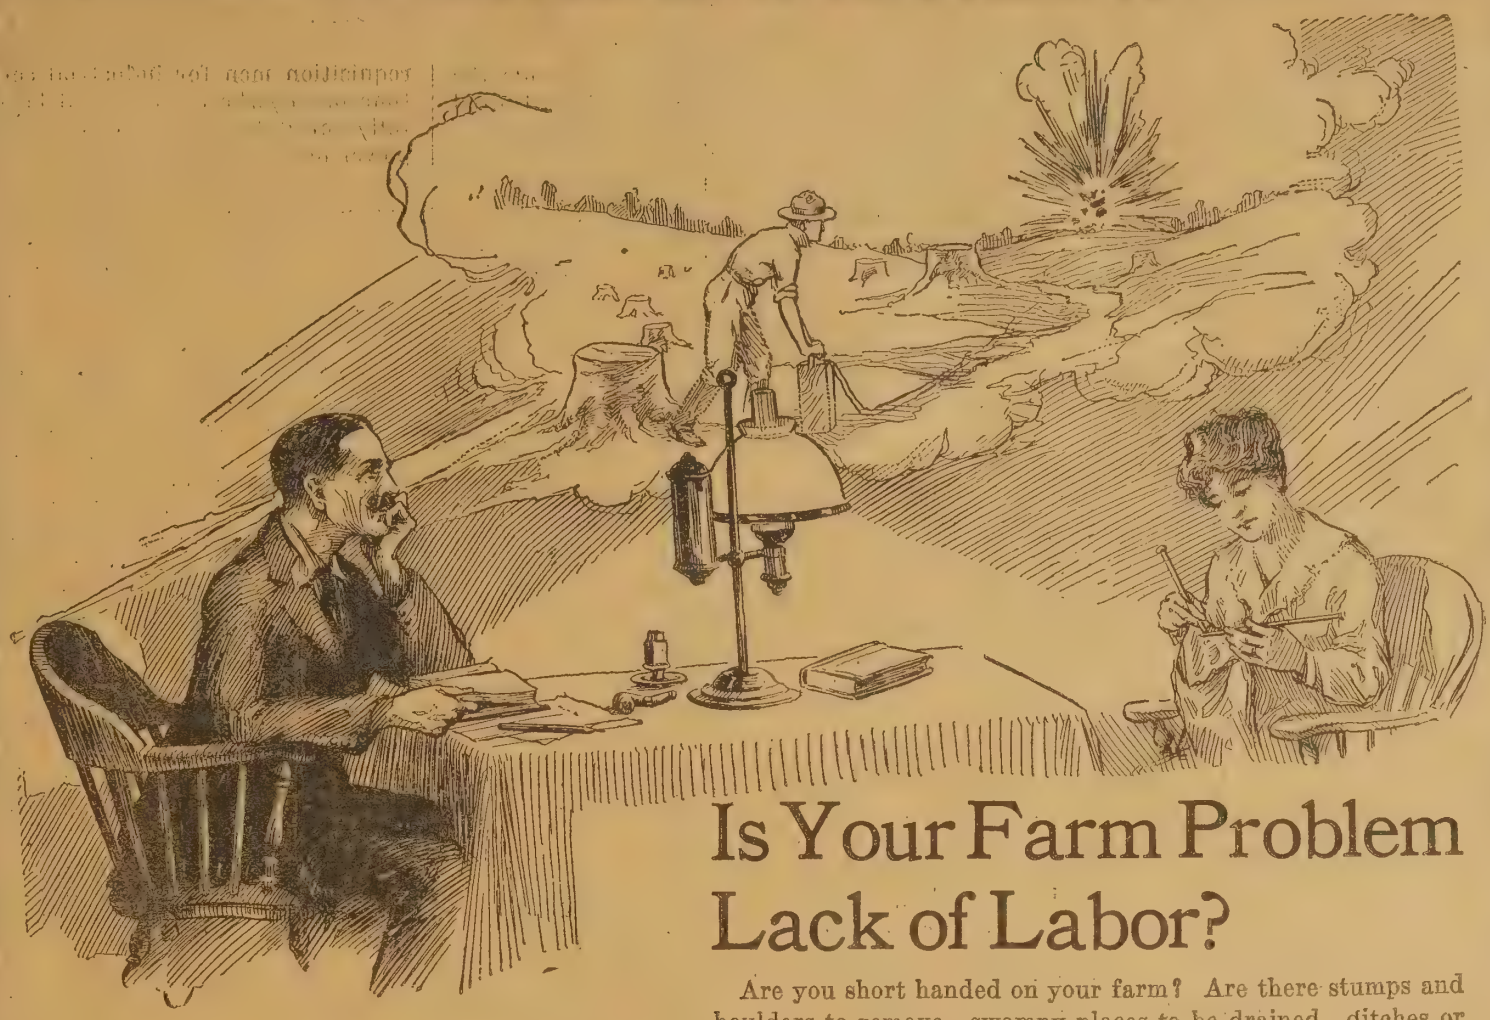
Washington farmers are responding to the call to supply more foodstuffs for this and the allied nations by planting a larger wheat crop than ever before, according to P. J. Sweeney of Tacoma, chief grain inspector for the state.

One ton of silkworm eggs, enough to fill half a carload and capable of making enough silk after they have developed in the mulberry bushes of Japan to clothe a city, arrived in Seattle recently from the east and was shipped to the orient.

The Farmers' union of Spokane is sending a representative to Washington to urge upon the grain corporation of the United States food administration the necessity of establishing primary wheat markets on the Pacific coast for handling the 1918 crops.

Realizing the fact that the present housing facilities are entirely inadequate to handle the number of workmen they expect to have for the running of the Sunnyside and Toppenish sugar factories next year, the Utah-Idaho Sugar company has announced that it will erect whatever houses it may need to carry the men.

## What Others Say



California Cultivator: It is a wise farmer who can look ahead and be sure of getting a profit from any particular crop.

Ohio Farmer: Farmers may well put their equipment in the most attractive working order, put tenant houses in good repair and make terms as definite and fair as conditions demand.

Denver Field and Farm: What has become of the old pioneer who didn't grumble at a wheatless day when he could forage enough corn meal from an incoming bull train to make a hoecake?

Breeders Gazette: A pedigree has no value whatsoever in itself. Its utility lies in the fact that it affords the information from which a study can be made that will determine the question of whether a given animal has a good pedigree or otherwise.

# Value of Crops Increases Greatly

## *Increases Faster Than Production Due to High Price*

According to the revised estimates of the department of agriculture, farm products of the United States reached the unprecedented value of $19,443,849,381 in 1917, an increase of more than $6,000,000,000 over 1916, and almost $9,000,000,000 more than in 1915.

It is well to point out, however, that these figures, if taken without explanation, would be misleading. They are the combined value of all farm crops and also of animals and animal products. The department has counted in the grain, hay, etc., fed to live stock, and in that way the value of such products has been figured twice, though the farmer is paid but once.

For illustration, suppose that a dairy farmer grows 1000 tons of hay and feeds it to his dairy herd. It is counted twice—first for its hay value and again in the value of the produced butter, cheese, cream and milk.

But, deducting the total value of all animal and animal products, the figures on farm crops alone make an impressive record, a total for the United States of $13,610,462,782, or 70 per cent of the value of all farm products. Animals and animal products were valued at $5,833,336,599 in 1917, an increase of almost $1,500,000,000 over 1916.

The figures might be misleading in another way. They measure market values, not bushels, pounds or tons. Higher prices have played a large part in swelling the totals. And while the producers have been paid increased prices, the gain has been largely, in many cases entirely, offset by the increased cost of production.

In a measure, therefore, this stupendous showing of farm wealth is largely "paper" increase.

But even so, it is evident that the American farmers responded right loyally to the government's appeal for increased production of food.

**Northwest Production.**

A study of the figures on farm crop production (aside from live stock and other animal products) shows that the four Pacific northwestern states produced last year crops to the value of $451,789,000, divided as follows:

| | Value. | Rank. |
|---|---|---|
| Washington | $144,422,000 | 29 |
| Oregon | 108,632,000 | 32 |
| Idaho | 94,890,000 | 36 |
| Montana | 103,845,000 | 35 |
| Total | $451,789,000 | |

The term "rank" in the foregoing table means that Washington was 29th state in the Union in point of crop production.

Illinois topped all the other states and Texas came second. It will surprise many readers to be told that Kansas ranked down to 14th place. The "big ten" states were:

| | Value. | Rank. |
|---|---|---|
| Illinois | $842,042,000 | 1 |
| Texas | 788,983,000 | 2 |
| Iowa | 783,488,000 | 3 |
| Ohio | 546,058,000 | 4 |
| Missouri | 546,036,000 | 5 |
| Georgia | 542,733,000 | 6 |
| Nebraska | 522,186,000 | 7 |
| Indiana | 503,154,000 | 8 |
| Minnesota | 480,230,000 | 9 |
| California | 432,285,000 | 10 |

**Comparative Records.**

Last year's national production compares with former years as follows:

| | Crops. | Animals and Products. | Total. |
|---|---|---|---|
| 1917 | $13,610,462,782 | $5,833,386,599 | $19,433,849,381 |
| 1916 | 9,054,458,922 | 4,351,905,089 | 13,406,364,011 |
| 1915 | 6,907,186,742 | 3,868,303,670 | 10,775,490,412 |
| 1914 | 6,111,684,020 | 3,783,276,511 | 9,894,960,531 |
| 1913 | 6,132,758,962 | 3,716,753,549 | 9,849,512,511 |
| 1912 | 5,842,220,449 | 3,500,569,700 | 9,342,790,149 |
| 1911 | 5,562,058,150 | 3,257,116,809 | 8,819,174,959 |
| 1910 | 5,486,373,550 | 3,551,017,194 | 9,037,390,744 |

These figures represent the actual value on the farm unmixed with any additions for freight. They are, therefore, basic figures of the industry, which is the foundation of industrial and financial life.

# Busy on Farm Labor Problems

## *Government Assigns Specialists to Groups of States*

The farm help specialists through preliminary labor surveys will endeavor to ascertain in advance the prospectivve needs for extra labor in each community. They will work with state and local agencies to supply labor deficiencies from local supplies if possible or from the nearest point where labor can be secured outside the community in need of assistance. All local sources of labor first will be drawn upon and only when the fullest possible utilization of local labor proves inadequate will labor be brought in from outside. In cases of necessity, however, through the department of agriculture and the department of labor, arrangements will be made for interstate movement of help, in which the department of labor will cooperate in obtaining extra labor for farm purposes from the populous communities.

To cooperate effectively in the farm labor problem with the United States department of labor state councils of defense, state commissioners of agriculture and labor, and other official state and local agencies concerned with supplying needed farm labor, the department of agriculture has divided the country into four farm labor divisions:

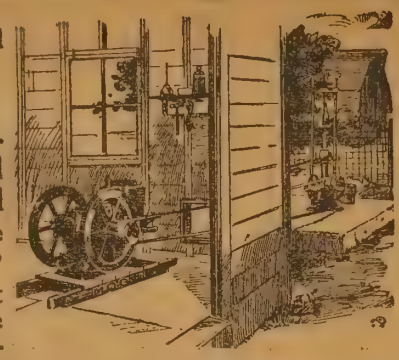
(1) New England and northeastern states.
(2) Southern states.
(3) North Central states, and
(4) Western states.

Each of these divisions is in charge of a representative of the department of agriculture, known as a supervising farm help specialist, who supervises the work of the department's farm help specialist assigned to the farm labor work in single states or two or more adjoining states. These farm help specialists will cooperate directly with state agencies, central and local employment agencies of the United States department of labor and with the county agents and community farm help committees which will be charged directly with meeting labor needs in their specific localities.

It is pointed out that the farmer in need of labor should proceed as follows: He should report his need to his county agent or to a member of the community farm help committee. If possible, his need will be supplied from lists of men available in the county. If local labor is inadequate, the county agent or committee will report to the state farm labor specialist, who, in cooperation with the state officials, will draw on the nearest available labor within the state.

A farmer who does not know the name of his county agent or those on the community committee, should make known his need to his state farm help specialist, who will direct his request into the proper channels and answer questions on farm help problems.

The supervising and state farm help specialists of the department of agriculture for the western states are given below. The grouping of the large states is temporary, as the plan contemplates appointing a state farm help specialist for each of the large agricultural states.



M. O. Evans, supervising farm help specialist, 1931 Home street, Berkeley, Cal.

Arizona and New Mexico: J. O. Miller, Las Cruces, N. M.
California: R. L. Adams, Berkeley.
Montana: T. L. Currier, Agricultural college, Bozeman.
Oregon: J. H. Brewer, Portland.
Washington: J. C. Scott, Pullman.
Colorado: D. W. Thomas, Chamber of Commerce building, Denver.
Utah: J. W. Watson, Logan.
Idaho: Specialist to be appointed.
Wyoming: Specialist to be appointed.
Nevada: Specialist to be appointed.

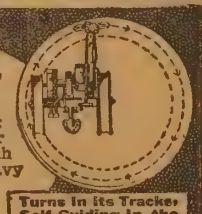
To The Washington Farmer: I enclose my check for $1 for The Twice-a-Week Spokesman-Review and The Washington Farmer. I feel that I can not afford to overlook this unusual bargain.

A. J. McLAUGHLIN.
Waitsburg, Wash.

**Makes Farm Work Easy**

IS there an **International Harvester Mogul Kerosene Engine** on your farm? This is an important question because few factors contribute more to farm life, in the way of economy, time saving, comfort, and lasting satisfaction, than the right size and type of **Mogul** engine.

You don't mind the lack of hired help nearly so much when you have a **Mogul** engine to do the chores. Morning and night it takes care of the jobs that used to be so tedious and tiresome. It does not get tired or quit just when you need it most. When you find how useful it is and how cheaply it works, you buy more labor-saving machines for it to run until it is doing all the power jobs on the place.



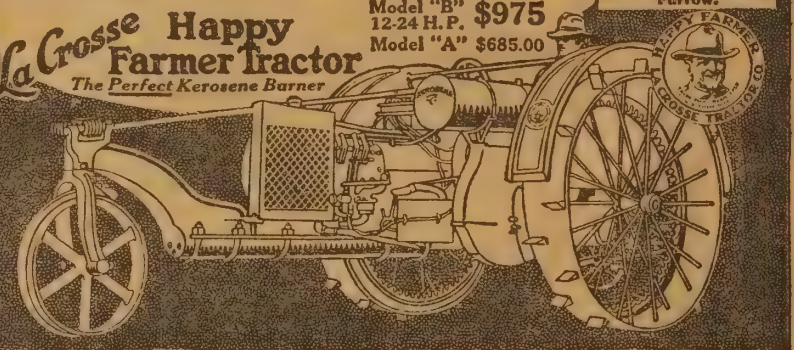
**Mogul** engines are the standard steady reliable power. They are designed, made, backed and guaranteed by a manufacturing experience that grew out of three-quarters of a century of good farm machine building. They work economically on the cheapest engine fuel you can buy—kerosene or distillate. They start easily. They run steadily. They serve you well for years.

Buy Mogul power and run your farm more profitably and with less labor. See the dealer and write us for catalogues describing **Moguls** ranging in size from 1 to 50-h. p., in all styles, for all purposes, all using kerosene for fuel.

**International Harvester Company of America**
(Incorporated)
Billings, Mont. Crawford, Neb. Denver, Colo. Helena, Mont.
Los Angeles, Cal. Portland, Ore. Salt Lake City, Utah
San Francisco, Cal. Spokane, Wash.

**Turn More Acres With Kerosene**

The difference between the **Happy Farmer** and other tractors makes the difference in the extra work you can do with it. The Happy Farmer works on kerosene without waste—has plenty of power to do all your plowing and is built to stay right on the job all through your busy season. Weight only 3800 pounds with 12-24 H. P.—a wonderful combination of heavy power with light weight. **Write for descriptive circular.**



**LA CROSSE TRACTOR CO., Dept. 18 La Crosse, Wis.**

Turns in its Tracks. Self-Guiding in the Furrow.

Model "B" 12-24 H.P. $975
Model "A" $685.00

**La Crosse Happy Farmer Tractor**
*The Perfect Kerosene Burner*

**FREE**

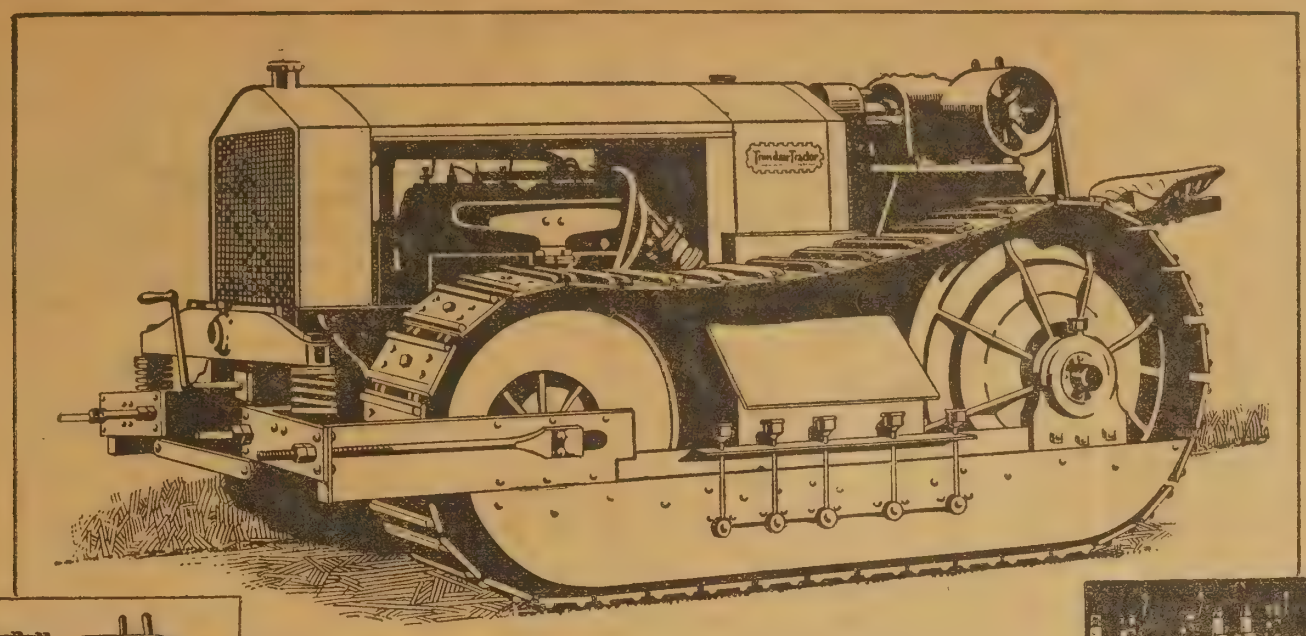
If you will write me at once, I will explain how, with little work this winter, you can secure a brand new Ford car without a cent of expense. Just one grown man in each town—no boys. Not a lottery; guaranteed by million dollar capital.
**THE SILO KING, Box 627, Sumner, Wash.**

**Just What You Want**

may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

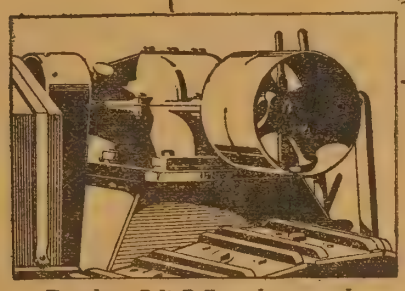
**Easy to figure the Profits**

Where in **Western Canada** you can buy at from **$15. to $30. per acre good farm land** that will raise **20 to 45 bushels to the acre of $2. wheat**—it's easy to figure the profits. Many Western Canadian farmers (scores of them from the U. S.) have paid for their land from a single crop. Such an opportunity for **100% profit** on labor and investment is worth investigation.



Canada extends to you a hearty invitation to settle on her

**FREE Homestead Lands of 160 Acres Each**



or secure some of the low priced lands in **Manitoba, Saskatchewan or Alberta.** Think **what you can make** with wheat at **$2. a bushel** and land so easy to get. Wonderful yields also of **Oats, Barley and Flax. Mixed Farming** and cattle raising. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature and particulars as to reduced railway rates to Supt. Immigration, Ottawa, Canada, or to

J. N. GRIEVE,

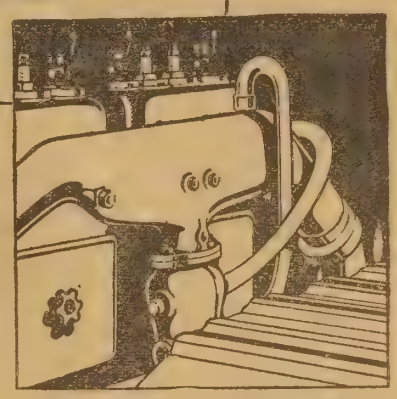
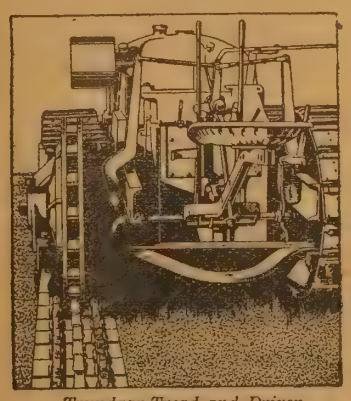
Canadian Government Agent.



160 ACRE FARMS IN WESTERN CANADA FREE

*The Trundaar Tractor meets every requirement of your farm work and has many distinctive features*

*Trundaar Belt Pulley—always ready for work*



*Mounting of the Buckeye-Deppé Integrator on the Trundaar Tractor*

# What will you look for when *you* choose a tractor?

***Experienced business farmers and tractor engineers agree on main requirements for the successful tractor. How the Trundaar Tractor exceeds these requirements***

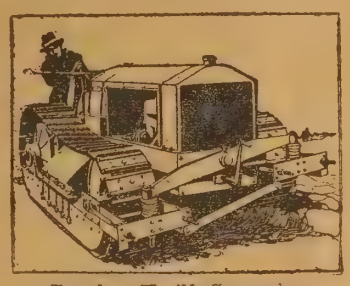
When you choose a tractor for your farm you will want a tractor that is a practical success. You will set up your own standards of tractor performance and make your own requirements to suit working conditions on your farm. So the tractor you buy must measure up to your particular requirements.

Experienced business farmers and tractor engineers have definitely outlined the features that have proved essential to success in a tractor. We believe that these will coincide with your own views on the

*Trundaar Tread and Driver*

subject. Just look them over and see:

*Positive traction without packing the soil under all sorts of conditions.*



*Perfect protection of all vital parts from dust.*

*Reliability. Ample power.*

*Economy of operation.*

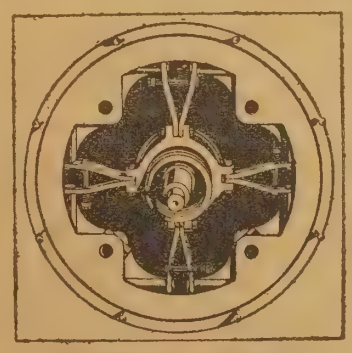
*Flexibility and ease of control.*

*Belt pulley that may be quickly connected and adjusted.*

*Trundaar Flexible Suspension*

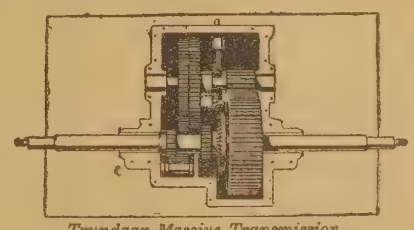
All the accumulated knowledge and experience of 23 years in the tractor industry has been built into the Trundaar Tractor.

Glance over a few of the many exclusive features that characterize this scientifically-built tractor and note how thoroughly every detail has been worked out in tests on actual farm work in every section of the United States.



**Practical engineering principles develop ideal tractor**

The patented Trundaar Tread, built on the log-chain principle, is of the endless belt type and provides positive traction at all times, under any conditions. The Trundaar Tread requires no lubrication and every link and grouser plate is instantly detachable. Its large area on the ground—2160 square inches—entirely obviates the soil-packing problem.



Every vital part of the Trundaar Tractor runs in oil and is absolutely impervious to dust.

The double three-point suspension insures maximum traction on any ground. It absorbs all shocks and strains, thus protecting the power plant.

The Trundaar Tractor is rated at 20 horsepower on the drawbar and 35 horsepower on the belt. The Buckeye-Waukesha special tractor engine is standard equipment in all Trundaar Tractors. Another feature is the Buckeye-Deppé Integrator, which makes low-grade fuel operate like high-grade gasoline.

*Trundaar Drive Clutch*

*Trundaar Massive Transmission*

The massive Trundaar transmission delivers maximum drive power to the treads and is practically wear-proof. It requires no differential.

Powerful multiple disc drive clutches control the treads—a new principle in tractor engineering that produces wonderful flexibility.

A big, strong belt pulley that may be instantly connected is fitted to the Trundaar Tractor.

We believe you will want to know more about the Trundaar. Write today to our nearest distributor for illustrated advance catalog which describes it in detail.

## Dairy Questions

### Are Answered by A. B. Nystrom

I want to know what I can do and feed to make my cows give more milk. I am now feeding good alfalfa hay with a feed of shorts at each milking. I also feed a few pumpkins and rutabagas at noon. Three weeks ago I began feeding bean straw, which they seemed to relish. But shortly after I stopped they went down in milk. What can I do to bring them back to normal flow?

E. S., Mabton.

Apparently you do not give the cows enough to eat and I would suggest that you feed them more succulence, such as rutabagas and pumpkins, up to 30 or 40 pounds a day. Cows can not do their best, unless they have a liberal allowance of such feed. In addition give them all the alfalfa hay they will clean up and one pound of bran for every three pounds of milk produced. I do not believe the bean straw produced any ill effects. If you still have some to feed I would use it in supplementing the alfalfa.

**Apples for Succulence.**

Are apples injurious to the milch cows? Have just been told so; but have been feeding a little right along with the rest of the feed. If they are good how much should be given to each cow, also how much each of mangles, rutabages, shorts and bran with good clover hay to make a good ration? Have intended the mangles for the fore part of winter and rutabagas for the latter part of the winter. A. N., Rochester.

Apples are not injurious when fed to cows. When cull apples are available it is good economy to use them for succulence, especially when other succulence is scarce. They will not cause the cow to dry up as is often supposed, unless she is given nothing to eat but apples, in which case it is the lack of food material rather than any injurious effects that cause the cows to dry up.

Apples have about 40 per cent of the feeding value of corn silage. When used with the other feeds you have mentioned feed all the clover hay the cow will eat and from 35 to 45 pounds of apples, mangles or rutabagas. For a grain ration feed one pound of apples for each 3 1-2 to 4 pounds of milk produced. I would advise you to eliminate the shorts as it does not add anything to your ration except a price.

### FIGURES PROVE FACTS

#### Purebred Sires Improve Herd

The Carnation Milk Products company of Seattle is sending to its patrons a little pamphlet bearing on its cover these words:

"Subject—Pure Bred Sires. If you have never gone into the subject of pure bred stock we earnestly request your attention to the official statement on pages 2 and 3 of this folder. It is true this test was made in Iowa, but it will hold good in this dairy section."

The inner reading matter of the folder contains the tabulated results of an experiment carried out upon a scrub herd by the Iowa experiment station.

Pure bred bulls were mated with scrub cows and the resulting heifers were bred back to approved bulls of the same breed as were their sires.

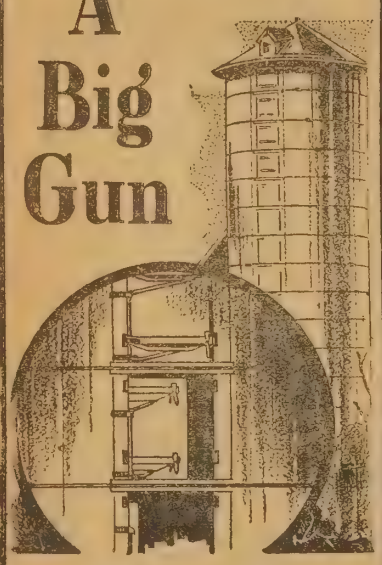
Here is what happened: The first generation of heifers all showed a remarkable increase over the herds of grade cows from which they were descended. In the case of heifers out of pure bred Holstein bulls mated with scrubs, this increase was 94 per cent in milk and 62 per cent in butter fat. The daughters of pure bred Guernsey bulls, mated with scrubs, increased their dams' average 11 per cent in milk and 17 per cent in butter fat. Heifers sired by pure bred Jerseys when mated with scrubs increased their milk production 39 per cent and their butter fat production 54 per cent over their dams.

In the second generation of daughters out of pure bred sires, the increase in productivity was enormous, the daughters of Holstein sires again heading the list with an increase of 245 per cent in milk and 168 per cent in butter fat. The increase of the other two breeds, while less than that of the Holsteins, was very large.

To complete the work begun by the publication of these figures the folder closes with the announcement that the Carnation company will furnish information to inquirers who desire to purchase pure bred sires, either Holstein, Guernsey or Jersey.

### Finishes Remarkable Record.

Star of Ashburn, one of the good Jersey cows in the J. M. Dickson & Son herd at Shedd, Ore., on December 13, last, finished a really remarkable record. She began at 4 years and 2 months of age, was only on test 347 days and produced 727 pounds of fat, or 855 pounds of butter. This puts Star of Ashburn in the gold medal class, but that tells only a part of the story. She was only milked twice a day, had ordinary herd care and her maximum feed of concentrates was only 12 pounds a day. On her 347th ay she stepped on her teat and cut the milk duct open. She was then giving two and one-tenth pounds of



fat a day. There is no reasonable doubt that had she continued 365 days she would have produced 900 pounds of 85 per cent butter.

H. A.

**Smallest Known Bird.**

The smallest known bird is a Central American humming bird that is about the size of a bluebottle fly.

# Every Silo's A Big Gun

Americanism stands for action; for deeds, not words. The SILO on your farm means that you are doing things—doing your best to win the war.

## A WEYERHAEUSER SILO

on your farm you can point to as one more proof of American food efficiency—every Silo is just one more big gun pointed against the enemy.

Remember the Air-tight door of the Weyerhaeuser Silo—it is important!

Don't Order Too Late.

Everett, Wash.

# Three Important Reasons For Buying a NEW DE LAVAL CREAM SEPARATOR At Once

THERE are three very strong reasons for the immediate purchase of an up-to-date De Laval Cream Separator.

In the first place, a new De Laval machine will now save its cost in a few months—in more and better cream and butter and in time saving—at the present very high butter prices and great need of every minute of time.

In the second place, the patriotic duty rests upon every producer of butter-fat to save every ounce of it, and nothing is of greater food value to a nation at war. All European countries are encouraging the sale of the best cream separators in every way possible.

In the third place, railway delays are such that you can't depend upon quick delivery, and if you don't order your De Laval now there is no telling when you can get it. Moreover, the supply of labor and material is uncertain and all last year De Laval deliveries were nearly two months behind.

Again, De Laval prices have advanced very little thus far but must go higher if present industrial conditions continue, let alone become more difficult. Present prices hold good until March 1 only.

There was never a time when the immediate purchase of a latest improved De Laval Cream Separator was more important to every one separating cream, or when it could less wisely be delayed.

See the nearest De Laval agent at once. Arrange to try a new De Laval machine for your own satisfaction. See for yourself just what it will do for you. If you don't know the nearest agent simply address the nearest general office.

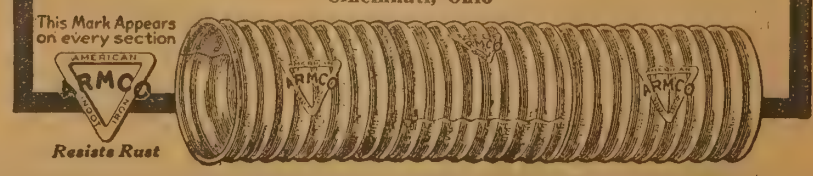
A Load of Culverts that went to One of Our Allies

# When War Makes Time Precious and Labor Scarce

Governments turn to culverts that can be bought ready-made, shipped promptly, and installed quickly by unskilled labor.

## "ARMCO" IRON CORRUGATED CULVERTS



not only meet all requirements as to speed of delivery and ease of installation but they fulfill every demand for endurance and strength. The iron used in "Armco" Culverts is remarkable for its purity and evenness. If you have ever pulled an old hand-wrought nail out of a building that has stood for years, you will know that pure iron endures.

"Armco" Iron Culverts last for years and years without a cent for cost of maintenance. Not affected by frost. Stand up under heavy loads. Withstand spring freshets. Measured in terms of service they are an investment—not an expense.

# National Commander-in-Chief Is Needed for Food Production

There is perhaps greater agitation in the public mind over other problems today than there is over that of food production. Coal transportation, the work of the war department in handling and equipping and transporting troops and food conservation are those most strongly urged before the public. But the problem of food production is the one most vital problem before the world today if this war continues even as much as one more year. These other things are important, desperately important, but if food production should fail, it would make no difference whether troops were armed or transported to Europe or not.

Here are further letters received by the Farmer in its campaign for the appointment of a national food production administrator for the period of the war, to do for food production what Herbert C. Hoover is doing for food saving:

**A Monster Problem.**

AGRICULTURAL COLLEGE OF UTAH, LOGAN.—To the Editor: I am very much in sympathy with your telegram to President Wilson. Certainly, if we are to maintain our production, something must be done to retain boys on the farm. The nation is confronted with a monster problem, this great war, but if "Food Will Win the War," its production must be increased and the experienced men on the farm will, no doubt, be more valuable on the farm than in the trenches, provided they can be made to realize the significance of their work and inspired by a knowledge that they are actually engaged in the war, produce to the utmost the vital necessities of the nation.

I have pleasure in quoting the words of a resolution adopted at a very representative assembly of the citizens, largely tillers of the soil, in attendance at the Farmers' Round-up and Housekeepers' conference of the Utah Agricultural college, as follows:

"Resolved: That we, the farmers and housekeepers of Utah, assembled at the Utah Agricultural college, Logan, Utah, pledge to the national and state food administration our unqualified support of every measure adopted, and every measure necessary to adopt in the future, in meeting the serious and critical issues which are now ahead of the nation, and we pledge to suffering humanity the maximum production from our fields and the maximum conservation in our homes.

"Unanimously adopted."

Every effort is being made to keep men on the farms to urge increased production during the coming year.

E. G. PETERSON, President.

**Is Much Interested.**

HOUSE OF REPRESENTATIVES, Washington.—To the Editor: I have been very much interested in reading and considering the articles enclosed with your letter of January 1, concerning food production during the war.

BURTON L. FRENCH.

**Will Push It Along.**

H. C. McCartney, treasurer of the Bull Tractor company of Minneapolis, Minn., writes:

"To the Editor: I have your letter of January 2d, enclosing copy of telegram sent to President Wilson asking for the immediate appointment of a national war-time food production administrator. This certainly appeals to me, and I will be pleased to push this along in any way possible and will write the chairman of our state council of defense.

"In April of last year I took this

(Continued on page thirty-four.)

## Coordination in Food Production

Colonel Clarence Ousley, assistant secretary of the United States department of agriculture, told the farmers gathered at the state university at Moscow, Idaho, the other day, that the tens of millions of people in England and France had not had a full meal for two years, having used up their surplus of food during the first year and a half of the war. This tremendous fact is sinking more and more deeply into the minds of the American people every day. The grave need of greater food production in the United States this year already has aroused the nation as a whole. Chambers of commerce, great railroad companies, banking and other great business enterprises, are making it a part of their business to help devise ways and means for increasing food supplies. The public school systems of these 48 states are doing more to put a punch into home gardening and other ways of increasing food production than ever before. The national department of agriculture itself, with its thousands upon thousands of employes, with the county agents, with food production evangelists traveling into every nook of the country, and backed by millions of emergency funds, is arousing the people to this great need. The farmers are awakening up on this matter. As was shown in our columns last week most of the farmers are planning to raise more wheat, more barley, more rye, more beef and dairy cattle, more sheep and hogs. All of these developments demand coordination, else there will be a tremendous waste in duplicated and inefficient work. Never was there a greater need for a national war-time food production administrator than at this very moment. This is indicated clearly by the following communication to the Farmer by Governor Lister of Washington:

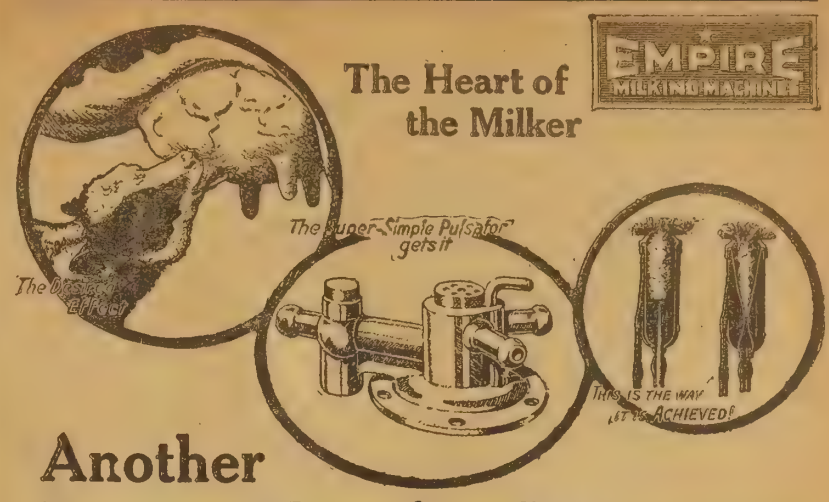
To the Editor: Regarding the campaign you are making for the appointment of a National War-Time Food Production Administrator, I would say that the appointment of a person to cover that matter would in my opinion assist materially in coordinating the energies of those who are now engaged in this most important line of activity. There is no question regarding the need of great food production. The plan you suggest ought to be of material assistance in bringing it about.

*Ernest Lister*
Governor.

*Raise Your Calves on*
**Blatchford's Calf Meal**
***and Sell the Milk***

More calves have been raised on Blatchford's Calf Meal than on all other milk substitutes combined.

100 lbs. makes 100 gallons of milk substitute, costing only one-third as much as milk.



Prevents scouring and insures the early maturity of sleek, handsome calves.

It is steam-cooked and no trouble to prepare or use.

**Write for Pamphlet** "How to Raise Calves Cheaply and Successfully with Little or No Milk." At dealers, or Blatchford Calf Meal Co., Dept. 58 Waukegan, Ill.

**SPOKANE SEED CO.**

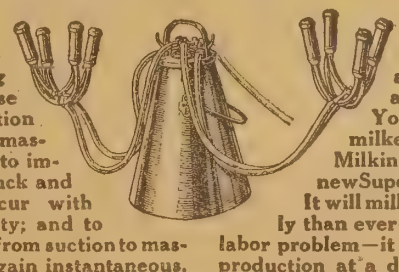
SPOKANE, WASH.



**Another Battle Won for Dairymen**

**FOR months we have been experimenting—investigating—testing—fighting, to find a way to make the Empire Milking Machine, already the unquestioned leader, still more efficient for the dairy farmer.**

**The battle is won.**

**We have given the milking machine a new heart—the pulsator is the heart of the milking machine—and the result of our experiment, the new Empire Super-Simple Pulsator, is the most wonderful development since the invention of the Empire—the competent milking machine.**

To be successful a milking machine *must* have a perfectly acting pulsator to cause the alternating action of suction and massage on the teats (to imitate the calf's "suck and squeeze") to occur with absolute regularity; and to make the change from suction to massage and back again instantaneous.

The Empire Super-Simple Pulsator, the pulsator without a piston, does that and more. It really is *Super-Simple*—so simple that it can be taken apart and put together again in less than two minutes. It has but five moving parts; nothing to wear out or "get out of gear." It cannot lose vacuum, so its action is perfect.

It places the Empire Milking Machine immeasurably in advance of all competition. Your cows should be milked by an Empire Milking Machine with the new Super-Simple Pulsator. It will milk them more rapidly than ever—it will solve your labor problem—it will increase milk production at a decreased cost; it will transform milking from drudgery into a pleasant chore.

Our factory is overtaxed by the increased demand for Empire Milking Machines, so go to your dealer at once, see the new Super-Simple Pulsator and tell him to order your Empire outfit without delay; or write for Catalog No. 48

E. J. IDDINGS, Editorial Contributor

# Digestive Tankage

Replying to an inquiry about digestive tankage, Professor E. J. Fjelsted, assistant professor of animal husbandry at the O. A. C., writes:

"Digestive tankage is a feed very high in protein. The highest grade of this material analyzes about 60 per cent protein. It is a product of the packing industry, being made in the following manner: They take the scraps, blood and certain parts of the animal, place them in a steam chest and subject them to a very high temperature. After this they are thoroughly cooked in order to increase digestibility and remove any danger of disease. The mass is then dried and ground.

"The feed is very concentrated and rather expensive, so it must and should be fed in comparatively small amounts in proportion to other feeds. For best results it should be fed as follows:

"For fattening hogs, feed about 5 per cent of your grain ration digestive tankage; for growing pigs, from 7 to 9 per cent. Maintaining sows over winter can stand from 10 to 12 per cent economically. One pound of digestive tankage in a combination of this kind will replace about three pounds of grain. Digestive tankage at from $90 to $100 per ton would (fed properly) equal either barley, wheat or corn at $30 per ton.

"We have been able to get the best results with our hogs by feeding about two-thirds barley and one-third shorts with from three to five pounds of digestive tankage for every 100 pounds of the combination in feeding fattening hogs."

## Hogs on Mt. Angel Farm.

Mt. Angel College farm, St. Benedict, Ore., that turns off a good many fat hogs, usually at a profit, has this winter been feeding ground barley, middlings, and about 7 per cent tankage or fish meal, with excellent results. Cull potatoes, raised on the farm, are also used.

Father Boniface, who manages the hogs and poultry, is a Duroc-Jersey fancier. Pacific Golden Rod, purchased from Doerfler Brothers, is being used as a herd sire. Will Advance III., another of the Harvey line of breeding, is one of the foundation sows and she was bred to Orion Top Col. of Charles Hoover breeding. Both purebred and grade Durocs are kept and when I was last there 11 registered breeding sows, all good ones, were in the hog lots, besides a lot of grades nearly ready for the butcher. H. A.

# Veterinary

Dr. S. B. Nelson

**Diarrhea**—I have a 14-year-old mare that is troubled with diarrhea a great deal. I had a veterinarian extract two loose molar teeth about 18 months ago and float her teeth. About a month ago he extracted another loose tooth, but this time it did not do any good.—J. M. Burley, Idaho.

Try giving your horse one teaspoonful of listerine in a little water morning, noon and night. It may not be possible to do very much for a permanent cure for an animal of this age.

I have a mare that foaled a colt last April. Both of them have highly colored water and they strain and pass small quantities of water at short intervals. F. C. S.
Monkland, Ore.

Give your mare one teaspoonful of tincture of iodine in her drinking water once daily. Also give the mare on her feed morning and evening a half a teaspoonful of salt with a teaspoonful of sodium bicarbonate. Give this for three, four or five days as necessary.

**Teat Is Injured**—I have a cow that has a hole half way up one teat. When she is milked the milk comes out of this place. W. C.
Fangollano, Ore.

The treatment for your cow is to put a harnessmakers's stitch through the side of the teat at the middle between the outside and inside opening. That will close the middle of the hole. Then make the outside wound sore, scraping it with a fine knife, washing it thoroughly with hot water and a 1 per cent solution of lysol. Then put in two fine stitches on this outside opening. Cover the stitches with boracic acid and pour collodion on it so as to keep it airtight until it heals. This is the only way that these types of injuries to the teats can be in most instances successfully treated.

**Horses Have Worms**—I have several horses which have been troubled with worms. Can you give me some reliable remedy? What are the symptoms? How does a horse act which has been foundered at some time or other? L. C. H.
Hingham, Mont.

The treatment for worms runs along two lines. One to kill the worms and then flush them out of the system, the other one to stupefy the worms and then flush them out.

The first treatment necessitates that one should know the specific parasite and use certain drugs that are nearly specifics. As you have not made this clear I can not give the treatment.

The second treatment will cover many of the cases although not all, and is therefore the best all around treatment, and although some people seem to not know the value of it, yet my records show that it has been a very valuable one and is as follows:

Give the horse two drachms of powdered iron sulphate on his grain night and morning for a week. Then miss one meal and before the next one give him from one to two ounces of turpentine well shaken up in one full quart of linseed oil, given as a drench.

**Work Horse Sick**—I have a work horse 12 years old that has been sick for a week. He does not eat, but stands with his head down and once in a while he throws his head up. When I turn him loose he goes and lies down, but does not kick, paw or thrash around any. The pain seems to be located in his bowels or stomach, for he sometimes looks around at his side. He seems to pass water as usual and his bowels move. Some horses around have mountain fever. F. W.
Greer, Idaho.

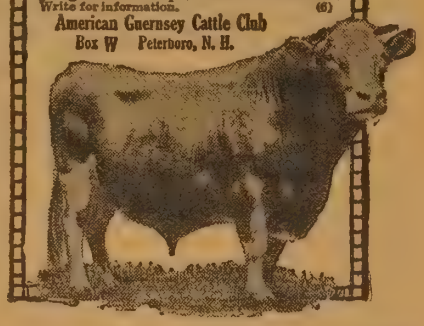
Give your horse all the water that he wants to drink. Do not feed him anything to speak of at the present time. Give him each morning one pint of raw linseed oil and at night three-fourths of one pound of Epsom salts in two quarts of water. At noon give him one ounce of compound tincture of gentian in one pint of water. I do not think that your horse has what is known as mountain fever among horses.

**May Be Lice**—I have a few horses that bite themselves and rub against anything and blemish themselves, appearing as if they have lice. P. P.
Opportunity, Wash.

Your horses may be affected with some one of the external parasites which sometimes attack horses, such as mites, lice or the manger mite. The use of a tobacco solution bath or a bath of a 2 per cent solution of any of the coal-tar disinfectants might be of value. For the tobacco solution get a quantity of tobacco stems and boil them until the solution is a light brown and use on a warm, sunny day. Use the coal-tar product wash the same. The solutions had better be used warm since it sometimes makes a difference in treatment as to which parasite is to be destroyed. I would suggest that you consult your local veterinarian and let him determine the exact cause of the trouble for you.

## Save Orphan Lambs.

To the Editor: Spring is or will be coming soon, and then comes lambing time. I noticed in the papers that the government is calling attention to the shortage of meat and advocates meatless days. Now, as stated above, lambing time will soon be here and it is time right now for us to wake up and stop this useless killing of orphan lambs. I am sure that at least 10,000 little orphan lambs died last spring for want of care which would have been taken care of if the sheepmen would sell them to the farmers. At least half of this amount could have been saved, but the sheepmen would not sell them for love or money. They would rather kill them than see the farmers raise them. I think it high time to call the attention of the food administrator to this and stop this willful slaughter of lambs. I for one would be willing to buy some or take them and raise them on shares.
ERNEST A. MESSNER.
Wendell, Idaho.



**130% More Butter Fat Than Their Scrub Dams**

A Guernsey bull in Iowa has daughters that are producing 130% more butter fat than their scrub dams.
A grade Guernsey in New York made 943.75 lbs. of butter in a year and a profit of $157.13 above cost of feed.

**Use a Guernsey Bull**

Don't sell your scrub cows for beef. Breed them to a pure bred Guernsey bull. The resulting heifers will produce from 25 per cent to 100 per cent more than their dams. Guernseys give greatest return per dollar invested in feed. Write for information. (6)

Box W Peterboro, N. H.

**-: AN INTERESTING SHORT STORY :-**

We cannot prepare any better advertisement for

**GOMBAULT'S CAUSTIC BALSAM**

than the following voluntary testimonial from a man who stands very high in all business and social circles where he is known:

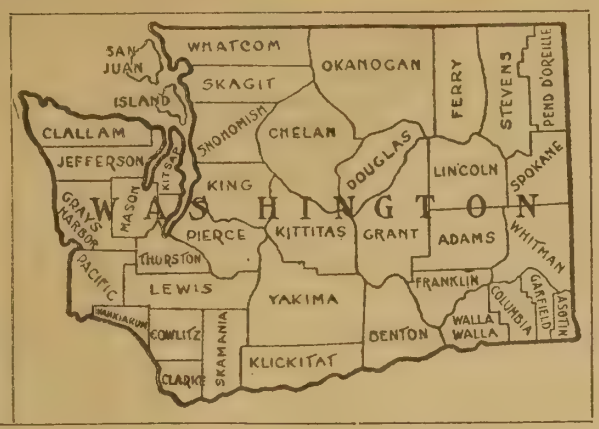
No. 2131 Wyoming Avenue, Washington, D. C.,
November 26, 1917.

The Lawrence-Williams Co.,

Dear Sirs:—I have had GOMBAULT'S CAUSTIC BALSAM constantly in my home for thirty-three years and have used it for a large number of animal and human ailments. It is by far the most effective, reliable and economical medical preparation that I have ever known. Its persistent use for chronic rheumatism, lumbago, neuritis and kindred troubles bring sure relief. For sore throat, pains in chest and acute cramps it penetrates and relieves pain. For mosquito bites, bee stings and bites of all other vermin it instantly stops all irritation. For itching between the toes and on limbs, it is an instantaneous cure. For fresh cuts, wounds and old sores, it eliminates all danger from blood poisoning and hastens a cure. A few drops of CAUSTIC BALSAM is more effective than half a bottle of any other application that I know of.

Truly yours, M. J. LAWRENCE.

**GOMBAULT'S CAUSTIC BALSAM** has had a steady, reliable sale in France, where it is made, for forty-five years. In the United States and Canada, with only moderate advertising, it has had an increasing sale for thirty-five years. The demand is produced strictly by its merits. Price $1.50 per bottle. Sold by druggists, or sent by Parcel Post on receipt of price. Guaranteed to give satisfaction. For further particulars and unlimited testimonials, address



**The Lawrence-Williams Co., Cleveland, Ohio**

# What Does It Cost to Make Pork?

## The Cost Per Hundred Is Estimated at from Ten to Twenty Dollars; Ration Feed Appears To Be Determining Factor.

SOUTH BEND, Pacific county, Wash., Feb. 1.—Dairymen are receiving 56 cents for butter fat and $3 per hundred for milk. Bran is $38 a ton and shorts $40, beef from 15 cents to 20 cents per pound. Poultry raisers pay $4.50 a sack for scratch feed and are receiving 50 cents for eggs on the local market. The dealer gets 55 cents. Potatoes are one and a half cents, wholesale, and the dealer is receiving two cents for them; cabbage, carrots, rutabagas and turnips average the same. Home grown apples sell at $1.25 and $1.50 a box. Butter is shipped in; almost the entire amount consumed is shipped in from other counties. Lots of cheese is made here and a great deal of condensed milk is used and meat also, which is shipped in from outside. Poultrymen are able to supply the local markets. Vegetables are nearly all home grown, with the exception of early varieties. Every year the dealers buy a couple of carloads of Eastern Washington apples to supply the demand. Butterfat, milk, and often meat are shipped to distant points. One farmer who raises more pigs than any one else around here estimates that it costs $18 to raise a pig until it weighs 100 pounds. He uses the by-product of his cheese factory to feed them on. January was a mild month for midwinter, but toward the end, the weather grew colder and on January 31 the thermometer registered 22 degrees above zero, the coldest this winter. The grass grew a couple of inches during the month. The ground is quite wet and soggy for spring plowing. Hay is scarce and the farmers look forward to an early spring.

MRS. WINNIFRED BUCKINGHAM.

### Costs 15 Cents to Raise Pork.

LA CROSSE, Whitman County, Feb. 2.—Market conditions are quite steady and uniform. The farmers have very little produce to sell, as a rule, although nearly all have some eggs and butter to market when they are not in market for it themselves. Eggs remain steady at 50 cents per dozen, potatoes retail at $1.75 to $2 per hundredweight, hogs, live weight, are 15 cents per pound, steers seven to eight cents and cows five and one-half to six cents per pound. I would estimate from personal experience that it would take, ordinarily, from four to five pounds of dry grain feed to produce one pound of pork. If one figures high cost value of wheat and barley, adding cost of equipment and labor, a pound of pork will cost 15 cents. The exceptionally warm open winter came to a sudden end January 30, when a strong north wind caused the temperature to drop to five above zero. The ground was blown bare and winter wheat had its first siege, but I believe it is still unhurt.

M. E. SCHRECK.

### Feed Potatoes for Cheap Pork.

MARIETTA, Whatcom County, Wash., Jan. 28.—Farmers about this time receive $20 per ton for potatoes, $60 to $65 per ton for wheat, $43 to $45 for oats and $51 to $55 per ton for barley. The retailer generally gets $30 per ton for potatoes, $80 for wheat, $55 for oats and $70 for barley. Most of the farm produce here is marketed locally. By feeding small potatoes and mangels and waste from the farm, farmers should be able to raise 100 pounds of pork for $10. Some farmers are waiting for a few days of nice weather the ground being soft and ideal for plowing. It begins to look in some sections as if winter were over, as many buds are coming on the bushes. Right in this section, however, there has been very heavy damage done by the recent high water, and it will take months of hard work to put some of the farms back in a good condition.

S. B. HAYHEW.

### Twelve Cents to Make Pork.

GIG HARBOR, Pierce County, Wash., Feb. 1.—With the exception of some of the small fruits grown quite freely about here, our market may be termed a purely local one—mainly in the city of Tacoma. Prices for such of our products as are to be marketed at this season of the year, are undeniably good, with the exception of the potato, for which there can hardly be said to be a market. Eggs for some days back have brought upwards of 50 cents per dozen, dairy butter 50 cents, butter fat about 53 cents, dressed pigs 18 to 20 cents, live hens 24 cents. We are paying $1.70 for quarters of flour, oatmeal, cornmeal, graham and other like flours about 20 per cent advance on this price; shorts $37 per ton, bran $33 to $34 per ton, scratch feed $74 per ton, oats $65 per ton, barley about the same when it is to be had; alfalfa hay $29 per ton, timothy hay $38 per ton.

Farmers about here who have to buy the bulk of their concentrated feeds but have potatoes and roots to boil and use with them, consider that it costs about 12 cents per pound to make pork. Up to yesterday's severe freeze the weather has been unprecedentally mild, with grasses and grains making quite a steady growth. Just what effect this freeze will have on such winter grain as is grown here can not yet be determined. There has been heavy rainfall, and there should be a good store of water with which to make next season's crop.

W. D. BOYNTON.

### No Demand for Potatoes.

RAINIER, Thurston County, Wash., Jan. 29.—Weather is mild with plenty of rain. Winter grain is growing right along. Some plowing is being done. No demand for potatoes, but many farmers have not sold 500 pounds of potatoes since last fall. Eggs sold locally at 45 cents a dozen. Most of the products are shipped out to distant points. Milk is shipped to the condenser at $3 per hundred pounds, and a number of farmers are shipping milk to Camp Lewis through the Thurston County Dairy association. The farmer pays, retail, $1.15 for a 60-pound sack of bran, $1.65 for 80-pound sack of shorts and $1.85 for a 90-pound sack of shorts. Scratch feed is $4.50 per hundred pounds, flour is $2.80 for a 49-pound sack, creamery butter is 60 cents a pound. The dealer will sell 45-cent eggs at 50 cents a dozen. Potatoes are from 1-4 to 1 cent per pound over what he pays, according to the season. There are a good many porkless days for the people now. Very few hogs here, and young 6-weeks-old pigs are worth $5 to $7 each. I do not think there are as many calves vealed as there used to be. The dairy farmer is raising what he needs of heifer calves and there is a good demand for the rest of his calves at fair prices to stock raisers. The calves are sold when from three to five days old.

L. F. DAVIS.

### Want Coast Wheat Price.

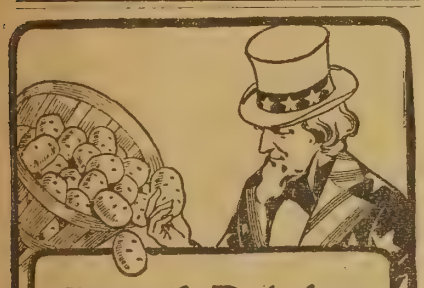
EPHRATA, Grant County, Wash., Jan. 30.—This is especially a wheat country and the problem that interests the farmer as much as any one thing at the present is whether labor will be available for the planting and harvesting of next year's crop. The farmers are much interested in having a primary wheat terminal established on the Coast. They consider this one of the most important things at the present time to be done to increase wheat production. The big percentage of the wheat in this county is already handled in bulk and the problem of sacks does not interest so much as getting a price for their wheat based on the Coast, instead of some eastern market. There is about as much moisture in the ground at the present as is usual at this season of the year. However, there is no snow on the ground and if a heavy snow fall comes there is apt to be considerable run off because the ground is frozen and will not take moisture when the snow melts. Live stock is in much better condition than it has been at this season of the year for two years. Very little feed has been given them, as the range has been open all winter and cattle have been able to make a very good living without feed.

H. W. REAUGH.

### Get Together.

WALLA WALLA, Walla Walla County, Wash., Jan. 26.—I consider the most important problem for our or any community is the getting together of the people in thought and action supporting the national government in word and deed. The crop prospects are fine for this section. Live stock is looking fine and prices of hay have decreased. We believe that the state college is doing a fine work and is being well patronized from this district.

W. A. RITZ.



### Stock Wintering Well.

GRANDVIEW, Yakima County, Wash., Jan. 27.—The mild and rainy winter will be splendid for wheat and also for summer fallow. Not as much hay has been fed this winter as usual and live stock is looking good. There has been but little interest in the winter course. I hope there will be more interest when the demonstration farm is started near Prosser.

# The Feed Question

The placing of a maximum price on bran and shorts has created an unusual demand for them among poultrymen and dairymen. Farmers are feeding more bran and shorts and less oats and barley. The action of the food administration in reducing the price of these mill feeds has been a distinct advantage to poultry raisers. The price of bran and shorts would probably be $10 a ton higher than it is now but for this action. Oats and barley are now about double the price of the wheat by-products and as a consequence farmers are selling oats and barley that they otherwise feed to stock and buying bran and shorts.

But bran and shorts are not in sufficient quantity to meet the demand. The food control price therefore has not been of as much advantage as it would have been had there been a sufficient supply. One mill in the northwest is turning out 200 tons of bran a day, but if all the mills could double their output there would be ready sale for it. If farmers can not get what they want since the price was reduced, it is because there is not enough to go around.

What the poultrymen need now and need badly is a supply of cheaper corn. It would seem that the corn farmers should be regulated just as the wheat farmers are. At any rate a reasonable maximum price on corn, a price that would permit it to be laid down in this state at $60 a ton or less, would be a fine thing for the poultry raisers.

Large quantities of bran and shorts may be fed to advantage, but the more bran that is fed the more corn is needed to balance it. With cheaper bran and cheap corn the increase of eggs and poultry which the government is calling for would be assured. The best way to secure an increased production is to lessen its cost.

Meantime poultrymen will lessen their feed bills by feeding more bran and shorts if they can be obtained. About as much bran and shorts by weight as of whole grain may be fed. Bran and shorts may profitably replace whole grain up to 50 per cent of the ration.

The price of corn at this writing, January 28, is about $76 a ton at Portland, kiln dried. That is more than the price of wheat. It requires patriotism for the farmer to sell his wheat and buy corn at a higher price.

J. D.

# Soft Shelled Eggs

To the Editor: Should like to know cause and remedy of chickens dropping soft shell eggs at night. They have a large area of ground to run over. I would appreciate any information you can give me on the way to get best results from chickens.

S. V. D.

Friday Harbor, Wash.

Eggs that are laid with a thin shell or soft shell or without any shell, according to some recent investigations, are not due to a lack of calcium, lime, in the feed. It was found at the Wisconsin station that a lack of calcium did not cause soft-shelled eggs, the hen apparently drawing upon her skeleton for the lime. The number of eggs laid, however, seemed to decrease. If she doesn't get lime enough she will not lay the eggs. The trouble is probably due to some deranged condition of the egg organs or to a lack of vigor. A heavy laying hen uses a large amount of lime to cover the eggs with the shells and the ordinary foods do not furnish lime enough for the purpose of heavy production. It has been found that oyster shells furnish the lime in most available form, and all good poultrymen feed oyster shells. The best plan is to keep a box or hopper of broken or ground oyster shells before the fowls all the time. Clam shells may also be used, but are not as valuable as oyster shells, but will serve the purpose.

In other respects a good ration should be fed. That means a variety. Barley and oats, or corn and oats and barley, for whole grain, fed in such a way as to keep the fowls as busy as possible. Feed the grain in a deep litter of straw twice a day so as to keep them exercising, and that means keeping them in good health and vigor and with less trouble from thin or soft shells. A mash should also be fed, either dry or moist. If fed dry it should be kept in a hopper all the time so the fowls can help themselves at will. It may be composed of about the following materials: Wheat bran, 3 parts by weight; middlings or shorts, 1 part; ground corn, 1 part, oil meal (either linseed or cocoanut oil meal) 1 part, and meat scrap or fish scrap, 1 part. If the mash is fed moist use buttermilk, preferably, for moistening it or water if milk is not available. Use about as much milk by weight or a little more as of mash, and mix to a crumbly consistency. Feed it either first thing in the morning, all they will clean up in half an hour, or feed it as the last feed of the day, all they will eat. If fed moist do not put the meat scrap in it, but feed this in a separate hopper where the fowls can help themselves at will. Give all the green food they will eat and keep charcoal, grit and shell before them all the time in separate hoppers. Feed in such a way as to keep the fowls as busy as possible, at the same time giving them all the food they need, and there will be little trouble from soft shell eggs.

J. D.

## Catarrhal Roup.

To the Editor: I have kept hens for more than 40 years, but now I have something I do not understand. Have had trouble about one year. Some of them always shake their heads exhaling air through the nasal passage and one of them when doing that utters a short chip sound. They are out of sorts when so troubled. However, some of them recover without treatment. Others finally act as with roup. None have died. A SUBSCRIBER.

Hillyard, Wash.

The fowls are no doubt suffering from a form of catarrhal coup. Try dipping the head of the fowl in a 2 per cent solution of permanganate of potash. Hold the head in the solution for quarter of a minute or long enough so as not to strangle the bird. Repeat this two or three times, or twice a day for two days.

J. D.

## Turkey Raising Information.

To the Editor: Will you kindly inform me where I may obtain instruction in the way of a book or literature on "Turkey Raising?"

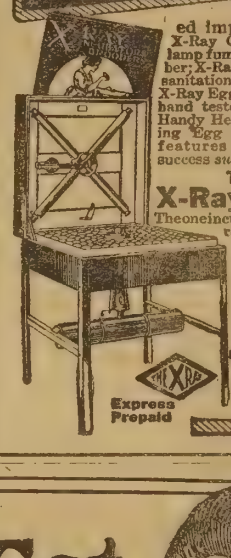
R. E. M.

Coeur d'Alene, Idaho.

For a treatise on turkey reasing write to the United States department of agriculture, Washington, D. C., for a farmers' bulletin on that subject. This is a recent bulletin and covers the subject very thoroughly. Copies could no doubt be secured also by addressing a request to your congressman.

J. D.

## Longer Hours for the Hen.



W. C. Tuhrlow, residing on a small tract in the Montavilla district near Portland, has a flock of bred-to-lay White Leghorns that have been laying 60 to 70 per cent a day during December and January. That is excellent laying. He uses artificial lights in the poultry houses in the morning and evening and he believes that the lighting is responsible in part at least for this good egg yield. A number of northwest poultrymen are using lights this winter and the reports seem to be favorable. The purpose of the lights is to give the fowls a longer working day in winter. On the Baker & Mart farm at Beaverton, Oregon, artificial light is used for a flock of 1000 hens.

J. D.

### Mineral Wool.

An American firm operating in Australia has started works near Melbourne for turning the local basalt into "mineral wool" for use as an insulator in packing machinery and ice chests and as a substitute for asbestos.

1918 Features that Assure Good Hatches

Twenty patented improvements in all. X-Ray Gas Arrestor prevents lamp fumes entering egg chamber; X-Ray Nursery Tray assures sanitation, protects little chicks; X-Ray Egg-Tester, most perfect hand tester ever conceived; Handy Height; 1918 Quick-Cooling Egg Tray — *all* exclusive features that make poultry success *sure*.

The 1918 X-Ray Incubator

The one incubator in the world that requires only one filling of oil during a batch.

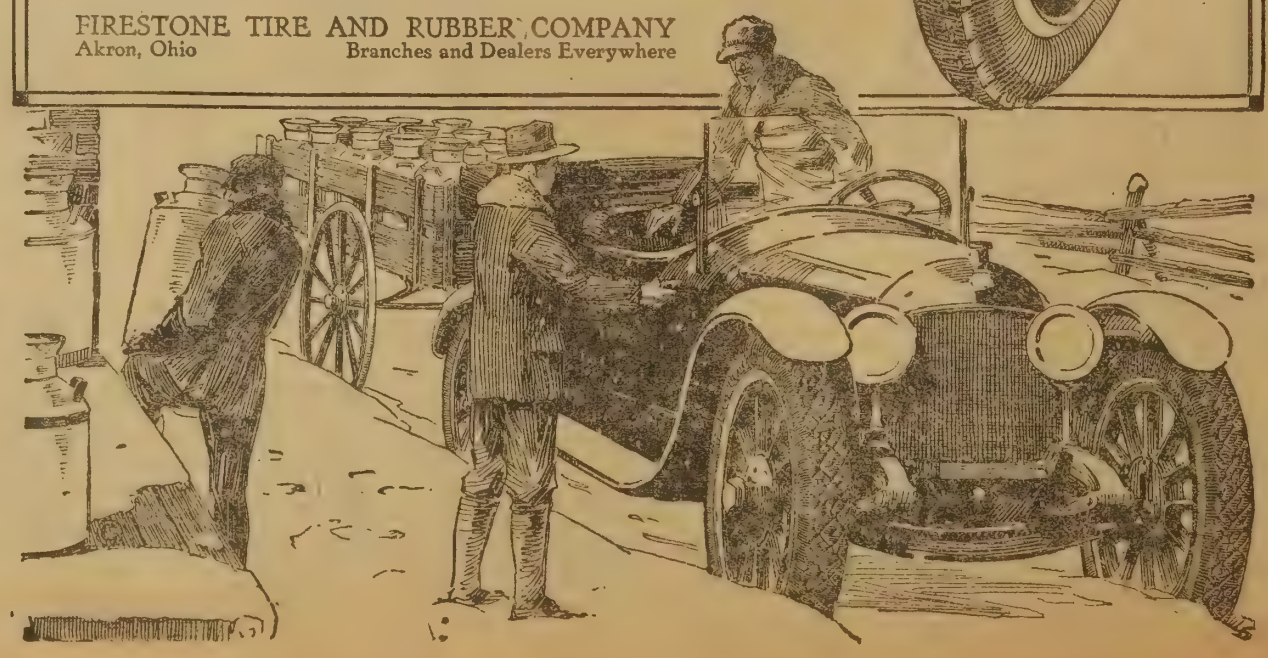
For The Men Who Get Things Done

ON your busiest days when there are certain things that must be done regardless of road or weather, then is the time you appreciate Firestone Tires. They will get you to town in comfort and on time. Over frozen ruts, sleety roads or through deep snow and slush, you can depend on

Firestone TIRES

There is economy as well as safety in the Non-Skid lettered tread. Out of that added rubber, piled high in the center, you get good-measure wear. Fuel-saving will interest you at this time especially. Unusually long runs per gallon is the rule on Firestone Tires.



*More Rubber Between Fabric Layers* reduces internal friction and heat. This extra rubber and thick cushion layer adds to resiliency and is most effective in eliminating stone bruise.

*Special Enforcement* gives strength at the bead and holds the hinge or bending point in the proper position.

Firestone Cord Tires will astonish you with their combination of lively, comfortable going with stout resistance against wear. Your dealer is ready. See him today.

## Uses Cover Crops

### Irrigates Trees With "Clover Tea"

In an address before the Idaho State Horticultural association recently E. F. Stephens, prominent orchardist of that state, cited some interesting figures and gave some interesting opinions concerning orcharding. Here are some things he says:

"R. H. Woods of Wood Spur, in the Payette valley, in 1912 packed 1295 boxes of fancy and extra fancy Ben Davis apples from apple trees making their tenth season's growth. Placing these apples in storage, he sold the crop the succeeding spring at $1.03, $1313.55 per acre, and after paying storage charges he had remaining $1056 per acre.

"In 1917 in the Stephens orchards, near Nampa, 26 orchard run boxes of Rome Beauty were picked from single trees, 1178 boxes from single acres.

"How could this be done? First, by 24 cultivations a year during the period of development. In five years the trees were grown to a size large enough to carry many boxes of apples. Next the fertility of the soil was increased by seeding to and growing clover. In the year 1916 no crop of apples on the trees, hay and clover seed to the value of $3000 was marketed.

"In 1917 the abundant crop on the trees was supported and developed by repeated cuttings of clover, which was allowed to fall on the ground, act as a mulch and also decay. Clover lying on the ground impeded the rapid passing away of irrigation water. The water was checked and compelled to soak deeply into the soil. I called this watering with clover tea. The apples now on display on the platform illustrate the superior quality of fruit grown with clover tea.

"In connection with fertile soil and suitable culture we must not overlook the important work of pruning followed by spraying with suitable insecticides. For some years I have given careful study to the question of what to spray with. My trip to the Washington state meeting this winter still further confirmed my reliance on the use of the liquid solution of lime sulphur 32 or 33 degrees Baume, and to control the codling moth the paste form of arsenate of lead, averaging in available markets 15 to 18 per cent cheaper than the powdered form of arsenate of lead."

## Make a Garden

### Make It a Part of Farm Work

Making a plea for farm gardens, E. R. Bennett, field horticulturist of the University of Idaho, declared that the people of the United States used 50 per cent more of wheat and meats in their diet than do the people of Europe. Later in the day the same point was brought out by Professor O. M. Morris of the state college of Washington, when he mentioned the fact that the per capita consumption of potatoes in Europe was twice as large as in this country. A. C. Burrell, field entomologist of the Idaho State university; W. S. Shearer, practical gardener of Lewiston, Idaho, and C. L. Smith of the O.-W. R. & N., also urged the raising of more vegetables for home use on the farm. War conditions gave a certain punch to the words of the speakers and a certain earnestness to the audience which was in striking contrast to many of the farm meetings I have hitherto attended. Here are a few scattered points from the garden day session of the farmers' week at the Idaho State university.

Do not think that you must have some sort of peculiar soil or peculiar fertilizers to grow "vegetables. Any of the common vegetables will thrive on well-prepared, well-fertilized and well-cultivated soils. Plenty of well-rotted manure thoroughly worked into the soils of the Pacific northwest is all that is needed in the way of fertilizers.

Take a sheet of paper and plan out your garden before spring work begins.

A half acre of garden should furnish half the living for a farm family the year round. It is better to have this half-acre twice as long as it is wide so as to make longer rows for cultivating with the horse. Plant early vegetables like lettuce, radishes, spinach and peas on one side of the garden, part of a row at a time so as to furnish these fresh, early vegetables right along, and later use this same part of the garden for late cabbage and other late vegetables.

It is a good plan to move the garden every two or three years to other parts of the farm, as this is one of the surest ways of keeping down garden pests.

Cleanliness, also, is one of the most effective methods of controlling garden pests. Clean off all the trash or leaves and weeds and burn them up especially in the fall.

Cultivate often, keeping a dust mulch of two or three inches over the garden.

There is hardly a day throughout the season, but the garden needs some attention. You can not have a good garden without paying the price, but the garden is well worth the price.

As a rule, your home garden on the farm will give fresh vegetables, will give you a greater variety of vegetables and vegetables of a better quality than you can buy from others. Those who make a business of producing vegetables for the market will, just as far as they can, raise varieties which will produce the largest crops even at some expense of quality.

Cultivate your vegetable garden on the farm as early as is practicable in the spring so as to warm up the land as well as to conserve the moisture. Wet soil is cold soil. By cultivating as early as the soil will permit you dry out the top of the soil and warm it up.

Latest garden experiences seem to favor a combination of sprays on general principles. Tobacco, Bordeaux and the arsenical sprays can be combined.

Write to your state experiment station or advise with your most successful neighbors if you have not found out yourself what are the best varieties of vegetables to grow. Write to the department of agriculture, Washington, D. C., for farmers' bulletin, No. 856, which has just been published, giving directions for raising the common vegetables. EAS

## Trees

We offer a few choice prune, pear and cherry trees, select Vrooman Franquette walnut trees, and other first-class nursery stock at special low prices. Order today.

BENEDICT NURSERY CO.
185 E. 87th St., N., Portland, Ore.

### MUST BELIEVE IN IT

### Orchardist Must Have Side Line

By E. F. Stephens.

Commercial orcharding under present conditions should be in the hands of people who enjoy and believe in the business. Commercial orcharding also should be conducted on lands suited to the production of fruit of superior quality. Those who have planted orchards on unsuitable soil or unfortunate locations should change to other lines of work. They are likely to succeed better with grain, hay or some form of live stock.

The orchardist should grow his own forage and feed and he should keep a cow, pigs and poultry. He should be able to survive an occasional blank year.

### Northwest and California Fruits.

I have been out over some of the citrus groves' sections of California, and am trying to make comparisons on the methods of irrigation, pruning, spraying, cultivating, cost of land, harvesting, marketing and the net profits. I want to know as nearly as possible what are the profits from these orchards as compared with apples, pears and peaches in the Pacific northwest. I am not ready to report, but I have some information that to me is interesting and I think maybe so to the fruitgrowers of Washington, Oregon and Idaho. Of course, the conditions are so different in the two sections that it is, in some cases, difficult to make comparisons, but the citrus fruitgrowers have passed through some experiences similar to our own and have solved the problems satisfactorily to themselves. We have not been so long in the business and our organizations are not so complete as those of California. I presume we will bring them to a higher stage of perfection in time, but it will take pressure and the elimination of some of the smaller organizatitons to do it. I may be mistaken, but it seems to me now that a government marketing agency is destined to be the final solution of the question. However, I would not be dogmatic about it, but wait and see the result of experiments already being tested by the government as a result of this war.

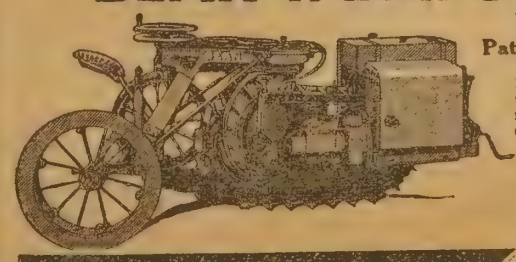
# Patented "Turning Feature"

### Immensely Important in Orchard Tractor

Will the tractor you buy turn in a 10-foot circle (5-foot radius) *pulling as strong on the short turns* as on the *straight away*—and will it do that without *straining one side or one wheel?* That's of vital importance! Many tractors work well when pulling *straight*—it's on the *turns* that you will get *good* or *poor* service from your tractor.

The Bean TrackPULL Tractor is the *only small orchard-and-vineyard tractor made* that delivers *full power* on 10-foot turns and it turns without straining one side, pivoting, or doing anything else that a tractor shouldn't do.

This remarkable machine is built on *patented FRONT-DRIVE principle*—you *steer* with *the single track* which does all the *pulling* whichever way you go. You can turn it back down the same row (see illustration above) without lifting out the tools making as *short* a turn as with a team!



Absolutely no other tractor acts so like a team while doing three times as much, is so handy, so efficient, so staunch, and so *protected against over-strains!*

You'll want the TrackPULL eventually—go see it now. Send coupon at once for catalog, complete description, and name of nearest demonstrating-agent.

Don't buy a tractor that does less. Don't do without one that does so much. Send the coupon now.

**BEAN TrackPULL Tractor**

With Invaluable Patented Front-Drive

# Transport Torpedoed

## *American Soldiers Are Jeopardized*

The one outstanding news event of the past week in the eyes of all America was the sinking by a submarine Wednesday of the British transport Tuscania, carrying more than 2100 American soldiers bound for the European front. At this writing complete check on the lost and rescued has not been announced, but it is practically certain that the loss will not exceed 200 men, a considerable portion of whom are members of the vessel's crew. The Tuscania at the time of the sinking was under British convoy just off the Irish coast and it is reported to have remained afloat for some two hours. Much of the rescue work was done by the convoying vessels. Up to this time the names of those lost have not been learned owing to the fact that it is necessary for the names of the survivors to be cabled to the war department at Washington before identification of the lost can be had. The bodies of a considerable number have been washed ashore on the rocky coast of Ireland, but it is officially stated that recognition was impossible owing to injuries and mutilations resulting either from the torpedoing of the boat or the dashing of the bodies upon the rocks. While most of the soldiers aboard the Tuscania were from the states of Michigan and Wisconsin there were a few on board from many sections of the country, including the northwest. Probably as many as 100 men from the three states of Oregon, Washington and Idaho were on board. The sinking has served better than any other single event up to this time to arouse the American people to a realization of the gravity of the American position. Although the loss of some 200 men is a vital and regrettable matter, from the standpoint of American participation in the war the loss of the vessel will be more keenly felt. It was one of the largest vessels in the war carrying service.

### Unsinkable Vessels?

An interesting announcement was made late last week by William L. Saunders, vice president of the naval consulting board, to the effect that marked progress had been made in an attempt to make vessels unsinkable by torpedoes. He declared to a New York audience that one ship now at an Atlantic port is so protected that she can not be sunk by a submarine. He said the ship might have a hole 30 or 40 feet in diameter torn in her side and yet remain afloat. What was true of this ship, he said, could be made true of other ships, although it would take considerable time to equip a large number of vessels with this device. The scheme in the main consists of a honeycombing form of construction and Mr. Saunders said that an injury such as he described would permit the flooding of not more than one-tenth of the vessel's displacement.

### Peace Terms Again.

In a message to congress Monday President Wilson again made clear this country's terms of peace. He summarized them as follows:

"1. Each part of the final settlement must be based upon essential justice to bring a permanent peace.

"2. Peoples and provinces are not to be bartered about like chattels to establish a balance of power.

3. Territorial settlements must be for the benefit of people concerned and not merely adjustment of rival states' claims.

"4. Well defined national aspirations must be accorded all possible satisfaction.

"A general peace upon such foundations can be discussed," said the president. "Until such a peace can be secured we have no choice but to go on."

### Americans Taken Prisoner.

A report seemingly authentic from European sources announces the capture of American soldiers by a German reconnoitering party. It is not stated how many soldiers have been captured. Reports from the front indicate the morale of the American soldiers under General Pershing is excellent and that their preparations for participating in the war are satisfactory.

### Roosevelt Is Ill.

Considerable interest has been manifested during the week in the illness of Theodore Roosevelt, who has recently undergone two operations for abscesses in the region of his ears. For a time the colonel's condition was thought to be very serious, but at this writing he is reported to be well out of danger. His physicians have ordered him to remain in bed for two or three weeks.

### Russia Quits War.

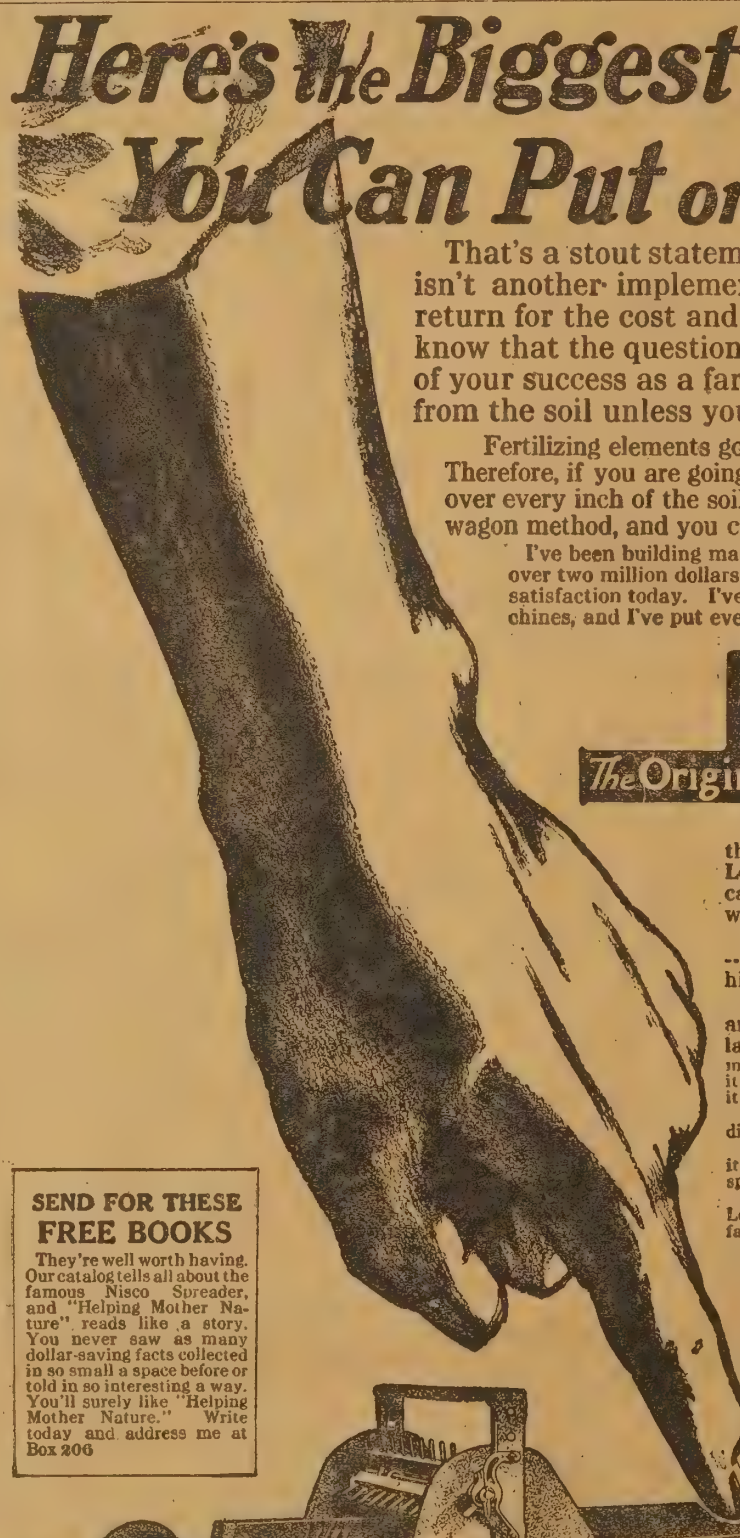
The Russian government, as nearly as there is a Russian government at the present chaotic time in that country, has formally quit the war, declaring that the state of war between that country and Germany and her allies is at an end. This virtually turns over to Germany all the supplies available in Russia, and relieves hundreds of thousands of German prisoners held by Russia, for participation in the war against the allies.

### Prefer Irregular Lines.

The straight line is an abomination to the Chinese. They endeavor to avoid it in their streets and buildings, and have banished it completely where country field paths are concerned. They will always substitute a curve wherever possible or they will torture it with a zigzag. To the Chinese mind the straight line is suggestive of reath and demans.

# Auto Boosts Land Value

"Statistics prove that the total cost of all the automobiles purchased up to this time does not equal the difference between the value of land 10 years ago, when automobile transportation was introduced to any degree and the present value of the land," says W. C. Hendricks of Spokane. He attributes the increase in land value to the automobile in considerable measure.



"Take the value 10 years ago of a farm 10 miles from a railroad station, and it will be found that a 25 per cent to a 50 per cent increase in value has doubled. The automobile has boosted land values because it has brought city advantages to the country. It has to a 50 per cent increase in value is a fair average," he continues. "In a majority of cases the value has brought church and school opportunities to the farm in almost the same degree that they are enjoyed by the city resident.

"The good roads movement did not get any material start until the automobile became popular. And more progress has been made in this direction during the last 10 years than in all the time that came before. Good roads will be general for the reason that so many have interested themselves in the movement. And this is because of the vast number of farmers who own automobiles and who have a desire to see the country in which they live.

"The automobile has served another purpose, in a business way. It has aided the real estate men in marketing farm lands which heretofore have been lying idle or inefficiently worked. It has created the townsman's interest in country life and as a result he has invested in country property.

"Strange as it may seem when it comes to purchasing a car, the country buyer is better posted than the average city purchaser. This indicates the great interest manifested by those who are in a position to know and realize the value of machinery in general and its uses."

# Here's the Biggest Money Maker You Can Put on Your Farm!

That's a stout statement, but the facts bear it out. There isn't another implement made that will bring you as great return for the cost and the work as a good spreader will. You know that the question of fertility of your land is at the bottom of your success as a farmer. You cannot keep on taking crops from the soil unless you restore the fertilizing elements.

Fertilizing elements go straight down. They will not spread themselves. Therefore, if you are going to get bumper crops, you have to put manure over every inch of the soil. You can't do that by the old pitchfork and wagon method, and you can't do it with many of the spreaders offered.

I've been building manure spreaders ever since I was fifteen years old. I sold over two million dollars worth of them last year, and every one of them is giving satisfaction today. I've learned something in all these years about these machines, and I've put everything I know into building the

## NISCO
### The Original Wide Spreading Spreader

Look at its wide distribution--seven feet at least. It was the first wide spreader, and it has always held the lead. Look at the way it pulverizes the manure—so fine that you can safely scatter it over growing corn. Can you do that with any other?

Then it's light draft—easy for the team. It's low down --easy for the men. You can load the bed thirty inches high, and scatter 8, 6, 9, 12 or 15 loads to the acre.

Let me tell you that without a Nisco Spreader you are wasting your most valuable asset--the fertility of your land. With a Nisco standing where you can throw the manure from the stalls right into it, hauling it on your fields as soon as it is full, you are getting every dollar's worth of crop food right where it is needed, at the least labor, just when it is needed.

Ask any county agent, any experiment station man, what right distribution of manure will do for you.

I haven't exaggerated a bit. Thousands of good farmers have proved it themselves. Thousands know it pays to use the right kind of spreader, and that the Nisco is right in every particular.

Stop wasting your fertilizer! Feed your land and get more out of it! Let me send you my book, "Helping Mother Nature," which tells the facts about manure, and full description of the peerless Nisco, a money maker for *your* farm.

See the machine at the Nisco dealer's. If you don't know him, we will send you his name.

# Cost and Worry of Distributing Milk

(From The Idaho Farmer.)

By R. C. KUHMANN

Some time ago I discussed the milk problem from the producer's point of view, in the Idaho Farmer; now I want to say something from the distributor's position.

Some people seem to think that the milk distributors have a gold mine that needs only to be scratched a little with a pick in order that the gold dollars can hop out at a great rate. The reason they think so is because they know nothing at all of the work, the difficulties and often the discouragements that are a large share of the lot of the milk distributor. While the consumer may have a very vivid imagination, he is more than likely to imagine the wrong thing about milk distribution than the true course of affairs. It all looks easy just to see a quart bottle of milk placed on the back or front porch each day, but let me tell you there are a great many moves connected therewith, and some of them are very expensive ones, too.

In the first place, after the cost of milk itself, there is the labor required to wash the bottles and other milk-house utensils. This takes considerable time if it is all done properly. Then there is the filling of the bottles, capping, etc. After that comes the most expensive and trying part of the distributor's work, that of delivering to the consumers list of customers. As I ran a milk wagon for several years, I can give first-hand experience in this line. It is one of the most trying kinds of work that can be imagined; very tiresome, and wearing, too. It isn't any boy's play—it's a man's job, to keep all the accounts and deliveries straight, and the customers satisfied; also to prevent a heavy loss of bottles. Of all the miserable, irritating, little, measly troubles in life, commend me to the milkman!

He must jump off and on his wagon several hundred times a day, and do it every day in the week, including Sundays. He may climb a flight of stairs and then be told by the lady, "We don't want any milk today." Or, he may stand and rap for several minutes, and when the lady finally arrives at the door she says, "Oh, I forgot to put my bottle out, didn't I?"

Again, after doing his best to please a lady in supplying special milk for her baby, she says one day, "I can get 12 quarts for $1 from a neighbor who has a cow—that's four quarts more than you are giving me!" Just thing of "turning down" fine milk that has kept her baby in health, and use the usually filthy stuff produced in an unsanitary barn and other surroundings, by a neighbor who is not equipped to produce sanitary milk! The business dairy and distributor's places and methods are all inspected, and must meet the rules and requirements of the law; but a neighbor, with one cow, can produce milk in any kind of filthy place and manner, and the law permits such unfair competition. Is that right? What encouragement is there for one who wants to produce clean milk, and deliver it in a sanitary way all along the line, when the unsanitary neighbor is allowed to produce and sell without any inspection at all?

I have nothing to say about the cow kept for private family use—if they want to drink dirty milk, that's their own affair; but I do protest most emphatically when such a product is allowed to be put on the market in competition with clean milk that has been produced in accordance with the strict requirements of the law.

Another thing that must be taken into consideration: The expense not only of the drivers of the milk wagons, but the tremendous upkeep of horses and wagons. With oats at $65 a ton, and hay at $35; and with horse-shoeing at $5 a team, and wagon repairs all the way from broken axles and broken double-trees to broken springs and other breakdowns—well, there is a continual expense that only those in the business know anything about.

Then, consumers should not forget that no matter what the weather is, nor how hard the condition of the roads, their little pint of milk must be there on time ever day, Sundays not excepted! Beginning with the care and milking of the cows, all the way through to the end of the delivering the bottled milk, is there any such a dog's life connected with any other business? Nay, verily. And consumers are not willing to pay a price for the milk and its cost of delivery that will only meet expenses, to say nothing of a fair profit and return on the large amount invested, from the value of the cows to the equipment used by dairymen and distributors.

Unless there is a radical change on the part of many consumers in regard to milk, some of these fine days they will be whistling for their milk, and no milk will be forthcoming. Both producers and distributors will simply quit the exasperating and discouraging business of milk production and delivery, and go on day's wages in some other line of work. By so doing they will make more clear money, have shorter hours of labor, and live like white folks instead of worse than African slavery.

Yes, I know I have painted a somewhat sombre picture of the milk business, but some one needs to paint it in its true colors, and so impress it upon the public that they will stop and think—stop and realize the quality and quantity of service they are getting when they get a pint or quart of clean, pure milk every day in the year, and be willing to pay what it is worth, or at least what it costs. Almost every other article of food is bought without a murmur of protest as to its high price, but when it comes to milk, why, the poor consumer is "being robbed" if he is asked to pay a fair price for it! I dare say that there is not another article of food in the whole list that requires so much actual labor—so many hours of toil—from start to finish, as it does to produce and deliver clean milk. It is high time that the consuming public begins to appreciate this, and cease their everlasting howl against paying a legitimate price for so valuable a food article as pure and sanitary milk.

# Enlist Your Ford
# Your Country Needs It

Increased food production is the crying need of the country. More corn, wheat, oats, rye barley—more land under cultivation—more productive labor from horses, machinery and the men on the farms. Efficiency and greater output are not only patriotic duties, but they insure increased profits. And the

## STAUDE Mak-a-Tractor

(Trademark Mak-a Reg. U. S. Pat. Office and Principal Foreign Countries)
Price $225 F. O. B. St. Paul

stands today as the farmers first and strongest ally in the battle for food supremacy. *Put that Ford to work.* Remember you have two-thirds of a tractor already in your car. A Staude completes the job and does double the work. It releases 20 acres for food for men that otherwise go to feed that four-horse team.

## Making Good With 7,000 Farmers

The triumph of the Staude Mak-a-Tractor has been so tremendous that any possible doubts of its efficiency have been swept away by the tidal wave of popular approval. The enthusiastic praise from users everywhere is the most convincing evidence that it has more than justified every prediction made for it. Thousands of farmers can testify that the Staude has stood up well under the most grueling test in all kinds of farm work and heavy hauling.

## *More Work—Less Cost*

It does continuously—24 hours a day if necessary—the work of four horses at the cost of feeding one. It plows an acre with less than two gallons of gasoline—is easy to attach and operate—can be used on Fords, Overlands, Chevrolets and other cars—is detached in 20 minutes, permitting the use of your car on the road—nothing to get out of order or require adjustment.

## Master of All the Farm Work

Attached in a few minutes to your automobile, the Staude Make-a-Tractor will do your plowing, seeding, reaping, binding and hauling. Equipped with the Belt Power Attachment, it does your sawing, grinding, shelling, feed chopping, pumping and any other work that an 8-10 H. P. farm engine could do.

**We are co-operating with the U. S. Government in the increased food production through greater acreage and increased yield per acre. The Staude Mak-a-Tractor will help you solve these problems.**

## *Let Us Prove What We Say*

Get ready to meet the shortage in farm help and horses. Put your farm on an increased production and efficiency basis. Fill out the coupon and get our two free books by return mail. Read the statements of some of the thousands of Mak-a-Tractor owners. Find out how YOU can increase output and profits and decrease cost of production.

*Sign and mail the coupon today—NOW—while it's before you.*

## The E. G. Staude Mfg. Company

2596 W. University Ave., ST. PAUL, MINN.

I have got my Staude Mak-a-Tractor belt power attachment at work and it sure is great for sawing wood and grinding feed. Sawed our 40 cords in one day, some as large as 14 inches in diameter and all three men could lift. I say it is great.
Glenn O. Wood, Limaville, Ohio.

I plowed 190 acres with my Staude at a cost of less than 50 cents an acre. My car is just as good as ever and the engine don't heat. I used about one quart of water a day. I plowed 5 acres a day, where I could only plow 5 acres with 5 horses on the gang. It does the work of six horses and not four.
J. S. Welter, Grafton, N. D.

I cut all my wheat, 450 acres, with a Staude Mak-a-Tractor and am plowing 10 acres a day at the present time with a 14 inch gang, and don't have any trouble with it heating and it doesn't damage the car as much as running on the road.
A. Christophorson, Flaxville, Mont.

My Staude Mak-a-Tractor pulled a 14-disc grain drill over 200 acres of newly broken prairie sod, pulled a 8-section harrow over 200 acres and the same drill over 450 acres more land—all newly broken sod. I averaged 2 1/2 acres per hour with the drill. It has proven absolutely satisfactory.
Carl F. Errebo, Garden City, Kan.

I have pulled two 16-inch plows in sod for five hours and 4 tons on the road for eight miles with my Staude Mak-a-Tractor and the engine never boiled. I don't see that it hurts the car and it will do all the company claims.
C. F. HARRIS,
Orange Lake, N. Y.

# Wool Men Meet

## Thresh Out Important Problems

By RAY W. FELTON.

The government's rule requiring sheep men to be growers of hay before they are given permits on the national forests for grazing purposes was the subject of much discussion during the recent joint convention of the Washington State Wool Growers' association and the Washington State Forest Users' association. A resolution was adopted asking that sheep men owning their grazing lands or leasing sufficient fall, winter and spring lambing range be placed as class A applicants for grazing and that those not in a position to raise their own hay be not handicapped by reason thereof.

The resolution points out that it is more beneficial to the industry and to the government in the production of more sheep and wool to permit the sheep men to buy such hay as they need from the small irrigation ranchers living on projects tributary to the ranges which have been developed largely by government reclamation service. Such a practice would foster two industries where it now works as a handicap to both. The hay man can sell profitably to the sheep man at a price less than the sheep men can produce it himself, the resolution declares. Another resolution asks for state legislation making closed herd districts of unfenced ranges leased or owned by sheep men. It was pointed out that these ranges, used for winter grazing, are used by some cattlemen while the herdsmen and their flocks are away on the summer ranges in the national forests or elsewhere and that as a result there is little or no grazing for the sheep when they return in the fall.

The convention indorsed the annual state fair sheep sale which last year was successful under the direction of Professor William Hislop of Washington State college and asked that congress appropriate $500,000 to aid the destruction of predatory animals.

A. F. Averill of the federal biological survey, in charge of the destruction of predatory animals, addressed the convention, telling of the work he and his men are doing to aid the live stock industry, and he spoke at some length regarding rabies, which he said is spread largely in this state and from which, he said, a man died two weeks age at Pasco. He urged sheep men not to kill dogs believed to have rabies until 10 days after the first symptoms develop. He advised them to chain the animal up and leave it 10 days. If at the end of that time the dog is not dead it will be proof that it did not have rabies. The $15,000 appropriated by the last legislature is being used in this work for the hiring of trappers and hunters and Mr. Averill promised to send a man to any section where coyotes or bears are causing trouble. From the sale of hides and furs taken from animals trapped and killed the survey will secure sufficient to return to the state about 25 per cent of the amount appropriated for this work. Particular efforts are directed at this time to protecting the lambing ranges and sheep men displayed much interest in the activity of the survey and are deeply appreciative of the personal interest and energy evidenced by Mr. Averill.

An interesting talk was that delivered by F. A. Clarke of the Columbia Basin Wool Warehouse company of Portland. While last year at this time practically 12,000,000 pounds of wool had been contracted on the sheeps' backs, this year there has not been a pound contracted, so far as is known, Mr. Clarke said. Mr. Clarke expressed the opinion that producers could contract at 55 cents if they made the effort. He expressed the opinion that sooner or later the government will fix a minimum price on wool and he urged western producers to have a representative on hand when that time comes instead of staying home and letting some man wholly unfamiliar with the situation say what growers are to receive for their efforts and the money they have invested in the business.

Mr. Clarke said he did not think there was a surplus of wool. The use of shoddy in the manufacture of clothing and bedding for the boys at the front is positively criminal, he declared, and has resulted in the death of many men not properly clothed. This substitution has made an oversupply apparent but not real, he declared. It is criminal to say wool men have been profiteering, Mr. Clarke asserted.

## Mill Feeds Scarce.

Mill feeds are very scarce and expensive in Spokane county, says O. S. Fletcher, assistant county agent. Farmers are hard put to find a way to get stock through the winter. At present there is a large supply of barley in local warehouses and we are advising people to buy rolled barley for feed.

# In The Nation's Service

America is sending its best men to fight for freedom and in their honor the whole land is dotted with service flags carrying the stars of sacrifice

It is a far cry from the crowded city streets above which floats our service flag to the telephone exchange hidden in the front-line trenches. But the actuating spirit of service here and abroad remains unchanged.

The Stars and Stripes is the emblem which unites us in war for human liberty and national honor. The service flag is the emblem which unites us in mutual sympathy for the men who give themselves and for those who give their men.

These flags should inspire all citizens to greater endeavor and greater sacrifice. As one of the agencies of preparation and military support, the Bell System is honored by the opportunity to do its share.

# HAS THIS EVER HAPPENED TO YOU?

# MUGGSY RUINS A GENT'S TOPCOAT AND SAVES HIS LIFE

# World Faces Meat Hunger

## *Right Care and Feed Will Do Much to Increase Supply*

By DR. S. B. NELSON

At the present time when there is a shortage of live stock throughout the world, stock men can help by taking better care of their animals. It is well known to all who have handled animals that a little extra attention at the right time may prevent sickness, even death. There never has been any excuse for letting farm animals die for want of the right care or feed; but at this time in world's history, such negligence is unpatriotic, as well as unprofitable.

There is a good example of what care will do for animals in an experiment conducted in the Sixth field artillery corps involving 937 horses that averaged 1165 pounds in weight, and ranged in age from five years up, eleven years being the average.

These horses were put on a scientifically planned method of feeding for 140 days. In that time, only 14 of the horses were ill from digestive troubles. Twelve of these cases were very slight. Only two horses died. If this record had been carried out for a year there would have been less than forty horses sick, and less than six died—out of nearly a thousand.

In a herd of one hundred horses, at this rate, and with this kind of care, there should be about four horses sick in a year, and one dying every year and a half or so. This means that a farmer with five, ten or twenty horses ought to have sickness among them, between the ages mentioned, of course, so seldom as to be hardly a factor in his work at any time of the year—yet what harvest crew gets through with one week's work without being troubled with sick horses? Many have a colicky horse every day or two—so often that it is understood to be the right and proper thing. But it is not.

Herbert Hoover says that it is the multiplication of spoonfuls, slices and scraps, by 100,000,000 and then by 360 days in the year that will save the world from going hungry in the present war crisis and food emergency. If live stock men will apply this same thought in their business, watching daily for the small bit of care and attention here and there that may make an animal more comfortable and help prevent disease, they can, in the United States alone, relieve much of the meat hunger that now is threatening the nations of the earth.

Any one who has seen the immense numbers of letters that have in past years come to the college of veterinary science at W. S. C. from farmers asking about every conceivable animal disease, could not doubt the largeness of this problem, and the actual possibilities for the saving of meat-producing animals merely by taking better care of them. If it is not scours in calves due to navel infection at the time of birth, it is scours due to dry feeding, or to overfeeding; this and other maladies and ailments levy a heavy toll on the meat of the world every year, and now the world can ill afford to stand that loss.

It is a mistake to assume that all animal disease is allowed to run rampant. The once costly plague of calves, blackleg, is an example. Since the 27th of last November the college of veterinary science has distributed over 10,000 doses of blackleg vaccine. Without doubt this was used to overcome a definite loss in calves, and much veal was saved.

There are other sources of animal loss, however, which are not so well controlled as blackleg. This is especially true in the wheat growing sections, where straw is now stacked out of doors. In such localities there occure during certain periods of the year a poisoning of horses known as "forage poison," which is entirely preventable. Merely keep the horses away from the strawstacks when they are wet and covered with the blue mold that forms either after a period of frost or severe rain followed by warm, sunshiny weather. But when horses get this disease it is practically 100 per cent fatal. Therefore, prevention is its cure.

Many breeders are now growing pigs on cheap roughage with the grain ration minimized on account of its expense. Our correspondence shows that many are having trouble in feeding pigs from 3 to 5 months of age when they ought to be able to thrive on a large percentage of roughage with only a small portion of concentrates, or grain. The animals become infected with an irritation of the bowels, which presently appears in a protrusion of the rectum, or "piles."

This trouble can be prevented by seeing that the little pigs get plenty of exercise. A very simple way of providing such exercise is practiced by Charles M. Talmadge of Newport, Wash., and other breeders of the northwest. Mr. Talmadge wads up a newspaper and throws it among the young pigs three or four times daily, and they play with it, thus getting the exercise they need.

A sudden change in feeding is one thing that animals can not stand. I remember that a few years ago a friend of mine was feeding a hundred or more 2 and 3 year old steers. He ran out of rolled barley, and thought he would carry them over on whole barley for a short time, till he could get some of the rolled. Just two full feeds of the whole barley succeeded in putting over 50 per cent of these big, fine, fat steers on the sick list, and he lost more than 10 per cent of the entire band. Many of the steers that were quite ill did not recover quickly enough to make the required gain and were not ready for the market. His loss from these

"One more thing before I go—
the guarantee that goes with your OilPull"

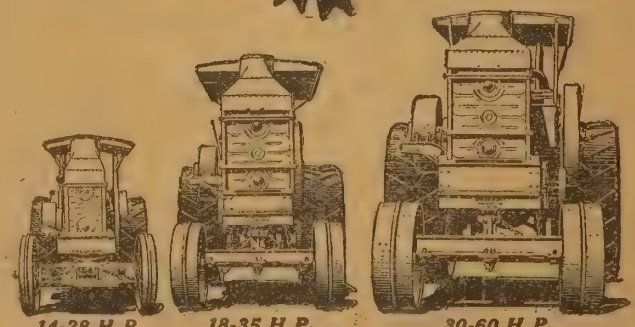
YOU know the kind of service that goes with the Rumely OilPull Tractor—or ask any owner. He'll tell you that Advance-Rumely doesn't lose sight of the customer's best interests after the sale is made. At each of our 22 branch offices we maintain an organization of skilled tractor experts, for the benefit of Advance-Rumely tractor owners.

When you need him, there's an Advance-Rumely expert to not only help unload and deliver your tractor but to show you how to operate and take care of it.

But we go still further in guarding our customer's interests. In addition to that personal service, with your OilPull you get an iron-clad *written guarantee.* The OilPull would give just the same satisfactory performance *without* this guarantee, but we feel that the OilPull owner is entitled to protection against "near" kerosene tractors, and the word of mouth promises and "near" guarantees that go with them. It is just the difference between "delivering the goods" and "putting it over."

The guarantee speaks for itself—*read it carefully.* Notice that it says—*under all conditions—at all loads*—and with *all grades* of fuel oils. It protects the new owner as well as the experienced operator, and it holds good for the life of the tractor.

There's no half way in this burning of kerosene, distillates, etc. Either a tractor does it *successfully* or it doesn't. And if it does, why should it not carry a clean, fair and square, *written guarantee* as goes with every OilPull? Think it over.



The OilPull in a New Size—14-28

You can now get the famous OilPull in a small size, the 14-28. A light weight, *big power* outfit. The 14-28 is every inch an OilPull—the same *guaranteed* performance on low grade oil fuels—the sure, dependable service—long life—and ability to handle all jobs, drawbar or belt.

The new 14-28, with the 18-35 and 30-60, give three sizes of OilPulls—a small, medium and large. Ask our nearest branch for a copy of the special OilPull catalog.

# EDISON'S *NEW* DIAMOND
# AMBEROLA

## MADE IN THE "WIZARD'S" LABORATORY
## FOR USE IN YOUR HOME. *Will you try it.*

*Model 50, Edison Diamond Amberola*

SEE the coupon at the bottom of the page? That little slip of paper sent to an Edison dealer, with your name and address on it, will bring to your home Edison's latest model Diamond Amberola, the wonderful phonograph with the GENUINE DIAMOND reproducer point, no loose needles or any thing like that to bother with.

NO one has to learn to play the Amberola. It is as simple to operate as A, B, C. It will give you any kind of music you like, from "rag" to grand opera. And be sure to bear in mind that it is a GENUINE EDISON INVENTION, made in the great Laboratories of Thomas A. Edison at Orange, N. J. Every part is either designed by Edison himself or one of his most trusted, high-priced assistants, but the design of every part, down to the tiniest screw, is O.K'd by Edison himself before it can become a part of the Amberola.

Just as much as if he knew you personally, Edison wants you to have one of his marvelous New Diamond Amberolas in your home. In this way you may know that it is all that is claimed for it. This will be done on an

## ABSOLUTELY FREE TRIAL

No strings to this offer. No red-tape. First you will want to get full particulars about the free trial and especially a copy of

### "A MASTER PRODUCT OF A MASTER MIND"
***The Beautiful Amberola Booklet, Illustrated in Natural Colors***

When you receive this booklet, select from it the model Amberola you prefer, also any twelve records from the Blue Amberol Record Catalog. Blue Amberol Records are almost unwearable and unbreakable. As soon as he can pack and ship them, the dealer will send the Amberola and records. When they arrive make believe they are yours, then you will realize what wonderful times you could have for years to come if they actually belonged to you. No need for either young folks or old folks to go out for entertainment, no more dull evenings.

Unless you are already the owner of a New Edison Diamond Amberola, there is no reason in the world why you should not take advantage of this offer. You will at least have three days of delightful music in your home, and the dealer will consider his time and money well spent, because he knows that, once you hear it, you will have nothing but praise for the Amberola. The sooner you send the coupon, the better chance you will have of getting the model Amberola and the records you prefer.

### SOME AMBEROLA MUSIC

The records listed below will give you a good idea of the kind of music you can have with the Amberola. Look over the list. We are sure you will find many of your favorites.

# UNLUCKY LOOIE LOSES HIS LAWSUIT

# BOOT FINDS PUP IS SOME GOOD AFTER ALL

# Wheat for Allies

## Hungry for Every Ounce Saved

In regard to the wheat situation the United States food administration has issued the following statement:

"It is true that the allies need from 75,000,000 to 90,000,000 bushels more American wheat. It is also true we have already exported the theoretical surplus of last harvest over our normal consumption. The American people have saved a considerable amount, estimated from 25,000,000 to 50,000,000 bushels, during the last five months, and we are exporting this saving.

"We can not and will not export more than our savings, for our own people must also be fed. The allies have reduced the bread ration to their people sharply the last few days, and if the lowered ration is to be maintained we must save more than hitherto.

"Every grain of wheat and every ounce of flour and bread saved now is exactly that amount supplied to some man, woman and child among the allies.

"We are asking the American people to further reduce their consumption of wheat products and use other foodstuffs instead, for the allies must also have some wheat as well as ourselves. It is one of the vital issues in winning the war that we must maintain the health and strength and morale of their men, women and children over this winter."

H. A. Akin of Parker is turning sheep on waste land on his farm this year. Sub-irrigation has killed out a lot of his alfalfa and he will pasture it for the time being. Mr. Akin will plant about five acres of corn this year.

A. C. Mitchell of Naches has found sugar beets excellent cow feed. "I cut out all grain and fed about 15 pounds of beets a day to a cow," said Mr. Mitchell. "The test held up and my herd is in excellent condition. I am well pleased with the beets."

H. Stanley Coffin at this writing is dipping his purebred sheep in the lower Yakima valley. Dipping operations are carried on in an extensive manner at this season of the year. Equipment of a modern nature is provided and the sheep respond readily to the treatment, which is given to keep them free from ticks.

Joseph Tyson of the Moxee valley, Washington, will plant 25 acres of corn this season. "I am planning to check my field and thereby make my rows run both ways so it can be cultivated with horses," said Mr. Tyson to the Farmer field man. "I believe this will save me a good deal of labor and on account of the labor shortage, which bids fair to be even more crucial than in 1917, I realize the necessity of making every possible arrangement to conserve as much man-power as possible."

"Speaking of hog feeds," said S. D. Saunders of Selah, Wash., "reminds me that artichokes and their value seem to have been overlooked by a large number of stockmen. I raise artichokes on my place and as feed for hogs they net me $200 an acre, besides providing a convenient method of feeding. I feed just a little grain at the same time I am feeding the artichokes and my hogs thrive on the ration. I much prefer artichokes to alfalfa. I also am a great believer in sugar beets as a food for hogs. I can feed them to my swine and make double what the beet sugar company will pay me for them."

Mrs. Art Adams of Yakima, Wash., is one of the many farm women of the northwest who did farm labor this summer to help out the shortage of help which prevailed quite generally. When it was time to stack the alfalfa Mr. Adams found he was unable to get necessary help. "Don't worry, we'll get the hay stacked," said his plucky little wife. Then she proposed that she do it and her husband, who at first demurred, finally consented to let her try. A representative of The Farmer saw the stacks she put up the other day and he is here to say she did a first-class job. "We took things easy," said Mrs. Adams, "and it was fun to think I was doing something that was a really, truly help. I didn't get very tired because I am accustomed to lots of outdoor life."

## Western Washington Floods.

Some indication of the damage done in western Washington by the recent floods is afforded by the fact that on the Carnation Stock Farms, Carnation, Wash., a roadway constructed of three-inch planking, laid on heavy timbers and anchored every 20 feet to a log sunk three feet in the ground, was lifted by the flood and set down in an entirely new location. By the same arbitrary force a peninsula has been changed into an island, with a branch of the river whose depredations caused all the damage running like a mill stream where formerly was dry land. Mr. Stuart reports all stock and buildings in good shape, however, thanks to the fact of the latter being located on higher ground than the bottom lands chosen by the flood waters.

P. E. T.

## Silos in Klickitat County.

B. W. Cooney, county agent in Klickitat county, reports that he has visited every farm where there was a silo built last fall.

With the exception of no one, he says, every farmer is pleased with what he has done. The Coates brothers, who are large dairymen in the valley, say that they will more than pay for their silos by this season's operations. Their only regret is that some one did not inudce them to build one 10 years ago.

## GRAIN AND HOGS

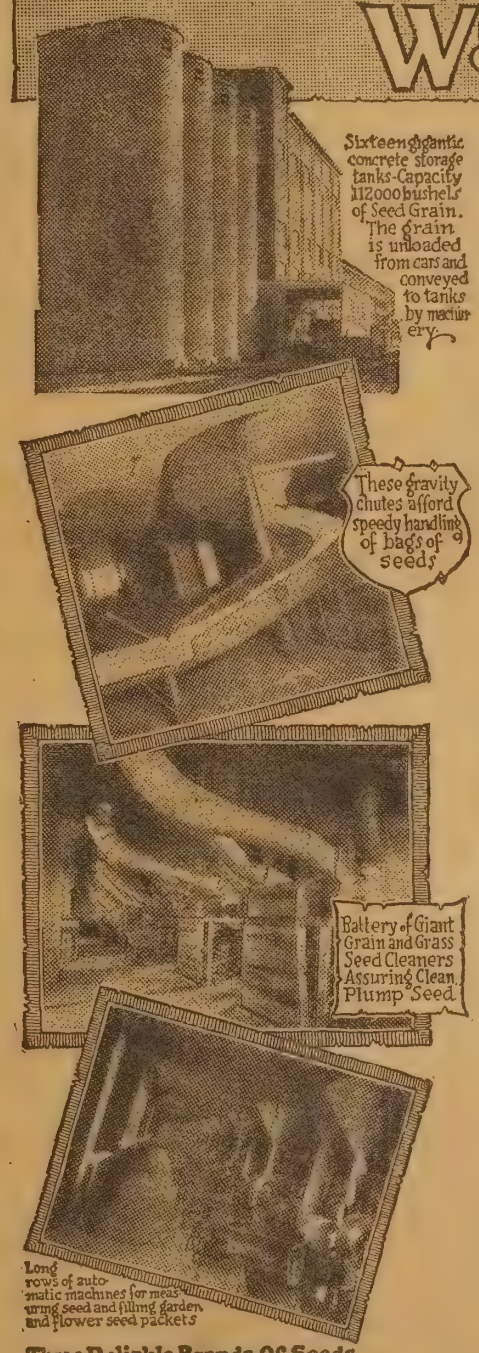
### Pay for Hogs in Terms of Barley

To the Editor: There seems at present a particular need for a price of hogs bearing a certain ratio to the price of grain on the same market. The Hoover commission has recommended that the government fix the price of 100 pounds of live hogs at either 13.3 bushels of corn or 14.3 bushels of corn, according to whether a return of the pork supply of normal or a 15 per cent increase is desired. In the west the price of live hogs would be based upon the price of barley instead of corn. According to this the price of 100 pounds of live hogs, average of the run, would be the same as the price of 800 pounds of barley, average of the run. Such a ratio price on hogs should undoubtedly be established by the government at once.

F. R. STEEL.

Grants Pass, Ore

# Believes in Silage



John L. Smith, the Holstein man of Spokane, believes unequivocally in silage. During several seasons Mr. Smith's concrete silo was unusable because of leakage of the walls, and during this time feeding had to be carried on without silage. Last fall Mr. Smith bought enough cement to make a thin wash or paint, with which the interior of the silo was sprayed. The corn crop subsequently ensiled has been absolutely satisfactory and Mr. Smith declares that he will never again be without silage. He admits that roots are a fine supplementary feed, however, and in the matter of production to the acre it is unlikely that the best crop of corn silage will go much beyond a yield of 30 tons of carrots to the acre, which he secured on his Spokane farm. Mr. Smith reports several satisfactory seven-day butterfat tests recently made on his farm, the three highest of which were 34.5, 28 and 23.

### Navy Is Growing.

Our naval man-power is about six times what it was when Germany proclaimed ruthless submarine warfare.

# This New Seed Plant Helps You Raise Better War-Time Crops

**Three Reliable Brands Of Seeds**

STERLING BRAND · NORTHLAND BRAND · VIKING BRAND

**Eight Acres Of Floor Space Are Devoted To Modern Machinery, Storage Tanks, Bins, and Equipment For The Selection, Cleaning and Prompt Distribution Of High Quality Seeds.**

THOUSANDS of farmers and gardeners depend on this institution to supply them with reliable seeds. Buying Northrup, King & Co.'s brands, they are sure of getting reliable seed that is tested for purity and germination.

This mammoth plant was recently completed and put into operation. It makes possible better service to every user of seeds in the Northwest.

**World-Wide Sources**

From the best seed-growing localities of the world, seeds of thousands of varieties are brought to the plant of Northrup, King & Co., where they are prepared for planting.

**Seed Purifying**

So that seed can meet the high standards this Company has set, it is thoroughly recleaned and purified by special machinery of latest type.

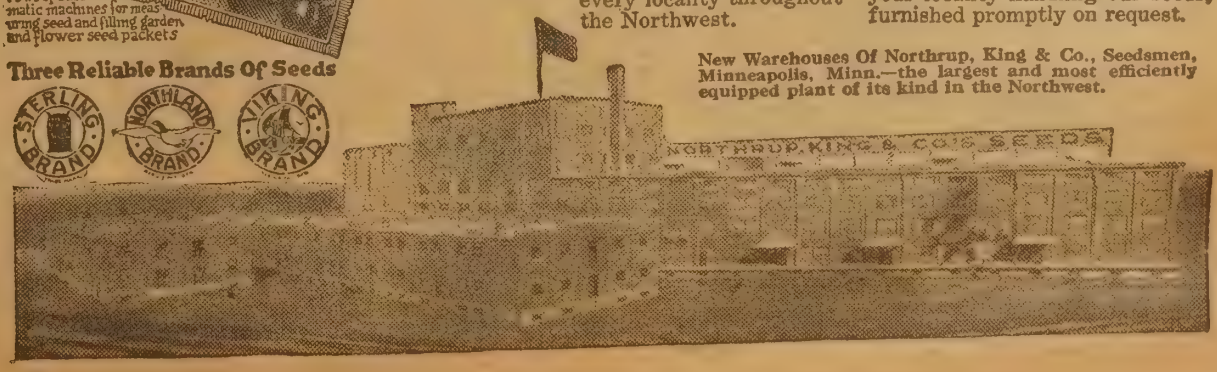
**Testing For Purity and Germination**

Each lot of seed is tested in a laboratory in charge of an expert analyst. Purity is determined by the use of microscopes and delicate scales. The seed is sprouted to show percentage of germination.

**Packet Seed Department**

Millions of packets are sold from the attractive Northrup, King & Co. seed cases, which dealers display in their stores. These packets are filled and sealed by delicately-adjusted machines.

**Speeding Up Shipments**



Seed is sent from storage floors to shipping room by the use of electric truck, gravity chutes, and special bag and box elevators. Freight cars on three lines of tracks are rapidly filled from long loading platforms and shipments are made to nearly every community in the great Northwest.

# NORTHRUP, KING & CO.'S SEEDS

In this new plant, Northrup, King & Co. is working at top speed to make it easy for you to obtain reliable seeds of the hardiest and most productive varieties. Because of the immense amount we supply, we can distribute most effectively by placing them on sale in dealers' stores, in nearly every locality throughout the Northwest.

STERLING, NORTHLAND, and VIKING brand seeds will help you raise better crops and increase food production for war-time needs. We have on hand large stocks of most varieties.

Order early before stocks are sold out. Names of dealers in your locality handling our seeds, furnished promptly on request.

New Warehouses Of Northrup, King & Co., Seedsmen, Minneapolis, Minn.—the largest and most efficiently equipped plant of its kind in the Northwest.

# Grow Wrong Beans

## Markets Demand Certain Varieties

Numerous reports from various districts have indicated a dissatisfaction on the part of growers of beans with market conditions. It has been charged that dealers were demanding as high as 15 cents a pound for beans when they would pay the producer something like half that price. Where this condition exists it may be due to the production of the wrong varieties of beans, thinks Charles Uhden, wholesale dealer, of Spokane.

Mr. Uhden believes that the trouble is that the growers have beans of an unpopular variety or one comparatively unknown to the consumers. He recommends the production of the White Navy or Martha Washington varieties, because these beans are staple, known to all consumers and generally popular.

"We would advise every grower to raise white beans only," says Mr. Uhden. "Many growers make one mistake, not only in raising beans but in raising other products. Too often they raise what appears to them to be good, regardless of the fact that the public does not take to it at all. They should pay attention to public taste or opinion and govern themselves accordingly. This refers especially to potatoes. They raise perhaps 50 varieties in the northwest, while perhaps six varieties would be sufficient."

### Understanding the Tractor.

Does the tractor possess any marked advantages over the horse? If it does have such advantages, what are they?

With thousands of tractors drawing plows and harrows and seeders and binders over American farms today it looks as if there is a real need for power that is greater and more economical than has been supplied by horses. With tractor schools throughout the country, many of which give free courses of systematic instruction to tractor owners, it is evident that tractor farming is growing in favor very rapidly.

One of the first considerations that comes up in comparing the tractor with the horse is the difference in operating and maintenance cost between machine power and horse power; for it is obvious that production cost is one of the big determining factors in measuring profits from farming operations, the crops must be marketed at the very best price you can get and the cost of producing the crops reduced to the lowest point possible.

In order to show just what the general opinion of the tractor is among those who have adopted tractor farming in the Pacific northwest we shall pass along to our readers from week to week the opinions and experiences of some of these men. Here is one of them:

"The tractor question is a very large one," says Mr. William Potter of Grangeville, Idaho. "I have been using a small tractor for two years on my place of about 1000 acres in a very heavy adobe soil that had practically been given up by horse farmers. I was a stranger here in this country when I started and people generally expected me to make a failure. But instead I have done so well with my tractor that a large per cent of my neighbors are now buying tractors. My tractor is a small one. It takes the place of about 20 horses and will plow the same number of acres as 15 horses in a day. It does not tire out and requires no attention when not in use." Mr. Potter says that his repair bill the first year was heavy owing to his having used a make of lubricating oil not suited to his machine. "I found that my trouble was altogether the oil," he adds, "and have not been out one cent for repairs this year." Another point Mr. Potter brings out is that in his estimation a tractor should be powerful enough to pull a sufficient number of plows to plow out its own track.

**Expansion of Concrete.**

Concrete roads expand most in winter and contract most in summer, according to the United States bureau of standards, because of increases or decreases in the moisture they contain.

# Two Shorthorn Sales Coming Soon

## *Hundred and Seventy-Five Purebreds Will Be Offered*

**By. D. I. RAYMOND, Assistant Sales Manager, Northwest Shorthorn Breeders' Association.**

Approximately 175 head of purebred Shorthorn cattle will be offered for sale at Spokane and North Portland on February 23 and 25, respectively, under the auspices of the Northwest Shorthorn Breeders' association. About 100 head will be offered at Spokane, at the Union stockyards, while about 75 will go on sale at the stock yards at North Portland.

I hope that the farmers and stock men of the northwest will look upon these sales as excellent mediums through which to purchase their purebred stock, for such is the aim of the breeders in congregating their offerings and selling them together at a given place. It has been my interesting experience, in discussing these forthcoming events with prospective purchasers, to hear them express their ideas that the breeders hold these periodical sales, with the sole idea in view of acquiring large, unreasonable prices, through arousing competition among the buyers. Such is not the case. The object of such sales is along more cooperative lines. Of course, the breeders have their own welfare at heart in conducting them. It serves to create a market for their surplus, a marget to which they can consign their stock and sell it entirely upon its merits. But the paramount idea the breeders have in mind, is to conveniently serve the needs of the farmer, enabling him to get what he needs with little expense and trouble. He has the advantage of inspecting and comparing the stock offered by all the breeders, of discussing the merits of the different individuals which interest him and in meeting the breeder of the stock, and he usually finds that the breeder is anything but one obsessed with the idea of filching him, but merely a man similar to himself, occupied with the same ideas and problems and particularly with a desire to cooperate, and proud of the opportunity to distribute a class of live stock that will result in profit to the farmer and at the same time improve materially, the quality of the stock in his community. With such ideas in mind, the Northwest Shorthorn Breeders' association initiated the Spokane show and sale in 1917. For the first venture of this kind, the patronage was encouraging. Such a sale was more or less of a novelty to the people in this territory and the attendance was not as great as the offerings warrante', although the breeders felt that the interest shown and appreciation expressed, justified them in again consigning their young bulls and heifers to Spokane and offering them again to the farmer and stockman. Their belief that the sale will receive the patronage which it will justify, is indicated through the fact that they have increased the number of their offerings of last year, 35 head, there being offered this year 60 bulls and 37 heifers.

These cattle will come from the herds of many of the new as well as of the old and well-known breeders and I believe that the facts will bear out my statement that the farmer, stockman, dairyman or breeder can procure through either of these sales the type of breeding animal he desires. There will be strong, rugged, bigboned young bulls that can be put on the range and help produce the kind of stock that top the market for prime beef; bulls and heifers from good milking foundations with facts and figures to back them which will prove a valuable addition to any dairy herd, and stock of the same families that have proved themselves winners in the east as well as in the west, with which the breeder can build up a creditable herd or improve one already established.

All the cattle offered through the sales will be exhibited and judged and prizes will be awarded. Nothing but those that are to be sold will be allowed to compete for these prizes. These exhibitions should afford the prospective purchaser an excellent opportunity for comparison of the offerings and to choose among the many, the one he would like to buy. Each animal will be tested, showing it free from tuberculosis and the breeding qualities of each will be guaranteed, and a certified copy of registry will be furnished with each lot sold.

The second annual northwest live stock conference will be in session from February 21 to 23 and will enable those coming to the Spokane sale to attend and participate in this conference which will, through the prominent authorities who will be present, take up the many things with which the farmer and stockman have to contend with. Among the men who are qualified to talk on these matters, based upon their own experiences, are Duncan Marshall, minister of agriculture of Calgary; W. T. McDonald, commissioner of live stock of British Columbia; C. H. Eckles, University of Missouri of Columbia, Mo.; T. W. Tomlinson of the American National Live Stock association, and many others. Representatives of packing houses, stockyards and educational institutions will be in attendance and the meeting will be interspersed with visits to the local packing houses and stockyards, followed by a dinner on Friday evening at which the business men of Spokane hope all out-of-town visitors to the conference will be their guests. A very entertaining and instructive three days will be the lot of all those who can come to Spokane at that time. Railway companies have authorized the usual fare and a third on a certificate plan for those attending the convention.

### The Busy Gaza.

In almost every particular the modern Gaza is an Egyptian rather than a Syrian town. It is full of rich vegetation, and its many glistening minarets show up against the dull green of innumerable olive trees. Gaza is still as of old, a place of trade, of camels and caravans, and its bazaars are loud with traffic and filled with merchandise.

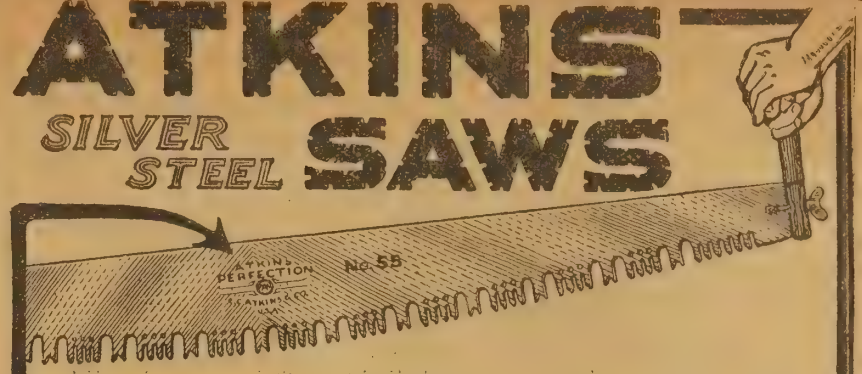
AMERICAN SEPARATOR CO.
Box 3137, Bainbridge, N. Y.

**Have an Apple Orchard On Your Farm**

"An Apple a Day Keeps the Doctor Away." There's a world of truth in this old saying, because there's no healthier or more delicious fruit than apples. You should have an apple orchard on your farm.

The pleasure, health and profits you will get out of an apple orchard will repay you many times over the first cost.

*Apples on Pyrus Baccata Roots* are the only apples that should be grown in this cold Northwest climate. These roots are able to withstand the coldest, bottest and driest weather. Baccata roots check the growth of the tree and force early bearing—you will get apples the second year.



10 STRONG 4 to 5 ft. Trees $3.75

This will make you a very fine orchard—one that you can be mighty proud of. Order these 10 trees RIGHT NOW and I'll give you 10 tree protectors absolutely FREE.

**ATKINS SILVER STEEL SAWS**

**Cross-cut saws that make work easier, save time, and save labor**

There is no more reason for "getting along" with a poor saw than there is for "getting along" with a broken plow. Time and labor are too valuable to waste, and poor tools waste a lot of both. The best saw—the famous Atkins—is not expensive, and will quickly pay for itself in dollars and cents. Think of the time and material a poor saw will waste in the hands of your hired man or yourself!

If you own a saw that sticks in the wood and makes your work hard, discard it and get an Atkins. Stop that waste!

**The Finest Steel**—Atkins Silver Steel, used in all our best saws, is made by an exclusive process and is the highest grade of saw steel ever devised. It takes a keen edge, stays sharp longer and takes less filing to keep in shape than any other saw made.

***Carpenter's Helps FREE***—"The Saw on the Farm" tells how to make neat joints, how to build things, how to file saws and take care of them, etc. Sent free on request.

The genuine Atkins saws ALWAYS have our name on the blade. If your dealer does not handle them, write us.

**Uniform blasting results in every stick**

**GIANT FARM POWDERS**
STUMPING — AGRICULTURAL

Uniformity is another word for economy and safety. When the same things happen with each pound of Giant Farm Powder, you know not only how much to use, but what results to expect and how to handle the explosive.

Giant Farm Powders are surer, safer and more economical because our tests guarantee every pound. We maintain our own completely equipped chemical division to inspect Giant Farm Powders during every process of manufacture. Absolute uniformity means absolute dependability. Like results always obtained under like conditions make western farmers prefer Giant Farm Powders.

"Giant Powder is the most satisfactory," says John Zurr, Santa Rosa, Cal. "I account for this because Giant Powder is made with the utmost care."

**Caution:** Be sure you get the genuine. That other explosives are often called "Giant Powder" indicates the high quality of the original. Look for the Giant trade-mark on every case.

The coupon (or a postal mentioning this paper) will bring you the big book "Better Farming." Tells how to remove stumps, prepare tree beds, and do all kinds of farm work cheaper and better. Write for it now.

# The Nannie Goat--Why Not?

## *In Italy, Belgium, the Balkans, Goat Is Stand-by for Milk*

By E. E. ELLIOTT

There was an interesting story in the Spokane papers lately about a man out on the North Side of the city who was attracting a lot of attention because he kept a nannie goat to supply his famly with milk. The story was mighty interesting to the reading public for several reasons. In the first place, it was a story "touching and appertaining," as the lawyers say, to milk and the milk question in the city of Spokane, as well as in every other metropolis, might be called a burning issue, only it isn't the milk that burns, but the money that is spent for it. In the second place, the story attracted attention because it held out the alluring dream of 5 cents a quart, or was it 2½ cents? Anyway the owner of this animal claimed that it cost him only 5 cents a quart to produce the milk, and, of course, he would be willing to sell it at cost, as all the other dairymen are doing. In the third and last place, this article made some slight mention of a certain nannie goat as being the fountain and source of supply of a very desirable and necessary article of food and spoke in a complimentary way of the public service being rendered by this lady-like appendage to the family circle of this estimable citizen

As a matter of fact the reporter who wrote up this story knew his audience and wrote it in the manner that would easiest catch the eye, consequently the goat as a possible rival to old brindle was not the outstanding feature as might have been a reasonable conclusion. The point that was featured was 5-cent milk, or the possibility of it. Cheap milk, good, wholesome milk at old-time, befo'-de-war prices. Some one had pioneered and shown the way. Everybody and anybody with a backyard could adopt it. The plan was simple and within the reach of the poor as well as the rich. It was an excellent corrolary of the war garden on the vacant lot and the unoccupied parking strip.

Simply told it was this: Keep a goat. If necessary keep two goats. Purchase a tether rope, flank the chicken yard with a goat corral, sell the lawn mower to the second-hand man and put the lady goat to work on the front yard. Compel her to minister to the ultimate city beautiful by helping to clean up the surplus weeds and grass on idle real estate and unused public property. Give her a place of honor beside the hen and the spud and let her do her bit or best toward helping to win the war.

This story appeared only a few weeks ago and after a day's mild interest, has passed and is probably forgotten. How many can recall reading it? It proposed a perfectly reasonable scheme based on an actual experience for augmenting the milk supply of the city and holding down the soaring price of this product. Did it create a furore of excitement? Did the goat market suffer any remarkable inflation? Was there a rush to the stockyards or a flood of inquiries in the advertising columns for stock of this character? There was not. None of these things took place. The goat population of the city is yet normal and will probably remain so subject only to natural increase. The people will still continue to pay any price demanded for milk; 14, 16, 18 and even 20 cents. The milk wagons will still chase each other around and duplicate their routes, the health officer will lend his office to the maintainance of the existing order and everything will go on as before.

And yet, why not? The suggestion was a perfectly reasonable one! We are doing and expect to do many unusual things these war days in order to win the world-wide victory for humanity.

We are changing our whole system of living, giving up preferences and likes, accepting discards and dislikes. We are curbing our prejudices in every direction and especially in the matter of food, all in the interest of the public good.

The arbitrary demands of the situation are cutting across all our eating and living habits and will affect them more and more as time goes on. These are the hardest prejudices of all to overcome. We are trying to create an appetite for corn and rye bread, to substitute rabbit for veal, whale steak for mutton chops and horse meat for pork sausage. It goes against the grain, but why not? They are all perfectly wholesome and nutritious. By what compulsion in science or economics are we compelled to limit ourselves to cow's milk? It is not so in other parts of the world, among people and nations with, as well as against whom we are fighting. Before the war it was estimated that 75 per cent of the households in Germany depended on goat's milk. In Italy, Belgium, the Balkans, the goat is the standby. There are more goats in Switzerland than cows. In many countries along the Mediterranean there are no cows at all. The explorers of the United States department of agriculture in foreign lands have found types and breeds of milch goats almost without number. In a late bulletin not less than 33 types and breeds were described in detail, all of them being classified as having been bred for distinctive dairy purposes in various countries. Switzerland alone has no less than 16 breeds which are well defined in character.

And yet, when the goat is suggested as a substitute in America it is always met with ridicule. A few years ago a public spirited citizen in a town in New Jersey gathered a considerable flock of selected milking animals and undertook to popularize their use among the consumers. His experiment met with attack from that irresistable source the ridicule of the sensational reporter, and was a failure. The goat, to the average American, seems capable of serving best as a foundation for the jokesmith and cartoonist.

Here and there breeders are trying to build up flocks of superior quality and an association has been established to found a breed to be known as the "American goat." The United States government has given all possible encouragement to this movement, but while the future of the Angora breed, because of its production of mohair, appears well established, efforts to exploit the really more valuable milking breeds seem to languish. The argument for the goat against the cow is unanswerable and may be given in detail.

1. The original purchase cost compared with possible production profits is much less.

2. A cow rarely comes into service until past two years of age, the goat at one year.

3. The goat can utilize foods that the cow can not, and may be kept more economically.

4. The goat is immune to many of the diseases affecting the cow, particularly tuberculosis.

5. The amount of milk in proportion to weight of animal compares favorably.

6. The quality is superior, as is the percent of butterfat.

7. The milk approaches more nearly to that of the human family and is recognized as the best adapted to infants and sick people.

8. The goat will reproduce twice as rapidly as the cow, twin kids being the rule.

The goat can be said to be the poor man's cow, but by the same token it may be said to belong in the aristocratic class. The efforts of well-meaning wealthy citizens to popularize the use of the milk are certainly to be commended. It has already passed the experimental stage, even for peace times, and now when the demand is emphasized by war conditions it should receive serious consideration from stock men as well as other people of influence. A campaign in behalf of the nannie goat is certainly as feasible as well as reasonable a suggestion as the backyard garden idea, the potato propaganda, the "can all you can" game, or the "hurry up with the hen" scheme. Mr. Editor, I have convinced myself. Do you know where I can get a goat?

### Test Germination of Seed Corn.

Even when seed corn has been carefully gathered and stored it should be thoroughly tested in the spring before planting. The best way to do this, says the United States department of agriculture, is to make a seed-corn testing box and test 100 ears separately.

Each kernel that is tested must be perfect and not injured at the tip when it was removed from the ear. Hand-shelling will give much fewer injured tips than machine shelling, and should be used with all seed corn. If three or more kernels out of ten from any one ear fail to grow it will be wise to test every ear in the entire supply of seed. If the 100 tested ears show no poor ones further testing of the supply is unnecessary.

### Salt Found Under Cleveland.

Salt has been found under Cleveland and prepared for market for many years, but the city has only recently awakened to the fact that sufficient salt underlies it and the immediate vicinity to supply the world.

## Win the War by Preparing the Land, Sowing the Seed and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

**U. S. Employment Service, Dept. of Labor**

## *THE GOODS YOU SEE ADVERTISED IN THESE COLUMNS ARE RELIABLE*

We accept advertising only from firms or individuals whose goods we are convinced are exactly as represented. In writing advertisers please mention this paper.

# SAVE MONEY BY SENDING YOUR ORDER DIRECT

THE farmer realizes the advantages of dealing direct, perhaps, more keenly than any one else. If you have found private customers for butter, eggs, honey or anything else produced on the farm, you know that you can give your customer a better price than he could get if the goods came through the middleman's hands.

As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct.

It is not too early to say that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible. Readers get the benefit of every dollar which would ordinarily go for agents' salary and expense account.

If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan a complete success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance.

**25c** Pays for The Washington Farmer for One Year

**50c** Pays for The Washington Farmer for Three Years

**$1** Pays for The Washington Farmer for Five Years

**Give the Principle of Cooperation a Boost by Telling Your Neighbors About This Special Subscription Offer.**

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

Feb. 14.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription. In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# No Minors Allowed

By JOE L. ASHLOCK

PART III.

The sun was hot in my face the next morning when I began to awake. First, there was a hazy, dreamy notion about the day before—too much bull bitters, an eerie ride home, a round, yellow moon that laughed like a fool while I stood by the haystack pulling at a wheat straw to regain the balance of my legs—or was it I who had laughed? I pondered in my waking dream.

As consciousness became clearer other impressions crowded into my feverish brain. Some one had rested a crowbar on my head and was trying to pry up the corner of the haystack. I yelled at him to quit. He dropped the crowbar and let the whole haystack fall on me!

I struggled madly and was smothered almost into unconsciousness; fought on, determined to die game; suddenly was wide awake, my own thirsty, suffering self!

The sun's light smote my eyes in white sheets which focused in pricking, burning, stabbing points of pain in the back of my head. I was hot and dry as a smelter, inside and out.

With hands that trembled I put on my clothes, which, oddly enough, I had removed the night before. How I got them off I can not imagine.

My whole being, body and soul, was assailed with a parching desert of thirst; which presently was relieved by a stream of clear, cold water that flowed in the horsetrough. After drinking I soused my aching head in the water and felt a little bit better.

The rest of the crew were up ahead of me and had fed and harnessed their horses and gone in to breakfast. Some good Samaritan had fed my horses, but had left me the harnessing to do, which I did and was hitched up and ready to go to the field with the crew. I had missed breakfast, of course, but could not have eaten anyway. No one in the crew paid any attention to me. There was reason for this. A fellow who the night before has been "lit up" does not take amiably to joking the next morning. In our wheat country it was an unwritten law that a fellow should be let alone by his fellow harvesters while he was "sobering up." Once sobered up and himself again then he was the legitimate prey of whatever jokes or remarks might be made at his expense.

We were "heading" heavy wheat that day and the torments I endured in the hot, yellow wheatfield are not good to think of. I was helped in my battle with the adeptness of a rather wiry, muscle-toughened, farm-reared boy; and I called into play every trick of the harvest trade I knew.

Trained and disciplined to the tasks as I was I believe the strain would have worn me down except for the fact that twice during the day, once forenoon and one afternoon, the "header" broke down, giving me in all about an hour of rest when otherwise I should have been driving and unloading at top speed.

During the afternoon rest, which the breakdown of the header gave me, I slept 15 or 20 minutes and had queer, ghoulish dreams.

I dreamed that a lot of small, active, monkey-like black devils or imps were making sport of me. They raced one after the other at regular intervals along the high side of my grain bed, then hopped and skipped down the sloping end to the low side, from which they leaped into the yellow wheat stubble. Over the grain stack and through the tall, stiff stubble raced the imps; and then swarmed over the low side of the grain bed, leered at me from beady, black eyes that were surrounded by reddish disks like the spokes of small, red wheels set closely together. I awoke with such a jerk that I seemed nearly to spring out of my own skin.

Almost immediately I dozed again. Another dream! This time many hideous insects as long as clothespins, bent in a half circle, possessing scratchy feet and a forked tail with a stinger on each fork, were stinging me. The crescent-shaped bugs were colored bright red and shiny black in diamond-shaped spots not unlike the markings of a rattlesnake, except for color, and with their scratchy feet they hung to your nose, cheek or hand while they humped their clothespin tails and stung you twice with one punch!

This devil-bug had a small, leering, half-human face about the size of the head of a wooden clothespin. Its impish face was decorated with sharply-pointed mustache and an equally pointed beard. It flew in the air, but had no wings! Surely enough my spiritual guardian whose mission was to punish me for wrongdoing was not sleeping on the job, though I was!

The rattle and clip of the header sickle awakened me from this pleasant vision and I snached the lines just as my team started.

It was several days before I rid myself of the effects of those drinks of bull bitters—and out of the experience was born in me the most intense hatred of bull bitters and the whole bitter and booze tribe.

When I was a little fellow the phrenologist that came to our town and felt the heads of many felt of mine. He told the audience that I must surely have some Indian blood in my veins. He said it would be strange for one to have an Indian trait so strongly developed as did I and not have ancestral lines reaching back to a redskin somewhere.

I was much disturbed by this pronouncement and for days pestered my mother for information about my alleged redskin forebears. She finally lost patience and told me to clear out and be still on that subject ever after.

Failing to get from my mother any information about the supposed Indian king, chief or warrior from whom I had inherited an unforgiving disposition, I pored over the "family record" in our big Bible, which was an heirloom in our family, having passed from father to son and mother to daughter through several generations.

My quest was discouraging. There were announcements of marriages, births and deaths galore. There was the announcement of my own birth, with space reserved for my marriage, the birth of my children, and my final death! I acquired a creepy feeling, and for the time forgot about the mysterious Indian chief I was trailing through the maze of my ancestral record.

Finally I found it!—so I thought. On a page of Deuteronomy was a queer looking bird done in pencil of four or five colors. The bird had a blue and a red wing, one purple feather in its tail, the rest being black; a huge yellow eye with green eyebrows; and monstrous claws! The coat of arms of him from whom I had inherited an unforgiving disposition without a doubt! In excitement I confronted mother with this evidence.

Nonsense! When my Uncle Sam was little, Grandfather Stigall one Christmas gave him a box of differently colored pencils. Sammy proceeded to decorate the family Bible, beginning with Genesis and ending with Deuteronomy, where he was discovered. For this bit of art a hickory switch had been the lot of Sammy. Such would be my lot if I wasted any more time about that Indian who had never existed! So I gave up the search.

So, in tracing my vindictive disposition to a redskin ancestor the phrenologist marked a limb of my family tree which, on all evidence, never existed. But in his diagnosis of disposition, the examiner of heads was partly right, as was evidenced by the intense and sweeping hatred which, on the occasion of my bull bitter experience I developed toward bull bitters, any and all kinds of bitters, any and all kinds of booze—indeed, my animosity reached almost to the innocent bottles containing these outlaw liquids!

My feeling was Indian-like, I suppose, barring the essential fact that no Indian of my acquaintance ever felt peeved at the presence of any of the booze tribe. But the Indian's ethics, by which he is led to hate his enemy and his enemy's kinfolks and friends as one, were mine in the matter of bull bitters. My animosity extended from the drink itself to its consumers and sellers—everything in connection with it. All this time I had not at all espoused the cause of temperance, of which I had never heard. I was merely hating a personal enemy and all his kin, and my affair was a personal one rather than the burning public question which has developed from the liquor evil.

My hatred of the booze tribe and its camp followers ultimately led to an exchange of blows and a break of friendship with Charley Blank, who for years had been my loved companion. Charley told me one day how a few days before he had been "tanked" at the Wilbur Fourth of July celebration. While thus "tanked" he had met Miss So and So on the street and held conversation with her for 10 minutes before he could tell who she was—so drunk he couldn't see, yet was walking straight! Charley was proud of the achievement, and bragged about it.

The memory of my bottle of bull bitters came to me like a flame and set my head ablaze. What I said to Charley drew from him a heated retort. Our exchange of compliments, neither of which is printable, was instantly followed by blows at short range.

Bystanders took possession of us then—pulled us apart like two raging collies. We went our way, each vowing vengeance, I with a bleeding nose, he with an eye that was closed. But in a little while we cooled off and by unspoken understanding let our affair pass, though never were friends again.

The following winter at a big dance in McDonald's wheat warehouse I slipped from Charley's pocket a flat pint of whisky. I do not know exactly why I did this, for by this time my regard for him was so slight that his ejection from the dance for drunkenness would have caused me no grief. Half drunk at least, Charley did not observe my act; and saying nothing about it, I took the flat bottle and its evil contents home.

Dawn was brightening the east when I reached home, weary and numb with the cold. I had forgotten about the whisky, but found it when undressing. I took the flat bottle from my pocket and set it on a small table near the door. Then I turned in, and a moment later was sound asleep with no dreams of either Charley or his whisky.

In mid-forenoon I was awakened by the rattle of the door lock. With eyes half open I saw that the door stood half ajar, and could also see that some one was holding the knob on the other side. In a flash I realized what was happening. Whoever was holding the doorknob on the other side was standing there looking at the flat flask of whisky on my washstand. My mother, of course!

It was she. While I watched her hand reached in and took away the flat pint. The door closed swiftly and she was gone.

Oddly enough, I never offered mother any explanation. Nor had I ever told her of my experience with bull bitters. She knew a little about my hatred of the whole booze tribe, and may have wondered why I brought the whisky home. But she asked no questions, and so far as I know was not particularly disturbed at finding a flat pint of whisky in my possession. She was a shrewd mother.

But I can never forget the hesitant, wondering movement of her hand as it reached through the half open door for the bottle.

A good many years later I visited mother's grave in the Greenwood cemetery near Spokane. The place was quiet and beautiful in all its richness of shading trees, green grass and blossoming flowers, and set among all this beauty and quiet with silence unbroken save for the twittering and flutter of nesting birds were stately groups and rows of monuments.

My mother's monument was of pure white marble, with an open gate carved in the foreground of its decoration. You looked through the open gate at "Morning" cut in pure white. Reaching down from the morning clouds was the likeness of a human hand.

Why I had never noticed that hand before I can not imagine, for I had been at my mother's grave many times before the occasion of which I speak. There the hand was—my mother's hand, cut as true as if the sculptor had had the living model before him!

The hand held a white rose, and back of the rose was the dawn.

I stood there for a long time, marveled, and suddenly remembered when last I had seen my mother's living hand in a posture similar to that cut in the pure white stone. It was when she reached through the partly open door and took away a flat flask half full of an evil looking liquid.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B. , M. A., M. D. (Johns Hopkins University.)

## The Sort of Pillow Science Suggests to Sleep On

Dr. Hirshberg

Whenever you undertake such a task as an inventory of your bed clothes, you will be apt to discover that some of the soft, downy pillows which were a part of the family inheritance may have to find a place among the many household goods which have been scheduled for the refuse heap.

Feather pillows of the old-fashioned type are unhygienic, because they are neither germ-free nor clean. That part of the human machinery which is supposed to lie on the pillows does not rest upon them so as to be in a position parallel with the rest of the anatomy. The softness of the down is frequently the source of the stiff neck which accompanies your waking, and this feeling of soreness and pain may perhaps be traced back to the restless movements which pushed the feathers so much to one side as to render stiff and hard that spot upon which your head rested. The neck, in its twisted position, is apt, at times, to become afflicted with knots and lumps during your sleep so that interference with a large vein or artery may even result in some permanent damage.

**Germs Often Present.**

When you realize that feather pillows are, in many instances, handed down in families from time immemorial, you will probably not be surprised to know that examination under the microscope of the down or feathers in them may reveal the presence of millions of germs, which are ready to do some mischief when the rundown vitality of the human machine gives the opportunity. As soon as the life motor becomes impaired by "colds" or coughs or ailments of certain kinds bacteria in the feathers of your pillows begin to "do their bit" to provoke and to complicate the malady.

There is some ground, perhaps, for the suspicion that infantile paralysis is transferred by the use of the old-time feather pillows for babies. Myriads of bacteria are prone to become a menace to baby's health. The heat which feather pillows produce about a child's head, a most delicate part of his entire mechanism, is not liberated because feathers are a non-conductor, and therefore, an excellent heat retainer. Since a child's flesh and blood are very sensitive, the head becomes overheated, interference with the heart action may possibly take place and indirectly aid the virus of some disease to make greater headway in the progress of that ailment.

**A Better Pillow.**

Just as the tired, worn-out plant must ever give way to the young and vigorous offshoot, so the old-fashioned, worn-out, too thoroughly exploited feather pillow is soon to make way for the modern, sanitary pillow. This new head rest is small—as long as the space between the back of the neck and the top of the head, and as wide as the line from shoulder to shoulder, and about five inches in height. It is easily filled through a slit in its ticking with new stuffings of curled hair, and so is kept clean and wholesome. It does not give opportunity for a brood of facteria to grow old within it.

This physiological pillow is adapted to the individual's head. The rest plane of the anatomy and that of the head are parallel to each other when the weary human machine reposes peacefully in bed. No opportunity is given to crumple the pillow into a hard knot under the head or neck or to give hindrance to the free flow of the blood. It remains straight and comfortable during the night, uniformly smooth, and is an aid in body building. The pillow itself tends not to break up the resistance of the flesh-covered bony framework of the human form.

# Use and Patriotism of Foreign Languages

Not long since I went into a dining car to get dinner, when among the first things on the bill of fare was something I could not understand. It was printed "du jure," and I supposed it was French, but had not the slightest idea what it meant. It was in the same class with consomme, so I reasoned it might be a variety of soup.

I used to be too proud to ask when I did not know for fear I would advertise my ignorance, but I learned later that if I did not know there were enough others in a similar state of ignorance, so that I would not seem lonesome.

When the waiter came around I pointed with my finger to the place where the word was printed, and said: "How do you pronounce that word?"

He bowed politicly and said: "Well, suh, I don' no's I kin tell yuh."

"Can you tell me," I said, "what it means?"

"Sorry, suh, but I doin' no's I kin. I think, suh, it means some kind of soup."

"Well, will you bring the head waiter, the cook, the chef, or some one else who can tell me what it means?"

"Sure, suh," and he hurried away with that politeness characteristic of his race.

A gentleman sitting nearby took a French book from his pocket and said: "Pardon me, sir, I have been studying French a little, and I think that word means soup of the day."

"Thank you," I said. "I care very little about it, but I want to get some fun from this outfit, for printing the bill-of-fare in a language not one person in 100 hunderstands.

By this time the head waiter came, and I said to him: "We are all mixed up here about the meaning of a word, perhaps you can straighten us out a little."

"That," said the head waiter, 'means vegetable soup."

"The French student said, My book gives soup of the day, and I supposed it was a kind of composite of everything thrown into the pot."

"Well, here if you order it," said the head waiter, "you would get vegetable soup."

"All right," I said, "then bring me vegetable soup." "But," I said, "I see at the bottom of this program Demi Tasse. What does that mean?"

"It means a small cup of coffee."

"Well," I said, "I used to know that Demi John was a small John, at any rate, a half John, and if I had known what Tasse meant, I would have known what to order. Bring me Demi Tasse."

I have not written this for mere amusement, nor for magazine filling. I have given it for two purposes.

One is that I think we are spending millions of dollars in the United States teaching foreign language in our schools when the money could better be spent teaching the laws of business, of commerce, of science, industrial training, chemistry and the laws of health. Not half the college graduates can draw up a contract according to legal form, make a deed to land, or do the simple things in business life, which most people must do in order to succeed. Every one should study shorthand and be able to write approximately as fast as he could talk. Every one should be able to use a typewriter and be able to keep books, so that he would know at a glance his balance of profits or losses.

Then, every one should know the chemical composition of the ordinary foods and their actions and reactions on the particular individuals using them. Because some people like milk and it agrees with them is no evidence that it will react favorably on every other one. No two persons are exactly alike, chemically or otherwise. If corn bread is 4.7 per cent fat, whole wheat bread 0.9 per cent fat, and white wheat bread 1.3 per cent fit, it might be interesting to know which of the three kinds of bread would require the most butter or bacon to make a balanced ration. If fat is a heat producer, it would also be interesting to know which of the three kinds of bread is best for cold weather and which for hot weather. Why do the boys in the trenches and the people in extremely cold climates require so much fat and sugar? To know the chemical qualities of root crops and their effects on health, energy and life is more important than to know Greek roots and Latin endings. This line of study is a large field exceedingly practical and can be used to advantage in every-day life.

My observation has been that the average student of a foreign language will seldom make practical use of the language which he has spent months, or perhaps years, in studying and that in a short time will not be able to read or translate correctly a single page of the book from which he studied. I do not claim that this study is of no value, but that it is not of the greatest value and if any one desires to specialize in that field, let him choose for himself and pay for it out of his own pocket.

In the second place I am convinced, after carefully studying the question, that the principal reasons for the disloyalty of so many German-Americans is that the "Society for the Organization of Germanism in Foreign Lands," a movement hatched in Berlin, and propagated in every country in the world, is fed, fostered and strengthened by German language papers and German teachers in the schools. This society publishes a quarterly magazine in which the declared purpose of its publication is "The promotion of Germanism among 30,000,000 people of German birth dwelling outside of the German empire." This is Pan-Germanism. The "Pan-German league" was founded in the United States in 1893, and its declared purpose is "To foster German civilization, to use the German language, to assist in spreading Germanism, to live the German manner and create German world nationality."

In 1910 statistics showed that there were in the United States 715 German-American newspapers. Wisconsin had 94, Illinois 82, New York 80, Ohio 76, Pennsylvania 57, Missouri 50, Iowa 40. Total in the seven states named, 579. All the other states had 136. It should be noted that Wisconsin had 94 and Illinois 82, therefore, Senator La Follette of Wisconsin and Mayor Thompson of Chicago are not accidents, but are effects of causes. Neither are the incendiary fires, dynamiting outrages, blowing up of our ships, labor strikes, numberless spies, and the various methods for the destruction of life and property of American citizens accidents. They are the effects of causes that we have only recently felt, but which were seen years ago in Germany, as a means by which the war lords of that country hoped to conquer the world. These German-Americans, many of them take out naturalization papers and are taught from Berlin to do so, in order that they may use the ballot, to promote the interests of Germany, as in the case of La Follette, who represents Berlin in the United States senate and does the United States more damage than if he were a member of the German reichstag. Just now, we are allies of France, and many of our boys will be almost compelled to learn the French language, while many others will find pleasure in doing so, but I do not believe the public moneys should be used to teach and our children be compelled to learn a foreign language.

In her conquered territory Germany prohibits the use of any language except the German. A family, who are our neighbors, and who had lived in Alsace-Lorraine, told me that the children in the schools of that country were questioned by their teachers as to whether, when they prayed, they thought in French or in German. If they prayed or thought in French, they were punished. If the world is not to be ruled by Germany, Germany's own methods must in some degree be made to react upon herself. Cut out the German language from every school in America and stop the German language newspapers.

Granville Lowthers

# YES!

Are War Savings Stamps the safest investment on earth?

Is their value *fixed*, so that they *can not* depreciate?

Have they a greater value with each day that passes?

Will they keep my dollars from competing with the government?

Will they help the nation in fighting this war?

Can I by buying them show my spirit and earnestness in backing up our soldiers?

Can I buy them cheaper this month than next?

Can I get my money back any time if I *need* it?

Are they as easy to buy as postage stamps?

***Get War Savings Stamps---$5 Stamps are $4.13 in February---from your carrier, postoffices, banks and many other authorized agents***

**THRIFT STAMPS**

Help your children by teaching them the lesson of thrift—have them buy Thrift Stamps REGULARLY. It will teach the value and rewards of saving. U. S. Thrift Stamps sell for 25 cents each. With the first one you get, free, a Thrift Card with spaces for 16 stamps. When filled, this may be exchanged, with a few added cents, for a $5 war savings stamp.

## WAR NEWS

The present war is the greatest, most far reaching and stupendous conflict in the history of the world. You and your family will want to keep in touch with every move in this tremendous drama of the nations. You can do so at low cost by accepting our clubbing offer. The Twice-a-Week Spokesman-Review presents a reliable, condensed review of all current events.

Being a member of the Associated Press, the important happenings are flashed to it without delay from every capital and village, and from every far flung battle line, where the history of our day is being recorded. It pays particular attention to the war news of special interest to the people of the Pacific Northwest. It reports the progress of the draft; and from its pages you will learn who among your friends and neighbors have joined the colors.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officials.

In addition to this intensely interesting and important war news, the Twice-a-Week brings you an accurate summary of local, state, national and international events. It is published every Tuesday and Friday. Purchased in any other way it costs $1 per year. Certainly an offer so liberal should appeal to every one of our readers. Every issue contains important news. If you have not acted already send in your dollar now.

*In case you are already a subscriber, your subscription will be extended if payment is sent now*

**IF YOUR NEIGHBORS DON'T KNOW ABOUT THIS OFFER PLEASE TELL THEM WHAT THEY CAN GET FOR $1**

# Friendly Advice

## Out of Her Own Experiences

Dear Young People of the Family Circle: When I open the paper and see the little picture at the head of the page, with father, mother and the children gathered around the reading table, it brings before my imagination the scores of dear young folk in the farm homes where the Farmer is a weekly visitor. Young people are very dear to me. One way and another I have been closely associated with them all my life. Looking back over the years to my owa girlhood I can not recall that any one, outside my father and an older brother, gave any particular attention to guiding my inexperienced feet into ways that were safe and secure. And neither did any one take the trouble to give me heart-to-heart talks about the seriousness of making mistakes about my associates or of wasting my time in school or the value of forming good habits.

I would have given respectful attention I am sure and I have no doubt that I should have been saved much heartache and avoided many mistakes had I been given the benefit of the experience of those who had traveled the road of life before me.

There are some things I just long to say to you young people while you are growing up and before it is too late. You will scatter out into the world soon and I want to tell you a few things that will aid you in making your way in the world.

First, be truthful, be frank and open in all your dealings. If you have made a mistake, and we all do, frankly acknowledge it. Excuse yourself, apologize if you know you should and then start in again.

Be friendly. Don't just seem to be but cultivate a friendly feeling toward every one. There is good in every one if we will but look for it and most of us have sufficient number of faults so we can, quite profitably, spend some time counting up and correcting our own, which will leave us less time to take account of the faults and mistakes of others. Don't be critical. Remember how easy it is to misjudge when we do not know all the circumstances. Jesus said: "Judge not that ye be not judged." Let that little "judge not" come quickly into your mind before your tongue gets in its work of criticizing the actions, manners or motives of people.

Perhaps they may be in the wrong. You may be convinced of it, but what good will it do to talk about it to any one save the people themselves? Learn early to be a good listener. When a person is talking to you give perfect attention. Most of us, even if what we have to say is not so very profound, enjoy the courtesy of attention from the person to whom we are speaking. In this connection let me say that it pays to be alert to learn something from people with whom you are talking. If one is so full of his own ideas and so eager to express them that he can not wait to hear what the other party to the conversation has to say he will have small chance to profit by the other's ideas.

Many years ago my father gave me a little bit of advice which has always stayed by me. I was about to leave for church one Sunday morning and was bewailing my lot that I had to sit and listen to a certain preacher. My father quietly said: "If you pay attention to the man I am very certain he will say something good, and the more careful attention all of you give him the more good things he will say." Tuck that sentiment away in the back of your heads and bring it forward whenever you listen to a public speaker. We get back, in this world, about in the same proportion as we give out. You may doubt this, but I believe it to be true, with some exceptions. There are many more bits of advice I have in store for my young people, but I will only mention one more this time.

Be neat and clean, both about your person and your rooms and personal belongings. Habits good and bad stick closer to us than our friends.

To the boys I would say that there is no matter of greater importance for them to consider than their personal appearance when they set about getting a position. No firm worth working for will want a fellow who looks untidy. It is the fellow with the neatly pressed clothes, clean linen, well kept teeth and hands who will gain easy access to the up-to-date business ofice. I don't mean these things alone will gain him a position, but if he secures an interview he can then present his case, and it is the clean, erect, honest-eyed fellows who command attention.

The girls I will gather about me another time and tell them some things I know.

# Helmeted Basilisk

One of the curious animals of Central America is the helmeted basilisk. It is about 31 inches long, three-fourths of which is tail. The general color of its body, which is covered with small,

Helmeted Basilisk.

overlapping scales is a greenish or olive-brown above and whitish below. The head has an elevated ridge of skin inclined backward and the back and tail are like the dorsal fin of the fish. The limbs are long, especially the hinder ones and armed with short nails.

# Corn and Oaten Breads

Americans have almost forgotten some of the best things we knew, says a circular issued by the U. S. food administration. Corn bread is one of them; oaten bread is another. How many times you have said, "That's good; why don't we have it oftener?"

Well we are going to have corn and oat bread more often, very often, every day, in fact. We would do it whether we liked or not, because our government needs more wheat to send abroad—wheat that can be had only as we let it go.

Well made, there is no bread more wholesome, more nourishing or better flavored than the mixed loaf of corn or oats. There are a number of good rules in every old recipe book. Here are three that have been tried; When in doubt, use these. Every time you eat bread with corn and oats you do well by yourself—and more, you help to win the war.

**Corn Meal Quick Bread.**

One and one-half cups corn meal, 4 teaspoons baking powder, 1 teaspoon salt, 1 tablespoon flour, 2 cups milk, 1 egg (omitted if desired), 1 tablespoon melted fat.

Mix and sift the dry ingredients. Combine the milk beaten egg and melted fat, and add to the dry ingredients. Mix well, pour into greased muffin tins and bake in a hot oven about 20 minutes. This bread should be served hot.

If a softer bread is desired the cornmeal, salt and milk may be brought to a boil and cooked for 10 minutes in a double boiler or over hot water. Cool, add the beaten egg, melted fat and baking powder. The flour is not necessary. Beat well and bake in a hot oven. This same mixture may be baked as griddle cakes.

**Oatmeal Bread.**

One cup liquid, 1 1-2 teaspoons salt, 1 cup rolled oats, 1-8 to 1-4 yeast cake softened in 1-4 cup lukewarm water, 2 1-2 cups flour.

Long process—Scald the liquid, add salt and pour it over the rolled oats in a bread-mixing bowl. Cool, add the yeast and one cup flour. Cover and allow the sponge to rise. When light add the remainder of the flour, knead, cover and let rise until double in bulk. Shape into a loaf, cover, let rise again until it doubles in bulk, and bake.

Short process—Follow the directions as given above, but add the flour at one time.

**Corn Meal Gingerbread.**

One cup corn meal, 1 cup wheat flour, 1 teaspoon soda, 3-4 teaspoon salt, 2 teaspoons ginger, 1 teaspoon cinnamon, 1-2 teaspoon cloves, 1 cup sour milk, 1 cup molasses, 2 tablespoons shortening.

Sift together the dry ingredients. Combine the milk, molasses, melted shortening and beaten egg. Add the liquid ingredients to the dry. Stir well. Bake in moderate oven.

Two cups of buckwheat flour may be substituted for the cornmeal and flour in this recipe. This will have the characteristic flavor of buckwheat. If it is too strong, use only one cup of buckwheat and one and a half cups of white flour. Two and a half cups of rye and white flour may also be substituted.

# Plenty of Potatoes

Leaflets are being sent out by the United States department of agriculture and United States food administration and contain many valuable recipes. One just received tells about the value of potatoes and says:

They are a splendid food, excellent for your body and are delicious when well cooked. They are good fuel; they furnish starch which burns in your muscles to make you work, much as the gasoline burns in an automobile engine to make the car go.

To boil them so they will be "fit for a king," drop the unpeeled potatoes into boiling salted water and cook 20 to 30 minutes. Drain the water off at once. If they are cooked too long or allowed to stand in the water they get soggy.

For best mashed potatoes, peel the boiled potato, mash and beat until very light, adding salt, butter or oleomargarine and hot milk. If dinner is not ready to serve, pile lightly in a pan and set in the oven to brown.

Potatoes are good in bread. Try the following recipe and see if you do not like it.

**Potato Cornmeal Muffins.**

Two teaspoons fat, 1 tablespoon sugar, 1 egg well beaten, 1 cup milk, 1 cup mashed potatoes, 1 cup cornmeal, 4 teaspoons baking powder and 1 teaspoon salt. Mix in order given and bake in a hot oven for 40 minutes. This makes 12 muffins, and they are delicious.

Potatoes can be used with nut meats and make the main dish of the meal.

**Potato Sausage.**

One cup mashed potatoes, 1 cup ground nuts, fish or meat, 1 egg well beaten, 1½ teaspoons salt, a pinch of pepper, and either salt pork, bacon or other fat. Mix the mashed potatoes and seasonings with the ground nuts, fish or meat. Add beaten egg and form into little cakes or sausages, roll in flour and place in a greased pan with a small piece of fat or salt pork on each sausage. Bake in a fairly hot oven until brown.

The above recipes have been tried by the writer and all are delicious.

# Handicraft For Girls

By Dorothy Perkins.

## Soap Bubble Fun.

It is not necessary to have special soap or a patent blower to blow bubbles successfully. There is nothing better than castile or ivory soap for

a solution, and a clay pipe like that in Fig. 1, which can be bought at a drug store, is as good as any blower on the market. But for large bubbles, the finest sort of a blower is a tin funnel about 2 1-2 inches in diameter (Fig. 2). Probably your mother has

one in her pantry. Another blower which you will find handy is a short lemonade straw (Fig. 3).

To make up the solution, shave the soap into a pan of warm water, putting in as much soap as the water will dissolve.

To make a bubble with the tin funnel, place the end into the solution, then lift it out gently, and if it is covered with a film blow upon the small end and a bubble will appear. Steps A, B and C (Fig. 4) indicate how to release the bubble by inverting the funnel and tossing the bubble out.

If the solution has the proper amount of soap in it, the bubble should be tough enough to land upon the floor without bursting. A carpet or rug is better to drop bubbles on than a bare floor.

## Bouncing Bubbles.

Fig. 5 shows how to bounce a bubble upon your arm. By dropping your arm slightly as the bubble descends, as indicated by the dotted lines, the bubble will land with less shock.

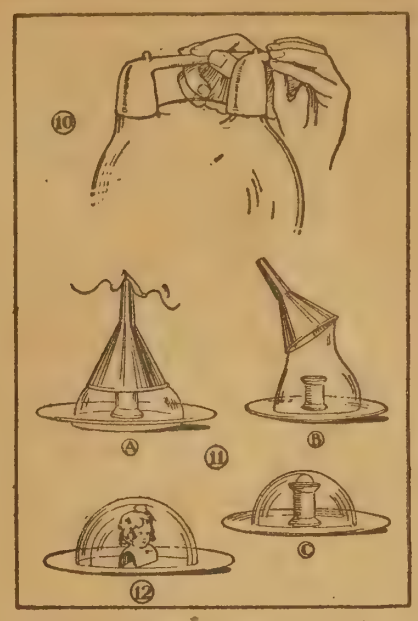

Fig. 6 shows how you can drop tacks into the funnel spout without bursting the bubble.

Place several glass tumblers upon a table, and blow a bubble upon each (Fig. 7), then add other tumblers and see how many bubbles you can place before the first ones burst.

## One Bubble Within Another.

Fig. 8 shows how to blow one bubble within another. First blow a large bubble on a pie tin having a depth of one-quarter inch of solution in it. Blow the bubble as you raise the funnel, then turn the funnel sidewise and slide it off of the bubble. The inner bubble is blown with a lemonade straw. Wet the straw in the solution, stick it through the bubble into the solution, and blow the inner bubble. The large bubble will not burst if the straw is wet, and is pushed through quickly. In the same way a series of small bubbles may be blown (Fig. 9).

If you have two clay pipes, you can blow two bubbles, and then by bring-

ing them together cause them to unite in one large bubble (Fig. 10).

Fig. 11 shows the steps required to blow a bubble over a spool. After blowing this bubble you can place a smaller one inside on top of the spool (C, Fig. 11). A small doll's head can be enclosed in a bubble, as shown in Fig. 12, and there are many other tricks which can be carried out.

(Copyright, 1916, by A. Neely Hall.)

## Meat Pies.

Here are some recipes for making meat pies taken from a leaflet issued by the U. S. food administration:

Cornmeal mush, hominy or rice are used for crust to save wheat. Take 4 cups cooked corn meal, rice or hominy, 1 onion, 2 cups tomato, 1-8 teaspoon pepper, 1 tablespoon fat, 1 pound raw meat or left-over meat cut up small, 1-2 teaspoon salt. Melt the fat, add the sliced onion, and if raw meat is used, add it and stir until the red color disappears. Add the tomato and seasoning. If cooked meat is used, add it with the tomato and seasoning, after the onion is browned and heat through. Grease a baking dish, put in a layer of the cereal, add the meat and gravy and cover with the cereal dotted with fat. Bake for half an hour.

Shepherd's pie is the name of a meat pie with a mashed-potato crust browned in the oven.

### Insect Language.

Insects, like birds and animals, have their calls, naturalists say. But the sounds they produce include the rubbing together of their limbs or wing covers and the vibration of their wings, so they can not always be spoken of as voices. Flies and bees undoubtedly mean something when they hum louder and louder.

## *Wonderful Egg Producer*

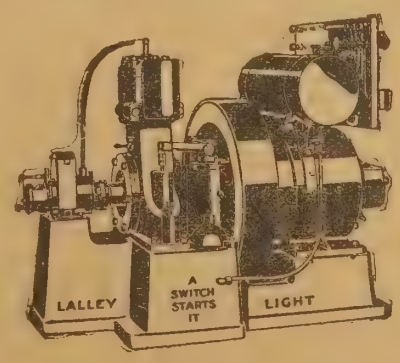
Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4662 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—**Adv.**

# Silent, Steady, Sure In Its Work

***Lalley-Light Brings New Cheer to the Old Home***

LALLEY-LIGHT, in operation, is practically as silent as light itself. With it in the basement you can barely hear, on the first floor, the low hum of its running.

It is quiet because its engine is designed and built expressly to run a direct-connected electric generator. That means, in addition, increased economy and efficiency.



Because it has big ball bearings to prevent wear—and noise—at every point where split babbitt or roller bearings are ordinarily used.

Because it has but three moving parts—no valves, no springs, no cams, to clatter and chatter.

Because the engine's patented construction permits it to run as smoothly and steadily as a perfectly governed steam engine.

Lalley-Light—with a record of seven successful years—brings electric light and power to the farm, and with them every convenience and comfort and cheer which electricity has conferred on mankind.

It gives you safe light—and eliminates fire risk in that direction. It is so simple that a woman, a boy or even a girl can run and care for it as well as a man.

**Generating plant is 27 inches long, 14 inches wide, 21 inches high. Storage battery is included in complete outfit.**

It is practically two plants at the cost of one—for either the generator or the battery supplies current, independently of the other.

Lalley-Light is a complete plant—direct-connected engine and generator, and storage battery. No extras to buy, aside from the wiring, fixtures and bulbs you must supply for any plant.

Consider the comfort of Lalley-Light on the farm. Unlimited light always and instantly at your command, in house and barn; power for pump, churn, separator, and so on. Greater convenience and labor-saving than you have ever had—all for a few cents' worth of gasoline per day.

Do not put this paper aside until you send us a postal card with your name and address. In return, we will send you, free, our book completely describing and illustrating Lalley-Light; and tell you what the plant complete will cost delivered at home.

We will also tell you the nearest place where you can see Lalley-Light in actual operation. Be sure to write today.

**Lalley Electro-Lighting Corporation, 1856 Mt. Elliott Ave., Detroit, Michigan.**

ELECTRIC LIGHT AND POWER FOR EVERY FARM

# Make Uncle Sam Your Banker

## *Uncle Sam Never Goes Broke; Buy War Stamps, Bonds*

A man may be bright and a woman brilliant, but unless intellect and wit are linked with the solid virtues they are unstable foundations.

What are the solid virtues? Industry, honesty, reliability, truthfulness, morality and thrift. Given these virtues the comparatively dull boy or girl will succeed where the bright and witty youth without them will fail.

Thrift is an almost indispensable essential to real and lasting success. Every one should save money and acquire the habit of thrift. This counsel is good for the country and good for the city. A New York daily, published near Wall street, finds no better advice for its readers, chiefly men of the great metropolitan business world, than the tried maxims of the Bible and the homely teachings of Ben Franklin.

"Nobody," it says, "can make money in the sense of accumulating a competence for old age without saving it. Even speculation must be based on money in hand. The young man who dreams of making a fortune will do no more than dream until he learns self-restraint and saves something."

There was never a time in American history when the government made it as easy as now for young people in the farming regions to form the saving habit. It has made an easy and safe beginning possible for every boy and girl in the United States.

Buy war savings stamps. They are the best investment in the world. The following explanation of these war savings stamps should convince persons of small means that this is the chance of a life time:

Beginning January, 1918, a war savings stamp costs only $4.12, with 1 cent additional every month this year, making the cost this month, February, $4.13. The United States government will pay back $5 on January 1, 1923 and the owner of this stamp may—prior to January 1, 1923—if he wants his money back, get it with interest at 3 per cent by giving 10 days' notice to any postoffice. This is the safest investment in the world bearing 4 per cent interest, which is compounded quarterly; these stamps may be registered at any postoffice as an insurance against loss. This, of course, applies only to the $5 stamp, as the thrift stamp, which costs only 25 cents, is simply a building plan toward the purchase of war savings stamps. The price of the stamp itself and its maturity value is the great thing to emphasize throughout the campaign. We want to visualize for each individual the figures $4.13 now and $5 in 1923.

Parents should buy war savings stamps and encourage their boys and girls to buy them. In that way they will support their country and help themselves.

If you have not already done so, get into partnership with Uncle Sam. Make him your banker. He will never go broke, but if he did go bankrupt all the banks in the country would go bankrupt with him.

This paper is in partnership with the government in helping you invest in these stamps. Any order received at this office will be filled at once. The Farmer has undertaken to sell $50,000 worth of them for Uncle Sam. Already many readers have ordered and have received their stamps. One man purchased a hundred dollar book of the stamps for each of the seven members of his family. Another has taken 10 books of them. At first the government did not allow any one to buy more than $100 worth of the stamps at ony one time, but now one person can buy $1000 worth if he wants to. That is the opportunity—a safe, businesslike investment of everything from 25 cents to $1000. In ordering, clip the coupon printed herewith and mail it to The Farmer properly filled out. That is all you have to do.

## Clip This Convenient Order Blank

Address all communications concerning thrift or war savings stamps to The Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Remittances may be in any form desired, including personal check.

I have already bought.....Stamps and have a..... (kind of stamp) (card or certificate)

# Commander-in-Chief Needed for Food Production

(Continued from page eleven.)

matter of food production up with Hon. John Skelton Williams, comptroller, which is embodied in copy of letter which I enclose herewith. I also took it up with senators and congressmen from North Dakota, but nothing came of it. In fact, I presume the trouble with the scheme is that there is not enough red tape to it. In other words, it would be too simple a proposition. H. C. M'CARTNEY."

Mr. CcCartney's proposition to Comptroller Williams is indicated by the following paragraphs:

"It occurs to me that we have a vast organization already mobilized which could be put to work immediately. This organization would be the most efficient of any that could be gotten together. I have reference to the national and state banks of the United States. The officers of every bank in the United States located in agricultural districts, we feel confident, would be only too glad to take up this work if they were requested to do so, and we believe they could organize the agricultural districts quicker and better than it could be done in any other way. Every manager of a bank in the agricultural districts is thoroughly conversant with the crop, soil conditions, circumstances of the farmers and their needs, and is better fitted for this work than any other class of men in the United States.

"This organization could be brought into service for immediate action—give every banker a certain territory in his vicinity to organize. We believe all that is necessary is to outline a plan for the bankers, assure them of assistance through the federal reserve for the financing of farmers who need seed and machiney or other financial assistance in their immediate district, and they will get results and get them quick."

### Army of Small Farmers.

In his letter the state commissioner of agriculture of Arkansas, John H. Page, brings out one of the most important phases of the problem of increased food production and one that has been very largely neglected. It is the problem of getting into closer touch with the great army of small farmers who must be depended upon to produce the results so desired. Here is his letter:

"BUREAU OF MINES, MANUFACTURES AND AGRICULTURE, LITTLE ROCK, Ark.—To the Editor: I have yours of recent date in regard to telegram sent to President Wilson.

"For some time past I have been conscious of a very distinct weakness in the general movements made to stimulate greater production and to produce cooperation and intelligent action among the farmers. I refer to the conspicuous absence of the farmers in the recent and other meetings that have been held and the preponderance of college professors, college presidents, agricultural workers and professional agriculturists, bankers, big business men, et cetera. It is doubtless much easier to reach definite conclusions as to what should be done about production to meet war conditions, to make pledges for increased production and to pass high-sounding resolutions in favor of meeting the war needs when the meetings are composed of presidents and members of the faculties of universities and agricultural colleges, the professional agriculturists and the bankers; but the results following their conferences clearly indicate that a meeting composed of this class of people—almost to the exclusion of the actual producer—is not qualified to speak for the great army of farmers throughout the country, nor is such a meeting authorized to pledge their efforts. In truth, the great bulk of our farm products is produced by the small farmers, who constitute the greatest factor to be reckoned with in production at any time. These people have never been brought into a meeting, and possibly never invited to attend. They have not been consulted about their own condition or their ability to respond to the demands that might be made upon them by the country at large. They have been campaigned to death by people with good intentions, who have in a measure assumed an attitude of guardianship or administrative interest in their affairs, and unfortunately but few, if any, of the class that compose the average meeting or conference have ever stooped to lend a helping hand or take an inquiring interest in the affairs of the small farmer.

"Viewing it from this situation, I am not astonished that the small farmers throughout the country do not exercise any greater degree of interest in fulfilling the pledges made for them by those who only seem to have a supervisory interest in their affairs.

"I do not believe that we will ever produce any very substantial results until some plan is devised of bringing the nation's needs into closer, if not direct, contact with the great army of small farmers who must be depended upon to produce the results so desired.

"I have attended several of these meetings in person, and consequently I have caught this viewpoint. I may be in error about the matter, but I do not believe that I am.

JNO. H. PAGE, Commissioner."

### Labor That Sticks.

Secretary N. E. Shaw of the Ohio state department of agriculture had this to say:

"To the Editor: I have read carefully your telegram to President Wilson. I heartily endorse any movement that will assist in promoting conditions with reference to farm labor. Our farmers are willing to do their utmost to increase production and some plan must be devised to supply them with the necessary labor and see that it sticks. When this is done we can expect greatly increased production in this state.

"N. E. SHAW."

## Storms Delay Dress Patterns

Severe storms have greatly handicapped mail service throughout the east, and the Farmer and its readers have to suffer for it. The regular weekly dress pattern material failed to reach us in time for this week's issue, probably tied up in a snow bank "back east." For the hundreds of readers who weekly turn to this department for information and opportunity to place orders for patterns, this is unfortunate, but the pattern department will be resumed next week and in the long run nothing will be lost. We will not omit the instalment missed this week, but will continue the patterns in regular order after it reaches us.

### Adequate Food Supply.

UNITED STATES SENATE, Washington.—To the Editor: I am in sympathy with any movement looking to securing adequate food supplies, and hope it will be possible to aid the farmers along some such line as that which you suggest. MORRIS SHEPPARD.

# World Faces Threatening Meat Hunger

(Continued from page twenty.)

two feeds of whole barley was very great.

If stockmen will commence a change in feed with a fourth or a third of the feed to which the animals are accustomed and make the complete change gradually they will be much less likely to suffer losses of this character.

Losses can be prevented and much done to increase our meat supply merely by housing animals well. Pay strict attention to feeding, of course, and neither over-feed nor under-feed; but also see that the animals are not subjected to cold, chilling draughts during the next few months.

I can illustrate the importance of housing for animals.

Some years ago a friend of mine who was operating a farm in cooperation with a tenant went out to the farm to see how things were getting on. They had several nice brood sows—four or five, I suppose. He found that they were due to litter in a short time. The next time he went out he found that the night before one of the sows had given birth to nine pigs. The night had been cold and stormy and the sow, being in an unprotected place, lost all of her pigs but one. They died from exposure almost as soon as born.

A few days after that he went out and found that two more of the sows had given birth to their pigs under similar circumstances, most of their offspring having chilled to death. Naturally, his anger rose. He informed the man on his place that there was really no excuse for the first mishap, but that that could be overlooked; but that when two more sows were permitted to lose their pigs it amounted merely to gross negligence, for which utterly no excuse could be offered.

How many young pigs have been lost in the Pacific northwest in the last 10 years? One man's guess is about as good as another's. I think, however, that most men who have observed would agree that if we had all this pork in the Pacific northwest now, for our own use, we would not feel the world's pork shortage for several years to come. It would be agreed, also, I am sure, that if we now had all the pork that has been lost by this and similar causes in the United States in the last 10 years we need not fear a pork shortage in the American army overseas, or in the allied armies. When we add to this the pork losses from other sources—cholera, improper feeding, bad housing, lack of sanitation, our imagination shrinks; we can not comprehend it at all. The tragedy of it is that much of this loss is preventable.

Looking back into human history we find certain periods known as the stone age, the copper age, the bronze and the iron age. When, by the passage of time, we of this present day have been swept far into the past, I believe that historians will look back at us and call our present time the age of waste. If the great war does nothing else than to usher us out of our age of waste it will have contributed something of value to us and our descendants.

**Pomppaso Has a Star.**

Dear Aunt Nellie: Today as I was sitting in the library I accidentally picked up the Farmer and as I noticed the Children's Corner I decided to write. I have just returned from a drive in my Pierce Arrow car, which I received from my grandfather for my last birthday. I am the only child in the family. We have 95 head of cattle, 20 hogs and 200 chickens. We have six horses of which I have a pony of my own. He is very black with a star on his forehead. His name is Pomppaso. He is very gentle. I am in the eighth grade at school and am 11 years of age. My birthday is February 22. I have long black hair, which is very curly and large brown eyes.—Violet Vivian Vase.

**Freedom for All Forever.**

Dear Aunt Nellie: As my friend, Violet is writing to you I thought I would add a little. The great conflict raging among the nations at the present time we must all strive to end. To the Red Cross you can give your services and also donate to the other various funds. Adopt this slogan, "Freedom for all forever." I am in the eighth grade and go to the Wakins schools. I am 12 years of age and my birthday is the 24th of December. I will have to close with the hopes of seeing my letter in print.—June Jeneva Gorden.

**Good Times Camping in Summer.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but I have been reading the letters. I am 10 years old. My birthday is September 17. I have a brother and a sister. My brother's name is Fred and my sister's name is Alice. I have a pet dog, a pet chicken and a pet kitten. My dog's name is Fannie. I have not named my kitten and chicken yet. I always call my chicken Chickie. We go to school every day. I am in the fourth grade. We have a mile and a quarter to go. We drive every day with a horse. In the summer when there is no school we go camping. Then we have a good time. I am always glad when we get through with harvest, for then I know it is not very long till we will go. One morning when we were going camping mama called us and told us to get up, because she wanted to start early. We slept in a tent that time. It was quite dark when mama called us. When we got outside the moon and the stars were still up. It took a long time before we could get all the quilts and dishes and whatever we were going to have with us.—Edith Christensen, Cottonwood Farm, Box 143, R. 3, Ellensburg, Wash.

**Sleigh Rides on Saturday.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I love to read the girls' letters. I am going to learn to knit for the soldier boys. My brother is going to enlist pretty soon. We go three miles to school. We go horseback to school. Our teacher's name is Miss Clara Nelson. We have 27 pupils. I am in the fourth grade. My father has a sawmill. He is just getting in logs to saw up. We have three inches of snow. It is melting fast. It is like summer all but the snow. We have lots of fun riding. My brother has a sleigh. My brother and I go sleigh riding on Saturday when there is no school. Our first techer went to war. His name was Mr. Magary. I am 10 years old. I will be 11 years old July 16.—Wilma Little, Fruitland, Wash.

**A Good Letter From Georgie.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the Farmer. I am 12 years old and I am in the fifth and sixth grades. I hope I see my letter in print. My complexion is fair and my hair is a dark brown. Have I a twin? My birthday comes the 3d of September. My sisters and I go to school. I like to go to school. Our teacher's name is Miss Juanita Tigges. I have three sisters. Their names are Lola, Iva and Virgie. We have four horses. The horses' names are Maud, Bessie, Ted and Bird. We live at a logging camp. Father logs in the winter and spring. We children have fun in the summer. We go in swimming. We have to go just one mile to school. —Georgie Fraser, Ford, Wash.

**Fun at School With Lucille.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am going to tell about our school. We have all eight grades. There are 22 pupils in school. My teacher's name is Alpharetta Kellie. The name of the school I go to is Jones school, district No. 146. We had a program at our school, but we did not have a Christmas tree. Teacher and the older pupils cleaned the floor, black boards and seats and also decorated our schoolroom with Santa Claus and fur and pine branches. All our parents and other people came. In our program were the following: "Three Bad Little Boys," "Poor Christmas Dolly," "Santa and His Reindeer," "His Letter and Others." The name of the dialogue was "Mrs. Ruggles Getting Ready for a Christmas Party." When we had finished our program the people all said it was the best one that they had heard for a long time. One of my school chums is writing to the Children's Corner. Her name is Lucille Gerlitz. I have lots of fun with her at school. I hope all the cousins had a good time Christmas vacation. I had a grand time. Twelve days after Christmas came my 10th birthday. I wish some of the cousins would write to me and I will surely answer their letters.—Esther Herger, Box 48, Penawawa, Wash.

**Shorty, the Dog, Has No Tail.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old, and my birthday is the 27th of March. I am in the fourth grade. I have one dog and cat. The dog's name is Shorty. I call him Shorty because he hasn't any tail. The cat hasn't any name. We ride horseback to school. Four of us go to school. Lucile is 6 years old and in the first grade. Leo is 9 years old and in the second grade. My oldest brother's name is Chester. He is 13 years old. He is in the fifth grade. I like to go to school. My hair is brown. My eyes are gray. My complexion is medium fair. Have I a twin?...We have two guineas, five geese, four horses, two cows, a lot of pigs and chickens. I had lots of fun Christmas. We had candy and nuts.—Vera Isabelle Mcord, Box 30, Fruitland, Wash.

**Sister Is Margaret's Teacher.**

Dear Aunt Nellie: This is the second time I have written to the Corner. I have noticed that the Children's Corner is a lot smaller than when I wrote last. I live on a 10-acre farm. This may seem small, but the largest farm around is only about 40 acres. I have three cats. I did have three guinea pigs, but two died. We have five cows, Beauty, Brownie, Sunshine, Fussy and Maidie. We have one horse named Dick, I am 10 years old. My birthday is the 12th of January. Have I a twin? If so I wish they would write to me or I would like to have any of the other cousins write. I am in the fifth grade at school. There are 26 pupils in my room and there are four rooms. I have my sister for a teacher. I like school fine.—Margaret Binnings, R. F. D. 4, Box 298, Tacoma, Wash.

**Play Hop-Scotch at Recess.**

Dear Aunt Nellie: I am going to write to the Corner and I hope to write again. I am 13 years old and my birthday is May 1. Have I a twin? If so please write. I would like to correspond with Viola Marguerite Tarbert, Route 1, Box 56, Deer Park, Wash. I go to school every day. I am in the seventh grade. The schoolhouse is very old and painted white. There are 12 pupils and my teacher's name is Mr. Brown. The schoolhouse is a mile and a half from my home. I ride my pony, but in good weather I walk. My pony's name is Puss. We only have half an hour noon and we get out at half past 3. At noon and recess we play baseball and hop-scotch. I am going to take the state examination in geography and physiology.—Irene Alma Clark, Grand Dalles, Wash.

**Always Cool in the Mountains.**

Dear Aunt Nellie: We live on Twin mountain. I am 13 years old. We have five miles to go to school and 12 miles to go to town. We have five nice milch cows and sell butter. I have two brothers. They are Morden and Dale. I have three sisters. They are Ramona, Pearl and Dorothy. I have a little canary. I like to live in the mountains, where the timber grows, because it is always cool. They are having literaries at the schoolhouse. I have dark brown hair and blue eyes. I am about four and one-half feet tall. My birthday is the 8th of August. Can you find me a twin? I will write another letter some other time.—Gladys Phillips, R. F. D. 2, Deer Park, Wash.

**Mildred Hasn't Written Before.**

Dear Aunt Nellie: I have not written to the Corner before so I thought I would write. I like to read the Children's Corner very much. I am 11 years old and in the fifth grade. My birthday is August 26. I have one brother. His name is Robert. He is 5 years old and will be six February 15. He goes to school and is in the first grade. We have one cat and two dogs. The cat's name is Blackey. The dogs are Doc and Prince. We have a horse and cow. The cow's name is Blackey and the horse's name is Dolly. My teacher's name is Miss Sandall. I like her very much. I would like to correspond with one of the cousins.—Mildred Buxton, Route 7, Spokane, Wash.

**Lowlands Are Flooded.**

Dear Aunt Nellie: This is my third letter to the Corner, but anyway it won't be the last. I am 9 years old and in the sixth grade. My birthday is March 10. I have blue eyes and weigh 72 pounds. My teacher's name is Mr. Sloane. I go to the Conway school. There are about 60 pupils that go to it. I spent a very happy Christmas and I hope all the cousins and Aunt Nellie did the same. We had a program at the schoolhouse. We are going to start a junior Red Cross at school. I have five sisters and four brothers. I am very glad we live on the highland, because all the people that live on the lowlands have moved their cattle to the highland and some families have moved, too. A few days ago I had a boat ride in the flood. All the trains are stopped because the railroad bridges are washed out, so the mail is carried on boats. I wish that we had a bigger Corner, so I am going to ask some children that go to school to write. I certainly will help Mary can the kaiser.—Walborg Brandt, R. 5, Mount Vernon, Wash.

**Glad That Dorothy Is a Cousin.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it won't be the last time. I have been reading the Children's Corner. I am 9 years old. My birthday is the 10th of December. I go to school and am in the third grade. We have four horses and one cow. The horses' names are Dolly, Polly, Bonnie Bell and Princess. The cow's name is Daisy. We have one dog and his name is Fido. We have a cat and her name is Pussy. I have a twin. I will write to her. I would like to join very much. May I be one of the cousins of the Corner? My sister's name is Zelma. I have no brothers and only one sister.—Dorothy Helen Hotchkiss, R. F. 1, Oroville, Wash.

**Good Luck to All Cousins.**

Dear Aunt Nellie: I am a little girl 8 years old and in the second grade at school. I like my teacher very much. I go one mile to school. I have three brothers, Richard, Irwin and Gerald. My sister's name is Mildred. Mamma reads the letters in the Corner to me every week. I like them very much. We have two horses, three colts, two cows and 60 chickens. We have a fine dog. His name is Tip. This is the first time I have written to the Corner. I hope I shall see my letter in print. I hope we will win the war. I wish everybody in the Corner good luck.—Isabel Sullivan, Uniontown, Wash.

**Lydia Got Eight Red Cross Members.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We are glad that the water didn't get in our houses. Papa and about 50 more men were working on the dyke. They put over 3000 sacks on the dyke. I ride a bicycle to school. We have a lot of chickens and I think we have 500 altogether. I have 25 and I get $4 per month to put in the bank. Papa and mama are putting up window curtains. I got eight Red Cross members. We have typhoid fever germs. All the water is turned off. Papa got me a bottle to carry water to school.—Lydia L. Young, Mount Vernon, Wash.

**Doris Goes to a Country School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. May I join? I am 10 years old and in the fifth grade. I go to a country school. Our teacher's name is Mrs. Stine. I like her fine. The name of our school is Ainslie. I have about a half mile to walk to school. I have two brothers and four sisters. Their names are Emery, Lawrence, Lillie, Nellie, Maxine and Irene. Lillie is the oldest. We have 120 acres of land, three big pigs, two horses, 21 chickens and 17 head of cattle. I will write again.—Doris Roe, Route 2, Box 129, Winlock, Wash.

**A Jolly Good Time Together.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and am in the second grade at school. I have one dog. His name is Kaiser Bill. That is a very funny name, don't you think? Of course, Brother Frank had to name him, but I don't like that name. I have three cousins who live in the city of Seattle. Their names are Margaret, Lillian and George. My cousin, Margaret, came up here to visit me, and we had a jolly good time together.—Gunda Bailey, Box 15, Marysville, Wash.

**Burton Lives in Maple Falls.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. Beecher and I just got through piling for papa. Beecher is the only brother I have. He is 6 years old and I am 8 years old. I have three sisters; one is 2, one is 3 and one is 9. My sister write to you yesterday. I like the story of the New Year Bells. I live in Maple Falls. I am in the third grade. My brother is in the first. My birthday is the 5th of March. —Burton Adkinson, Maple Falls, Wash.

**Brother Is Soldier in France.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I like the letters very much. I am 9 years old. I am in the fourth grade. I have blue eyes and light brown hair. I have two kittens. Their names are Tim and Maud. We have two horses and two cows and a calf. We have lots of chickens. I have three sisters and two brothers. One brother is a soldier in France.—Marion McPherson, Colby, Wash.

**George Has a Dog Named Nifty.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I am 10 years old and in the third grade and like it fine. I have two brothers and two sisters. My big brother is a mechanic and my little brother is a freshman. My little sister is in the fifth grade. I have a dog named Nifty. I have two cats. —George Bolender, R. F. D. No. 2, Box 57, Olympia, Wash.

**Knitting Will Help.**

Dear Aunt Nellie: This is the fourth time I have written to the Children's Corner. I enjoy reading the letters of the Corner. My subject is the Red Cross. I hope the cousins can learn to knit. I am going to learn as soon as I can. I think all the cousins ought to learn how to knit if they can. That is the one way we can help. I have been thinking of starting a junior Red Cross in my school, but I don't think I can. I am 8 years old. My birthday is the 11th of July. I am in the fifth grade. Have I a twin? I have three cats. Their names are Julia, Tommy and Freckles. We have eight head of cattle. Their names are Prilly, Rosabell, Beauty, Cherry, June, Maybell, Annabell, Bess and King Bonnie. We have five horses. Their names are Babe, Prince, Mascot, Fred and Sam. We have one dog. His name is Tip. I would like it if the cousins would write to me.—Mildred Elizabeth Marks, Wapato, Wash.

**Building a Good, Warm House.**

Dear Aunt Nellie: I live on a farm and we have lots of chickens. We have an old rooster and when you are running by he will fight you. I am in the fifth grade and my studies are easy. We are building a log house and it is a warm one. This is my first letter to the Corner. I am pleased with the Corner. We have been taking the Farmer for five years. I am 10 years old and I am four feet three inches tall. I weigh 78 pounds. I wish we could have jokes and riddles in the Corner.—Roland W. Gerth, Tumwater, Wash.

**Tracy Writes to Us Again.**

Dear Aunt Nellie: This is the second time that I have written to the Children's Corner and I hope it won't be the last. I have two cats and a dog. The dog's name is Prince and the cats' names are Tom and Pussy. We have two cows and one horse. The horse's name is Molly and the cows' names are Nellie and Pansy. We have about 25 chickens. I am 11 years old. My birthday is the 17th of December.—Tracy Germont, R. F. D. 1, Greenacres, Wash.

**Seven Miles From Town.**

Dear Aunt Nellie: This is my first letter to the Corner. I am in the fifth grade. I was 12 years old the 27th of January. I have two sisters and one baby brother. My papa takes the Farmer. I like to read the letters in the Children's Corner. I have one lamb and a pony. I like to ride horse back. We live on a farm. We are seven miles from town. We live close to school and church. I go to Sunday school.—Myrtle Bailey, Fruitland, Wash.

**Has Alice a Twin Anywhere?**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I enjoy reading the letters. I am 11 years old and my birthday is August 3. Have I a twin? I go to school. I am in the fourth grade. I have one brother and one sister. My sister's name is Eileen and my brother's name is Johnnie. We have two cats and one dog and one cow and one calf.—Alice Henley, R. F. D. Route 1, Twisp, Wash.

**Little Brother Rocks the Baby.**

Dear Aunt Nellie: How are you and all the cousins? I am going to tell you about my little brother. He can dry dishes and rock the baby. He is 4 years old, and his name is Raymond. I have four brothers. Their names are Wynne, George, Raymond and Gilbert. My sister's name is Maxine. She is 3 months old. I like her very much. I am 9 years old. I am in the third grade at school. I like school fine.—Fern Stallcop, Pomeroy, Wash.

**Goes to School Every Day.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My name is Willie Plano. I am in the third grade. I am 8 years old. My teacher's name is Miss Emma L. Bucklin. I go to school every day. We have eight acres of land. We have a cow, a heifer, six rabbits, 23 chickens, one dog and a cat. The dog's name is Jack and the cat's name is Tommy.—Willie Plano, R. F. D. Route 2, Box 5, Renton, Wash.

**Gets 100 in Spelling.**

Dear Aunt Nellie: I haven't written to you for a long time so I thought I would write. I have had 100 in spelling for the last two months and a half. My sister Martha spelled the whole school of Mud Creek down in a spelling match. I will be 13 years of age the 24th of February. Have I a twin? I would like to have a crochet contest. Would you cousins like one, too —Emma Short, R. F. D. 1, Lowden, Wash.

**Make Bandages and Bed Socks.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old. My birthday is the 22d of October. I am in the seventh grade. Have I a twin? We girls are making bandages and bed socks for the Red Cross. We are learning to knit, too. I think all the girls should learn to knit.—Eunice Pool, Box 134, Wenatchee, Wash.

**Seventeen Scholars in Eileen's School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I enjoy reading the letters very much. I am 9 years old. My birthday is June 17. I am in the second grade at school. Teacher's name is Miss Lenore Roach. We all like her very much. She is from Seattle. We have 17 scholars in our school.—Eileen Hanley, R. F. D. Route 1, Twisp, Wash.

**Hazel Goes to School Every Day.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old. I go to school every day. I live on an 80-acre farm. My father has two horses and five cows and five pigs and many other animals.—Hazel Jane Webster, R. F. D. 1, Box 6 D, Burley, Wash.

# NEWS FOR BREEDERS

Ed Schoel, well-known O. I. C. breeder, reports that he has had one litter of six pigs farrowed since the first of the year, and has sold four of them inside of three weeks of their birth. He is delighted with the winter, which has so far been fine for hogs as well as other live stock. He finds a strong demand for O. I. Cs., and thinks swine breeders generally will have no trouble in disposing of their stock.

C. L. Falk Jr. of Halsey, Ore., has recently purchased the young Percheron stallion, Diligent, from B. F. Burge of Albany, Ore. Diligent is a very handsome black, coming 3. He was first price and reserve junior champion at the P. P. I. E. Mr. Burge purchased the colt the winter he won at San Francisco and considers him one of the best Percheron horses in Oregon. His blood lines run strong into Brilliant through Besique. The Falk brothers and their father have six registered Percheron mares and have kept a horse in service at Halsey for years.

Doerfler Brothers, the Duroc Jersey breeders of Silverton, Ore., report that they have had fair sales and many inquiries, but that a great many seem to want breeding stock at pork prices. This is something that many swine breeders find to be the case. Yet any one wanting a breeding boar or sow should remember that the breeder can, at pork prices, realize almost as much as former breeding prices; that not only is feed higher, but the breeder must have something for the extra care given a breeding animal. If a breeder can not get a fair margin over what a hog will bring for pork, it will pay him better to sell to the butcher.

Martin & Looney of Junction City, Ore., who now have about 40 registered Holsteins, including 20 cows in milk, have, for a herd bull, Lundy Pontiac Ormsby. This bull is a son of King of the Pontiacs, on the sire's side, while on the dam's side he goes back to the famous Frakes bull, Lundy Oregon DeKol.

One of their good cows, North Star Helena Burke, bred by W. S. Moscrip of Minnesota, is related to Bonnie Ormsby Lass, William Bishop's cow that has won so many grand champion honors, including the P. P. I. E., and has a number of high-record relatives close up. It was the intention to give this cow an official test at her last freshening, but she went off feed before they were ready to begin. She is a heavy milker and high tester.

These gentlemen also have a granddaughter of Colantha Johanna Lad, and they should make some fine records when they get started on official test. H. A.

## Steer for Annual Banquet.

Those who attended the fat stock sale at the Pacific International Stock show in December no doubt remember that the Oregon Cattle and Horse Raisers' association was the purchaser of one of the steers offered. The steer was a purebred Shorthorn exhibited and sold by Child & Anceny of Helena, Mont., and weighed 1160 pounds at the date of sale. It was, in fact, purchased by William Pollman of Baker, Ore., and presented by him to the association, of which he is president, to be used at the banquet held at the annual meeting in Ontario, Ore., April 24. The well-known Shorthorn breeder, Duncan Dunn of Yakima, Wash., offered to feed the steer free of charge until time to kill him for the meeting, which offer, it is needless to say, was accepted. Rumors that the steer is "coming on" in fine shape reach The Farmer. More than rumors are also already in circulation that at their next meeting the stockmen and citizens of Ontario are going not only make welcome and comfortable the largest crowd that has yet attended an annual meeting, but that the "stunts" pulled off will eclipse anything yet attempted at the meeting of their organization, at which business of serious import to stockmen and uproarious and enjoyable fun are well mingled. H. A.

## Building Up a Herd.

A. E. Smith, the Holstein breeder of Seattle, is planning to consign to the spring sale of the Western Washington Holstein Breeders' association approximately 20 head of stock from his farm at Sumas. Many of these animals either have A. R. O. records themselves or are heifers out of A. R. O. dams.

From 40 to 60 cows are milked on the Smith farm, and an unusual percentage of these are advanced registry animals. Mr. Smith is a firm believer in the official test, especially as to its value to the occasional buyer who is not well posted on blood lines. In regard to this latter class of buyers, which includes the farmer who purchases a few good heifers or a pure bred bull occasionally, Mr. Smith has something to say.

"It isn't reasonable to expect that any breeder is going to sell his best breeding animals," he says. "Sometimes you hear the complaint that a man has bought some pure breds, and that the latter are not producing any better than the grades he has been milking. Perhaps the claim is true. But if he will look upon these purebreds simply as the foundations of his herd, and will buy the best bull he can afford to go with them, it will not be many years before he will realize that he has made a good investment. There are only a few 30-pound cows on the Coast today, and the farmer who wants to get into the purebred business can not expect to buy any of these. But he can buy good, healthy purebred heifers and a purebred bull out of high producing ancestors. This is the way a herd is built up."

All of which is based on Mr. Smith's own experience in building up a herd containing many individuals producing 20,000 pounds of milk annually.

"I can remember when it was harder for me to produce an 8000-pound cow that it now is to breed one that will produce 16,000 pounds," he says. "You've got to look to your bull to do most of the building up. There aren't enough good cows to go around, while in the nature of things there will always be plenty of bulls out of high producing ancestors." P. E. T.

## A Spring Valley Lamb.

**One of the good Oxford lambs, shown by Fisk Farm, Spring Valley, Wash., at the Northwest Livestock show at Lewiston, Idaho, in 1917.**

## Chalcraft Buys Jersey Bull.

J. J. Chalcraft of Richland, Wash., recently purchased from F. A. Doefler, proprietor of Mellow Lawn farm, one of his best bred young Jersey bulls, paying $250 for him. The bull's dam has an official record, begun as a senior yearling, of 480 pounds of butter, made in 10½ months, and promises to make over 700 pounds as a senior 2-year-old. The grand dam on the dam's side seems sure of producing over 700 pounds of butter, starting at 15½ years old and badly stifled. The calf's sire carries 50 per cent of the blood of Rosaire Olga Lad, 25 per cent of St. Mawes Poppy (with 1120 pounds of butter in a year), and 25 per cent of Gertie's Fern Princess that Mr. Doerfler paid $820 for. Mr. Chalcraft has no registered Jerseys yet, but has used only registered sires since he has been in the dairy business and he certainly showed wisdom and deserves great credit for paying the price and getting so good a bull to improve his grade herd. H. A.

## A Correction.

In the isslue of the Farmer of January 24, it was stated that the Shorthorn dispersal sale of Alex Morrison of Valley, Wash., would be held at the stock yards, Spokane, February 20. The correct date is March 20.

## Scientific Grafting.

Lane county, Oregon, fruitgrowers are resorting to scientific grafting to make up for the shortage of bees as pollenizing agents for cherries and pears. The late, wet springs delay the bees to such an extent that pollenization has not been perfect when other conditions were favorable.

**Important Point.**

Concentration is a great distinguishing faculty.—Greenville Kleiser.

# Don't Go Through Another Winter Without a Good Silo

**GOOD SILOS will produce 20% to 25% more milk and keep your cows in fine condition during the periods when fresh, green pasture can not be had.**

**MAKE YOUR SILO INVESTMENT PERMANENT AND PROFITABLE**

Decide Now to Put Up an

# IDEAL Green Feed SILO

There is a difference between the Ideal Green Feed Silo and other silos. You will discover it if you take a few minutes to compare the details of construction; the quality of material and workmanship; the contact of the doors with the door frame; the kind and size of hoops and lugs used; the quality of the paint for the inside.

**THE DOORS**

The doors of the Ideal Green Feed Silo are of the REFRIGERATOR TYPE, having three distinct bearings on the door frame on all four sides. They make an air and water tight joint. The inner side of the doors comes flush with the inside of the silo walls, making a smooth surface throughout the inside of the silo. No projections to prevent perfect packing of the silage and no chances for air pockets and spoiled silage.

Send for complete description, telling us how many cows you want to feed and ask for our Dairy Hand Book with Rations for Dairy Cows.

## DE LAVAL DAIRY SUPPLY COMPANY

**61 BEALE ST., SAN FRANCISCO, CAL.**

**Prompt Shipment From Seattle and Portland Storage Stocks.**

## POULTRY

### TRAP-NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen trap-nested. First pen has, I believe, for past two years highest Barred Rock av. egg record in the world. All other pens practically same blood lines.

Pen 1, 12 hens, av. over 240 eggs, crossed to yearling cock, parents av. 260 eggs, $5 setting of 15. Pen 2, 25 yearling hens, av. over 200, crossed to 2 sons of No. 44, 708 eggs in 3 yrs., $5 setting of 15. Pen 3, about 20 hens and pullets, with reserve cocks and cockerels, same breeding $3.50 per 15. A few cocks and cockerels from $5 up. **IRVINE P. GARDNER.** **Riddle, Ore.**

### Heavy Laying S. C. R. I. Reds

Hatching eggs from top-notch laying strain of Pacific Northwest. If you want the best layers, weighers and payers that money can buy, write me.

**MRS. ROMINGER, Underwood, Wash.**

### Heavy Laying Strain

S. C. White Leghorns, hatching eggs, baby chicks and stock.

**MT. ANGEL COLLEGE POULTRY RANCH.**
**St. Benedict, Ore.**

### BABY CHICKS

Rhode Island Reds, White Leghorns. Don't wait until March or April to order and then be disappointed because you can't get them. But order now from our heavy-laying strain. Send card for price list.

**MAPLEBROOK POULTRY FARM.**
Box 3, Southworth, Wash.

### State Winners of the Blue

Barred Rocks, White Leghorns and Black Minorcas. Prize winners, with the laying habit. Choice cockerels at $5 each. Eggs, $3 and $5.

**WILBER CLAYTON, Payette, Ida., R. 1.**

### S. C. Rhode Island Reds

Golden Sebright and Black Bantams.
**CHAS. E. LUCAS, R. F. D. 3, Missoula, Mont.**

**MAMMOTH BRONZE TOMS.**

Strong vitality, $6 to $8 each; no charge for crates. Barred Rock eggs for hatching. Pullets (some laying) $1.25 each.

**S. M. WILSON, Carley, Wash.**

### Rhode Island Reds and Whites

Rose comb and S. C. Blue ribbon winners. Utility and show stock. 100 cockerels at $3 up. Bronze turkeys and Toulouse geese. Blue ribbon stock. Registered Airedale bitch at a bargain if taken at once.

**Highland Fruit and Poultry Ranch.**
J. NONNENMACHER,

## Leading Breeders of the Pacific Northwest Are Consignors to Both Sales

**FARMERS** You get in this sale the kind of stock that will build up your farms to profitable production.

**BREEDERS** Will find excellent individuals with which to lay the foundation for a Shorthorn herd or enlarge and improve a herd already established.

**DAIRYMEN** Come to these sales for choicely bred bulls and heifers from heavy milking strain.

**RANGEMEN** Splendid opportunity to get a class of stock that will improve your herds and produce the kind that tops the market for prime beef.

## Spokane Show and Sale Held During Session of Northwest Livestock Conference February 21, 22, 23

Speakers of national prominence in U. S. and Canada will discuss timely matters of vital importance to the farmer and stockman.

Sales will be held at Union Stock Yards, in both cities.

Write immediately for catalogue and particulars to

**F. M. ROTHROCK** or **FRANK BROWN**
Exchange Bank Bldg., Spokane, Wash. Carlton, Oregon.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Feb. 11.—Prospects of a renewal of eastbound shipments of grain from Chicago strengthened the corn market today after prices had sagged owing to a decided enlargement of receipts. The close was firm at a shade to 1-8@1-4 net advance, with March $1.27 1-4@3-8 and May $1.25 1-8. Oats gained 1-8 to 1-8@1-4c. Provisions lost 7 to 25 cents.

Peace gossip, which early in the day had received some attention, was apparently not a factor in the late trading after the general tenor of the president's speech became known.

Oats were governed by the same conditions which affected the corn market. Receipts showed a material increase, but demand was good both from elevator interests and shippers.

Big receipts of hogs and a falling off in exports weakened provisions.

**Chicago Futures—Close.**

Corn—March, $1.27¼; May, $1,25⅛.
Oats—March, 82⅞c; May, 79⅞c.
Pork—May, $46.70.
Lard—May, $25.40; July, $25.50.
Ribs—May, $24.65.

**Cash Quotations.**

CHICAGO, Feb. 11.—Corn—No. 2 and 3 yellow, nominal; No. 4 yellow, $1.35@1.80.

Oats—No. 3 white, 83½@85c; standard, 84@86c.

Rye—No. 2, $2.18.
Barley, $1.70@1.90.
Timothy, $5@8.25.
Clover, $21@30.
Pork, nominal $24.32; ribs, $23.50@24.02.

**Pacific Northwest Grain.**

PORTLAND, Ore., Feb. 11.—Grain futures 30 days: Oats, No. 2, $63 bid; barley, feed, $63; brewing, $66. Eastern oats and corn in bulk: Oats, No. 3 white, $59 bid; 38 pounds clipped, $39.50; corn, No. 3 yellow, $65; No. 3 mixed, $63.50; oats, No. 3, $59; clipped, $60; corn, yellow, $65; mixed, $62.50.

**Minneapolis Grain.**

MINNEAPOLIS, Feb. 11.—Flour unchanged; shipments, 32,030 barrels.
Barley, $1.55@1.88.
Rye, $2.16@2.17.
Bran, $32.50.
Wheat—Receipts, 200; holiday a year ago.
Corn—No. 3 yellow, $1.68@1.73.
Oats—No. 3 white, 83½@84½c.
Flax, $3.64@3.68.

**San Francisco Grain.**

SAN FRANCISCO, Feb. 11.—Barley—May, $3 bid.

## Live Stock Quotations.

**At Omaha.**

OMAHA, Neb., Feb. 9.—Hogs—Receipts, 19,200; steady. Heavy, $15.10@16.10, mixed, $15.75@15.05, light, $15.65@16.05; pigs, $10@15; bulk of sales, $15.75@15.95.

Cattle—Receipts, 500; steady. Native steers, $8@12; cows and heifers, $7@10; western steers, $7.50@11.50; Texas steers, $7@10; cows and heifers, $6.50@9; canners, $6.25@7.25; stockers and feeders, $6.50@10.75; calves, $9@13; bulls, stags, $7@10.

Sheep—Receipts, 100; market steady. Yearlings, $12@15; wethers, $11@13; ewes, $10.50@12.50; lambs, $16@17.

**At Chicago.**

CHICAGO, Feb. 11.—Hogs—Receipts 60,000; slow, 10 to 15c under Saturday's average. Bulk, $16.20@16.40; light, $16.70@16.45; mixed, $15.85@16.40; heavy, $15.65@16.40; rough, $15.65@15.85; pigs, $12.50@15.

Cattle—Receipts 15,000; steady. Native steers, $8.40@13.90; stockers and feeders, $7.20@10.40; cows and heifers, $6.25@11.65; calves, $9.50@15.25.

Sheep—Receipts 25,000; weak. Wethers, $10@13.30; lambs, $14.25@17.50.

**At Portland.**

PORTLAND, Ore., Feb. 11.—Cattle—Steady to 25c higher; receipts 743. Medium to choice steers, $10.55@11; good to medium steers, $9.35@10.35; common to good steers, $8@9.40; choice cows and heifers, $8@10; common to good cows and heifers, $6.75@8.15; canners, $4.25@6.25; bulls, $5@8; calves, $7.50@11; stockers and feeder steers, $6@9.50.

Hogs—Market 30 to 45c higher; receipts 1371. Prime light, $16.85@17.25; prime heavy, $16.60@16.90; pigs, $14.50@15.50; bulk of sales, $16.80@17.

Sheep—Steady; receipts 305. Western lambs, $15@15.50; valley lambs, $14.50@15; yearlings, $13@13.50; wethers, $12.50@13; ewes, $9@11.

**Spokane Stockyards, Saturday.**

Hogs—Receipts, 76; market steady. Prime light, $16@16.25; prime heavy, $16@16.25; pigs, $14.75@15.50; stockers and feeders, 12@14; bulk of sales, $16.05.

Cattle—Receipts, 12; market steady. Best beef steers, $10.25@11; good steers, $9.25@10.25; common to good steers, $8@9; best beef cows and heifers, $8.50@9.25; good cows and heifers, $7.50@8.25; common to good cows and heifers, $6.25@7.25; canners, $3.50@6.25; bulls, $5.50@7.75; calves, $6.50@10.50; stocker and feeder steers, $6@8.

Sheep — Receipts, none; market steady. Prime lambs, $14.50@15.25; good lambs, $13.25@14; prime yearlings, $12.50@13.25; prime wethers, $12@12.75; best mutton ewes, $9@10.25.

**At Salt Lake.**

SALT LAKE CITY, Utah, Feb. 8.—Cattle receipts fair, market steady. Choice steers, $9.50@10.50; good steers, $8.50@9.50; fair steers, $7.50@8.25; choice cows and heavy heifers, $7.25@7.75; fair to good cows and heifers, $6.25@7; cutters, $4.75@5.50; canners, $4.50@5.50; bologna bulls, $5.50@6; fat bulls, $6.25@7.50.

Hog receipts have been light, although the market has jumped 50 cents the last week. Choice hogs, $15.75@16; mixed hogs, $15.50@15.75.

Sheep receipts good. Sheep, steady. Receipts 1195. Choice grain-fed lambs, $14.50@15; choice yearling wethers, $11@11.50; fat wethers, $10.50@11; fat ewes, $9.50@10.

## Portland Market.

PORTLAND, Ore., Feb. 9.—With the withdrawal of eastern buyers from the egg market, local prices have declined fast. At the close of the week the extreme quotation on the street was 40 cents and large lots could not be moved at 38 cents. Local consumption is increasing as the price declines—eggs now retailing at 45 cents, but the buying is not heavy enough to take up the enlarged receipts.

The butter market is not active and prices are barely holding steady.

So small is the poultry supply that prices have climbed to an unheard of level. Heavy hens were sold at 26 1-2@27 cents, light hens at 25 1-2 cents, heavy springs at 26@27 cents and broilers at 35 cents. Geese easily bring 20 cents and any kind of ducks will sell for 30 cents.

Country dressed meats have also advanced, fancy pork going to 21 cents and veal to 20 1-2 cents. Only a small quantity of meat is reaching the street each day.

Farmers are offering potatoes more freely and prices have eased off. Shippers are buying at 90c@$1 and have more potatoes offered them than they can use. Burbanks are jobbing at $1.10@1.25 and a few Washington Netted Gems are bringing $1.50. The onion market is also weaker at $1.50 at country points for No. 1 stock.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $62.50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $61; brewing, $65@70; rolled, $67@69.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50; grain, $22.

Eggs—Oregon ranch, case count, 38@40c per dozen; candled, 42@44c.

Poultry—Hens, 25 1-2@27c; ducks, 30c; turkeys, live, 25c; geese, 20c.

Butter—City creamery, prints, 52@53c per pound; cubes, extras, 48c.

Cheese — Tillamook triplets, 25c; Young Americas, 26c.

Dressed meats—Veal, 20@20 1-2c; pork, 21c.

Hops—1916, nominal; 1917 crop, 16@17c.

Potatoes—Oregon, buying price, 90c@$1 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 50@55c.

Beans—Buying prices: Oregon white, 9@10c; colored, 8c.

## The Wool Market.

BOSTON, Mass., Feb. 8.—The Commercial Bulletin will say tomorrow: "The wool market has passed through another dull week, although there was heavy trading.

"Prices were firm on all good wools, but short scoured capes were easier.

"The manufacturers are finding a very good call for civilian cloth, although the government is not exhibiting any great keenness to place new orders as yet."

Scoured basis: Texas, fine 12 months, $1.68@1.72; fine 8 months, $1.55@1.60.

California northern, $1.70@1.75; middle county, $1.55@1.60; southern, $1.45@1.50.

Oregon, eastern No. 1 staple, $1.80@1.82; eastern clothing, $1.50@1.60; valley No. 1, $1.65@1.70.

Territory fine staple, $1.85@1.90; half-blood combing, $1.70@1.75; 3-8 blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

## Portland Wheat.

PORTLAND, Ore., Feb. 9.—Barley sales were made in the latter part of the week as high as $70 and $72 for shipment east, but available stocks in this territory are so nearly exhausted that prices are nominal. Competition between Minneapolis and local millers for what remained was responsible for the high prices.

There is an urgent demand here from bakers for barley flour, but little of it is to be had. Millers' list prices are $10.50@11 a barrel. Corn meal, also required as a substitute, is scarce and strong at $5.65 a bale. Only a limited amount of rice flour is on the market and it is now quoted at 8 1-2 cents a pound.

Oats are holding steady with a light movement. The hay market continues easy.

## Seattle Market.

SEATTLE, Feb. 9.—Seattle jobbing interests have been bucking the tide in selling fancy and extra fancy Washington apples against California orange competition at $6.50 per box. The choice of practically any good keeping apples in the proportion of three to one, is offered against oranges, but buyers are insisting upon having the orange while protesting against the excessive price. Wholesalers say this is a phase of human nature often manifested, but never satisfactorily explained.

The same peculiar situation exists as to potatoes. At this time last year spuds were selling at more than twice the present level and the market tendency was upward. There was a heavy demand, coupled with loud protests at the price. Today the market is downward and jobbers are unable to elicit the slightest interest in the commodity.

There has been a slight inquiry from the east for Washington spuds for the week-end, but prices are weak in both gems and locals. Jobbers say it will require more pressure than a mere request from the food committee to put stiffening into the Washington potato market in view of its demoralized condition.

**BUYING PRICES.**

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 44c per dozen.

Poultry—Live hens, fat, over 4 lbs., 25c lb.; 4 lbs. and under, 25c; old roosters, 16c lb.; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.; springs, live, 25c lb.

Butterfat—58c lb.; dairy butter, 35@36c.

Beef—Buying prices: Prime beef, steers, 11@12c lb.; cows, fat, 9@11c lb.; heifers, 10@11c lb.

Hogs—Light, 18@20c lb.; heavy, 17@18c lb.

Veal—Fancy light, 17@18c lb.; heavy, 9@16c lb.

Hides—Salted, 14c lb.; flint-dry hides, 29c lb.; salt kip, 16c lb.; green hides, 11c lb.; green calf, 23c lb.; dry calf (under 6 lbs.), 29c lb.; bulls and dry salts, 4c lb. less; green bulls, 10c lb.; dry full wool sheep pelts, 36@39c lb.; salt bulls, 12c lb.

**SELLING PRICES.**

Feed—Scratch, $74 per ton; all grain chop, $70 per ton; oats, $68 per ton; rolled oats, $69.50 per ton; bran, $33@34 per ton; shorts, $36@37 per ton; soy bean meal, $67 per ton; whole corn, $67.50 per ton; cracked corn, $74 per ton; alfalfa meal, $35; rolled barley, $68.50; sprouting oats, $68 per ton; Milo maize, $70 per ton; white gyp, $75 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $30@31 per ton; straw, $15.

Butter—Washington creamery extras, cubes, 52c lb.; do bricks, 53c lb.

Eggs—Fresh ranch, 48c dozen.

Potatoes—Puget sound, $1.25@1.35 per cwt.; eastern Washington, $1.50@1.60 per cwt.

## Seattle Wheat.

SEATTLE, Wash., Feb. 9.—Convinced that they will have ground all the available wheat in the three states by April 1, Seattle millers are preparing to withdraw their salesmen from the road. Flour can sell itself at a sufficient speed to clean up all that will be left before the new soft wheat harvest in September and it is regarded as prudent at this time to Hooverize the payroll to that extent.

Millers have some hope that the government will give them another allotment of wheat before the present apportionment gives out. The movement into the east, however, has been so heavy that prospects of keeping the mills running through that source are not overbright. Barley that at one time was a drug on the Washington market has been sold out. Millers here claim that Washington barley has been moving out of this market for the last 60 days. Other substitutes in this territory are equally scarce. The Centennial Mill company announces that it will keep grinding oat products at its Spokane mill, but until forced to do so will install no machinery for grinding barley, rice and potato flour.

Experiments with barley, soy bean meal and soy beans from Japan are being made here by several of the smaller mills, but with uncertain results. Seattle grain and feed dealers have been trying to contract in the east for a supply of corn flour. One car was tentatively booked for March delivery, but the shippers later refused to confirm.

Food regulations regarding wheat in poultry food are causing the greatest hardship in this territory. The 10 per cent allowed is insufficient and dealers assert that unless it is raised there will be a material reduction in the number of young chcicks next season. There are no corn substitutes and others are not conducive to poultry development. Wheat grown on Whidby island, shipped across one of the docks and hauled into the Sumner district by wagon and truck contained, it is claimed, an excess of the 10 per cent and the wheat was fit for human consumption, contrary to the regulations. While feed dealers were prohibited from handling this wheat, farmers of Puget sound had ignored the regulations. B. C. Beck, assistant federal food administrator, stopped the practice summarily.

## Butter and Eggs.

PORTLAND, Ore., Feb. 9.—Butter—Prints extras, 52@53c; cubes extras, 48c; prime firsts, 47c; dairy, 32½c.

Butterfat—Portland delivery, No. 1 sour cream, 55c.

Eggs higher; receipts, 1809 cases; firsts, 51c; ordinary firsts, 48@49c; at mark, cases included, 48@50c; refrigerator firsts, 44¾c.

SAN FRANCISCO, Feb. 9.—Eggs—Fresh extras, 45c; firsts, 44c; fresh extra pullets, 42½c.

**Easy Milking and a Full Pail**

are the natural result of a healthy udder. When a cow freshens, her udder should be given careful attention. Caked Bag, so likely to occur then, is quickly removed by applying Bag Balm, the great healing ointment. Sores, cuts, chaps, bruises, cracks, bunches and inflammation quickly respond to its healing, penetrating effect. Try Bag Balm and you will never be without it.

Sold by feed dealers and druggists, in large 50c packages. Send for booklet, "Dairy Wrinkles."

# Farmers to Blame?

To the Editor: Instead of the shortage of labor so much complained of by the farmers, is it not a matter of distribution of labor? Our state labor commissioner, also the United States secretary of labor, say there is no shortage of labor. The federal employment bureau at Portland says the shipyards are turning men away every day. It seems to me the farmers are somewhat to blame for this faulty distribution of labor.

I left my homestead and went into the Willamette valley to work during seeding time last fall. I worked 10 hours in the field, one hour at chores in the morning and one-half hour in the evening, a total of 11 1-2 hours, for $1.50 per day, or about 13 cents per hour. After coming in from a fair day's labor you would naturally be sweaty and rusty, and with no facilities for a bath you are only fit to sleep in the barn and fight fleas and be disturbed by the noise of the stock. Now, take the factory hand who works 8 or 10 hours per day, at from 25 cents to 75 cents per hour and up, and lives in a home with modern conveniences, with access to the public library, lectures, music and entertainments. Which would you prefer, Mr. Farmer, if you had to work for wages? You would rather buy a Ford than install a bath tub. You would rather build a silo than build a sleeping room for your hired hand. You do not try to make his work convenient or his leisure time pleasant and inviting.

Would say in fairness to the party referred to above that, while I have but one hand, the work I was doing was as much as a team could stand. Also, he paid the going wage, which is not sufficient for even my small family of two. I would like to stay in the country to help sow and reap enough to feed the starving world, but I, too, prefer more natural and ideal conditoins under which to labor.

C. C. MURPHY.

Goldson, Ore.

## Most Miles per Gallon Most Miles on Tires

## Horse-Pace Family!—You Have Come to the Turning Point

**Business-Farmer—to be longer without a motor car may affect the whole of your success, and the whole of your family's future.**

Have you noticed lately that somehow the good chances that are missed by you are seized by others—others who have automobiles?

Have you noticed that, though some men you know of turn every hour and minute into profit, *your* work goes slow, *your* time is spent in fretting against delays—and that you are getting into the habit of letting many a good chance pass because you "wouldn't be able to get there in time?"

* * *

Have you noticed that your family—your girls, your boys, your wife—are steadily, steadily getting out of touch with those they ought to know? Have you realized that the families which surround you—automobile families—have a circle of friends and interests, and a radius of easy visits, far larger than your family? Open your eyes.

Have you noticed how many times you and your family have been placed under obligation by neighbors who have cars? Aren't you tired of asking favors?

* * *

Your environment is moving at automobile pace. You and your family are limited to horse-pace and horse-radius. And in the next few months the paths of automobile families and horse-pace families will separate still more sharply. Only motor-pace will do for the conditions in which this nation is now doing its work.

You stand at the turning point.

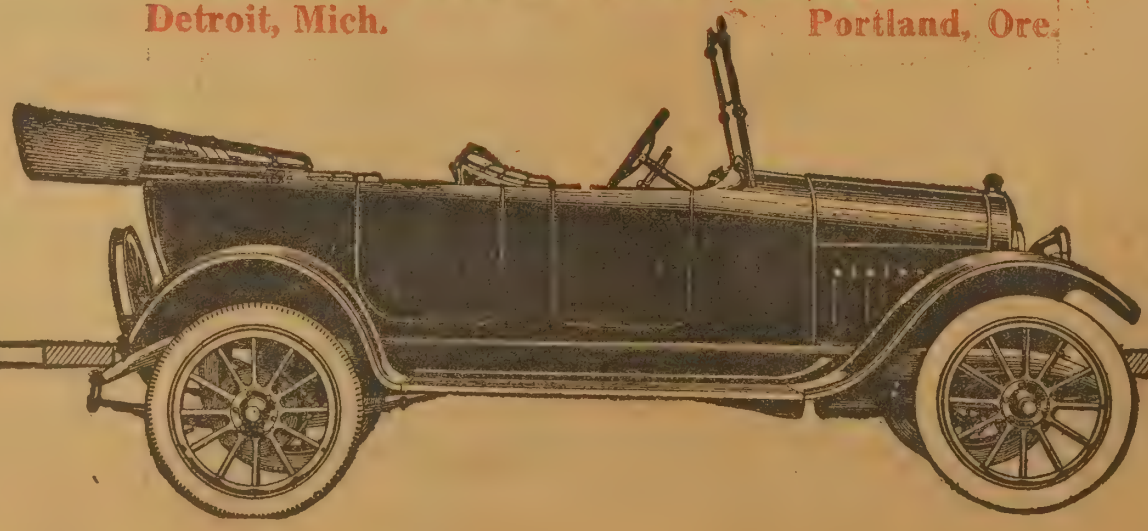
* * *

Motor-car service now costs less than horse service for all the work that a motor car can do.

And of all motor cars of equal service the one that costs least to run and least to own is the Maxwell.

Investigate this while these cars of greatest efficiency are still procurable. Write us a letter today.

---



*Touring Car $745; Roadster $745; Touring Car with Winter Top $855*
*Roadster with Winter Top $830; Berline $1095; Sedan with Wire Wheels $1195. F.O.B. Detroit*

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XLI. NO. 8. FEBRUARY 21, 1918. ** WEEKLY.

# School Ma'ams and College Girls Farm It

## *They Hoe Beans, Harvest Beans, Dig Potatoes and Buy Liberty Bonds in the Fall!*

FOUR young schoolma'ams gazed on a sun-baked stubble field near Waitsburg, Washington, one day last spring, and pondered. It was nearing vacation time.

"Perfectly grand spot if one were a writer in search of local color," remarked one.

"Yes, one likely would take on a thick coat of it," agreed another.

"The question before the house is: Are we willing to try the bean business?" put in a third.

"To a man!" was the response.

And thereupon the "Ho-Bean-Hoe" syndicate was organized. Its membership was limited to those present—Miss Gladys Persels, Miss Pauline Anderson, Miss Anne Goff and Miss Evadna Kuntzell, all teachers in the Waitsburg high school. The primary object of the syndicate was to provide profitable employment for its members during the vacation period and bean growing had been suggested.

Beans as a desirable crop on summerfallow wheat lands had been discussed by farmers in the neighborhood. Some regarded it with favor; others were doubtful. Mac Taylor had 15 acres four miles from town which he offered to let the four teachers use free of charge, as a bean experimental farm. The young women accepted the offer. Other fields were planted, but interest naturally centered on the Ho-Bean-Hoe outfit.

Plowing and planting time came before school was out for the summer. Mr. Taylor was willing to do the plowing, or have his man do it, but the planting had to be taken care of some way. The girls realized it would be expensive business to hire a man for this work, so they made a deal with

## *Woman and the Labor Crisis*

**The participation of women in the work of the farm, the actual toil with teams and farm implements is not a laughing matter. There has never arisen a crisis in which women did not come forth loyally and capably to play their just part. It is well to smile at the stories of the women and girls in these photographs, but back of them is a positive assurance that, come what may, the women of America will do their full share, whatever that share may be, toward the winning of the war. Above are photographs of the "Ho-Bean-Hoe" girls who grew beans at Waitsburg. At the left is a group of state college girls who arose to the occasion and harvested a crop of potatoes when "man power" was not available.**

**But it must not be forgotten that the woman on the farm has already a full share of hard labor to do. To expect her to venture into the field to take the place of the young man who has gone to the front is, in most cases, injudicious. In the house and poultry yard and dairy she renders service as real as that which she might perform in the field. And not only that, but there she finds, and always has found, all the work that one individual can perform. The farm woman is not an idler, waiting to be put into the field. She is already doing a share equal to the man's share, and in all too many cases is doing more than her fair proportion.**

# SOMETHING GOOD IN STORE FOR OUR SUBSCRIBERS!

In our next week's issue (Feb. 28th) will begin a serial story of gripping interest to every one of our readers.

A strong, clean story of outdoor adventure, full of exciting and out-of-the-ordinary incidents.

## THE TRAPPERS OF THE OZARKS

HERE'S a corking good tale--one which will certainly furnish a lot of keen enjoyment to red blooded men, women, boys and girls--any and all, in fact--who like a tale of real, up-and-doing outdoor adventure.

Chapter by chapter, it beguiles you farther and farther away from the last white settlement and deeper into the uncharted wilderness, west of the Mississippi as it was a hundred years ago.

The two young trappers reach the Ozarks, but hardly are they settled in camp when they are discovered by hostile Indians. From that time on hair-raising things begin to happen--and keep happening.

Just let this story get hold of you and we predict you will not miss a chapter of it if you can help it.

**THE OPENING CHAPTERS WILL APPEAR IN THIS PAPER NEXT WEEK. YOU'LL MISS A REAL TREAT IF YOU MISS THIS STORY**

# Why Deny Market Price to Farmers Alone?

## *President Schurman of Cornell University Declares That "We Are Confronted With Danger of Starvation in the Next Twelve Months."*

Warning that the nation "is confronted with the danger of starvation in the next 12 months," and that "the energies of our farmers are paralyzed by price fixing and the fear of price fixing," President Jacob Gould Schurman of Cornell university spoke at the farmers' week program at Cornell university last week, on "The Food Crisis and the Farmer."

President Schurman deplored attempts to regulate the prices of farm products, but urged legislation to end profiteering in the sale of foodstuffs. He warned that the nation is using up its grain reserves and said he believed the stage had been reached where compulsion should supersede appeals to save food. He appealed to President Wilson and congress to give farmers a fair chance to stimulate agricultural production.

President Schurman's address, in part, follows:

"Of all the great problems of this colossal world war the food problem is now the most important. Man power can be raised by conscription up to the point of exhaustion. The allied lines from the North sea to Switzerland are piled high with munitions which the output of French, British and American factories is constantly augmenting. But everywhere the supply of food is limited, and beyond a very narrow margin you see the edge of an inferno of starving nations. Yet no problem of the war is so much misunderstood. The simple question is this: Can we keep our own and our allied soldiers and civil population from starvation? It is not all a question of price. It is solely a question of supply.

"Legislation can surely put a stop to profiteering in the sale of foodstuffs. If milk goes up a cent a quart and children die in New York city in consequence, ought there not to be a law to stop it?

"But why should the food producer be singled out for the role of a public benevolent institution? Why not also the producers of unessential commodities, of amenities and luxuries? Why deny the farmer alone the market price of his labor and skill? Why select him first to support the poor of our great cities? He certainly can not afford it. One-third of our farmers are tenants and own little or nothing in the world. And of those who own the farms they operate only 28 per cent have them free of mortgage.

Why attempt to regulate the prices of farm products? Like other commodities, they will not be produced at all unless the producer gets a price sufficient to cover the cost of production and a fair profit. The people who demand the regulation of food prices really want low prices. But low prices for anything whatever in war time are utterly impossible. And foodstuffs have not gone up more than other commodities.

"I repeat and reiterate that our food problem is one of enlarged production and augmented supply. Price fixing leads to the opposite results. We have tried that experiment with coal producers, and the result is heatless Mondays. We have tried that experiment with the railway companies, and the result is a paralysis of transportation. We have tried that experiment with wheat and we have sent the price of corn above wheat, compelling the farmer to feed wheat to his poultry and animals and discouraging him in the planting of winter wheat.

"I believe it no exaggeration to say that we are confronted with the danger of starvation in the next 12 months. The energies of our farmers are paralyzed by price fixing and the fear of price fixing. Does the government want to stimulate agricultural production? Then strike the shackles off the farmer and leave him as free as other producers. In the name of common sense, of justice and of patriotism I make this appeal to the president and congress. Food will win the war. Give the farmers a fair chance to win it."

Jacob Gould Schurman.

**President Schurman comes of a New York Dutch family; was born on Prince Edward island in 1854; graduated from the University of London in 1877, continued his studies in Paris and University of Edinburgh, as well as the Universities of Germany and Italy. He became a professor in Cornell university in 1886 and has been president of that institution since 1892. He was United States minister to Greece and Montenegro in 1913. He was a member of the Philippine commission and joint author of an extended report of conditions in those islands.**

Even those who do not agree with the remarkable statement made by President Schurman of Cornell university as to the danger of starvation in this country within the next twelve months, will admit the increasing seriousness of the food production problem.

All this makes it plainer than ever that the ablest man in the country should be at the head of the food production campaign, a National War-Time Food Production Administrator.

The country is in great need of wise counsel, of a master executive, of one who shall lift this whole perplexing problem out of the routine of bureaucratic administration and who shall call to his aid men of like caliber in every state, and in every county of every state, in putting the food production campaign on its feet.

The survey made by the Farmer demonstrates the patriotic willingness of producers in the Pacific northwest to do their part, but they stand in need of the most efficient war-time cooperation, especially in the matter of marketing their products when raised.

# Wheat Men Will Be Represented

**The delegation of men interested in wheat production and marketing in the northwest, who went to Washington recently to take the matter of the 1918 price up with the federal authorities, are about to "bring home the bacon." At this writing they have apparently secured the cooperation of Herbert C. Hoover, national food administrator, and have secured his promise that the wheat growers shall be represented on the board that fixes the price of the wheat crop. Further conferences are booked for this week when details will be worked out.**

Mr. Hoover has made it plain to the northwestern delegation that the establishment of a primary market in the northwest depends upon the shipping facilities for transportation by water. Because of this the conferences at Washington are not only with Mr. Hoover, but with the head of the shipping board. One of the big things to be discovered, therefore, is: What boat tonnage can be made available for handling the 1918 crop? This is what the conferences are working out this week.

It is clear that Commissioner Hoover is anxious to do all he can to influence large wheat production and to facilitate the shipment of the crop when it is raised.

The two big questions involved, and which the farmers are deeply concerned in are: (1) What price shall the government guarantee for the 1918 wheat crop, and (2) at what markets shall that price be paid?

A clearer understanding of the problem can be had from reading the law. Section 14 of the food control act provides:

> Whenever the president shall find that an emergency exists requiring stimulation of the production of wheat and that it is essential that producers of wheat produced within the United States shall have the benefits of the guaranty provided for in this section, he is authorized from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what, under specified conditions is a reasonable guaranteed price for wheat, in order to assure such producers a reasonable profit.
>
> The president shall thereupon fix such guaranteed price for each of the official grain standards for wheat as established under the United States grain standards.
>
> The president shall from time to time establish and promulgate such regulations as he shall deem wise in connection with such guaran-

## STOCK CONFERENCE ON

### Great Session Booked This Week

This morning (February 21) there begins in Spokane the annual convention of the Northwest Live Stock association and it promises to be one of the notable gatherings of the year. Indications are for a large attendance, and an excellent program is ready. Many noted speakers will appear. The convention will continue for two days, with a dinner Friday evening. On Saturday, February 23, the annual sale of purebred Shorthorns will be held at the Spokane Union stockyards under the auspices of the Northwest Shorthorn Breeders' association. About 100 head of animals will be offered. A similar sale, with about 75 head, occurs at the Portland Union stockyards on Monday, February 25.

# Self-Feeder for Fattening Hogs

The use of self-feeders for fattening hogs is gaining in popularity, says Farmers' Bulletin 906 of the United States department of agriculture. A self-feeder is simply a device by means of which a supply of grain or other feed is kept constantly available to the hogs, in order that they may always satisfy the craving of their appetites with respect to the kind and the amount of feed.

Hogs in the wild state were self-fed animals, living upon such feeds as would satisfy their appetites, and under domestication they seem to thrive best when fed by the same principle. The marked success of the self-feeding system of hog raising is largely due to the fact that they may eat an abundance of those feeds which will nourish them to the best advantage.

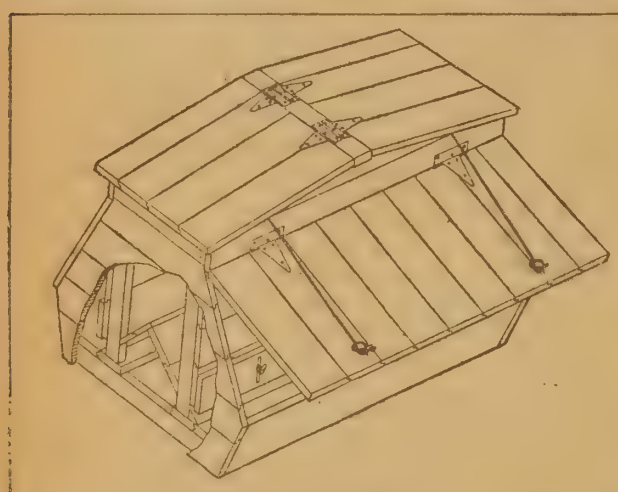
**Requirements of Self-Feeder.**

The self-feeder should be designed primarily to keep an available supply of grain constantly before the hogs and at the same time protect the contents against waste due to wind and rain.

A self-feeder consists of a hopper to hold the feed and a trough below it into which the grain flows as the pigs eat it. The hopper is made of such size that it will contain several days' supply of feed, and the inside walls are made as smooth as possible in order not to obstruct the flow of grain to the trough. At the bottom of the hopper, leading into the feed trough, an adjustable slide should be placed to control the rapidity of the grain flow. This slide usually takes the form of a board running lengthwise of the feeder and fastened to the hopper by wing bolts. A certain amount of flexibility in this slide will aid materially in preventing clogging, for the constant rooting of the pigs against such a board will cause the contents to flow down more freely.

Best results are obtained when the self-feeder can be placed under cover, but as this is nearly always impossible the feeder must be constructed to protect the contents from the weather. This is best accomplished by covering the end of the trough to keep out the wind and by projecting the roof to drain off the rain. Many variations are possible. The Ohio self-feeder is made with a hinged cover which fits over the feed trough and may be closed when the feeder is not in use.

The self-feeder should be built upon a pair of skids or runners to prevent rotting of the floor and to facilitate moving. If strongly constructed this method of transportation will be much easier and quicker than loading upon a wagon or sled. When it is desirable to feed two or more concentrates separately in the same self-feeder a partition may easily be placed in the hopper at any distance from one end. By using the best grade of lumber and applying yearly a coat of paint a well-constructed self-feeder will give service through a number of years.



**Materials Necessary for Ohio Double Self-Feeder.**

| | | Board feet. |
|---|---|---|
| 24 pieces | ⅞ inch by 8-inch shiplap, 6 feet long | 96 |
| 20 pieces | ⅞ inch by 8-inch shiplap, 2 feet 10 inches long | 38 |
| 10 pieces | ⅞ inch by 8-inch shiplap, 3 feet long | 20 |

# Chemistry Work

## One Department of State College

The Washington Farmer is glad to publish a statement from C. C. Todd, head of the department of chemistry, state college, Pullman, Wash., regarding the service which they are glad to render to the people of the state. Professor Todd writes that the department of chemistry of the state college of Washingtn maintains a special analyst to serve the taxpayers of the state, adding:

"We are at all times willing to make chemical analyses free of charge on samples of material sent in by citizens of the state for examination. We discourage the sending in of samples from mere curiosity, and attempt to make this work a real service by analyzing such materials as would tend to the discovery and development of new resources of the state of Washington. We are glad also to take such cases as tend toward the guarding and conservation of the health of the people. To this end, also, we examine a very large number of samples of water to determine what water is safe for domestic use. We have analyzed a number of samples for municipalities, as well as for private citizens.

"We receive a great many samples of water sent in small containers—many of them with ordinary cork stoppers. It is impossible for us to make a sanitary chemical analysis on such samples, and where analyses are desired it is always best for the patron to make inquiry of the department of chemistry as to the best means of shipping the water. We have especially prepared glass stoppered containers for collection of such samples, and with them we send out complete directions for collecting the samples, and a certificate for making the return.

"We do not wish in any way to seem to compete with commercial analyists of the state and decline to receive samples from business firms where the analyses would be solely for pecuniary advantage to the firm."

Potatoes, as this is written, are beginning to move from the Yakima valley. The price is about $20 a ton.

L. G. Terry of Sunnyside has purchased a fine young registered Holstein bull from the H. C. Davis herd of Granger. This will make a splendid addition to Mr. Terry's growing herd of Holsteins. He has four heifers from Snell brothers' herd at Puyallup. In addition to Holstein cattle Mr. Terry is breeding Duroc Jersey hogs. Recently he took four to market that weighed 1330 pounds, one of them tipping the beam at 590.

In line with many other farmers of the Northwest, William Todd & Sons, Yakima Holstein breeders, have reached the conclusion that machinery must take the place of man power during the next few years. As a result they are installing a milking machine in their dairy barn and hope to have it in operation shortly. Alex. Todd says the purchase of the machine is due directly to uncertainty of securing needed help during the coming season and the consequent necessity of meeting changing conditions.

"The wire worm pest is going to destroy the corn industry of this state unless some remedy is found to check their ravages," said G. W. Eastman of Yakima recently. "My losses from wire worms have been so great that I have been forced out of the corn business." Mr. Eastman recommends the use of a home-made drag for corn which is just poking its sprouts through the soil. "The regulation drag is too heavy and the teeth too large," he said. "I made a drag out of two by fours and used 60 penny spikes. This seemed to be just right. It killed the weeds, but did not injure the corn plants."

Alfalfa meal mills of Washington are experiencing keen demand for their product. The alfalfa meal business has been rather an uncertain undertaking in this state, and there are several skeletons of one-time thriving institutions scattered throughout the alfalfa-growing districts. The trouble, the millers say, comes as a result of the difficulty experienced in manufacturing. Hay when wet is exceedingly difficult to grind, and in spite of the most constant vigilance, numerous breakdowns are experienced from time to time during the day's run. This winter the mills have been swamped with orders, especially from western Washington. They are doing their utmost to fill them.

The bean situation seems to be looking up. While there is no pronounced movement there are inquiries which are somewhat encouraging. J. N. Price, agriculturist for Yakima county, received notice January 1 from the state office of farm markets notifying him that the Charles H. Lilly company of Seattle would handle white beans at 10 cents, on board cars in Yakima valley or at warehouses where carlots could be assembled. Up to this time the bean situation has been most depressing. This has been true not only of the Yakima valley, but of other sections of the northwest as well. In Yakima county approximately 2400 acres were grown, producing a crop estimated at 600 tons. In years gone by Yakima produced but few beans. The quality is well up to standard, and it is believed that they will yet command a ready market at a profitable price. Dealers say the act designed to prohibit hoarding of foodstuffs has prevented their buying any great quantity at a time. R. W. F.

# Raised Beans

## And Made $1500 During Vacation

**By D. C. SANDERSON.**

What professional men can accomplish in adding to food production is well illustrated in Milton, Ore. A committee for encouraging food production, consisting of Tassie Stewart, chairman; Professor John Washburn, superintendent of the Milton-Freewater high school; Professor E. R. Naylor of Columbia college, and Frank Cockburn, a prominent rancher of the district, met to consider how more food could be produced in this vicinity. After much consideration beans were selected as the crop, and Frank Cockburn suggested the highlands near Weston as most suitable for the purpose.

One Saturday, no school being in session, Professors Naylor and Washburn spent the day in looking for suitable land and finally selected a quarter section on the George Winn place on Dry Creek which seemed good, according to the bulletins they had read, for the purpose of raising beans. The land was in summer fallow and no crop would be raised on it that year. If they could raise beans they would enlarge the food production and make two crops grow where only one had grown before and at the same time improve the land for the next year's wheat crop. They agreed to pay one-fourth crop rent and later took into the partnership Hinkle Cox, who had some experience in raising beans in Idaho.

They planted the beans early in June in check rows 32 and 36 inches apart, putting five and six beans to a hill. The amount of seed used was about 15 pounds to the acre. Before the crop was planted Professor Naylor went to Kentucky, leaving the entire work and experiment to Professor Washburn and Cox. The last of June they started cultivating and had some trouble in getting two-horse cultivators and had to depend entirely on the one-horse cultivator at the start. In about a week they succeeded in getting the two-horse cultivator and used these most of the time. They had quite a time in breaking the horses to walk between the rows, and since they had no riding cultivator they had to walk 15 and 16 miles a day through soft dirt, which was quite a trial and hardship to the pedagogic legs. The beans were cultivated twice, once in each direction, the work being completed early in August.

The harvesting of the beans began about the 10th of September, employing a regular bean cutter, which cut the roots of two rows at the same time and threw the two rows of bean stalks together. Four horses were employed to pull the bean cutter, four or five men following with pitch forks to throw the stalks in still larger windrows. This part of the work was slow and occupied four or five weeks.

A small bean huller was procured, a $200 machine, which would thrash from 5000 to 7000 pounds a day. It took 15 days to thresh the crop. The yield was about 440 pounds to the acre, giving over 300 tons as the yield on the quarter section.

The beans were sold to a dealer in Idaho for 7½ cents in the dirt, and the plucky school teacher and his partner, after figuring out their expenses and labor, netted a clear profit on the entire crop at somewhere in the neighborhood of $1500. Not only that, but the field, which was sown to wheat has one of the best stands in the country, and with favoring conditions will yield a bumper crop this year.

## Tractors Have Come to Stay.

A prominent Scottish farmer, in an article on the agricultural situation contributed to a Dundee paper, states: "Tractors have come to stay. In the future they are to play an important part on the farm from an economic point of view. The report of the observers at the recent trial of tractors at Edinburgh, Glasgow and Perth should prove of value to the agricultural community. Their recommendations are on sound lines. Farmers and others should be more concerned about the thoroughness of the plow. After all, it is the work of the plow that counts most in helping to produce good or bad crops."

**Time the Only Cure.**

Nothing but time will get the hero of 16 out of the notion of marrying the heroine of 14. It may take a month.

# Income Tax Made Plain

## *On What You Pay and What Is Exempted*

To carry on the war Uncle Sam is drafting men into his armies.

To raise funds to back his soldiers he is drafting wealth.

People who try to dodge payment of income tax will be regarded as worse slackers than people who try to evade the draft, because there is less excuse for the man who runs away from his financial obligation to his country than for the timid man who runs away from the army.

Perhaps you have been negligent and have not yet filed your income tax return. If so you should perform that duty without further delay.

First, because it is your plain duty.

Second, because the penalties are severe. For failing to make a return on time the penalty is a fine of not less than $20 nor more than $1000, and in addition 50 per cent of the amount due. For making a false or fraudulent return the penalty is a fine not exceeding $2000 or one year's imprisonment, or both, in the discretion of the court and 100 per cent of the tax due. For failing to pay on time the penalty is an assessment of 5 per cent of the amount of tax due plus 1 per cent interest for each full month during which it remains unpaid.

To whom should you make your return? To the collector of internal revenue in the district in which you reside. The task of collecting income taxes devolves upon the bureau of internal revenue. The bureau is sending into every county in the United States revenue officers to assist taxpayers in making out their returns. The location of their offices may be ascertained by inquiring of the office of the collector of internal revenue, your bank or the postmaster. They will furnish you with blanks, answer any and all questions as to your returns, each of which must be accompanied by an affidavit.

The man who thinks to evade the income tax is making a serious error. A checking system will inform the government of delinquents.

The original requirement was that returns must be filed by March 1, 1918. Associated Press dispatches say the time has been extended to April 1, but collectors say they have not yet received official notification of any change. To be on the safe side, you should make your return by March 1.

The next thing to be considered is that the income tax applies only to your income for the calendar year 1917. Your income for prior years and your estimated income for 1918 are not to be considered.

This article, which has been prepared with the approval of the United States revenue experts, tells you how to make out your return. By studying it carefully and getting in touch with your banker or postmaster, you can do this without employing a lawyer:

The war revenue act of October 3, 1917, provides for a normal rate of tax of 2 per cent on net incomes of unmarried persons in excess of $1000 and upon incomes of married persons or heads of families in excess of $2000. If you are unmarried and your income for 1917 was $1000 or more you must get a tax blank, fill it out and file it with the collector of internal revenue in the district in which you live. If married and your net income was $2000 or more you must file a return with the collector.

The old income tax under the act of September 8, 1916, still is in effect, so that the total of your tax will be the sum of these taxes added together. Under the act of 1916 the normal rate of tax is 2 per cent on incomes of married persons in excess of $4000 and on incomes of single persons in excess of $3000.

For example, if you are married and your net income for 1917 was $4500, you will pay a tax of $60. This is 2 per cent on the amount above your exemption of $2000 under the act of 1917 and 2 per cent on the amount above your exemption of $4000 under act of 1916. An additional exemption of $200 is allowed a married person or head of a family for each dependent child if under 18 years of age or incapable of self-support.

A taxpayer is considered to be the head of a family and entitled to all the exemptions allowed a married person if he is actually supporting one or more persons closely connected with him by blood relationship, relationship by marriage, or by adoption.

Women as well as men must pay an income tax. The combined net income of a married couple in excess of $2000 is assessed. They may file a joint return or each file a separate return, if desired. If a joint return is filed either one may claim the exemption or it may be divided between them. A widow, a woman living apart from her husband or a maid is assessed on her net income above $1000.

"Net income" means gross income less certain deductions provided for by the act.

Expenses actually incurred in carrying on any business may be deducted, but not family or living expenses.

In making out your return you may deduct the following from gross income:

Interest paid on mortgages and notes and other indebtedness, except indebtedness for the purchase of tax exempt securities.

Rent paid for offices or business places.

Taxes paid, except for local improvements, such as sewer and water, income taxes and excess profit taxes.

Losses sustained in business or trade arising from fires, storm or other casualty or by theft, if not compensated for by insurance or otherwise. If property was purchased prior to March 1, 1913, the fair market price or value on March 1, 1913, is the basis for figuring the loss.

Losses sustained in speculations and side lines not connected with your regular business, but these deductions must not exceed the profits from similar transactions.

Debts ascertained to be worthless and charged off within the year.

Reasonable depreciation for business structures, but not for your residence.

Depreciation for oil, gas wells, mines, etc.

You must include under gross income the following items:

Salaries, wages and commissions or compensation of whatever kind for personal services.

All profits derived from business, trade or commerce.

Profits from the sale of property, real or personal.

Rents.

Interest on notes, bonds and bank deposits, including savings banks.

Incomes received from fiduciaries; that is, amounts received from incomes of estates, trusts, etc., through trustees, administrators or executors.

Dividends on stock, whether received as cash or stock. Only dividends paid out of earnings or profits accrued since March 13, 1913, are taxable.

Net partnership profits, whether divided and distributed or not.

Royalties from mines, oil and gas wells, patents, copyrights and franchises.

The following items are not taxable and need not be reported in your return:

Value of property acquired through will or by inheritance. It must be understood, however, that the income received from such property is taxable.

Proceeds of life insurance policies.

Returns of premiums on life endowment and annuity policies.

Interest on bonds and other obligations of the United States government or its possessions and of any state or political subdivision of a state, such as a city, town, county or village.

Interest on the Second Liberty Bond issue of September 24, 1917, to an amount not exceeding $5000 of such bonds. If you own more more than that amount the interest on the additional bonds is exempt from the normal tax, but not from the surtax.

Interest on securities issued under the provisions of the Federal Farm Loan Act of July 17, 1916.

Salaries of officers and employes of a state or political subdivision of a state, including schoolteachers.

In addition to the normal rate of 2 per cent the act of 1917 imposes an extra levy or surtax ranging from 1 per cent on incomes between $5000 and $7500 to 50 per cent on incomes in excess of $1,000,000. The act of 1916 in addition to the normal tax imposes a surtax ranging from 1 per cent on incomes between $20,000 and $40,000 to 13 per cent on incomes of more than $2,000,000. The total tax on incomes of more than $2,000,000, therefore, is 67 per cent.

# Was Sandy Waste; Now a Profitable Farm

By RAY W. FELTON

A farm that will pay 7 per cent on the investment and a labor income of $1712.68 is always interesting and when it is added that such a showing was made the first year the place was in full crop one's curiosity is aroused.

Three years ago Edgewater farm, a mile from Burbank, Wash., looked like one of those sandy waste places that make the easterner sick at heart when he reaches Pasco. In 1917 it was made to represent a paying investment and an example of what purpose and thoughtful planning will do towards approaching the model farm home. Books showing careful farm accounting tell the financial side of the story.

E. M. Chandler, its owner, does not call Edgewater farm a model farm. There are many things yet to be accomplished—improvements and additions that only time can bring about and changing conditions make practicable. But there is one thing that seems certain—neither time nor changing conditions will make it necessary to tear down very much of that which has been accomplished, because the future has been reckoned with in everything that has been done.

Edgewater farm gets its name because it lies along the south side of the Snake river not far from a point where the Northern Pacific bridge crosses the stream on the Walla Walla branch. The S. P. & S. parallels the place for some distance on the north side of the river. Emerging from a plain of sagebrush on either line one's attention is attracted and held by the broad acres of alfalfa, well laid out barn lots, red and white buildings and groups of purebred live stock.

The river forms a boundary line of the Burbank project, comprising 14,000 acres, and of which Edgewater farm is a part. Mr. Chandler, who recently was elected president of the Washington Irrigation institute, acquired this place after he was sent to Burbank to serve as project engineer and resident manager for the land company. He laid out the big project, installed the pump-buildings in the little town and drove away the gloom clouds that hovered over the little settlement during the first days of desert reclamation. He demonstrated his faith in the country when he purchased 60 acres which he has now improved and 90 acres more, which he is holding for another purpose. The 60-acre farm produced 350 tons of alfalfa last season.

With the mechanical mind of an engineer Mr. Chandler has the vision of an empire builder, a combination most unusual. The care he exercised in his work on the irrigation project has made it one of the notable ones of the west in spite of many adversities. When at last he found it possible to turn some attention to his own place it was natural that he should begin laying it out with the same thoroughness that had marked his other work.

"My first thought was that everything I put on the place should be first class," said Mr. Chandler, as we walked over the alfalfa fields the other day. "I was determined that the purebred strains should be carried out in all the live stock I shouldl acquire and I made up my mind that everything else, including buildings and equipment should be in keeping with that idea."

A visit to the farm will prove just how steadfastly this purpose has been followed.

One of the first things which will attract your attention is the dairy barn, 36 by 160 in dimensions. The arrangement is such that it answers the purpose of an ordinary structure several times its size. The barn has an all-steel stanchion and manger equipment. It is lighted by day by eight large windows on each side and two on each end and by night by four 60-watt electric lights. The interior is ceiled and there isn't a post in sight. The walls and ceiling are painted with white lead and oil. In the center of the concrete floor is a turn table on which feed and litter carriers can be turned to connect with spur tracks running from the main tracks leading from the barn to the manure pit and to the feed room. A sewage system connects the barn and the manure pit, thus keeping everything thoroughly drained and providing a means of saving the liquid manure.

There are 20 stanchions, pens for young stock, three bull pens and two hospital stalls.

An overhead track with patent milk-can carrier runs from the barn to a milk house, a concrete-frame structure 14x14, which has a hip roof and is ventilated by a ventilator cupalo. The milk house is equipped with a motor-driven separator and houses a water system with motor-driven pump which supplies water for all domestic purposes, including the barns and stock yards.

The horse barn is 36x64 and contains eight box stalls 13x16, and a 10-foot alley. It has a hay capacity of 75 tons. The roof is the Mansard type. There are no interior posts in the haymow. Like all the buildings on Edgewater farm the horse barn is lighted by electricity and equipped with a switch system so that any stall or any compartment may be lighted by turning a switch at the main door.

A silo with capacity of 60 tons and with dimensions of 12x28, stands halfway between the horse barn and the dairy barn.

A machinery shed 20x60 feet houses wagons and modern field equipment, including a tractor.

On an elevation commanding a good view of the river and the farm are two modern bungalows. Eventually both of these houses will be used for the help, Mr. Chandler having picked out another site for the residence he expects to build for his family later on.

Ayrshire cattle and Percheron horses are the breeds selected by Mr. Chandler for foundation stock. His herd sire is Peter Pan 63d, a double grandson of Beuchan Peter Pan, undefeated grand champion of Great Britain and America. Peter Pan 63d was bred by J. W. Clise of Redmond, Wash. He is a splendid individual and the Edgewater herd in its entirety is a credit to the Ayrshire family.

The same care in selection and breeding has been exercised in the horse barn. Fine specimens of Percherons are in evidence and they as well as the cattle, show the effects of intelligent handling, good housing and systematic feeding.

**Alloka, one of the Ayrshires on Edgewater Farm. She was sired by Chief of Sunnyside, 10522. Her dam was Miss Fox, 19794. Alloka was a prize winner at the Panama-Pacific exposition in 1915, although shown dry.**

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## The Test of Patriotism

It seems to be in order to remark that shouldering the musket is not the only test of patriotism. It may not be even the best test of loyalty to the country and to the flag. This much may be said without disparagement to those who may be found on the tented field, or in the naval service of the government. Not all are fitted for such a test, and Uncle Sam is wisely recognizing the fact.

It should, therefore, be no reflection on the loyalty of any person that he is not found tendering his services to the military branch of the government, either for service at home or abroad.

Fortunately, there are other ways of showing patriotism. Good citizenship means service to the country, and that can be rendered by the faithful discharge of whatever duty or duties may be required. The level-headed crop producer is a patriot, and he must be reckoned with in the adjustment of things. There may not be much bluster about him, but he gets there just the same, and that is what counts in the long run. Let us not belittle the mission of the soil tiller, nor, for that matter, of any other person, who engages in wholesome, useful work for the common good. There is no patent on patriotism, although there may be different types of patriots. They are all needed just now.

## Wheatless Days

What is this moan we hear about the "deprivation of wheatless days?" Ho, ye men and women from Pennsylvania, Ohio, Indiana, Illinois and Iowa! How about it, ye citizens from Kansas, Nebraska and Missouri? What do you think about it, folk from the sunny south?

You are descended from the men and women who bridged the streams, climbed the mountains, and conquered the wilderness—men with axe and rifle—women with distaff and spindle. They rode not in automobiles nor Pullman palace cars, but in canvas-covered wagons or on horseback or plodded along laboriously on foot. What served as a staple for the patriots from the rocky shores of Maine, the deep indentations of Massachusetts? What filled and strengthened the sturdy inconquerables, the pioneers whom peril by field and flood could not daunt?

They won gloriously on a diet of corn—corn meal, mush, corn pone, hoe cake, Johnny cake, hominy and other dishes which bear homely names.

Corn is the most versatile plant that grows. It adapts itself to every climate. It is a native of the tropics, and wins prizes for excellence in Minnesota and the Dakotas. It flaunts its green streamers on the dry winds of the plains, and bows its tassels to the rains of the coast country. The pilgrims leaned on it as on a staff. The history of corn is interwoven with that of our country.

It is not a hardship, but a pleasure to eat it. From it comes the rugged strength and rugged virtues we most covet and admire.

We should laugh at wheatless days. Why call them wheatless? Why not lament that we have so many cornless days? Instead of making a dismal face over a foolish custom which has deprived us of one of our most wholesome foods, we should be sad only because our allies and our own soldier boys are deprived of this great grain.

## Produce What Public Wants

While the public wants many things that it doesn't need, or that are actually inferior to other varieties of the same thing, it is doubtful policy for the farmer to attempt to educate the public to different desires. For instance, if consumers want a certain kind of bean, it is likely that the individual farmer will lose money if he produces some other variety and tries to sell it to such consumer. Nothing short of united and persistent effort along well planned lines of education would change the public taste, and until that taste is changed the producer would be wise to feed it what it wants. It therefore becomes one of the first problems of the grower of anything to sell to know his market. The successful merchant studies to find out what his patrons want and then supplies it if he can. In like manner the farmer must study to find out what the consumers of his products want, and then produce to satisfy that appetite.

## Thrift Stamps

The Washington Farmer has become accredited agent for the United States for selling thrift stamps. This does not mean that we merely buy the stamps from some of the regular agencies and sell them again; the government has named us as one of its recognized sources of distribution. We have accepted this position for two reasons: We wish to make it convenient for our readers to invest in a safe and profitable proposition with small amounts; we stand ready to do an important and patriotic service.

The war, terrible and destructive as it is, still brings out some virtues. Among them are generosity and thrift. Ease and comfort are nice things, but they do not strengthen backbones, and we have had some suspicion that we need a cold bath to brace our moral nerves again.

Today the world is crying for our help. The Belgians are still in the depths of need; the Armenians are starving. Poland has been devastated. The armies of the allies, as well as our own, are not producing and must be fed and clothed and cared for, whether wounded or not. These are calls upon our hearts, and to give as we should we must learn not only to give from our bounty, but must save that we may give more. The Liberty bonds furnished a means of saving and helping the government at the same time, and we have taken a goodly share. There are some who can not buy Liberty bonds, but who can invest an occasional five. The government has done a wise and sensible thing in enabling people to invest as low as twenty-five cents at a time.

Everybody should have a part in the campaigns and the thrift stamps and war savings stamps make it possible.

These are just what the names imply—they enable us to save small amounts steadily, and we doubt if there is any other way to make a good rate of interest on so small a sum.

## Washington Gleanings

Cashup, a grain station on the Spokane & Inland Empire railroad between Steptoe and Thornton, is to have a $50,000 grain elevator, with a capacity of about 90,000 bushels.

County Farm Agent C. F. Monroe of Chehalis county is urging farmers to save select roots such as rutabagas and mangels and other forage plants and leave them in the ground for 1919 seed.

The Unity Orchards company of Gordon has announced that it has purchased a mill site and a large body of land in Okanogan county and that it will hereafter operate its own box factory.

A. L. Aabling, president of the Aabling's Seed farms, reports that they will have about 1200 acres in cabbage, spinach, beets, rutabagas, kale and cauliflower for seed in the Skagit valley for 1918 crop.

The Lincoln county commissioners, as an inducement to trappers and ranchers to rid the county of coyotes, have offered $1.50 for each pelt as a bounty, in addition to the $1 offered by the state.

There are 83,692 bushels of potatoes in Snohomosh county still in the hands of farmers, according to the estimates submitted through the school teachers of the county to County Superintendent W. F. Martin.

The election of directors of the Western Washington Fair association for 1918 resulted in naming W. A. Miller and J. M. Jones to succeed John Mills and George Schofield. W. H. Paulhamus and H. A. Huff were reelected.

Ten million gallons of water daily, six times Aberdeen's present consumption and enough to easily supply a city of 100,000 inhabitants, are pouring through the new Wishkah water project, recently completed at a cost of about $400,000.

The sale of the Fred Lauer ranch northwest of Pomeroy, containing 480 acres, to W. L. Hoppe, a successful young farmer, owner of a valuable tract of grain land on the Pataha flat, is reported. The purchase price is reported ot be $48,800.

To encourage culture of sugar beets in the Yakima valley the Utah-Idaho company will contract with farmers on a basis of $9 a ton. An active compaign will be made all over the valley, as the company hopes to secure 15,000 acres for the 1918 crop.

The names of 142 Lewis county boys and girls who have been awarded achievement pins by the state department of education for their work in industrial clubs the last year have been announced. Herbert G. Heath has been appointed county leader for this year.

Farmers of Grays Harbor county have adopted the community labor agent plan—that is, some public-spirited man in each community center or town will be selected to work with the government employment agents in the big city centers to supply the help needed by the farmers of his community.

The Lynden Cooperative Creamery company reports that the resources of the company increased $1000 during the past year, while the gross sales fell off about $30,000. During the year 649,702 pounds of butter were churned. The creamery handled 2,203,025 pounds of cream.

The farmers' union of Pomeroy has elected the following officers: James Oliver, president; D. B. Williams, vice president; J. A. Strain, secretary-treasurer; J. W. Armstrong, conductor; Henry Hiller, doorkeeper; J. W. Ball, chaplain; W. A. DeBow, Peter McClung and D. B. Williams, executive committee.

The girls of Pullman high school are enrolling in the courses in agriculture, which were abandoned at the opening of the first semester because of lack of interest in the subject. The girls expect to place themselves in a position to help with the farm work at home in a scientific way while the young men are away bearing arms in defense of their country.

## What Others Say

Western Farm Life: The first cost of everything is the price of food. The duration and expense of the war will be determined largely by the support given the farmers to secure the greatest possible production.

Wallace's Farmer: Until we can grow another crop, we must cut down our rations just as much as is necessary to make this crop go around, and give our allies plenty of food to enable them to carry on the war vigorously.

Farmers' Review: The busy farmer can't go around with a spray pump on his back all the time and nobody expects him to, but nevertheless, sensible, sanitary precautions should be exercised and are necessary if farm animals are to be kept in good health year after year.

Ohio Farmer: There seems no good reason why every farm should not go into poultry production conservatively. Most farms can maintain a fair-sized flock without adding greatly to the work, and if properly managed it will yield a fair return, in money and maintenance for the family table.

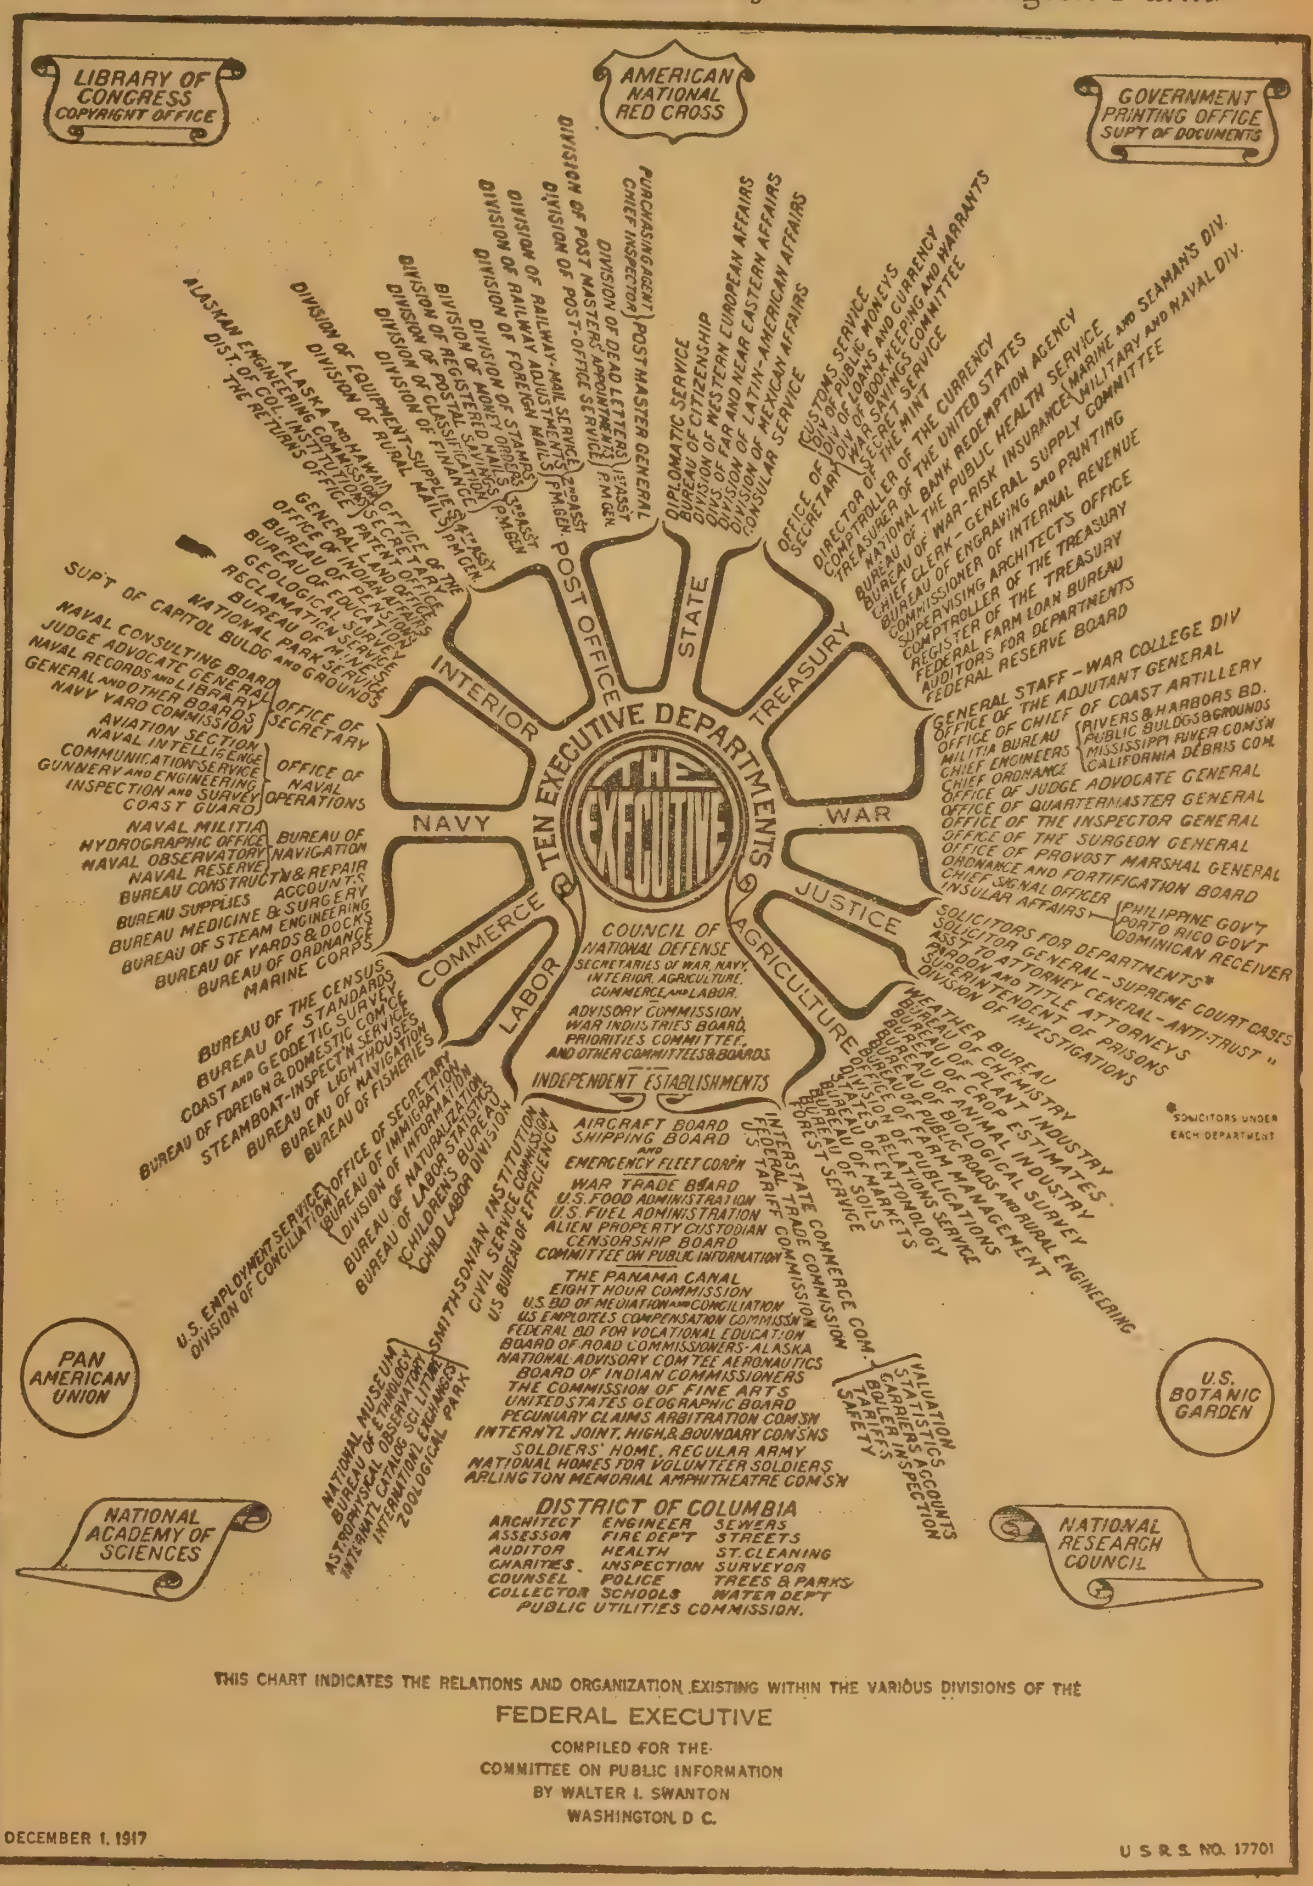
# Special Free Information Bureau

## *Opened in Washington, D. C., for the Benefit of the Readers of The Washington Farmer*

**The Washington Farmer proposes to act as a clearing house of information between the government and the people of this state. It proposes to assemble, compile and distribute the practical results of the great federal work of research and investigation. It proposes to make this information available to every one of its readers. For this purpose it has opened its new bureau in Washington, D. C.**

Our government is the greatest organization devoted to a single purpose the world has ever known. The keenest minds, the broadest learning, the most expert technical skill are turned day in and day out on every problem that confronts the American people. Problems of the farm and household, questions of health and hygiene, questions of opportunity, of self-help and help for others—all these and many more are studied in federal laboratories and in the field by men at the head of their professions with the resources of the richest nation on the earth behind them.

The work is being done for you. Your government is doing it. You are entitled to the benefit of its results. Examine the accompanying chart and learn how the government divides its work. Cut this chart out and preserve it in your scrapbook. It will be a valuable source of information as well for your boy and girl in school.



In beginning its new service The Washington Farmer Bureau offers **"The War Cook Book,"** a pamphlet of special interest to the home. This pamphlet contains the results of government researches, made at great pains and expense for the benefit of the household. The investigations deal with simple, practical things that every housewife ought to know.

The purpose of this cook book, which has just been published, is to put the war in terms of the kitchen and pantry. It sohws how every home can help; how every woman can save enough food to assure some American boy in France of three square meals a day.

One side of the food saving campaign, according to the authorities in Washington, is not sufficiently understood. Too many people think that food conservation means making a sacrifice. The opposite is more nearly true. When you save food, as the term goes today, you help your country, you live as well as ever, and you save money.

The government has spent your money to teach you how to do these things. The Washington Farmer Information Bureau is ready to tell you what the government has found out.

The keynote of the times is efficient service, and by supplying this bureau for the free use of its readers the Farmer is living up to this principle in deed and fact. Every housewife can help herself and her family by keeping posted on the latest knowledge relating to home management.

**This service is absolutely free to every reader of The Washington Farmer. You have only to send a 2-cent stamp for postage to The Washington Farmer Information Bureau at Washington, D. C., and "The War Cook Book" will be forwarded promptly.**

**Use the blank printed herewith, fill in your name and address plainly. Write today.**

# Farmers Must Pull Together

## Team Work Is the Great Need in Solving Any Problem That Comes Up on the Farm or in Any Other Industry of the Country

BICKLETON, Klickitat County, Wash., Feb. 4.—In the last few days the temperature has been as low as seven above zero, but has moderated again. The prospects for a fall crop of wheat are fine and the general opinion is that hot winds like last year are the only thing which can prevent a bumper crop. Live stock is doing well; grass is fine, with no snow to cover it up. Stock is in better condition than usual for this time of year. I consider the most important problem this community has to solve at present is the sack problem. This country could handle grain in bulk if they only would, but they still cling to the old sack proposition. There are two sawmills handy here and all of the big farmers have empty houses and barns that could be converted into granaries. If we could be assured of enough sacks to transport the grain from the threshing machines and combines to the granaries we could haul it after that to the stations in bulk and the same number of sacks would last us several seasons and eventually we could equip our machines to elevate the grain loose directly into the wagons and do without sacks altogether. The most important national problem at present is the raising of foodstuffs, and to do this we should adopt every means to eliminate unnecessary expense and use the money thus saved to install improved machinery to meet the labor shortage which is sure to be severe. Also better cooperation, pulling together. A dozen men can pull a reaper if they keep in the same direction, but all the men in the township could not cut a bundle of hay if they pulled it in all directions.

BERT H. FAULKNER.

### Two Reasons for Big Crop.

TWISP, Okanogan County, Wash., Jan. 30.—What methods we should employ to handle the amount of farm work we want to do this year seems to be the question that is causing the most worry among the local farmers at present. We can see two great attractive objects to lure the farmer to do his utmost to raise a bumper crop this year, patriotism and profit. The shortage and high price of farm labor seems to be bothering the farmers more than any other question. We consider a termination of the world's strife that is now being waged as the greatest problem of national interest. The winter has been favorable for the man that was short on roughage for his stock. Stock is in a normal condition. It seems that no one has been able to spare the time to attend the short course offered by the state institutions, as the call for the farm boys has left many farmers with shortage of help. GEORGE LA RUE.

### Yakima Valley Busy.

TOPPENISH, Yakima County, Wash., Jan. 26.—The winter so far is one of the mildest that has been experienced in many years. The only winter of recent years, approaching it in mildness was the winter of 1904-5. That was a very dry winter; this winter was much wetter than usual. Twice during December the Yakima river was at flood stage, the last time staying over the bottoms for more than a week. The last rise was the highest since November, 1906. Considerable damage was done to farms in the low lands immediately north of Toppenish between Toppenish and Buena, much of the soil being washed away and the fields badly rutted and cut. Hay stacked in the low lands was badly damaged by being wet from the bottom; the fact that the water stayed up so long caused much more damage than would have occurred otherwise. On the other hand the water staying on the land in a running state did much to wash away the alkali and land that was not washed was enriched by a deposit of silt.

The ground has been in fine condition for plowing all winter and farmers are very busy now preparing for spring crops. The acreage of hay will not be

# Buys Good Feed and Pays the Price

## *Hog Knows Better Than Men What He Wants and Needs*

It doesn't pay to try to produce pork without first-class feed; it doesn't pay to feed hogs good feed and let the vermin sap their strength; it doesn't pay to be careless in feeding methods.

These are some of the declarations of Charles Eagleson of Boise, Idaho, one of the successful swine breeders of the northwest, in an address before the recent meeting of the Idaho Swine Breeders of the northwest, in an address before the recent meeting of the Idaho Swine Breeders' association.

"In speaking of fitting hogs for market one naturally brings to mind the picture of a nicely built shoat, weighing from 100 to 140 pounds, with which to begin the fattening process," said Mr. Eagleson. "To my mind that would be ideal, if they were all uniform; but to get them alike in conformation, I believe you will find it necessary to go back to the time of selection of the sire and dam of the hogs you expect to feed. Proper attention should be given to the right type in order to get an animal that will top the market in the shortest time with the least feed.

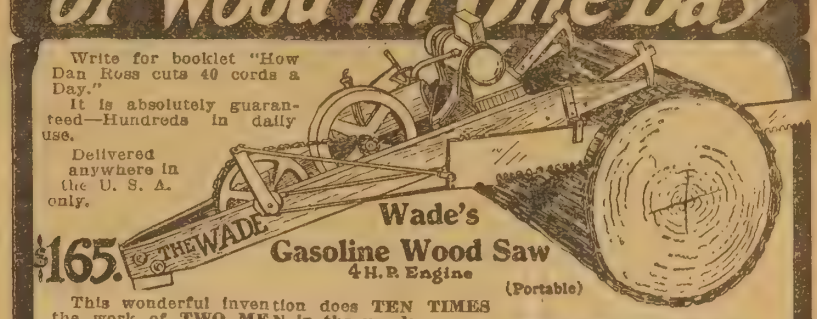
"The problem of the northwestern feeder is to produce pork on a basis of 14 to 15 cents per pound, which is the guaranteed price, less freight, to the larger markets. We must come in competition with the feeders of the corn belt who can use less expensive feed, and who have much less freight to pay than we of the west. We have an advantage in that we have more sunshine and better pastures, and although our feed is costing around 3 cents, with the proper proportioning of good pasture and cut alfalfa hay being mixed with it, I believe a modest profit can be made, and under the present circumstances, with our country engaged in a world war, upholding and defending our right and the right of other and smaller countries to a free and happy existence, we can not in justice to our government ask more than a small profit.

"I believe it right and proper for the authorities to fix the prices of foodstuffs during such times as now obtain, and further believe it within their power, and their bounden duty, to go farther and fix prices on what the farmer is compelled to buy in order to produce the foodstuffs needed.

**Raise Pork for Humanity.**

"Our country is asking us through its agents to increase our pork output 15 per cent this year, and we should make every effort to meet the demands, for in that manner we who are not permitted to go to the front ourselves, can raise more food and help support those who do go.

"Our experience in feeding hogs only dates back some five years, and in that time we have found the hog to have a good many human traits; for instance, he enjoys a clean, warm bed, a respectable place to go for his meals; good, clean water; lots of sunshine and pure air, and feels disgraced and loses interest in the higher purposes of life when his owner allows his body to become infested with lice. A little crude oil, warmed enough to run through a garden sprinkler, is very effective in making the louse disgusted with his surroundings, and a second application usually sees him on the way to the happy hunting grounds.



"We try to have our pigs come in March and October, and provide pens as warm and dry as possible, with plenty of light. Two to three weeks before farrowing, the feed is gradualy increased, so that by the time the pigs arrive the mother is on full feed. The pigs are allowed out as soon as they will eat, and given the run of the driveway, or in nice weather an outdoor pen. In the spring when the pigs are old enough to follow, the mother is turned on pasture. Plenty of salt and coal is kept in the pasture and grain enough fed to keep the mother and pigs in good condition. When the pigs are from 8 to 10 weeks old they are weaned and placed in a separate pasture with a ration of grain which is increased as they grow, until they are getting about four pounds per day, when they should weigh around 100 pounds. Just before or soon after they attain this weight they are weighed into the feed lot and from that day on an account is kept of feed, labor and weights until they are sold. Each day's feed is weighed and the hogs weighed once each week.

"If you have no scales, sell a good fat hog, and buy a set. There is no machine or implement on your farm that will pay for itself quicker than a set of scales.

"Interest is charged on the value of the hogs and on the feed they consume during the fattening period, and a charge is also made for all labor. We are satisfied to put on a pound a day to begin with, gradually increasing to two pounds or better. We prefer to feed corn, wheat, oats, barley and

# Farm Butter Making

Here is a summary of steps in making butter on the farm as given in Farmers' Bulletin 876:

1. Produce clean milk and cream. Cool the cream immediately after it comes from the separator. Clean and sterilize all utensils.

2. Ripen the cream at from 65 to 75 degrees F. until mildly sour. Always use a thermometer in order to know that the right temperature is reached.

3. Cool the cream to churning temperature or below, and hold at that temperature for at least two hours before churning.

4. Use a churning temperature—usually between 52 and 66 F.—that will require 30 or 40 minutes to obtain butter.

5. Clean and scald the churn, then half fill it with cold water and revolve until churn is thoroughly cooled, after which empty the water.

6. Pour the cream into the churn through a strainer.

7. Add butter color—from 20 to 35 drops to a gallon of cream—except late in the spring and early in the summer.

8. Put the cover on tight; revolve the churn several times; stop with bottom up and remove stopper to permit escape of gas; repeat until no more gas forms.

9. Continue churning until butter granules are formed the size of grains of wheat.

10. Draw off the buttermilk through the hole at the bottom of the churn using a strainer to catch particles of butter. When the buttermilk has drained out, replace the cork.

11. Prepare twice as much wash water as there is buttermilk, and at about the same temperature. Use the thermometer; do not guess at temperatures. Put one-half the water into the churn with the butter.

12. Replace the cover and revolve the churn rapidly a few times, then draw off the water. Repeat the washing with the remainder of the water.

13. The butter should still be in granular form when the washing is completed.

14. Weigh the butter.

15. Place the butter on the worker and add salt at the rate of three-quarters of an ounce to a pound of butter.

16. Work the butter until the salt is dissolved and evenly distributed. Do not overwork.

17. Pack in any convenient form for home use, or make into one-pound prints for market, wrapping the butter in white parchment paper and enclosing in a paraffined carton.

18. Clean the churn and all butter-making utensils.

## Western Dairy Instructors.

The Western Dairy Instructors' association holds its annual convention at Yakima, Wash., February 28 and March 1 and 2. This association includes the states of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. Men of national reputation along dairy lines will be present at the convention and subjects of live and vital interest taken up for consideration. A general invitation to attend this convention is to be sent out and it is hoped that a large attendance may be secured.

A Dairy Products show is to be held in connection with the convention which includes butter, cheese, milk and cream. Premium lists covering these exhibits are enclosed herewith. A students' judging contest is to be held in connection with the convention covering dairy cattle and dairy products. It is expected that teams from the agricultural colleges in the various states will be present and participate.

## Makes New Butter Record.

A purebred Holstein cows again breaks a record for butterfat production, says a letter from the Holstein-Friesian Association of America. Lady Netherland Pontiac, with 43 1-2 pounds of butter to show for a week's work, has displaced Wandermeere Belle Hengerveld as junior 4-year-old in the seven-day division.

Lady Netherland Pontiac produced in seven consecutive days 577.8 pounds of milk containing 34.817 pounds of fat, equivalent to 43.52 pounds of butter.

Her sire is King Pontiac Konigen, and her dam is Dretka Netherland 2d Lass. She was bred by Julius V. Fredericks of Canajoharie, New York, and is now owned by Oliver Cabana Jr. of Elma Center, New York.

## Linn County Cow Testing.

The Linn County Cow Testing association elected officers for its second year at Albany, Ore., January 21. There was a large attendance and a harmonious meeting. More dairymen make applications for testing than there are week days in the month, but the tester will work overtime and accommodate some of the new ones.

H. J. McInnis of Albany was elected president; Henry Stewart, vice president, and J. M. Dickson, secretary. Five of the herds have pure-bred Jerseys on official test. H. A.

### Steel Glasses for Soldiers.

Steel spectacles are the latest addition to the equipment of the Netherlands army for modern warfare. The commander in chief has ordered that they shall be supplied to all the machine-gun sections of both infantry, hussars and fortress artillery, as a protection against sprinters of projectiles, flying chips of stone and the like. Stocks of the glasses will be kept in readiness to serve out to infantry in case of war.

WHERE IS HE LAME? CAN HE BE CURED?

IT is surprising how accurately it is possible to diagnose the most chronic, complicated and uncertain form of lameness,—and treat ALL such cases successfully by the aid of our FREE BOOK. It is a book of facts—nowhere else found—our discoveries of over 22 years. No horse owner should be without it.

When you Figure *it* all up —

you may find some of your cows are a liability instead of an asset. Why? Almost every cow can be a profitable producer if her system is working properly and she is free from disease.

Kow-Kure, the great cow medicine, is just what the average overforced milch cow needs. It works on the digestive and genital organs and puts the system in condition to prevent disease and produce properly. Also a sure remedy for Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite, Bunches and other common diseases.

Try Kow-Kure on your poor milkers—you'll find it makes good every claim; in many dairies it has turned losses into profits. Feed dealers and druggists sell Kow-Kure; 55c and $1.10 packages. Write for free treatise, "The Home Cow Doctor."

LIVE STOCK NOTES

Write to the Editor

E. J. IDDINGS, Editorial Contributor

## Aberdeen Angus Field Force.

Following the decision of the American Aberdeen-Angus Breeders' association to employ more men to carry on the growing business in "Doddies" and meet the demands of enlarged fields for beef growing, two additional field men and an assistant secretary have been added. The field has been divided into eastern, southern and western territories and a field man definitely assigned to take care of business and advance Angus activities in each territory.

M. A. Judy, regular field representative, has been assigned to the eastern territory, which includes all states east of the Mississippi river and north of the Ohio river and the southern boundary of Pennsylvania, Delaware excepted, and the remainder of Minnesota. Dr. C. D. Lowe, in charge of live stock work in the extension division, University of Tennessee, has been assigned to the southern territory with headquarters at Knoxville, Tenn. East of the Mississippi river, all territory south of that in charge of Mr. Judy comes under his jurisdiction, as well as all west and south of the Missouri river in Missouri and the state of Arkansas, Louisiana, Texas, Oklahoma, New Mexico and Arizona. The western territory, assigned to E. T. Davis of Iowa City, Iowa, includes all the other states and that part of Missouri north of the Missouri river.

## Live Stock After the War.

While war conditions with guaranteed wheat prices make that form of farming increasingly attractive as an immediate operation, with the end of the war the high reserves of Australia, India and Argentina will be thrown on the world's markets to swell the pent-up flood of wheat that will pour out of Russia and into Europe through the back door, says Charles Gray, secretary of the American Aberdeen Angus Breeders' association at the annual meeting of the Minnesota beef breeders last month.

All the cheap lands of the world will be raising grain as the most direct route to the hungry mouths of Europe, and only government guarantees can hold up our grain markets. Our live stock, however, will have the inside track for the meat and fat needs of the world, for it will take years to rebuild the foreign herds and flocks that have been depleted and swept away. Furthermore, these herds and flocks will be largely rebuilt from seed brought from our herds, and already many purebred associations are laying plans for this export business for the rebuilding of a new Europe.

## Veterinary

Dr. S. B. Nelson

**Cow Has Warts**—I have a cow that has warts on her teats. How can I remove them? W. B. MARIAL, Ore.

I would suggest the use of the following treatment, applied night and morning after milking: Chloral hydrate, 1 1-2 drachms; acetic acid, absolute, 1 1-2 drachms; salicylic acid, 1 drachm; spirit of ether, 1 drachm; sollodion, 4 drachms; mix well before using.

I have a young hog whose skin on his sides and shoulders is very hard. It is creased and this is what is hard. He walks as if he is stiff and sore. He seems to be in good health and eats hearty.—A. K., Medford, Ore.

Try applying some of the following ointments to the sides of the pig: Pine tar, one part; lard, three parts; beeswax, one part; rub into the sides once daily or every other day for some time. See that he has plenty of roots or silage or green stuff in his feed.

I have a colt about 18 months old that I think scratched himself over the eyebrow on a nail and it did not heal, but puffed out as though it might be proud flesh. It is still an open sore, but looks like a wart.—H. C., Jared, Wash.

The chances are that there is some offending foreign substance in the injury which the colt received. Wash the part thoroughly with a 2 per cent solution of lysol until it is clean. Put a twitch on the horse's nose so that you can hold him, then gather up the sore portion and after disinfecting your knife make an incision into the part which is wounded and give it a draining. Then apply to the outside of the wound a dusting powder composed of one part of boracic acid and one part of tannic acid, dressing the wound once daily with this powder.

I have a cow that freshened January 4 this year and her udder has been swollen ever since. The hind quarters of her udder are very hard and there seems to be lumps in it, and the milk from these quarters is stringy. She is stabled at night, fed on timothy, clover and some alfalfa hay, and potatoes and brain.—S. O., Conway, Wash.

Your cow is without question affected with mammitis or caked bag. Give the cow a pound and a half of epsom salts in three quarts of water. Cut down on her feed. Try milking her three times daily even if you do not get very much milk from her. Then paint the affected parts of the udder with the following liniment once daily: Soap liniment, one part; tincture of iodine, one part. That may start resolution so as to cause the diseased tissue to break up and either absorb or be discharged. After three or four days it might be wise to give the cow one drachm and a half of potassium iodide in a pint of water night and morning.

**Hip Sweeny**—I have a mare that had a bad sprain in the left hind leg which has now developed a hip sweeny with a very rapid wasting of the muscle. She is very lame and favors the leg at all times.

W. J. W., Bellevue, Idaho.

Hip sweeny is generally the result of an injury in some part of the legs which prevents the use of the legs normally. Therefore, it does not always indicate that a shrinking away of the croup muscles means that the injury is in that region. However, it seems that the best thing that could be done for the mare would be to determine where the injury was and then have her fired by a veterinary with the actual covering. The use of the actual cautery does two things. It rests the limb and the injured part and secondly it causes an increased blood supply into the part. Of course, I can not tell you where to use the cautery because you do not say which part of the leg the injury was to.

### Control of Leather.

The American consul general at London cables that the British war office has extended control of horsehides in raw state to leather produced therefrom, and now takes possession of such leather from domestic or imported horsehides.

JAMES DRYDEN,
Editorial Contributor.

## Turkeys Fed Too Much

To the Editor: Can you please tell me what is wrong with my young turkeys? I have four hatched in September and each morning when they fly from the roost they can't support their bodies. It seems as though their bodies are too heavy for their legs to support. They walk stiff-legged all the time. At first only one of them was that way, but now they all are. I feed the same as for my laying hens, wheat bran, shorts, beef scraps and oil meal for a dry mash. In the morning I feed wheat and this dry mash, at noon I feed a crumbly mash of the same ingredients and in the evening corn if I have it, and if not wheat. They eat heartily and I can see nothing else wrong with them. They were all right until about two weeks ago.
MRS. A. L.
Benge, Wash.

From the information given I should judge the turkeys were fed too much, or too often. The turkey is a wild bird by nature and can not stand too much domestication. If possible give them free range in the fields and feed not more than twice a day, and one of these a light feed. Give them a light feed of moist or crumbly mash in the morning, early, then let them range till evening, when a feed of whole grain should be given, about as much as they will clean up. They need the exercise as much as the feed. If the purpose is to fatten the turkeys they will stand a ration such as is described in the letter about two weeks, and after that they will lose appetite and finally go to pieces. But for breeding fowls and for raising the young stock light feeding and abundant range or exercise are the essentials. J. D.

## Chickens Have Roup

hens of roup. The sparrows brought
To the Editor: I. I saw recently in The Farmer that a boy cured his it to my chickens last year. Some of the young chicks get over it, but my hens die. Please explain how to cure it. I have tried several cures, but all have failed.

2. I am planning to build a henhouse. Which is the better of the following plans? A room for roosts and a room for nests with a scratching shed between, or all in one room with a dropping board about four or five feet from the floor, with perches above, the front boarded up solid three feet to protect from the southeast winds and nests placed on this, using the entire floor space for scratching, the rest of the front being covered with netting? Please give dimensions of house to accommodate 100 hens, not more.
Meridian, Idaho. E. M. G.

1. For ordinary cases of roup, use a 2 per cent solution of permanganate of potash and dip the head of the fowl into this. Hold it there 20 or 30 seconds, or just long enough so as not to strangle the fowl. If there is canker in the mouth or throat apply a strong solution with a feather. Isolate the sick fowls from the rest of the flock. Keep them in an open-front house. Fresh air is a better preventive and cure for colds and roup than medicines.

2. The second plan is the better. Fowls require a certain amount of floor space and air space in their roosting quarters. A room that gives the required amount of air space for roosting will contain floor space enough for scratching or exercise. It is therefore a more economical plan to have the roosting and scratching room in one. A dropping board three feet from the floor will be high enough. A house 12 feet by 25 is large enough for 100 hens. A plan of this house was published in The Farmer September 28, 1916. J. D.

## Scaly Leg Contagious

To the Editor: What would you do for scaly legged chickens? My last year's pullets have been so for about six weeks, a little swollen and now a little watery and, getting sore up in the feathers to the body. Five days ago I dipped them in lamp oil to the feathers, and in two days greased them with a mixture of lard and sulphur and lamp oil. They are in good condition. J. R. L.
Reardan, Wash.

Scaly leg is caused by a mite under the scales. Coal oil will kill the mite. The leg should be held in the oil about half a minute. The oil works up under the scales and destroys the mites. Sulphur ointment or vaseline should then be applied. When it can be done without causing bleeding the scales should be taken off and vaseline or other ointment applied. It may be necessary to repeat the treatment. If coal oil is used at the first appearance of the disease it is easily checked or cured. It is contagious and it is a good plan to coal oil the roosts and nest boxes when any of the fowls show the infection. J. D.

### Case of Tuberculosis.

To the Editor: Can you tell me what is the matter with my chickens and give me a cure for them? The symptoms are as follows, as near as we can describe:

"First, become lame in one or both legs, generally both; sometimes eat heartily till very last, but lose flesh steadily and waste away and die. Other times, soon lose appetite after becoming lame and die soon. Have diarrhoea—yellow and watery. Never dissected but one; that was yesterday. Found the liver about three times normal size; granulated, that is, resembled a cake of very fine sand, and brittle. Lungs did not seem to be diseased, but were somewhat wasted—shrunken."

Have disinfected house and runways frequently; fed nothing but clean, wholesome grain and mash. Occasionally give saltpeter in water, also limewater. House is not entirely dry, and they wade around in mud after cattle. Have very fine stock, laying strain, but they have laid hardly an egg all fall and winter. L. E. C.
Applegate, Ore.

The symptoms of tuberculosis in fowls are very completely given here. There is no doubt but this is a case of tuberculosis. There is no known cure for this disease. The safe thing to do is to kill off the fowls and start with a new flock. The houses should be thoroughly disinfected and the yard plowed or spaded up and covered with air-slacked lime. It will be better to start the new flock on fresh ground. The new stock should be from a flock that is known to be free from this disease.

By using the VanEs test, recently described in The Farmer, it is possible to determine fairly accurately which hens are infected. If the test can be applied and all the fowls showing the reaction killed off and the houses and yards disinfected the disease may be stamped out without having to kill off all the flock. J. D.

### Catarrh or Roup.

To the Editor: Will you please tell me what was the matter with one of my hens. She could not breathe through her nose and she just stood around and gasped for breath. Her head was awfully hot and feverish. Her gills were very red. I cut her open, but could not find anything wrong. E. A. T.
Ellensburg, Wash.

This was no doubt a case of catarrh or roup. Try dipping the head of the fowl in a 2 per cent solution of permanganate of potash, holding it there 20 or 30 seconds. If any white patches or canker are found in the mouth or throat treat them with a strong solution of permanganate. J. D.

**Tells why chicks die**

E. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

**Sugar! Save It!**

Editorial Contributor.

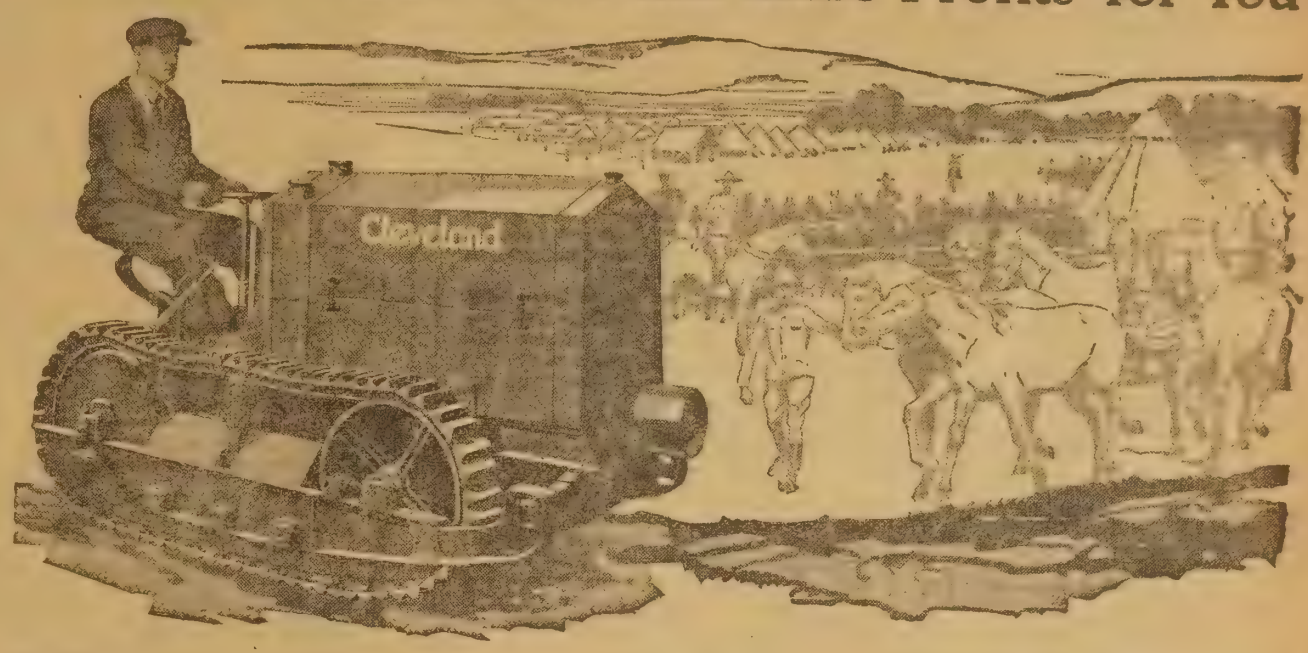
## Moths in Bee Hives

To the Editor: What way do moths damage hives of bees? Do they feed on the young? Can they be driven from the hive in any way? W. S. W.
Woodburn, Ore.

A. L. Melander, professor of entomology and head of the department of zoology, Washington States college, answers the question above in the following way:

The bee moth is notoriously fond of attacking hives which are not thrifty. Where the bees are in good, vigorous condition they take care of their own hives, which is especially true wherever the ready-made hives are made use of. Some farmers may have a loose-fitting hive which would permit the bee moth to enter, but in well-kept apiaries the bee moth is a very negligible factor. Hives which have become depleted for some reason or other, as for example, if the queen is lacking, or the brood is diseased, or the bees have become poisoned, and thus the hive allowed to become run down—such are the places where the bee moth does its harm. The caterpillars of the moth work through every part of the hive spinning up with silk as they go and utterly demoralizing the bee household. The bee moth and its caterpillars do not feed on the brood but eat the wax and more or less of the castings and excrement of the colony. If they are present the hive should be opened and freed of the pests. Old hives should be fumigated before being used, which may be done by the use of carbon bisulphide at the rate of two pounds to every 100 cubic feet of hive space to be fumigated. This, of course, can not be used when the hives are occupied by the bees. If occupied hives are infected it would be well to open them frequently and destroy whatever traces of the bee moth may be found.

## Community Drying Plant.



Municipal or government-owned drying plants have been in successful operation in European countries for years. Such plants provide village communities with a convenient and simple method of drying all sorts of produce of the home garden and orchard, as well as the vegetables and fruits shipped to the community, which might be allowed to go to waste at the stores and market places. The advantage to the busy farmer's wife in the country community can not be overestimated. Her work is heaviest in the summer, when vegetables and fruits must be saved for winter use. The establishment of a community drying plant at a consolidated school, country church, or centrally located farm home, would offer a great relief from her heavy kitchen duties. The housewife could clean and slice at least a portion of the fruits and vegetables she desires to conserve, and either take these or have one of the children take them to the community drying plant, where they could be left until it was convenient to call for the dried product.

A successful community drying plant located at Lincoln, Neb., is described in Farmers' Bulletin 916, which may be obtained free upon application to the division of publications, United States department of agriculture. Practically the same plan was followed in 11 other communities—nine of them in Nebraska—during the summer and fall of 1917, and the experience is related at this time in answer to a demand for information of this character for consideration at farmers' meetings during the winter.

## Fix Nitrate Price.

Announcement has been made by the United States department of agriculture that a price of $75.50 a ton f. o. b. seaboard, has been fixed for the nitrate for fertilizer which the department of agriculture has purchased in Chile for sale to American farmers at cost. The farmers must pay the freight charges from ports and the state tag fees and payments must be made in cash. In the farming districts county agents assisted by local business men chosen by them will handle the shipments and in counties where there are no agents, a committee of three or more local business men will be appointed. Farmers are required to file their applications with the agents or committees not later than February 4.

# Quick Plowing and Deep Cultivation Mean Bigger Crops for Uncle Sam and More Profits for You

NOW—more than ever before—you must work quickly and well. Farm and firing line must fight together.

America's acres must yield more than ever before. But the task of stimulating production is hedged about by difficulty.

Munition plants and factories have steadily drained labor from the fields. The new regulations place unskilled farm hands in the first draft class. Over a million horses already have been shipped abroad and the needs of our own army are yet to be filled.

*You must replace muscle with machine.*

The Cleveland Tractor will plow 3½ miles an hour—8 to 10 acres a day. *That equals the work of three good 3-horse teams and 3 men.*

This same time-saving speed, so profitable in plowing, is of equal advantage in harvesting, mowing, discing, spreading manure and other hauling work.

The Cleveland not only conserves time and labor but it does better, cheaper work.

*Traveling on its own tracks,* this sturdy little machine will go practically anywhere—even through ditches or gumbo, sand and gravel.

It will not pack the soil, nor mire, slip or flounder. It weighs less than 3200 pounds and has 600 square inches of continuous traction surface.

Although small enough for work in orchards and among small fruit trees, the Cleveland develops full 12 h. p. at the drawbar for hauling.

At the pulley belt it gives 20 h. p.—plenty for stationary work such as shelling corn, cutting ensilage, filling silos, pumping, and many other uses on the farm where power is needed.

## Cleveland Tractor

Rollin H. White, the famous motor truck engineer, designed the Cleveland Tractor. He uses only the best materials. Gears are the same quality as those of the finest trucks and are protected by dirt proof, dust proof cases.

Mr. White has so constructed the Cleveland that *it steers by the power of its engine.*

It will turn in a 12-foot circle. And can be housed in less space than it takes for a horse.

Put yourself in a position to produce the record crops called for by Uncle Sam—and incidentally to make more money for yourself.

Write to us today for complete information on the Cleveland Tractor and the name of the nearest Cleveland dealer. Address Dept. BK or use the coupon.

# Growing Peas

## Disk Land as Early as Possible

**By Joseph Brunna, Moran Prairie, Wash.**

For nearly twenty years I have been growing peas with more or less success, and during this experience I have found that the best method of preparing for the crop has been to disk the land as early as possible in the spring, after which I go over it with a harrow. Then it is plowed from seven to nine inches deep. By such deep plowing I enable the peas to have a fine surface in which to feed. The roots can penetrate to good depth through this mellow soil that is thus formed by deep plowing. After the plowing has been done I immediately go over the ground twice with a harrow, setting the teeth as straight as possible and frequently, by placing a board across the harrow, ride it to better facilitate the working down of the soil. If the ground is very loose at this time I roll it, so as to compact the surface and get rid of all clods. After this rolling the ground is ready for seeding, and it is my plan to put the seed in as deep as possible. Deep seeding, I have learned by practice, is very essential for the best results in growing the smooth varieties of peas. By deep seeding I mean put the seed in from four to six inches below the surface. Many drills will not accomplish this purpose, because the seed does not drop to the bottom of the furrow opened by the disks. One should have the drills so that the seed will drop to the bottom of the disk furrow and thereby insure them getting into the ground.

After drilling in the seed the best plan to follow is to roll directly. If a rain should come before the crop is up the harrow should be used to prevent the formation of a crust.

**Variety Used.**

I have used the Blue Prussian variety, and it has always given good results. In 1915 this variety made me 38 bushels to the acre. In 1916 I secured 40 bushels to the acre, and in 1917, during the very severe year, this variety made 13 bushels per acre. In 1916 the crop was sold for 6 cents per pound, thereby making me $144 an acre from the crop.

Early planting is essential for good results. Just as early as you can get the ground prepared in the spring the peas should be planted, as they must get their growth before the hot weather comes. I have found the pea straw from the Blue Prussian as good as wheat hay when fed to stock in the proper manner. I always feed my horses pea straw, but at first I feed them very little, mixing it well with wheat hay. Gradually the pea straw is increased, and when my horses are working practically the only roughage that they secure will be this pea straw during the winter months. I have also found it to be one of the very finest cattle feeds. My Jersey calves feed upon this, making excellent growth, and come through the winter in splendid condition.

I trust that this experience may be helpful to others who are going to grow peas, and especially those who have to prepare their land this spring for the crop.

# Buys Good Feed

(Continued from page nine.)

rye, with preference given in the order named. All grain is ground and soaked from 10 to 12 hours, and the cut alfalfa is soaked with the grain.

"We find that as the grain ration is increased they eat very little hay. Our experience has shown us that a hog will not eat over about three-fourths of a pound of alfalfa per day, when given a reasonable grain ration, but this keeps them in splendid condition so that they are ready for their food at feeding time.

**Platforms to Prevent Waste.**

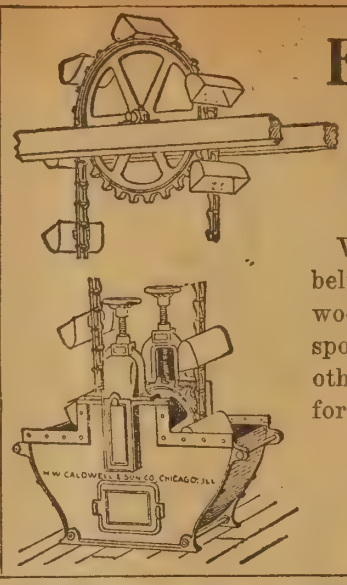
"The feed is put in troughs on a platform so that any waste may be picked up and refed to the stockers. The feed is increased slowly and we are guided in this by their gains each week, and sometimes by the market quotations. We watch them closely, and if one does not come up to his feed, he is at once looked after. If there seems to be anything seriously wrong, he is taken out of the pen and placed in quarantine.

"Coal, salt and sulphur are kept in the feed lot, and by spraying for the vermin, we have been able to keep them healthy and ready for their feed. Any price is too much to pay for grain to feed to hogs that have to feed an army of lice, for the lice do not weigh enough at market time to show a profit, even though on full feed all their lives.

"Our hogs are usually marketed when weighing around 200 pounds, although if the market promises to go higher we have fed longer.

"We have tried mill feed and beet pulp, and there may be times when these products can be fed at a profit, but we have found it cheaper to buy good feed and pay the price rather than try to put lard on a hog with a bluff.

"We hope this year to give the cafeteria plan of feeding a thorough trial. The least feed required for one pound gain for any car we have yet fed was 4.1 pounds, and ran from that amount up to about 5.5 pounds.



"The hog knows what he wants and needs to make him healthy and you wealthy, and if given the chance will show better judgment about his eating than the majority of feeders who try to regulate him."

## To Work Swiss Peat Beds.

According to the Geneva Tribune, a syndicate proposes at an early date to ask the federal council for a $1,000,000 loan for the development of the peat industry in Switzerland. The extraction of peat will be undertaken on a large scale, it being planned to work 24 peat fields in the coming spring.

Community Tung-Lok Elevator at Hanson Station, Wash.

**Handle Your Wheat in Bulk !**

Wheat sack prices are prohibitive, even if you could get the sacks. Surely you will not pile your wheat on the ground, to suffer heavy damage and loss above and below. Patriotic duty and business judgment alike demand that you save ALL your crop.

Here is the answer to your problem—build a

**Tung-Lok Elevator**

(Home-Built, Singly or in Series.)

A Tung-Lok Elevator can be built for so little money that it will pay for itself in one year, while it provides **permanent** storage. Easily and quickly erected—storm-proof for a lifetime. The most economical and convenient way of building is by community cooperation, each farmer erecting one of a group of Tung-Loks, as shown in the cut herewith.

Just notify us, and one of our agents will call on you and explain the Tung-Lok method to you and your neighbors. That costs you nothing. Now is the time to act—WRITE US TODAY.

You realize, of course, that labor conditions have been extremely unsettled in all industries in the past year, and the future is uncertain. While conditions with us now are such that we can take care of all orders promptly, we ask that you act at once if you are planning to erect a Tung-Lok Elevator this year. Don't wait for the summer rush!

# School Ma'ams and College Girls Farm

(Continued from page one.)

the school janitor. They would do his work if he would plant their beans. A bargain was made and four determined school teachers kept things spick and span about the school building and attended regularly to their classes.

Finally came commencement and the end of the semester. With hardly a day's delay the girls began making preparation to live near the scene of the "Beanery." Each purchased a supply of the popular koveralls and contributed to a fund that bought a camp outfit. The neighbors were much interested and disposed to help. They loaned the syndicate a cook wagon, a tent, a cultivator, and most precious of all—Tom, an old black mule, who experienced a bewildered career during the weeks that followed.

A delightful place to camp was found not far from the bean field. A big pile of fence rails, to which the girls had free access, provided plenty of dry wood, but they were mightly hard to carry to camp and tough as blazes to saw.

With camp established and preliminary work attended to, attention was turned to the cultivation of the beans, which, by the way, were of the Mexican Red variety.

Jupe Pluvius, the rain god, was anything but generous last summer, and the land the syndicate used, was in poor condition—baked hard and foul with weeds. Cultivation, and lots of it, therefore was imperative. First the field was dragged, then gone over with old Tom and the small cultivator, and then twice with a two-horse, wheel cultivator (also borrowed). This was followed by a thorough hoeing.

And here it was that grit and determination were brought into play. It wasn't half bad for one girl to ride old Tom while another manipulated the drag, or for one girl to drive the horses while another operated the two-wheeled cultivator. Hoeing was a different proposition. A lot of the joy of living seemed to fade before the end of a row was reached. The clods were hard, the hoes got dull, the dust was choking, Jupe Pluvius was stingy, Old Sol was merciless.

"Are you down-hearted?"

"No, but darned hungry."

And so the summer passed. Each day brought its joys and its sorrows, its blisters and sunburn. Often the girls were in the field as early as 4 o'clock in the morning to avoid the necessity of working through the heat of the day.

Not one had had farm experience of any kind before. They got into all sorts of difficulties. More than once their horses found themselves trying to untangle themselves from hard knots, brought about by crossed lines. There were distressing mixups when collars and hames were put on upside down and when Old Tom's traces were so tight the single-tree cracked him in the heels.

The continued dry weather was disheartening. Not a drop of rain fell from the time the beans were planted until they were pulled.

The fall term of school started with the beans in the field. The Ho-Bean-Hoes were trying to decide on some way of getting them pulled when the high school instructor in agriculture came to their rescue and went with his class to the field where the beans were pulled and shocked.

Then a neighbor with a home-made bean thresher was employed to finish the job.

In spite of the dry summer and the poor condition of the soil, the harvest yielded 4500 pounds. The crop was sold, ungraded, to Waitsburg stores at eight cents a pound. The girls had paid 12 cents a pound for the seed. When they finished their accounting they found the had realized enough to pay all their summer's expenses, including clothes, their rooms in town, which they had kept and visited once a week, and had some money left. Each put her surplus into a Liberty bond.

"We realized many benefits which are hard to compute in dollars and cents," said Miss Persels the other day. "We learned a great deal about farming, which we can put into practical use again. If we raise beans again, we will take the utmost care in preparing the seed bed. That's the big thing. We would check the rows when planting so we could cultivate both ways.

"We returned to our work in splendid health and much refreshed from the outdoor life and strenuous exercise. We are satisfied our bean crop, and the attention we gave it, left Mr. Taylor's land in better condition than it was when we found it. We made a little money, had a lot of fun and not a single quarrel all summer."

## Mere Man Not Needed.

What women can do in the absence of men is being demonstrated by Mrs. R. Goodman of Albion, Wash., who is known as the "Potato Queen," and is making a success of raising potatoes for the markets. Mrs. Goodman has been raising potatoes for several years and has been quite successful. She rents land that usually would be summer fallowed and she gets it for a reasonable rental and leaves it in better condition for fall seeding than if no crop had been grown upon it.

Last year Mrs. Goodman rented 30 acres of the M. L. Davis farm near Pullman and raised a good crop of potatoes, despite unfavorable weather conditions. She sold one carload for $1600, or more than $50 per acres for the entire field, and she had the bulk of her crop left on hand.

The unique and interesting part of her venture is the fact that the work of caring for and harvesting the potatoes was done without the help of "mere man." When harvest time came men could not be obtained for the work, but Mrs. Goodman was not disheartened, nor even worried. She went to Washington State college at Pullman and secured the aid of the "fair co-eds" and her potato crop was dug and saved. The accompanying photograph shows her "crew" of college girls posed with the patent potato digger. All are dressed in overalls, and they 'made good" at the work. The girls are:

Valley Bigle, Tacoma, Wash.; Mary Martz, Colville, Wash., Marjorie Heaton, Spokane, Wash.; Frances Donnellaw, Tacoma, Wash.; Eva Bradley, Spokane, and Evalyn Bradbury, North Yakima, and Evalyn Bradbury, Yakima, Wash. Mrs. Goodman is driving the team.

## Do You Know That

A little extra care for the comfort of the live stock will make your own bed more comfortable?

# Must Pull Together

(Continued from page eight.)

increased any this year and the acreage of potatoes will be less. The acreage of beets and corn will be larger, while the grain sown on irrigated land will be much the same. The acreage of dry land sown to wheat will be larger than last year. The Utah-Idaho Sugar company has announced that they will raise the price of beets on this year's crop to $9; many thousand acres were contracted at $8, but the company will give the raise to those who have contracted at the lower price.

The market on local grown beans has not been very satisfactory and the acreage will be decreased this year.

Potatoes are a little higher in price the last few days and are moving as fast as cars can be obtained. Many people are blaming farmers for not selling last fall on the high market yet the most of the offers were f. o. b. cars and cars could not be had on which to load them. Many who did sell could not deliver because they could not get cars. Leases are still in demand, but are not commanding such prices as earlier in the season. Milch cows are not bringing as good prices as in the fall, the reason for the lack of demand is not apparent. Hay is holding up pretty well yet many predict a sharp fall in the near future as the weather is staying extremely mild and the pastures are the best ever seen here in the winter. Many sheep men bought heavily of hay and have not fed a pound of hay and say that they do not expect to feed any hay. Hogs have done well this winter and are still in good demand for breeding purposes as well as for slaughtering. Eggs are down to 45 cents and are plentiful, butter is very strong and some is being shipped into the valley. Building is better than last winter, but is being held back by the high price of material. There is not an empty house in Toppenish or in the surrounding community, nor has there been one this winter. The sugar factory being unable to get houses for their employes are building 15 cottages and a hotel on their grounds near the factory. Roads were badly damaged by the recent high waters, all the small bridges washed away and the road beds washed badly in many places; dirt roads are still in very bad shape but are improving.

C. A. WYCKOFF.

### Couldn't Find It.

The Kid—This map is not correct.

The Teacher—Why not?

The Kid—You told me the general was going to Reconnoiter, but I can't find the place on the map.

### Coal Miners Patriotic.

In the Shenandoah district of the Reading mines the coal miners, on Thanksgiving day, made a record of 116 per cent of normal output, largely as a patriotic duty.

# Get the Habit of Thrift and Saving

This is a terrible war we are becoming involved in, but good can come out of even war. One of the benefits that will result to the American people is the renewal of the spirit of thrift and saving—a spirit almost lost. We have become a wasteful people. We have relegated the old proverb, "Save the pennies and the dollars will take care of themselves," to the discards. But war is arousing us. We are beginning to realize our mistakes. We are beginning to get the habit of economy and thrift. We need—how much we need!—to make that habit so much a part of our nature that it will remain with us long after the war is over.

There never before in the history of this country was so ideal an opportunity for saving and earning as that afforded by the thrift and war savings stamps offered by the government. As stated many times heretofore, the government has issued stamps called thrift stamps, that sell for 25 cents each, and has issued stamps called war savings stamps, that sell at $4.13 each (they will cost $4.14 in March). When one has enough of the thrift stamps he can exchange them for a war savings stamp. This is the thing to do for the war savings stamp draws interest. It draws interest at the rate of 4 per cent compounded quarterly (every three months).

The Farmer has become duly authorized agent for the government in the sale of these stamps, having undertaken to sell for Uncle Sam $50,000 worth of them. They are going. Several thousands of dollars' worth of them have been bought by readers and orders are still coming. This paper will be glad to furnish any reader the stamps of either kind without any charge to anybody. If you want to join in the thrift and savings habit merely fill out the coupon herewith, enclose the amount of money you want to save and invest, mail it to this paper and you will receive your stamps as quickly as the mail can take them to you.

## Clip This Convenient Order Blank

Address all communications concerning thrift or war savings stamps to The Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Remittances may be in any form desired, including personal check.

# Win the War by Preparing the Land, Sowing the Seed and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

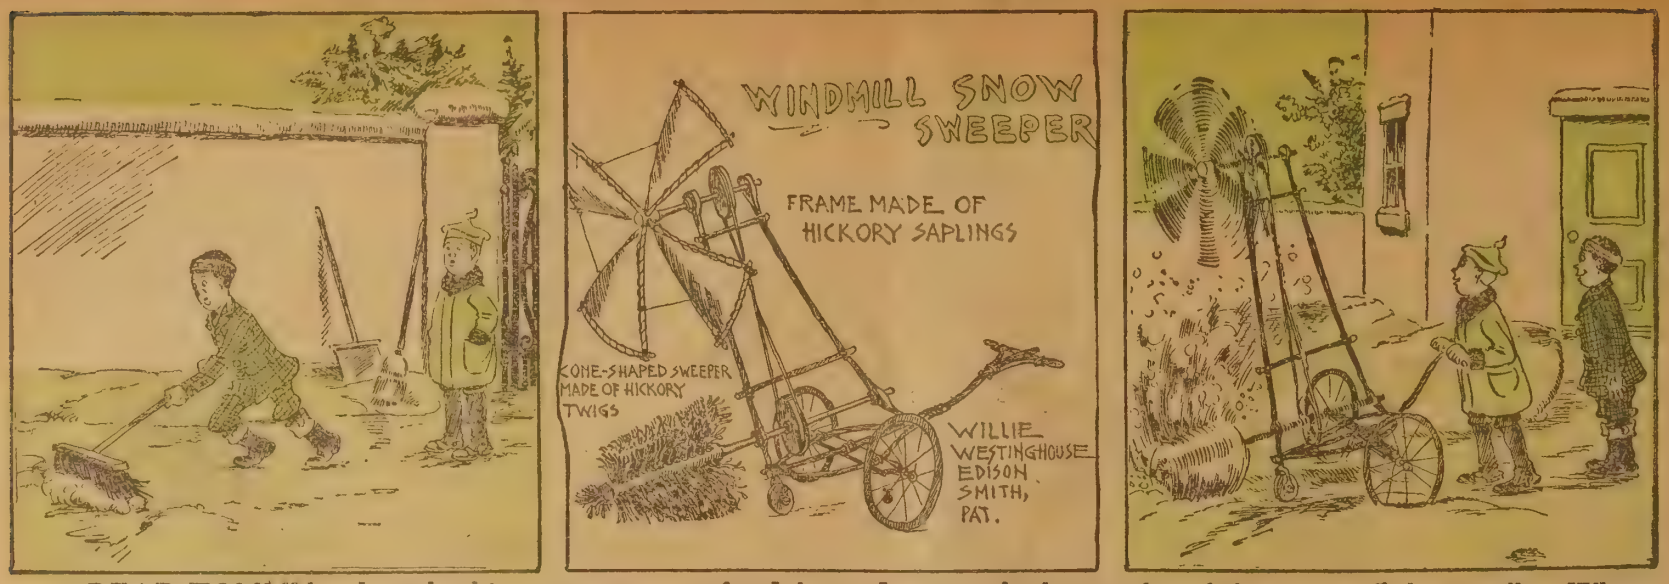
The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.



**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

**For particulars as to routes and places where employment may be had, apply to**

**U. S. Employment Service, Dept. of Labor**

# HOW WILLIE MAKES THE WIND CLEAN THE SIDEWALK

DEAR TOMMY: I made this snow-sweeper for Johnny Jones, as he has to shovel the snow off their walk. When we were trying it old Mr. Jones came out and started to laugh because the wind wasn't strong enough to turn it. But a breeze sprang up suddenly and nearly buried him! Yours, etc., WILLIE.

# BOOT RESORTS TO FIREARMS TO FREE HIMSELF OF PUP

# MACJUNK LEARNS HOW TO CONQUER THE MICE

# MUGGSY ASSISTS AN ABSENT-MINDED JURIST

# Poland May Fight

## *Germany Arouses Country's Anger*

Complications that may greatly affect the progress of the war in Europe have been noted during the last week in Russia, Germany and a number of provinces. The latest possibility is that the Polish nation will rise up against Germany and prove a thorn in her side. The reason that appears behind the Polish anger is the taking of a strip of her territory and giving it to the province of Ukraine as a peace offering to the latter.

The whole situation in that section of Europe is mystifying. The bolsheviki of Russia, apparently in something like an unconditional surrender, a little more than a week ago announced that the state of war with Germany was ended. They did not, however, agree to sign a treaty of peace. The province of Ukraine, however, did make separate peace, thus winning the enmity of the bolsheviki. The latter were taking steps of warfare against Ukraine when Germany stepped in and said no, and began sending soldiers to protect Ukraine. About the same time came seemingly authentic reports that Germany had formulated definite plans for further warfare against northern Russia; that it was the definite German intention to proceed to the Russian capital of Petrograd.

What all this means is problematical, but it does not seem unreasonable to think that it is the purpose of Germany to take advantage of the helplessness of Russia and dominate that territory. Whether or not Russia will remain helpless if Germany proves false to the bolsheviki is a matter of doubt, at least. If German armies go to overrunning the territory will the various factions that have been conflicting with each other unite in defense of their common country?

If Germany is allowed to take virtual control of Russia and devolop her industries as German genius can develop them, how many years will it add to the war? So long able to maintain herself in powerful fighting trim in her present restricted territory, how long could she maintain herself if the rich possibilities of the Russian empire were under her control?

Without question the breaking down of the Russian power was the great victory of the war for Germany, but it seems not improbable that she will make another colossal mistake. The unrest in the country to the east of Germany is great enough yet to remain a grave menace to the Teutons, and to prevent the full concentration of power on the western front.

### Is Germany Ready to Strike?

For several months the world has been developing an expectation that with the coming of spring the German and Austrian armies would launch the most gigantic offensive of the war on the western front. It has been freely predicted by some who believed themselves in a position to know probabilities that this offensive would be so great as to penetrate the allied lines, and it has even been suggested that Paris may again be in danger as she was at the opening of the war till the gallant French checked the invaders at the Marne in the greatest battle of the war. To what extent the central powers are ready to strike this blow, and to what extent the allies are ready to withstand it are questions that hold the world a-quiver. The next few weeks may see the decisive battles of the war fought out—before the American army is ready to lend the aid that the spirit of America is becoming so anxious to lend.

### New Examination Rules.

New regulations have been made by the war department of the United States covering physical examinations for drafted men, and it is stated that the percentage of rejected men is much less under the new rules. The rules modify some of the former grounds for rejection, so that a man need not be a perfect physical specimen to be accepted.

# Would Arrest Townley

Simultaneously with the statement of the conviction and sentencing of Joseph Gilbert, manager of the National Nonpartizan league, on a charge of holding an unlawful meeting in Lakefield, Minn., came the statement last week that a warrant was out for the arrest of President A. C. Towley of the Nonpartizan league on a charge of conspiracy to discourage enlistment. No report of the arrest of Townley has been made up to this writing. The following are the dispatches telling of the matters:

LAKEFIELD, Minn., Feb. 12.—Joseph Gilbert, manager of the Nonpartizan league, charged with holding an unlawful assemblage, was found guilty by a jury in the district court today and sentenced to three months in the county jail.

A warrant has been issued for the arrest of A. C. Townley, president of the Nonpartizan league, charging him with conspiracy to discourage enlistments. Townley now is at Thief River Falls, and authorities here say he will be arrested when he returns to St. Paul.

ST. PAUL, Minn., Feb. 13.—A. C. Townley, president of the National Nonpartizan league, for whose arrest a warrant was issued at Lakefield, Minn., Monday, charging him with conspiracy to discourage enlistments, did not arrive here tonight as had been expected. At the league headquarters it was said that Townley was scheduled to address a meeting of farmers at Perham, Minn., this afternoon and that he would return to St. Paul tomorrow morning. Sheriff O. G. Lee of Jackson county left today for St. Paul with a warrant for Townley.

Indicating that the plan to arrest President Townley had not materialized, and that he was still at liberty was indicated by publication Monday of this week of a statement by him urging the farmers of the country to increase wheat production to the greatest point possible. The following are extracts from his statement in this regard:

"The spring seeding season is close at hand," said Mr. Townley, "and at present prices corn, rye and barley all will pay the farmer much better than wheat.

"But the government and our allies need wheat above all else. Its increased production is of paramount importance. We must have more wheat to win the war. Many farmers, burdened by pressing financial obligations and possibly unaware of the vital necessity for more wheat, may decide to plant corn, barley or rye instead of wheat. This is a very natural thing for the individual farmer to do, but if it is done generally it would be a national calamity.

"Therefore, I urge in the strongest possible manner that all farmers prepare to plant more wheat, to the exclusion of less needed crops, purely as a matter of patriotism."

### Tractor Demonstration.

On April 17, 18 and 19 of this year a mammoth tractor demonstration that promises to draw visitors from every part of the Pacific coast will be held at Davis, Cal., on the Universtiy of California farm.

The demonstration will be under the auspices of the California Tractor and Implement association, an organization composed of the manufacturers, and California representatives of manufacturers of tractors and tractor implements.

The University of California, recognizing the broad educational value of such a demonstration, has offered to serve as host to the tractor men and the demonstration will therefore be held on the university farm, at a point less than two miles from the center of the town of Davis, on the main line of the Southern Pacific railroad.

Several features will mark this demonstration that are entirely novel and that will greatly increase its interest for the farmer. In the first place, at the suggestion of Professor J. B. Davidson, head of the department of farm engineering of the University of California, a special effort will be made to show the broad scope of modern power farming and to demonstrate the extreme versatility of the present-day tractor. With this purpose in mind, there will be a more complete showing of tractor tools than is usual at these demonstrations, including plows, disc and drag harrows, special types of cultivators, land levelers, sub-soilers, scrapers, checkers and so on.

### Sticking to the Point.

"Have you amused your baby brother, Willie, and kept him quiet while I was gone?"

"Yes, ma, and he hasn't opened his mouth since you went away."

"What did you do to amuse him, Willie?"

"I gave him the mucilage bottle to suck."

### Women Are Rulers.

Women are the rulers of the Island of Tiburon in the gulf of California, and the men are made to do all the work and act as servants to their wives.

**HIDES**

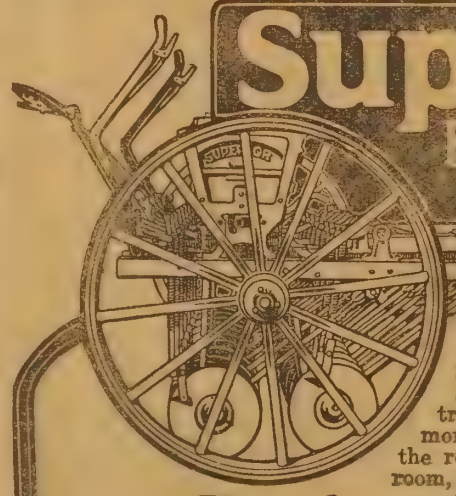
## PRIZES FOR WAR GARDEN PLANS

The Washington Farmer will give $10 in prizes for plans and directions for growing the best war garden on the farm. This includes:

1. As to size and length of rows and where and when to plant the various garden vegetables.

2. The best methods of cultivating the garden throughout the season and the best methods of fighting garden pests.

3. The best methods of harvesting, preserving and storing winter supplies of garden vegetables



4. In short, how to produce in variety and quality the largest amount of food for the farmer's family table with the least interference with other necessary farm production.

First prize, $5; second prize, $3; third prize, $2.

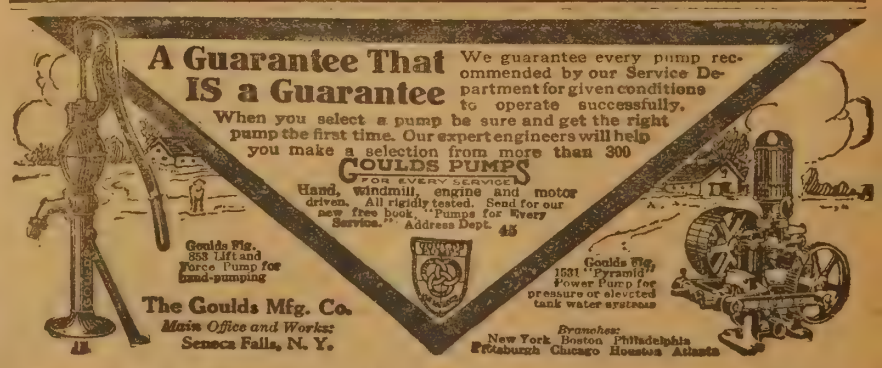
All entries in this contest must be received on or before February 28.

Mail to the Editor of The Washington Farmer, Spokane, Wash.

**Superior Four Inch Grain Drills**

Are made for the farmer who wants to Sow his grain closer together. Superior 4 Inch Drills distribute the seed more evenly, with more rows per acre and less seed in the row, giving each plant more root room, and a chance for sturdier growth.

**Bigger Crops—Fewer Weeds**



It has been proven that a greatly increased yield is obtained, some claiming as much as one-third more than by the old method of seeding. The discs are so closely spaced that a highly cultivated seed bed is obtained with an almost total elimination of weeds.

Superior 4 Inch Grain Drills are made in two sizes, plain and fertilizer styles. Operate perfectly under the most severe conditions. The heavy angle steel frame will stand up to all strains encountered in field work. The famous Superior Disc Bearings are guaranteed against wear. Positive force feed for both grain and fertilizer.

Ask your Dealer for further information, or write us for descriptive pamphlet.

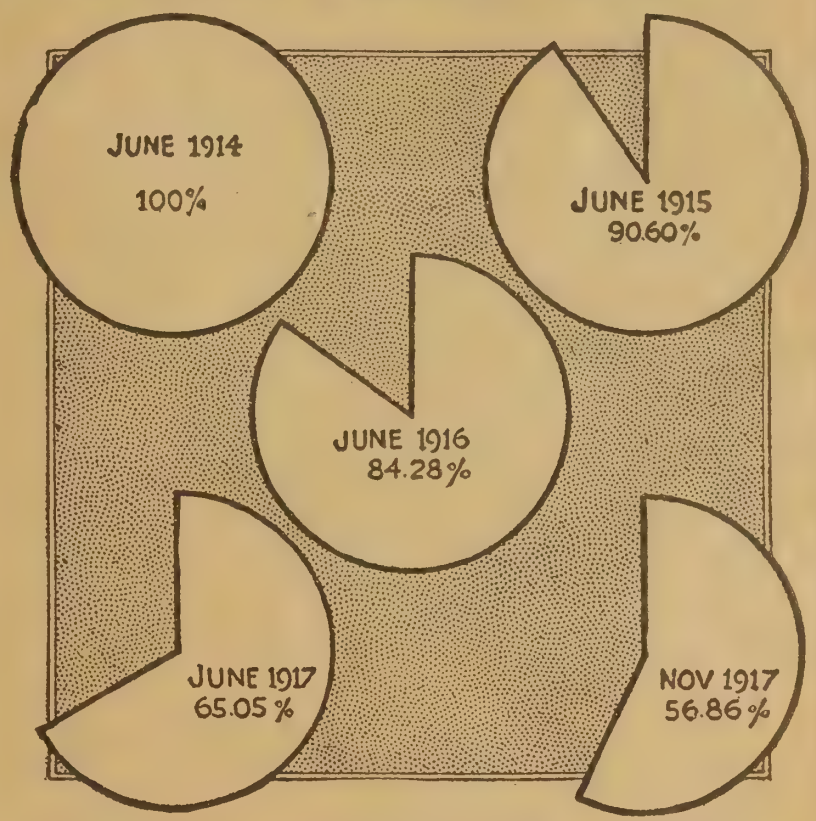
# WASHINGTON FARMER GIVES MORE FOR $1 AT A TIME WHEN DOLLAR'S BUYING POWER HAS BEEN MUCH REDUCED



## Former Rate Was $1.00 for One Year Present Rate $1.00 for 5 Years

***With prices for almost everything mounting steadily, the advantages to be gained through the elimination of the middleman are more apparent than ever.***

The plan of this paper to cut out its force of agents so far as possible came at just the right time. It offered a means for putting the principle of cooperation into actual practice.

We said to our friends: "Send your subscription order direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription. Moreover, many men will be released to serve in lines where help is badly needed."

If you believe in cooperation—if you believe in eliminating the middleman—help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

**This Chart Shows How the Dollar Has Dwindled in Purchasing Power Since the War Began. Compare With Our Offer**

## PLEASE TELL YOUR NEIGHBORS ABOUT THIS OFFER

Your state farm paper aims to have every issue of interest to each and every member of the family. There are departments devoted to live stock, dairy, poultry and orchard. Perplexing questions are answered. A splendid pattern service is maintained. Clean, fascinating fiction by popular authors is secured. Articles of timely interest are prepared. Today you are getting a better paper than ever before for less money than ever before.

**25c** PAYS FOR THE WASHINGTON FARMER FOR ONE YEAR

**50c** PAYS FOR THE WASHINGTON FARMER FOR THREE YEARS

**$1** PAYS FOR THE WASHINGTON FARMER FOR FIVE YEARS

Very likely one or more of your neighbors is unfamiliar with this unusual offer. If so, please tell them about it. We will appreciate this cooperation on your part, and we feel sure that they will, too.

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

Feb. 21.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription. In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Small, Inexpensive, Up-to-Date Farm House

Here are plans and sketches of a farmhouse made as small and as inexpensive as could well be done for the convenience of a farm family of four persons, says Professor William A. Etherton, of the Kansas State agricultural college. This plan, together with the plans of another farmhouse, by the same author, is published by the National Lumber Manufacturers' association of Chicago. The author well says that it is easier to increase than to decrease the dimensions of a plan, and many builders of this house have made it larger than shown.

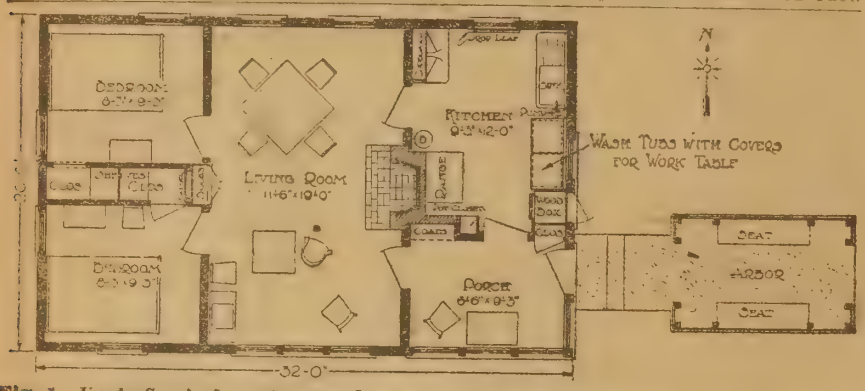

**Fig. 1—Uncle Sam's farm tenant house. An exemplary plan for a very small and inexpensive house.**

This plan was made by the author for the United States department of agriculture. It has been published extensively and many houses have been built from it. It is the prototype of a series of plans—three of which follow here in consecutive order—and of other published plans, also, which were not designed by the author. It serves better than larger houses to exemplify some of the important principles of planning, and it is used here for that purpose. It will be referred to in succeeding chapters more often than the other plans.

It is necessary to increase the size of this house if another outside door is required, and this is a change that many demand. When, however, it is considered that, in most farmhouses, the outside kitchen door is the entrance most used and, in many cases, the only one used in winter; and when it is considered that it is not needful to go out of this house for water and fuel, the one entrance is less objectionable.

A house has been built from this plan, near Kansas City, Mo., without change in dimensions, but stripped of all built-in conveniences, for less than $700 ($679.28). It can be built as it should be for a cost of about $1.50 per square foot of floor area, or $960.

The little house has many structural advantages for strength and durability. Some of these features will hereafter be explained. It has advantages, also, for convenience and comfort, some of which are not equalled or excelled in the larger plans.

It is one of the first principles of planning to make a logical grouping of rooms into public, semi-public, private and service rooms. This principle has been regarded in this little plan, notwithstanding that the reception room for strangers had to be provided out of doors. The arbor inclosure, with its seats, serves this purpose very well in summer. When too cold there, a warmer reception can be given in the living room, which is the semi-public division of this house and intervenes between the private (bedrooms) and the service (kitchen) divisions.

The living room corresponds to the wide hall in southern houses and it serves here a similar purpose. It serves, also, as a dining room and a sitting room, and the better because of well placed doors and the use of a fireplace instead of a stove. Should there be a need during harvest for a long dining table, there is room for it here and two routes, also, between dining room and kitchen. The room is easy to heat, because of being little exposed; it is well lighted and ventilated; and it can be made very attractive at little cost. See Fig. 3.

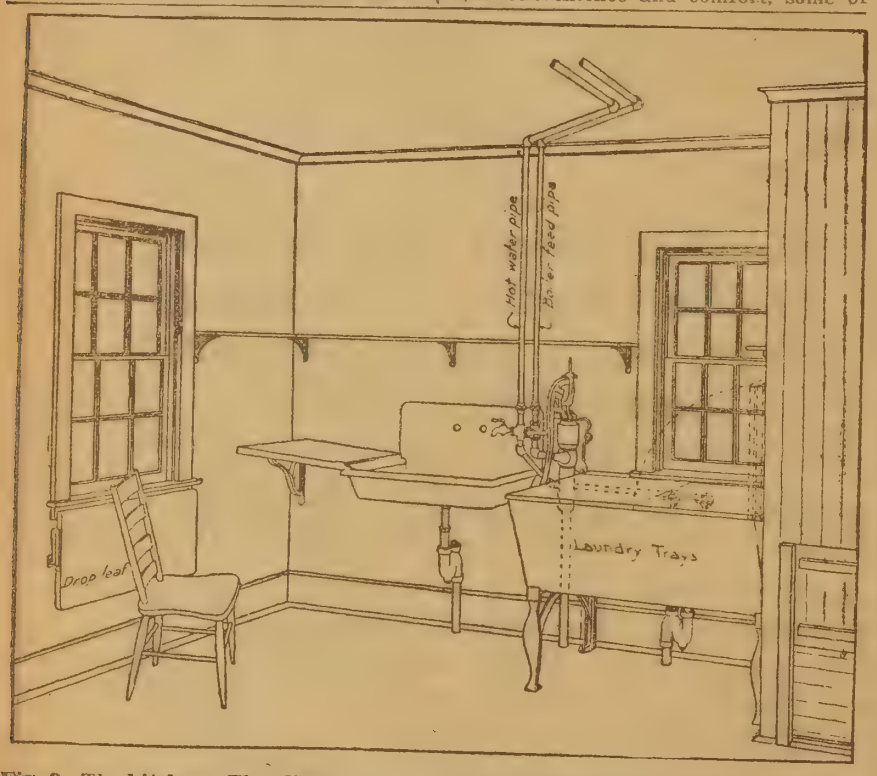

**Fig. 2—The kitchen. The slide to fuel box on the right drops to the floor to open.**

The partition between living room and kitchen can be omitted, so as to have in this little house what so many families contend for and have in large farmhouses; namely, a big kitchen for all purposes except sleeping. And this combination room would be better than the large, square kitchens, because the fireplace, if retained, would partly separate the cooking and dishwashing from the sitting portion of the room. But, whatever advantage there may be in such an arrangement, there are greater advantages in the kitchen that can be closed from other rooms.

As here shown, the dining table is quite as near to the kitchen fire as it should be and but little farther away from the work table, sink and cupboard. Certainly, it is more comfortably and pleasantly placed than would be possible in a kitchen.

This kitchen is not a thoroughfare to other rooms. It is not too large, yet large enough. It is self-contained. It has ample cupboards, a pot closet, work tables, fuel box, water supply, sink and stationary tubs. These are all within three steps of the center of the room.

The fuel box is filled from the outside of the house. The water—hot and cold—is supplied to the sink and to the laundry tubs.

It is necessary that rooms in small houses be used for more purposes than in larger ones, and the kitchen in this house serves also as a laundry and as a bathroom. As a laundry it has the stationary tubs with sewer connections, and hot and cold water supply. It has, also, the kitchen range for use as a laundry stove, and convenient fuel. A window at the tubs affords good light. When the two windows and the south door are open, the heat and the odors of the room will blow away from the house and not into other rooms.

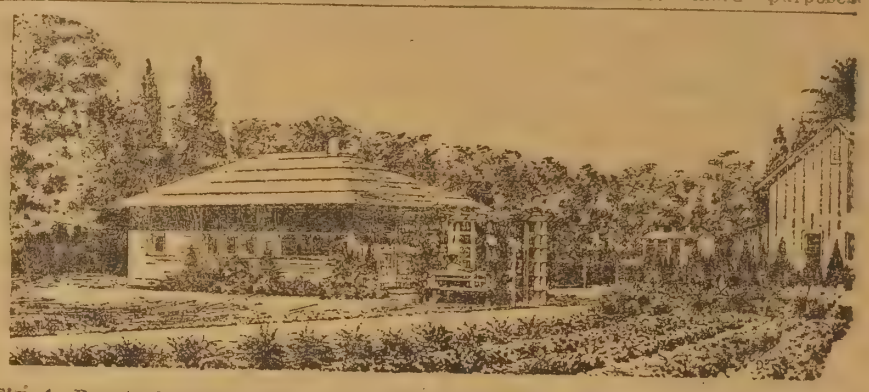

**Fig. 4—Beauty is not a luxury. The cheapest and simplest of farm tenant houses can have pleasing lines and beautiful surroundings.**

**Fig. 3—The living room. A very plain interior that has architectural design.**

Note:—Abnormal lumber prices make the figures in this story only suggestive of the cost.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Why the "Careless Sneezer" Is a Big Menace to Business

Dr. Hirshberg

If the breakfast is tasteless, the wife "wearisome," the children "a nuisance" and the car service an abomination, the chances are you are getting "it." Then if the typist is intolerably stupid, the business meeting an irritating wrangle, participated in mainly by "fools," and golf a thing of pain and sorrow, you've "got it."

Of course, being a man of courage and obligations, you will report at the office the following morning as usual. Your eyes will be red and watery, your voice raspy and your nerves frazzled. You will sneeze and cough, and your associates will look upon you coldly and avoid you, because you're in a fair way of infecting the office help, their families, the town, perhaps county and state, with wheezes, snivelings and gloom.

You have one of the 57 varieties of common colds—it doesn't matter particularly which one. There was a time when victims like you were mere objects of amusement—the butts of good-natured jibes. Today you're a pariah. This is the penalty you pay for your sanitary sins.

What aroused the public to this frame of mind, aside from the discomfort and the latent danger is the staggering economic loss annually suffered because of common colds. In these times of high prices and uncertainty the people can not afford to submit to an epidemic of colds with the resultant lowering of efficiency and often the total suspension of work.

The larger manufacturers, particularly those upon which the United States government depends for products essential to the prosecution of the war, were the first to appreciate the seriousness of this disease and its paralyzing effect on output. In many of these plants there is now a well-organized propaganda along this line. Close, dusty and over-heated workrooms are rarely found in the modern factory or mill. In this the employer is willingly aided by the employe who has a lively appreciation of the dangers of stuffy air. Some employers have gone to the length of establishing a separate department of hygiene and in every instance have paid dividens in increased output. The more simple rules laid down for workers are:

Avoid sudden changes in temperature.

Exercise regularly and eat intelligently.

Body cleanliness and lots of sleep are essential if the system is to be held to the highest point of resistance to disease.

**Muffle Your Sneezes.**

The careless sneezer in the shop has become of a right a person execrated. One careless sneeze may infect a dozen associates. Each sneeze releases thousands of cold germs in a fine spray and the one who breathes nearby must be very robust to escape infection. A handkerchief held to the mouth prevents this. It has the added virtue of muffling the noise and concealing a face which is for the moment most unattractive.

# All the World's a Stage, and All the Men and Women Merely Players

## Traveling "Somewhere in France"

Copyright—Committee on Public Information, Supplied by I. N. S.

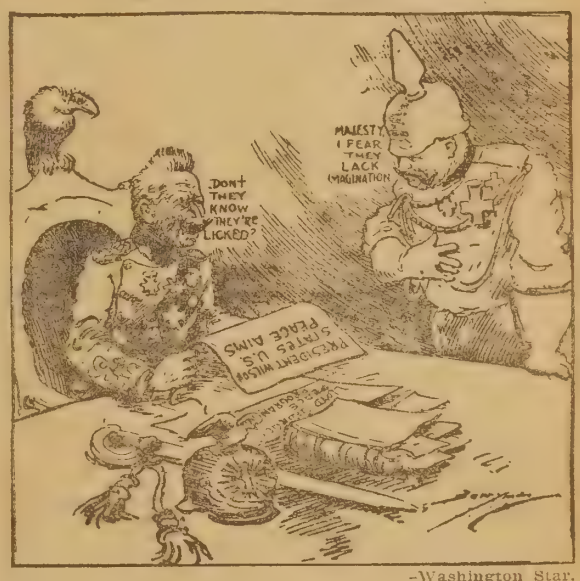
American soldiers just arrived in France are here shown on the last leg of their journey to the training camps behind the trenches.

## Learn European Style of Warfare

Copyright—International.

In the above photograph are shown some of the members of the Harvard university officers' training corps who are learning the European style of warfare. They are digging trenches for practice at Fresh Pond, Mass.

## Wood Precious in France



They are selling wood by the ounce in Paris now. The fuel shortage here is nothing in comparison with that of France. This photo shows a street merchant disposing of his precious stock of wood to the shivering citizens by weight.

## To "Feed Up" the Navy.

The time-honored sailors' menu of "beans, hardtack and more beans" is threatened. Miss Helen C. Hoerle, a suffragette, and pretty, recently won the distinction of being the first of her sex to be enrolled in the United States naval reserve as a cook. Miss Hoerle will act as cooking instructor in the naval reserve and is to start a campaign to recruit 500 men as coworkers in her plan to oust the bean from the sailors' menu.

# Pioneer Memories of the Big Bend

By IDA C. YOUNG

Those who have followed the experiences of the Bunch Grass Boy in the Big Bend country of central Washington will find a treat in these further pictures of pioneer days related by a bunch grass girl—Editor.

For a considerable time Lincoln and Okanogan postoffices were the only ones that existed in Douglas county. The mail route extended clear on to Davenport, which, in those early days, was known as Cottonwood. For a long time Mr. Tibbets carried the mail riding one horse and leading another, upon which was packed the single leather mail pouch shaped like a mammoth double-jointed oyster. On Tuesdays he came from the west with a little handful of letters and a paper or two in the saddle bag. On Fridays he returned from the east with a fairly well filled sack that held the mail for all Douglas county.

In time the growing population outgrew the capacity of the pack horse system, and a hack and team were installed. About this time J. E. Hetley had the contract for mail service. During his time I think it was at its best. Travel increased and there were more postoffices. The route was shortened so that Grand Coulee postoffice, nine miles east in Lincoln county, became the end of the division. We had four stages a week now: two from the east and two from the west.

During the winter of '88 and '89, carrying the mail became a difficult proposition. It was a hard winter, a cattle killer. The snow was deep and badly crusted, making it impossible for horses to paw through and reach the bunch grass as they did during the milder winters. Neither were there any bare spots, and range cattle starved that hitherto had made a good living drifting from place to place where southern exposure and scab lands held the abundant, well-cured bunch grass for winter forage.

**Traveling on Skees Carrying Only Letters**

Travel was next to impossible. The poor stage horses had leather boot-tops laced around their front legs, and still they staggered in spent and bleeding from the deep drifts and the cruel crust. Finally the drivers had to give it up, and for a long time it seemed to me there was no mail. Then one day toward evening two of Hetley's drivers, Alex Field and Corrington Gilbert, came down over the hill from the west. They were traveling on skees and carried only letters. They were tired, but in high spirits, and stopped over night to rest.

Young Gilbert had his harmonica along. I remember him as the most efficient producer of music on the mouth organ that I knew at that time: that is saying a great deal, for every one who could whistle a tune played the mouth organ. There are old tunes now that I hear occasionally that don't sound right because they are not given in this way.

We all certainly enjoyed those evenings. The next morning the boys were off again, and in a day or so they came back with letters from the east. Young Gilbert stopped at his home across the coulee, leaving Field to go on to Waterville with 80 pounds of mail on his back.

That was a long remembered winter. Feed among the settlers ran short long before the snow was gone. When bare spots finally did appear cattle and horses were taken out and herded and nursed along from one day to another. Chopped feed was hauled from Almira, where railroad operations had halted for the winter. This feed helped save man of the settlers' stock. Range stock, of course, having to shift for themselves, died off by thousands that spring.

**When Pink Crabtree Spent Night in Big Snowdrift**

I think it was in the earlier part of this same winter that a neighbor boy was lost in a snowstorm, and lay out all night. Pink we called him—it was really Pinkerton, but Pink was so much easier, and if went so well with his last name, which was Crabtree. Pink had started out with a sack partly full of ground feed for some horses, which he was to feed. He found the horses; scattered the feed in little piles for them to eat. Then, as I remember, he turned his mount loose and started for home with the empty grain sack.

It was snowing hard by this time, and before he had gone any distance he was completely lost. It seems, however, that he did not become alarmed or excited, nor did he spend much time traveling. He walked until he became warm. Then, coming to a big snowdrift, he pawed out a big hollow, made himself as comfortable as possible, without any overcoat and only the empty sack to wrap around his feet.

In the morning the storm was over and he came home. His people were considerably worried, and yet they had hoped some way that he had drifted in to one of the scattering neighbors. Pink never took the experience as seriously as did the rest of the boys and girls of the neighborhood, who regarded him with more or less respect after that.

**Getting Lost Was an Easy Matter Those Days**

Getting lost was an easy matter those days, especially in the fall when the rains began and the fog came down. Hillsides, rock ledges and sage brush get to have a terrifying monotony in a trackless region, that is trackless so far as human feet go, for cattle trails are little help, except that they might lead to a watering place, if one happened to be headed right.

Ed and I got lost just once, that is I was lost. Ed, however, had a sense of location that was almost uncanny when it came to finding home. We were out on foot and hadn't yet found our cows when all at once the fog shut down on us. We decided immediately to go home and turned around. I wisely let Ed engineer the expedition though I kept thinking that he was bearing pretty far to one side to find the road we were looking for. At last, after long walking, we came upon it and Ed started off down the slope at a quickened pace. It was then my doubts culminated in wild protest. I was sure he was going straight away from home. He was just as sure he going right. I begged and even wept a little, finally starting off on my own hook up the road. Ed only shut his jaws, turned and went the other way. Then after we had been out of sight of each other a few moments I began to feel that if we must part we might just as well do it together. So I turned and hurried after him. He was still going at a good pace when I overtook him, and paid no attention to my sniffing and grumbling, for I was sure to a dead certainty that we were going straight off toward the coulee walls. In a short time, to my complete amazement, we came upon our backyard fence looming strangely through the mist.

But fog and darkness and storm were not the only means of confusing sense of direction; children sometimes wandered off in the sunshine and were lost. Little three-year-old Sally Higgenbotham did this. One warm, sunny spring afternoon she, with some older brothers and sisters, wandered together in search of flowers. The children left the house, went over a little rising ground out of sight. Then in their interest going from flower to flower, became separated and later on straggled home one by one without Sally. Her absence was unnoticed for some time, but it finally became apparent that she was missing and when a hasty search and much calling failed to bring her by the time it grew dark the neighborhood was aroused and turned out man and boy for a systematic search.

**Three-Year-Old Finds Shelter in Badger Hole**

It turned cold in the night, clouded over and began to rain. All the searchers had on overcoats and mittens and somewhere out in the wilderness was that three-year-old child with no protection but a gingham dress. About daylight they found her huddled down in the open mouth of a deserted badger hole. She was stupid with cold and fright, but recovered very quickly after getting home and so far as I know suffered no ill effects from her experience.

But I've wandered away from my subject almost as far as Sally did from her home. When I began I meant to tell how much a part Lincoln postoffice had in our entertainment. So far I've only touched upon the regular or irregular arrival of the stages.

People come long distances for their mail in those early years. Phillip McEntee, Dan Paul, the Leaheys from the south end of Grand coulee, the Osbornes, Long and William Fleet from the north end. The Stubblefields and William Nail from way over across the coulee. From the south near and beyond where Hartline now stands, from distances away of 10 and 15 miles, came William Bundschue, the Ames, Mrs. Alice Jones and D. M. Stevens.

There were others, of course, but I seem to remember best those who came often, or those who traveled so far that they could not return the same day, so stayed the night with us. There were wonderful stories and songs on these occasions. One story that father still loves to tell concerned Jack Hardin, one time partner of William Fleet in the cattle business. Hardin had secured a new cook for his outfit, and the story concerned the unfeeling joking tendency of one of the outfit in slipping a handful of brown beans into the kettle in which simmered a toothsome mess of dried apples.

Every one who could sing was also expected to contribute a song with or without music. I have still to hear anything sweeter than "Kathleen Mavourneen," as sung by Phillip McEntee in genuine Irish dialect as he sat among the others in the light of our one little kerosene lamp. Dan Paul could not sing, but he voiced his appreciation of those who could in that unforgettable little hesitating way of

(Continued on page twenty-five.)

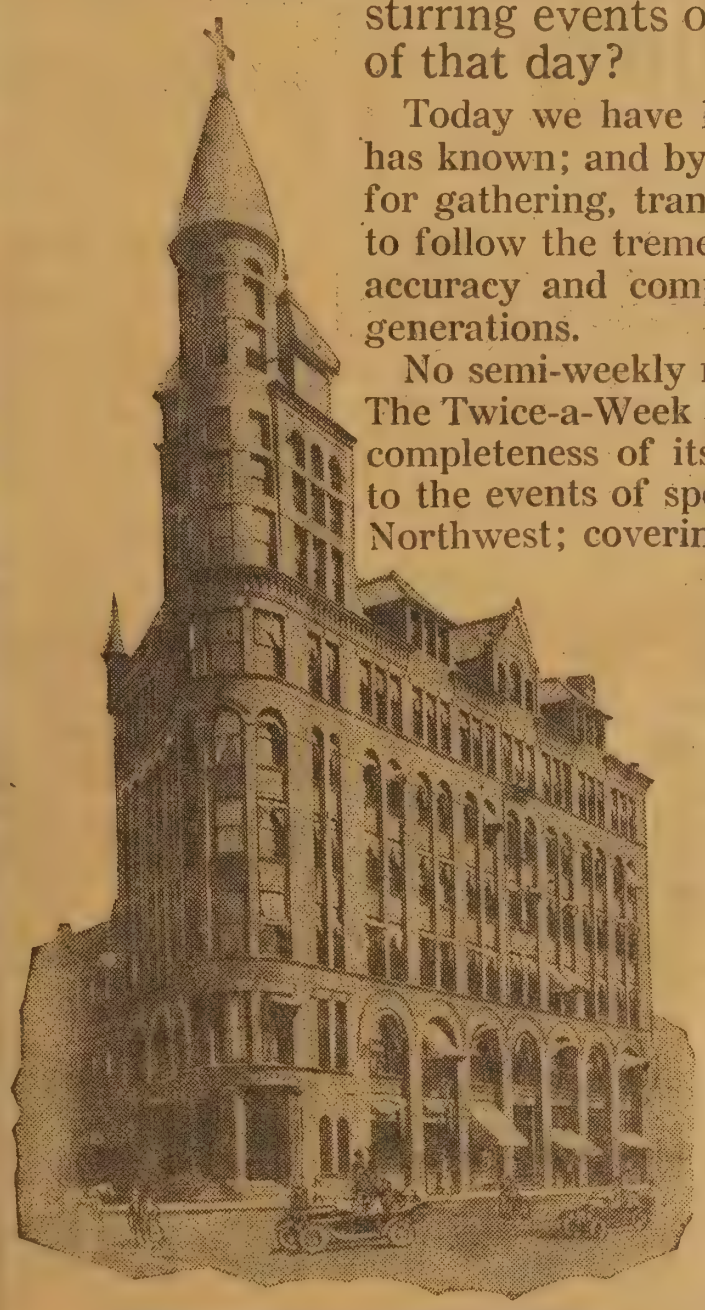
# RELIABLE WAR NEWS

## *Twice-a-Week Spokesman-Review, 1 Year The Washington Farmer, 3 Years--Both for $1*



IF you were living in the days of the American Revolution you would want to know every step in the campaigns of Washington and Cornwallis.

And what would you think of any one who lived in the '60s of the last century and was not enough interested in the stirring events of the civil war to secure the papers of that day?

Today we have been drawn into the greatest war the earth has known; and by means of the marvelous modern means for gathering, transmitting and printing news you are able to follow the tremendous events of the world war with an accuracy and completeness which was impossible for past generations.

No semi-weekly newspaper in the United States surpasses The Twice-a-Week Spokesman-Review in the reliability and completeness of its war news. It pays particular attention to the events of special interest to the people of the Pacific Northwest; covering the progress of the draft, troop movements; and all other details in which you are particularly interested. Names of killed, injured and missing will always be given as soon as issued by the military authorities. In addition the Twice-a-Week brings you a reliable summary of the general news of the day.

Purchased in any other way the Twice-a-Week will cost you $1 per year. For that $1 you can now get the Twice-a-Week for a year and your state farm paper for three years as well. It is a remarkable offer at any time; especially so in these war times.

**HOME OF TWICE-A-WEEK SPOKESMAN-REVIEW.**

**Above is a picture of the Review Building, Spokane, Wash., built, owned and occupied by the Spokesman-Review. It is the home of a great news gathering organization; the center of world-wide activities in securing reports of the war and all other important events for Spokesman-Review readers.**

# Good Things to Eat

By MISS RUTH WOODS, Caldwell, Ida.

Here are a few good things to eat, as demonstrated in the Caldwell (Idaho) public schools:

**Custar Souffle.**

Two tablespoons butter, two tablespoons flour, two tablespoons sugar, one can milk, four eggs, fresh or preserved fruit, (peaches or apricots are best).

Method—Scald the milk in a double boiler. stir the flour and the butter together, add the scalded milk gradually and cook five mintues, stirring constantly. Beat the egg yolks and add the sugar; then add to the milk. Set the mixture away to cool. When cool add the stiffly beaten whites of eggs, pour into a buttered baking dish and bake 30 minutes. Serve at once.

**Bread Pudding With Prunes.**

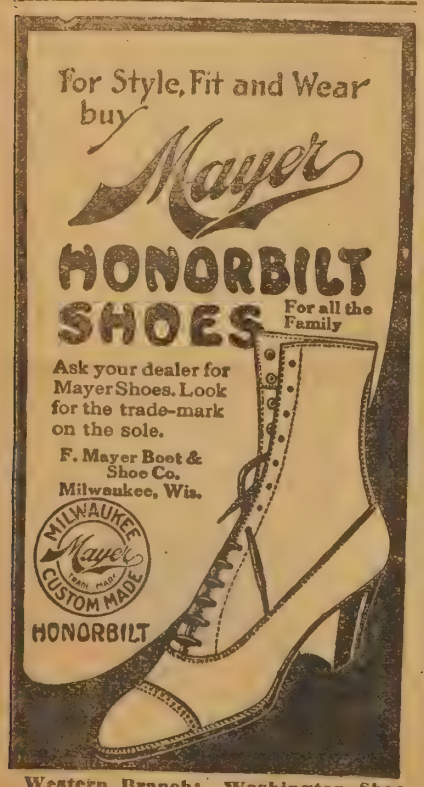
Ten prunes, one-eighth cup sugar, nutmeg, one egg, four slices buttered bread, one cup milk, salt.

Wash and soak the prunes for several hours—cook until the friut is soft so that the stones may be easily removed. Drain the water from the prunes, remove the stones and add sugar and nutmeg. Break the buttered bread into pieces. Put a layer of the bread in a buttered dish, add half of the prunes and then another layer of bread, the remainder of the prunes and finally a layer of bread with buttered side up. Beat the egg, add the milk and salt to it and pour the mixture over the bread and prunes. Bake slowly until the milk is thickened—cover for the first 15 mintues. Serve with hard or lemon sauce. Use juice from prunes for lemon sauce.

**Orange Marmalade.**

Four oranges, one grapefruit, four lemons, water, sugar.

Process I.—Reserve half peel of orange, grapefruit and lemon to use for candied peel. Slice fruit through pulp and rind to paper thickness, discarding all seeds—weight the prepared fruit and to each pound add three pints cold water. Set aside 24 hours.



Process II.—Let boil quickly until rind is perfectly tender, about one hour. Set aside until next day.

Process III.—Weight material and to each pound add one pound of sugar. Cook (stirring occasionally to avoid burning) to a temperature of 220-224 degrees F. Store in sterilized glasses or jars.

**Apricot Conserve.**

One pound dried apricots, one and one-half quarts water, two pineapples, sugar.

Wash the apricots and soak them in water—cook apricots until tender in the water in which they were soaked. Press through a strainer. Shred the pineapple and cook in as little water as possible. Combine the cooked fruits and measure. Add half as much sugar. Cook until thick—pour into sterilized glasses.

Western Branch: Washington Shoe Mfg. Co., Seattle, Wash.

## One-Dish Dinners.

These one-dish dinners planned by the U. S. food administration of the department of agriculture, supply all five kinds of food. Each is enough for the whole dinner for a family of five. Eat them with bread and with fruit or jam for dessert. Then you will have all the five kinds of food your body needs.

**Fish Chowder**—Rabbit, fowl, or any meat may be used instead of the fish, or tomatoes instead of milk. Carrots may be omitted. One and one-half pounds fish (fresh, salt or canned), 9 potatoes, peeled and cut in small pieces, 1 onion, sliced, 2 cups carrots cut in pieces, 1-4 pound salt pork, 3 cups milk, pepper, 3 tablespoons flour. Cut pork in small pieces and fry with the chopped onion for five minutes. Put pork, onions, carrots and potatoes in kettle and cover with boiling water. Cook until vegetables are tender. Mix three tablespoons of flour with one-half cup of the cold milk and stir in the liquid in the pot to thicken. Add the rest of the milk and the fish which has been removed from the bone and cut in small pieces. Cook until the fish is tender, about 10 minutes. Serve hot. You can omit salt pork and use a tablespoon of other fat.

**Dried Peas with Rice and Tomatoes**—One and one-half cups rice, 2 cups dried peas, 6 onions, 1 tablespoon salt, 1-4 teaspoon pepper, 2 cups tomato (fresh or canned.) Soak peas over night in two quarts of water. Cook until tender in water in which they soaked. Add rice, onions, tomato and seasonings and cook 20 minutes.

**Potted Hominy and Beef**—Hominy is excellent to use as part of a one-dish dinner, if you have a fire in your stove so that you can cook it for a long time, or use a fireless cooker. Heat one and one-half quarts of water to boiling; add 1 teaspoon of salt and 2 cups of hominy which has been soaked over night. Cook in a double boiler for four hours or in the fireless cooker over night. This makes 5 cups. This recipe may be increased and enough cooked in different ways for several meals. Hominy is excellent combined with dried, canned, or fresh fish, or meat and vegetable left-overs may be used. Here is one combination. Five cups cooked hominy, 4 potatoes, 2 cups carrots, 1 teaspoon salt, 1-4 pound dried beef, 2 cups milk, 2 tablespoons fat, 2 tablespoons flour. Melt the fat, stir in the flour, add the cold milk and mix well. Cook until it thickens. Cut the potatoes and carrots in dice, mix all the materials in a baking dish, and bake for one hour.

## Using Worn Out Garments.

To the Editor: My experience in making over garments and utilizing the least worn parts of discarded ones has caused me to say often that I am an expert in the art.

A much worn sweater will yield enough good material to make a child a petticoat; also good ones can be made from the bottoms of knit shirts. Sew onto a waist or yoke and crochet scallops on the bottom.

Underwear, when worn out for adults, still has enough good material to make garments for little folks. The gauze will even make nice stockings and can be dyed if colored ones are desired. Buy or make new feet for the children's stockings. Turn the worn knees to the back when you sew them on.

Flour sacks, dyed black, make nice bloomers for the little folks.

Did you ever have a dainty white waist made from sugar bags? If you prefer a tint put some tissue paper of the desired shade in the rinse water. This will wash out and you can have another color the next time.

MRS. A. O. LEE.

Othello, Wash.

**Habits of Crayfish.**

The crayfish may be described as a fresh water lobster, and usually lives a purely aquatic life, keeping to the river-bed. Some of the crayfish found in Australia, however, have forsaken the water and excavate burrows in damp soil. The tunnel leading to the heart of the burrow is free from water, but water is always present in the chambers at the end where the crayfish lives. They do much damage to artificial watercourses in the mining districts by riddling the banks and dams.

**Creamed Turnips.**

Wash and pare the turnip and cut into cubes. Cook in boiling, salted water until tender. Evaporate the water by leaving the kettle uncovred on the fire. Add three cups of thin white sauce made separately, or stir three tablespoons of flour into one-half cup water and add this with two and one-half cups of milk and water to the vegetables and boil. Add salt and pepper to taste.

# Trouble With His Well

To the Editor: I have a well on my dry farm 10 feet deep. Have dug it in a hollow. The formation is a blue clay and the water does not taste good. It seems slick, soapy. What is the cause of water tasting slick? Will a drive sand point be satisfactory to drive the well deeper? I have only about five inches of water. Would the screen get clogged up with the clay? G. E. B.
Preston, Idaho.

J. P. Fairbanks, instructor in agricultural engineering, Washington State college, gives the following partial answer to the above question:

In case the clay is not unusually hard it would be possible to drive your well deeper with a sand point, and the point should work satisfactorily in case it is driven through the clay into sand or gravel. If, however, the point remains in the clay after driving deeper it would be very apt to clog up, and you will be unable to get any quantity of water. This will be caused not only by the screen becoming clogged, but the circulation through the clay will be very slow. For this reason you should have a larger hole so that the water can collect during the intervals between pumping.

# Pioneer Memories

(Continued from page twenty-two.)

his speech and laughed his soft little chuckle at the stories that were told.

**"Oh, Bury Me Not on The Lone Prai-ree"**

Our choice of music was probably as indiscriminate as our reading. We had our hymn books, of course, that mother brought along with the organ, also some simple instrumental music. Ed used to play and sing "Come Thou Fount," and mother drilled us so that he and I could make a soprano and alto duet of "Jesus Lover of My Soul." I think those songs were a great help to mother. She seemed to prefer them to the more popular airs that took the fancy of us children.

We reveled in songs of pathos and emotion. There was "The Charge of Fredericksburg" that Frank Alexander used to play and sing with such feeling on the little organ. Also "The Drunkard's Lone Child." There was a cowboy song that I guess was known all over the west. I remember only the chorus:

"Oh, bury me not on the lone prai-ree
Where the yellow coyote will howl o'er me.
In a narrow grave just six by three
Oh, bury me not on the lone prai-ree."

Then there was "The Cowboy's Lament," which was charged with muffled drums, mournful music and dead marches. There were also the old plantation songs and many others. We sung them all, and I hope were influenced only by the best.

The postoffice, however, was not the only means of furnishing interest and entertainment. We had a flourishing Sunday school under the leadership of Mrs. A. L. Davis. There was preaching, too, every Sunday. A Mr. Gibson and grandfather alternating regularly in the frame schoolhouse that was now in district No. 1. Voorhees district, with the first log schoolhouse, having been cut off.

There were also school entertainments and Christmas trees. I think about the last entertainment that took place before we sold out and moved to Hartline, on the Central Washington railroad, was staged by Mrs. Davis. Julius Johnson was the hero; Davy Hughes second man. Julius did a slashing bachelor's part, baking sour dough biscuits and making a spectacular hit over the washboard. I was involved in the play somehow, but was inexpressibly bored over my part and didn't

(Continued on the following page.)

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4662 Reefer bldg, Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry—Adv.

## The MILLION DOLLAR AUTOMOBILE AND TRACTOR SCHOOL

**Men Mechanically Inclined, Your Services Are Needed.**

NEVER before has the demand for Automobile, Tractor, Truck and Aeroplane motor Mechanics been so great. Your service is needed in the Army, driving and repairing Trucks and Ambulances; in the Aeroplane section repairing motors; on our farms using Tractors; besides, remember that this country has 4,000,000 Automobiles. Thousands of mechanics who formerly took care of them are in the Government service. Somebody must take their places. It is up to you to take the places in the garage, etc., of the men that must go. Realizing these conditions I have made preparation to train men to fill these important positions. The demand for men is here. I am ready to train them. If you are in the draft come here and be trained so that you can give a special service to your Country.

WRITE FOR FREE CATALOGUE.

I have written a catalogue that shows pictures of all departments and describes my school. I want you to have it. It will tell you how I teach the Automobile, Tractor business; open your eyes to the opportunities for splendid positions at good money. This Country must have trained Mechanics. Take advantage of present conditions, write for my free catalogue; it's a trip through the greatest school in the world. Today is the day of oppportunities, grasp them.

E. J. SWEENEY, Pres.,
Sweeney Automobile & Tractor School,

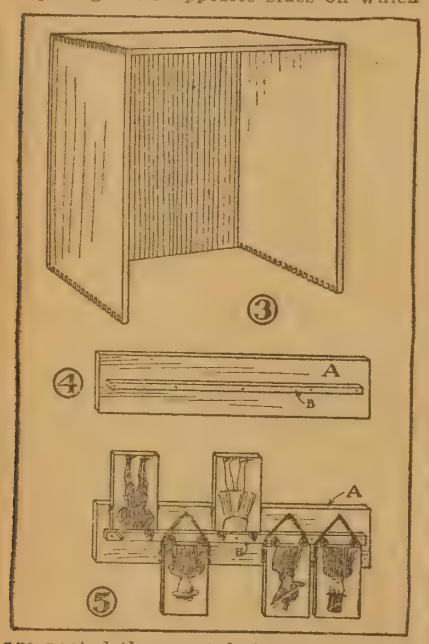
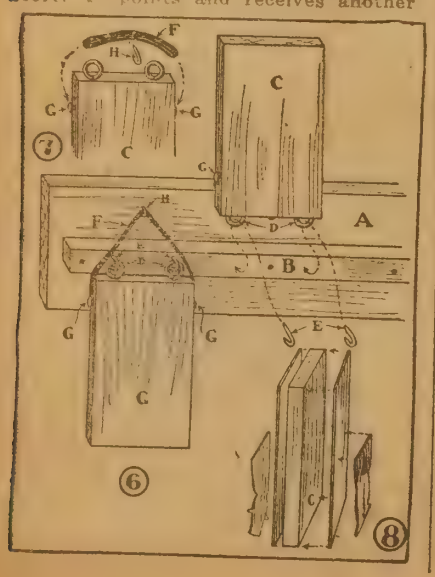
# Handicraft For Boys



By A. Neely Hall.

## A Johnnie-Jump-Up Target.

This is one of the funniest home-made games which you boys can construct. There are five targets, upon



which are pasted the lower halves of pictures of men, women, boys and girls, and these are bowled at with large marbles or small balls. When the targets are struck they swing back and up to the positions shown in Fig. 2, exposing their opposite sides on which

are pasted the upper halves of the pictures. The effect produced is that of the figures jumping up to see who has struck their feet.

By rolling the marbles or balls exactly right, all five targets can be sprung by three bowls. Each player has three bowls to a turn. He scores five points for each target he springs, and if he springs all five targets he scores 25 points and receives another

turn of three bowls. The first player to score 150 points is winner.

### Target Case.

A soap box or any other box of about this size can be used for the target case. Fig. 3 shows how one end must be removed; it also shows the position in which the box must stand.

Cut board A. (Fig 4) three inches wide and long enough to reach from one side of the box to the other, and nail the narrow strip B along its center to support the targets (Fig. 5). Board A must be nailed across the box front three inches above the open end, but not until after the targets have been mounted.

Fig. 6 shows a large detail of the target blocks. Cut these two and one-half inches wide and four inches long. Buy small screweyes and double-pointed tacks for mounting the blocks, then screw a couple of the screweyes into an end of each block (D, Fig. 6), and drive a double-pointed tack (E) over each screweye into strip B.

When all five targets have been pivoted in place, you must make provision for springing them above strip B, because the marbles or balls will not strike them hard enough to throw them into this position. The best arrangement is a rubber-band (F, Figs. 6 and 7) looped over a pair of large tacks G, driven into the side edges of the target block, and fastened to board A at its center by means of the double-pointed tack H. With this arrangement when the target is pulled down to the lower position it remains there because the rubber band pulls straight up (Fig. 6), but the instant that the marble throws the target out of this vertical position the rubber band pulls at an oblique angle and springs the target into the vertical position above stick B.

### Target Pictures.

Target pictures may be cut from magazines and newspapers. If you can find funny pictures of the right size they will make funnier targets than fashion pictures and other kinds would. Cut the pictures in half, lengthwise, paste them upon pieces of white cardboard, and glue the cardboard to the target blocks (Fig. 8).

Make the Johnnie-jump-up target after school some day, then invite several boys to come in and play, and you will have the jolliest time imaginable.

(Copyright, 1916, by A. Neely Hall.)

# Pioneer Memories

(Continued from the preceding page.)

make an impression on the audience as a sterling success.

Then there was a Christmas tree entertainment at which Sister Frances, then just 6 years old, was induced to play and sing a simple little song that mother had taught her. It was her first appearance in public and the vociferous applause rather startled her. She confided to the rest of us on the way home that she never would sing again for a Christmas tree if people were going to act like that.

**Our First Christmas Tree in the Big Bend**

Our first Christmas tree in the Big Bend was a little home affair, the crowning event of our second winter in Douglas county. We began thinking about it quite early in the fall when father had returned from his semi-annual trip to the railroad nearly a hundred miles away. The trip usually took a week, and along toward the sixth day of his absence we children began watching and listening for his return. Usually he could be heard before he was seen, for as long as I can remember father always came home singing, and always got up in the morning the same way. No matter how cold the weather we were awakened by the rattle of stove lids and the sound of song.

So when we heard him singing away in the distance of the still October evening that second fall we ran to meet him, climbed into the wagon and came home together in high spirits. As yet we had not thought of Christmas, but we knew we had new shoes. Each of us got a pair every fall. They had to last until the next fall. They were heavy and clumsy, as I remember them now, but we rejoiced in the squeaky, shiny newness as though they had been sandals of gold.

It was not until after supper that father sprung his great surprise on us. We three had on our new shoes, and Ed and I were examining with great interest our new Robinson's arithmetic that was to be taken to school next day. For we were part way through our first three months' term of school. Suddenly father announced that he had seen Santa Claus in Spokane. Ed and I were wise as to Santa Claus, nevertheless the statement meant something to us all.

Yes, sir, he went on in a matter of fact tone, he had met Santa Claus and Santa Claus was coming out to see us Christmas. Frances was all eyes. She dropped the cat, came over and climbed upon father's lap, asking all sorts of questions, but there was not much more to say. We knew we were to have a Christmas tree and that satisfied us, but I could hardly sleep that night.

**Mother Was Dipping Little Tallow Candles**

The days went by until Christmas eve finally arrived. We went upstairs to bed and Ed and I lay awake a long time from excited anticipation. There were all sorts of strange subdued noises below, muffled sawing and hammering, and the spicy fragrance of fir. That was the Christmas tree being set up. A sound of frying and spluttering, that was mother dipping little tallow candles; soft rustling of paper and the unmistakable perfume of apples, that was heavenly incense to us, for as yet we had had no apples in Washington. All this with a running accompaniment of whispering and soft laughter.

I suppose we finally went to sleep, for the rattling of stove lids and father's singing wakened us as usual next morning, and we called first from one bed then from the other, asking if we could come down now. Finally the room below was considered warm enough and we were given the word to come. We hopped out, grabbed our clothes and clattered down.

Mapleine can be used in more ways and with greater satisfaction than lemon or vanilla, and a smaller amount is required to produce the result.

The powdered mica in Mica Axle Grease keeps the spindles smooth, resists wear and pressure, and makes the grease last twice as long. Mica Axle Grease would still be good axle grease without the mica. But the mica makes it better. Get a can from your dealer today.

STANDARD OIL COMPANY (California)

MICA AXLE GREASE

ALL SOLD AT SATISFACTORY PRICES

Gentlemen:—

My little ad that ran during December cleaned me out entirely of boars and gilts at satisfactory prices. Could have sold three times as many if I had had them. Enclosed is a picture of some of the beauties I sold. It certainly pays to advertise in the Trio. I will be with you in spring with a good ad.

F. E. KINGSBURY.

Malaga, Wash., Jan. 16, 1918.

Dear Boys and Girls: A little baby was born in Virginia 186 years ago. I suppose he was very much like other little babies, though it hardly seems respectful to think of George Washington as a little crying, dimpled baby, does it? He wasn't any better off than most of the other babies all around him. He grew into boyhood in the same way, and had no more advantages than the others. He worked very hard as a surveyor. Yet, out of all the thousands of young men of that time, George Washington was the oine who became greatest.

Why do you think that was? I think it was because his mother began from the first to teach him certain things. He learned not only to read and write and do sums and other studies, but first of all, he learned to have courage, to want to be good, to stand by what he thought was right, no matter what happened.

As a little boy he was afraid of only one thing—to do wrong. As a young man he was the same. He wasn't great as a boy nor great as a young man. Few people knew anything about him. But pretty soon the time came when all our colonies needed just a certain kind of a man—a man who could not be bribed or bought or deceived of frightened, and there was one man of that kind—George Washington.

Now, this we must remember, especially when we think of George Washington. He didn't become great suddenly. It took him all his life. All the time he was a little boy and a young man he was making himself the kind of a man to be great when the right time came.

I think every one of you, girls and boys both, if you develop yourselves as George Washington did, all the time, when young, will find when you grow up that there is some great work waiting for just such a person as you, and you will be able and fit to do it.

### A Kitty Named Calico.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it won't be the last We have a kitty named Calico. I live on a 37-acre farm. I go to school and I am in the second grade. I am 7 years old. We have one cow.—Katherine Gillette.

### Leslie Writes Another Good Letter.

Dear Aunt Nellie: I am 9 years old. I guess I will tell you about the farm. We are milking five cows. I have two brothers. Their names are Carrol and Vernon. Vernon's cow's name is June. I have to walk to school about a quarter of a mile. Vernon likes to ride on Bob. I like to read the cousins' letters. I will tell you about the winter. We have had an easy winter. It is cold tonight. I am writing by lamp light. It is Sunday. I will be 10 November 10. Have I a twin? If so, I would like to hear from him. It has been a long time since I wrote to you. My father takes the Farmer. We have a good house and barn. We lost a good many chickens this winter. They froze. I like to go to school. I guess I will quit for the night.—Leslie Peck, R. F. D. Box 42, Republic, Wash.

### Hasn't Missed a Day This Year.

Dear Aunt Nellie: This is my fourth letter to the Children's Corner. This time my subject is about school. I am in the third grade at school. I am 9 years old. I will be 10 October 22, 1918. My birthday will be on Tuesday this year. I think I'll write about measles now. A girl that I go with got the measles when we were in the schoolroom. The girl's name is Helen, too. She told me to tell the teacher and I went and told the teacher and she said, "Why, Helen." She got redder and redder and the teacher sent her home. There are four who have the measles in our room. I have had the real measles, but not this kind. This kind of measles are German measles. I have not missed a day this year.—Helen Anderson, R. R. 3, Box 19, Olympia, Wash.

### Twenty Children in Helen's Room.

Dear Aunt Nellie: I am 8 years old and I am in the third grade at school. My teacher's name is Miss May Moore. We have 20 children in our room and 13 in the other. I live on a 40-acre farm and have four brothers and four sisters. Two of my sisters have graduated from high school. I have two brothers and one sister who go to the Ridgeway school. We had a Christmas tree at the schoolhouse and one at home. I got lots of presents Christmas.—Helen Elde, Mount Vernon, Wash.

### Vera Tells About Examinations.

Dear Aunt Nellie: We have three pictures enlarged. I took examination in reading and got 94. Leslie took examination in reading and got 92. I got 100 in my arithmetic and Leslie did, too. Leslie got 98 in spelling. There are seven pupils in our school. The names of the children are Jack, Lee, Bessie, Bonnie, Vera and Leslie. This is the second time I have written to the Children' Corner.—Vera Peck, R. 2, Box 42, Republic, Wash.

### Beautiful View in Clear Weather.

Dear Aunt Nellie: Now for my first time I will also write to the Corner. I have not written before. First of all I will describe our country and home. We live four miles from a town called Mount Vernon. It is not a very large town. It is advancing little by little. We live in Western Washington. Our home is not far from a small hill and there is a railroad up there. It is a logging train. The name of the camp is the English logging camp. We have a beautiful view of Mount Baker and the Olympic mountains. We can see them when the weather is clear and cold. We live on a 20-acre farm south of Mount Vernon. We have three horses, seven cows, two sheep and about 50 chickens. I go to the Lincoln school and my teacher's name is Mrs. Berenice Anderson. There are two rooms in our school and about 40 children in our school. There was some water on the school ground. When it got real cold weather it froze. We had a lot of fun skating on the ice. It did not last very long. I am 12 years old. My birthday is the 18th of October. I am in the seventh grade at school. Oh! I wish I had a twin. If I have I wish they would please write to me.—Myrtle Gladys Lee, R. F. D. No. 5, Box 40, Mount Vernon, Wash.

### Lalla Has Four Bantams.

Dear Aunt Nellie: We live on a 40-acre farm. We have two horses and one little colt. The little colt's name is Maud. We have about 25 chickens, four bantams. I got them for my last birthday. My birthday is June 22. I would like to correspond with Agnes Sunnell. Have I a twin? If so, I would like her to write to me. My teacher's name is Mr. Huffman. I am in the fifth grade at school. I have one sister and one brother in the eighth grade at school. I have two sisters and one brother. I can crochet, tat and knit. I will send you a few riddles. Higher than a tree, higher than a house; what is it? Patch upon patch and no seams? It can go up a stovepipe when it is down and down a stovepipe when it is down; it can't go up a stovepipe when it is up and it can't go down a stovepipe when it is up. We have had a little snow here. We have eight cows and three cats and one dog. The dog's name is Jeff. The cats' names are Lizzie, Mary and Pussy. I hope all the cousins are well.—Lalla Haquist, Independence, Wash.

### Lorna Doone and Bonny Bell Are Pets.

Dear Aunt Nellie: I have never written to the Corner before. I live on a 160-acre farm. For pets I have a pony and a dog. My pony is white and chestnut. Her name is Lorna Doone. My dog is straw colored. Her name is Bonny Bell. Lorna, as I call her, is a Shetland pony and Bonny is a Chesapeake Bay dog. We also have three big horses that I like real well. We also have one cow and calf and an immense lot of pigs. We have two cats. I have made two wash cloths for the Red Cross. I knit a sock and a scarf for myself and now I am making a scarf for the Belgians. I hope our Corner will grow.—Virginia Gibson, East Sound, Wash.

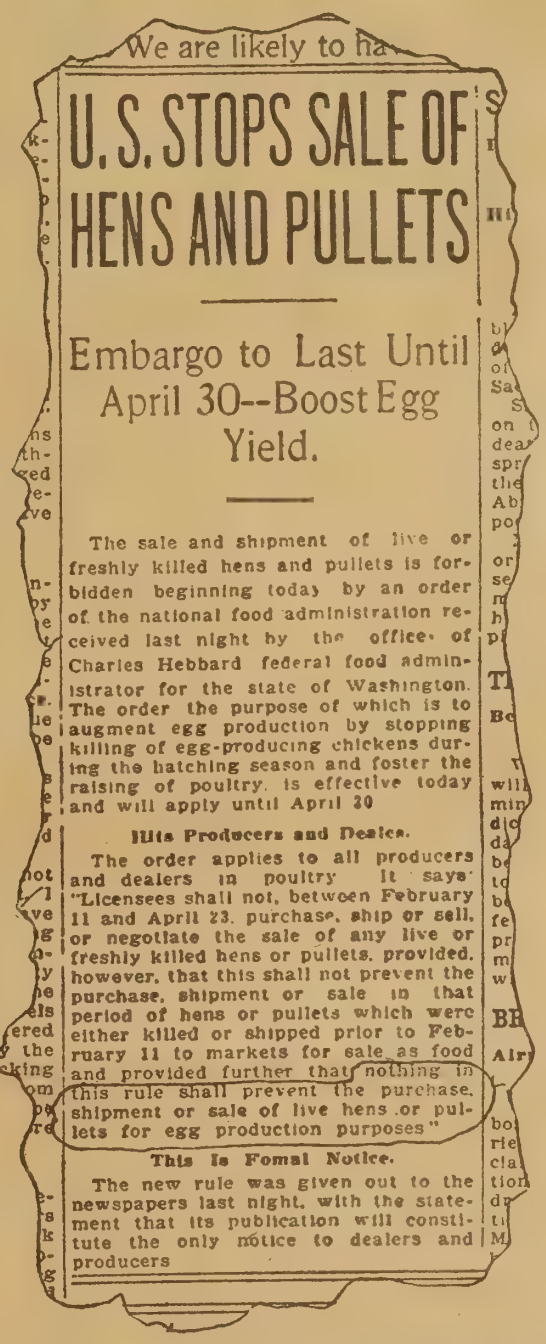
### Elizabeth Knits Afghan Squares.

Dear Aunt Nellie: I enjoy reading the cousins' letters. I love to go to school and I am in the second grade. I have one sister and two brothers. Sister's name is Harriet. My oldest brother's name is Leonard. The other one is a baby and we haven't named him yet. We have two kitties. They are named Tiger and Ted. We have one cow and a calf. The cow's name is Brownie. The calf is Tilda. We have six horses, two mules and two colts. I have joined the Junior Red Cross and I am knitting. I knitted one afghan square yesterday afternoon.—Elizabeth Cook, Route 2, Box 46, Mansfield, Wash.

### Not Far to Go to School.

Dear Aunt Nellie: I am 12 years old. My birthday is October 5. Have I a twin. I am in the seventh grade. I live on a 480-acre farm. We have 18 horses and six cows I have two pet dogs. Their names are Curly and Bob. We have seven sheep. I have a brother and no sisters. My brother is 16 years old. His name is Clarence. My teacher's name is Ruth Finnel. I like her very much. I have only one quarter of a mile to go to school. I would like to have my letter printed. I shall write again.—Esther Olestreich, Box 575, Ritzville, Wash.

### Marguerite Lives on a Big Farm.



Dear Aunt Nellie: I was 9 years old the last November. I have six brothers and no sisters. My brothers are Thomas, William, Howard, John, Bertie and Theodore. I live on a big farm. Last year my teacher was Miss Ford and I liked her fine. This year our teacher is Miss Lightheart. We like her very much. I am in the third grade. I have a mile and a half to go to school.—Marguerite Lawson, R. F. D. 2, Box 45, Friday Harbor, Wash.

### Muriel Stays With Grandma.

Dear Aunt Nellie: I live on a 10-acre ranch. We have cows, horses, chickens and a pig. I am 7 years old and am in the third grade. I have three sisters, Marjorie, Marie and baby Wilma. I stay with my grandma. I got some nice presents Christmas.—Muriel L. Dunn, R. D. 1, Box 60, Bellingham, Wash.

# *On Every Farm Chickens Should Be Raised in Increasing Numbers*

## U. S. STOPS SALE OF HENS AND PULLETS

### Embargo to Last Until April 30--Boost Egg Yield.

The sale and shipment of live or freshly killed hens and pullets is forbidden beginning today by an order of the national food administration received last night by the office of Charles Hebbard federal food administrator for the state of Washington. The order the purpose of which is to augment egg production by stopping killing of egg-producing chickens during the hatching season and foster the raising of poultry, is effective today and will apply until April 30

**Illis Producers and Dealers.**

The order applies to all producers and dealers in poultry It says: "Licensees shall not, between February 11 and April 23, purchase, ship or sell, or negotiate the sale of any live or freshly killed hens or pullets, provided, however, that this shall not prevent the purchase, shipment or sale in that period of hens or pullets which were either killed or shipped prior to February 11 to markets for sale as food and provided further that nothing in this rule shall prevent the purchase, shipment or sale of live hens or pullets for egg production purposes"

**This Is Fomal Notice.**

The new rule was given out to the newspapers last night, with the statement that its publication will constitute the only notice to dealers and producers

# *BREEDERS OF GOOD FOWLS*

grasp this excellent opportunity to sell surplus breeding fowls and hatching eggs. An ad with us, offering your birds, hatching eggs or baby chicks, will carry straight into more than 50,000 farm homes, where the patriotic wish to build up egg and meat producing flocks is growing daily stronger. Send in your ad today or write for our rates. Don't miss the best of the selling season by waiting. Write today.

# News for Breeders

## Fruit Buys Champion Boar.

J. W. Fruit of Brooks, Ore., has purchased from E. C. Naftzger of Gervais Ore., the Duroc Jersey boar, Elizabeth's Perfection, that was grand champion a' the Oregon State fair last fall. This boar's full brother was grand champion at the California State fair last fall, and his dam was grand champion at the P. P. I. E. at San Francisco. He comes from a prize-winning strain, and it was his extreme smoothness and general character that won last fall, as he was not extremely highly fitted. He was bred by Charles Hoover of Gervais, Ore., and both breeder and seller are neighbors of the buyer. Mr. Fruit has a great show ring record himself, having shown both junior champions last year and the year before and grand champion boar once and grand champion sow twice at the Oregon State fair. Mr. Naftzger has used the boar considerably for breeding purposes, and already has some very promising offspring from him, so it would not be surprising to see Elizabeth's Perfection and some of his get strong contenders at this coming fall's state fair. H. A.

## Wintering Beef Cattle.

One of the finest herds of young beef cattle in central Oregon is being wintered on the old Almeter ranch, three and one-half miles northwest of Terrebonne. This is a mixed herd of Shorthorns and Herefords. They are being cared for by F. E. Pellett, who has the 320-acre Almeter ranch under rental. The herd is the property of Logan brothers and will be sent back to the range about March 1 if the weather at that time permits.

Mr. Pellett had 100 acres in hay last year, and produced 200 tons. This is the hay now being fed to the cattle. Mr. Pellett expects to have the 320 acres all practically under cultivation this year. He has been in the past instrumental in securing for this section a farmers' phone line, and aided in the establishment of better roads. He is also taking up the raising of blooded Duroc hogs and pure bred chickens this coming reason in connection with his other work. Besides working this rented ranch, Mr. Pellett is the owner of another ranch in the same vicinity. W. S. C.

## Nineteen-Year-Old Ayrshire.

Lenetta, an Ayrshire cow born August 16, 1898, the property of Dr. John A. Ness, Auburn, Me., has just completer her fourth entry in the advanced registry, producing 11,450 pounds milk, 411.14 pounds butterfat, according to the Ayrshire Quarterly. From September 21, 1911, to November 23, 1917, Lenetta has produced 46,226 pounds milk, 1712.07 pounds fat, an average for four periods of 11,556 pounds milk, 428.01 pounds fat.

## Average Return Which Counts.

Dr. Park Weed Willis, well known Guernsey breeder and owner of Orchard Hill farm, Redmond, Wash., has little use for short period testing.

"All of our cows are tested for a year's production," he comments. "We have cows which will start out at a 50-pound clip, but which at the end of the year have not produced as much as some of our 40-pound cows which are steady producers. With cows, as with human beings, it is the average return which counts, not the exceptional and short-lived performance."

P. E. T.

### Larget Hens' Eggs.

The largest hens' eggs are produced in Manchuria, those weighing one-sixth of a pound being common.

NEZPERCE, IDAHO,
Auctioneer and Sales Mgr.

# Jerseys Win Economy Test

In a recent test at the Ohio State University, 157 Jerseys and 131 members of another dairy breed were entered. The Jerseys required only 75.3 per cent as much digestible nutrients per lb. of fat produced as did the other breed. Further, they produced 1.2 per cent more milk, 25.6 per cent more solids and 59.3 per cent more fat per 1000 lbs. live weight. Jerseys produce the largest *net profits* from every pound of feed. Build a Jersey herd. Write to breeders for prices.

*Send today for free book, "The Jersey Cow in America."*

**The American Jersey Cattle Club, 314 West 23rd Street, New York City**

# A FEW COWS AND HEIFERS

**MELLOW LAWN FARM HIGH PRODUCING JERSEY HERD.**

**HERD AVERAGE, APPROXIMATELY 700 POUNDS BUTTER.**

Every cow in the herd on test. Our herd is getting too large to give proper care, with present labor scarcity, so am forced to sell a few. Some of the best in the herd, now milking around 50 lbs., are for sale. Write for pedigree and prices. Ranch 7 miles south of Silverton, 12 miles east of Salem.

***F. A. DOERFLER, Silverton, Ore.***

# La Creole Farm Register of Merit A. J. C. C. Jerseys

under U. S. government control for health. No. T. B. or abortion ever in herd. A breeder for 15 years; high-class stock, for high production.

We offer you a bull that is O. K., guaranteed; sired by Oxford You'll Do Jr.; daughters producing over 2 pounds b. f. per day. His dam, Morrow's Select 828 lbs., is the first tested daughter of Golden Glow's Chief. She was 5 weeks on fair circuit while on test and only dairyman's care when at home, otherwise she would have produced close to 1100 lbs. This bull is 2½ years old and solid color. We have a bull calf from this cow, otherwise would not sell. Priced right.

**W. O. MORROW, Independence, Ore.**

**Jersey Isle Stock Ranch**

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castillian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG, Buhl, Idaho.

**BREEDER OF GOLDEN GLOW'S CHIEF 61460.**

35 daughters average 533.9 lbs. fat. Sire of world record Junior three-year-old. Two of his sons heading our herd. Some choice bull calves out of cows with records up to 856 pounds for sale. Sold out of bulls over six months old.

LADD FARM, Oswego, Ore.

**914 Pounds of Butter**

This is the official record for a year of the dam of a choice bull calf by Rosaire Olga Lad, sire of 29 tested daughters. He and others priced according to quality.

ED CARY, P. O., Carlton, Ore.
Station, LaFayette, Ore.

**Ashwood Farm Jerseys**

FOR SALE—BULL CALVES sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.

McARTHUR & STAUFF, Rickreall, Ore.

**Bull Calf For Sale**

Dropped June 19, '17; dam is Noble's Jewel of Fair Acres in R. of M., with record of 457 lbs., 4 oz. butter at 2 yrs., 3 mos. Sire is Holger; also in R. of M. Price $75 for quick sale. For particulars address,

WOODLAWN FARM, Vega, Wash.

**OAK RIDGE JERSEY FARM.**

Thirty years breeding Jersey cattle. Young bulls from Register of Merit dams. Also a few choice females.

RILEY E. HULBURT, Albany, Ore.

**763 Pounds Butter**

and 11,501 lbs. milk is the average of the Register of Merit records of the three nearest dams of this handsome bull dropped Aug. 28, 1917. Dam Stockwells Dahlia, 619 lbs. butter and grand champion Oregon State Fair twice. Sire Dominus, who is out of an 817-lb. cow and a son of an 853 lb. cow. Price $150.

J. B. STUMP & SON, Monmouth, Ore.

**ASHBURN FARM**
**Register of Merit Jerseys**

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

J. M. DICKSON & SON, Shedd, Ore.

**Waikiki Farm**

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.

ROUTE 7, SPOKANE, WASH.

**Jersey Bull for Sale**

dropped Oct. 14, 1917. Sired by Prosser Pogis 136850, a son of Hood Farms' great bull, Pogis, 99th of Hood Farm 94502, and full brother of Sophie's Agnes—record, 14149.7 lbs. milk, 982.3 lbs. butter.

E. O. RICE, Prosser, Wash.

**GOLDEN GLOW HERD**

Winner of 1st and 2d prize in butter test, Oregon State Fair, 1917, (all breeds, 20 entries); breeder and owner of grand champion cow in show ring, 1916; breeder of grand champion cow, 1917. Breeder and owner of world's champion 3-year-old, with 1115 lbs. butter, 80 per cent fat. Every female a daughter, granddaughter or great granddaughter of Golden Glow's Chief, sire of 34; 14 over 700 lbs.; 32 over 600 lbs.

PICKARD BROS., Marion, Ore.

**JERSEY CATTLE**

**Jersey Home Dairy**

Young bulls, winners at Washington State Fair, make good herd sires. Attractive prices for quick sale.

**Erickson Bros. Prop.**

North Yakima, Wash.

**SHEEP**

**SHEEP**

Full blood Lincolns, Rommeys, Corridales and Hampshires. Ewes and rams, small or large lots. For sale by

H. STANLEY COFFIN,
Breeder and Importer. Yakima, Wash.

**When you write to advertisers, be sure to say that you saw their advertisement in this paper.**

# Breeders' Department

## DUROC-JERSEY SWINE

MIDDLEDALE FARMS GUERNSEYS.
Herd founded in 1904, May Rose breeding. Most all granddaughters of Jethro Bass (11366), son of Imp. King of the May. Have a few heifers, calves for sale. Goshen, Ore.

## AYRSHIRE CATTLE

### Edgewater Farm

Government accredited herd, headed by Peter Pan, 63d. Bull calves available.
E. M. CHANDLER, Burbank, Wash.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Feb. 18.—Corn averaged higher today owing more or less to efforts to accumulate reserve stocks here before farmers become busy with field work. The close, however, was unsettled, March, $1.27 5-8, and May to a like advance compared with Saturday's $1.26 3-8, with the final range 1-8c off day's latest figures. Oats gained 3-8c to 5-8@3-4c net. The outcome in provisions varied from 17 1-2c decline to a raise of 7 1-2c.

Despite a big increase of arrivals, the corn market pointed upward throughout nearly the entire session. It was realized that but a short time remains until spring work might sharply restrict the crop movement. Predictions of stormy weather within the next 36 hours emphasied bullish sentiment ,and so, too, did the reports millers are absorbing choice grades. Reports were current that as high as $2 a bushel had been paid for extra good white corn suitable for milling. Near the end of the day, though, prices tended somewhat to relax owing to assertions that 100,000 cars had been concentrated in the middle west, and that a daily movement of 4,000,000 to 6,000,000 bushels was on.

Oats ascended to new top records of the season. Urgent bidding from the east was chiefly responsible.

A bulge in hog prices gave strength to provisions. Subsequently realizing sales brought about a setback.

## Portland Market.

PORTLAND, Ore., Feb. 18.—The potato market continues very weak. On the street the best Burbanks and American Wonders are quoted at $1.15@1.25 and Yakima Netted Gems generally at $1.35@1.45. There is a little buying around a cent for ordinary stock, with $1.05@1.10 available in a small way for fancy. Onions are weak and dragging.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $64.50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $64.50; brewing, $69.50@72; rolled, $67@69.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50; grain, $22.

Eggs—Oregon ranch, case count, 42@44c per dozen; candled, 45@46c.

Poultry—Ducks, 30@35c; turkeys, live, 25c; geese, 20@22c.

Butter—City creamery, prints, 52@53c per pound; cubes, extras, 47c.

Cheese — Tillamook triplets, 25c; Young Americas, 26c.

Dressed meats—Veal, 20@20 1-2c; pork, 21@21 1-2c.

Hops—1916, nominal; 1917 crop, 16@17c.

Potatoes—Oregon, buying price, 90c@$1.10 per hundred.

Wool—Eastern Oregon, 50@60c; valley, 50@55c.

Beans—Buying prices: Oregon white, 9 1-2@10c; colored, 8 1-2c.

## Seattle Market.

SEATTLE, Wash., Feb. 16.—It was quite apparent today that there is little hope for stronger potato prices.

Growers have expressed a strong feeling of disappointment over the season's results. Statements that the acreage planted will be greatly reduced this year are frequent. Producers who held their potatoes off the fall markets when selling was good point out that the government at that time advised them to be in no hurry to sell and that they did not keep their spuds off the market entirely of their own volition.

Inquiry for seed potatoes has started. One car of selected Yakima Gem seed potatoes sold this week at $23. White or Puget sound seed is being quoted at $18@20.

There has been an improvement in the apple demand. Buyers who a week ago were looking only for cheap fruit are paying $1.15@1.75 for healed-over stings. Fruit that can scarcely be called fancy is selling at $1@1.50.

**BUYING PRICES.**

Unless otherwise state, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 40c per dozen.

Poultry—Springs, 25c lb; 4 lbs. and under, 25c; old roosters, 16c lb; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.

Butterfat, 53c lb; dairy butter, 35@36c.

Beef—Buying prices: Prime beef, steers, 11@12c lb; cows, fat, 9@11c lb; heifers, 10@11c lb.

Hogs—Light, 18@20c lb; heavy, 17@18c lb.

Veal—Fancy light, 17@18c lb; heavy, 9@16c lb.

Hides—Salted, 14c lb; flint-dry hides, 29c lb; salt kip, 16c lb; green hides, 11c lb; green calf, 23c lb; dry calf (under six pounds), 29c lb; bulls and dry salts, 4c lb. less; green bulls, 9c lb; dry full wool sheep pelts, 36@39c lb; salt bulls, 11c lb.

**SELLING PRICES.**

Feed—Scratch, $76 per ton; all grain chop, $72 per ton; oats, $70 per ton; rolled oats, $71.50 per ton; bran, $34.50 per ton; shorts, $36.50 per ton; soy bean meal, $67 per ton; whole corn, $74 per ton; cracked corn, $75 per ton; alfalfa meal, $35; rolled barley, $70.50; sprouting oats, $70 per ton; Milo maize, $75 per ton; white gyp, $75 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $29@30 per ton; straw, $15.

Butter—Washington creamery extras, cubes, 52c lb; do bricks, 53c lb.

Eggs—Fresh ranch, 42@44c dozen.

Potatoes—Puget sound, $1.25@1.35 per cwt; eastern Washington, $1.40@1.50 per cwt.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1.25@1.50 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, 2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.25 box; Wageners, $1@1.50 box Rome Beauties, $1.75 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.65 box; Stayman Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 49c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snowcap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Winconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Dressed Poultry**—Hens, 28c lb; broilers, 32c lb; old roosters, 14@17c lb; ducks, 20@23c lb; geese, 20@23c lb.

**Hide Quotations.**

**Green Cows and Steers**—25 lbs and up, 11c; salted cured, 14c; green bulls and stags, 10c; salted cured, 12c; kip, 15 lbs. to 25 lbs., 16c; calf skins up to 15 lbs. 23c; dry flint hides, 30c; dry, salted, 25c; dry calf skins, under 10 lbs. 28c; dry sheep pelts, 30@35c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

## Portland Wheat.

PORTLAND, Ore., Feb. 18.—Coarse grain prices continue to climb. At the merchants exchange at the close of the week $69.50 was bid for brewing barley and in the open market sales at $72 and better were reported. Oats are following the eastern advances closely, and there are very few offerings of either cereal. One hundred tons of bulk yellow corn, February delivery, were sold at $69, which shows the upward tendency of that article. Because of the high price of the raw materials, millers today announced an advance of $1 a barrel on barley flour, rye flour, oatmeal and cornmeal.

Hay dealers report a strong demand from California for alfalfa, with sales of good sized lots at Idaho points for shipment south.

**METALS.**

NEW YORK, Feb. 16.—Bar silver, 85⅝c.

LONDON, Feb. 16.—Bar silver, 42⅝d.

## Will Be Represented

(Continued from page three.)

teed prices, and in particular governing conditions of delivery and payment, and differences in price for the several standard grades IN THE PRINCIPAL PRIMARY MARKETS of the United States, adopting No. 1 northern spring or its equivalent at the principal primary markets as the basis.

Wheat growers in Ohio and other eastern states are asking that the government set a basic price of $2.50. They are pointing out that if a lower price is set there will not be sufficient stimulus to insure the increased spring seeding that seems necessary to meet the emergency, and argue further that unless a reasonably high price is fixed a great deal of wheat will be fed to stock.

The law provides that the government price on the 1918 crop shall not be less than $2 a bushel, and it is contended that congress had in mind the probability that a higher price would be guaranteed and therefore gave the president a free hand to go above the $2 minimum.

Farmers of the Pacific northwest feel that a great injustice will be done them if the government should fail to establish a primary market in this region. They feel that Washington, Oregon, Idaho and Montana are a part of the United States and are entitled to at least one primary market where the farmer can deliver his wheat and receive the government guaranteed price.

They reason that a broad and liberal interpretation of the language of the law would recognize local points where the growers actually deliver their grain by team as the true primary markets, and that it is stretching the law to make them pay freight rates to a single primary market like Portland. They seem willing, however, that that be done, but do object to a further straining of the law that would deprive them of a northwestern market, make Chicago the only basic point, and require them to sell their wheat at the government price less the cost of freighting it to that distant point.

The manifest purpose of the law is to deal liberally with the wheat growers of the United States and so far as practicable to put the growers of the different sections of the Union on a plane of equality of treatment. But such equality would vanish if the broad Pacific northwest were treated as a region outside the pale of the Union.

43½ Bu Wheat Per Acre

**Mr. W. Loat Writes:** "I had 203 acres of wheat that averaged 43.5 bushels an acre, 13 acres of oats that averaged 65 bushels, 25 acres of barley that averaged 50.5 bushels per acre."

Such remarkable reports are coming in every day from Western Canada. Farm crops in Manitoba, Alberta and Saskatchewan are making records never before equaled.

| Bushels | |
|---|---|
| Wheat | 30 |
| Oats | 53½ |
| Potatoes | 148 |
| Barley | 37 |
| Rye | 27¾ |
| Flax | 13½ |

This is the 1915 average per acre from Government statistics.

**FREE!**

**128,000 Farms**

In this most fertile farming section you can get one of these 128,000 newly surveyed homesteads of 160 acres near the Canadian Northern—"The Road to Opportunity." You can get results as successful in grain growing, mixed farming or stock raising as did Mr. Loat.

**Best Farm Lands $15 to $25 Per Acre**

Rich, centrally located farms adjacent to the Canadian Northern can be purchased at from $15 to $25 per acre—easy cash payments, or part cash and part crop payments. Crops produced equal to crops on farms costing $150 to $200 per acre in more densely settled communities.

**Special Low Fares**

The Canadian Northern Railway, which takes you to all parts of this territory, provides special low fares to home-seekers and settlers.

**Send for FREE Book**

"Home-Seekers' and Settlers' Guide" contains valuable and interesting information based on government returns, and it tells you exactly how to make a home in Western Canada. Here is a home and wealth for you.

Portland, Oregon.

NEW SEED CATALOG—COMPLETE LIST of Tested Seeds for Western planting. Write for your copy today—MAILED FREE. An experience of 25 years in the Northwest. Aabling-Boyce Seed Co., 89 Pike St., Seattle, Wash.

WE SPECIALIZE IN TIMOTHY, ALFALfa, clovers, seed for forage crops. Write for prices. Mark Means Co., Lewiston, Ida.

VETCH, CLOVER, TIMOTHY.
Choice recleaned seeds at direct to you prices. RHOTEN FARM, Salem, Oregon.

HIGHEST QUALITY RED AND ALSIKE clover, also vetch seed. Prices right. M. Senders & Co., Albany, Ore.

## NURSERY STOCK 621

EVERBEARING STRAWBERRIES ARE mortgage lifters. We have plants, strong and thrifty. Send for price list. F. I. Moffett, Ellensburg, Wash.

PROGRESSIVE STRAWBERRY PLANTS, bear first year set, from July to November. $2 per hundred; $1.50 for more. G. F. Thayer, Payette, Idaho.

## FARM LANDS—FOR SALE 651

SMALL FARMS FOR SALE.

We have for sale at lower than prevailing market prices—and on terms to suit purchaser—8 small farms, ranging from 10 to 80 acres each—Some improved with house, barn, well, etc., at $80 to $120 an acre, just half former prices. Finest black Palouse soil—just the kind that insures "sure" crops of grain, fruit or garden; located 14 miles from Spokane, on electric line, and paved highway. Surrounding growing suburban community—active trading center.

These are among best bargains offered today. You buy from us as owners. Call at office, or write for full particulars, with plat, before you buy anywhere. One of these tracts will surely suit your needs.

HANAUER-GRAVES COMPANY.
601 Old National Bank Bldg.
Spokane, Wash.

BUY WHERE THEY RAISE THE PRIZE CROPS
IN SNOHOMISH COUNTY.

40-acre farms, $25 per acre. Ten yearly payments, 6 per cent interest. Visit our office and see the great exhibit of PRIZE-WINNING vegetables, fruits, grains, alfalfa and other grasses raised on the adjoining farms. They prove our claims that this is the best land in WESTERN WASHINGTON.

Paved roads. Four passenger trains a day. Graded school, cannery, creamery, cheese factory, plenty of work for the laboring man in the mills and camps, where 75 settlers are all boosters. DON'T LOSE A DAY in asking for our illustrated literature.

BROWNELL LAND CO.
904 THIRD AVE., SEATTLE, WASH.

YOUR CHANCE IS IN CANADA—RICH lands and business opportunities offer you independence: Farm lands, $11 to $30 acre; irrigated lands, $35 to $50; twenty years to pay; $2000 loan in improvements, or ready made farms. Loan of live stock; taxes average under twenty cents an acre; no taxes on improvements, personal property, or live stock. Good markets, churches, schools, roads, telephones; excellent climate—crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Allan Cameron, general superintendent land branch, Canadian Pacific Ry., 30 Ninth ave., Calgary, Alberta.

GOING — IRRIGATED ALFALFA AND stock ranch of 111 acres; gross income $6000; situated on the bank of the Yakima river; ideal for all kinds of stock; properly cultivated, will raise 100 bu. corn and 10 tons of potatoes to the acre. Horses, cows, registered $1000 Holstein bull, Berkshire hogs, chickens, farm implements, etc.; eight-room house, barn, silo, hog and chicken houses. This ranch is second to none in the Yakima valley. Reason for selling, old age. Price for all $28,000; one-half cash. Address B 7, care Washington Farmer, Spokane.

FOR SALE BY OWNER—40 ACRES; IN the beautiful San Juan archipelago, where there are no floods and the crops are sure; 20 a. cleared, bal. pasture, with enough timber to pay for the place; horses, cattle, hogs, sheep and chickens; all implements; house, barn, shed, chicken houses; all kinds of feed for the stock. Price, as stands, $37.50. Will take $1750 down, bal. easy, to suit purchaser; 8 per cent int. Address J. M. Jorgensen, R. F. D. Box 48, Port Stanley, Wash.

AN IDEAL FRUIT AND POULTRY RANCH —5 acres; abundantly watered; modern 6-room house; large sunroom, 12x24; hot and cold water, bath, etc.; overlooking the bay; 400 ft. from dock; on account of old age and poor health will sacrifice. For particulars address S. S. Stults, Langley, Wash.

FOR SALE BY OWNER—GOOD DAIRY dairy ranch in Lincoln county, Ore. Dyked, improved, with or without stock and equipment; close to town; about 150 acres. For full information address Owner, B 1, Oregon Farmer, Portland, Ore.

WANT OFFER FOR 20-A. TRACT, NEAR Prosser; under Sunnyside canal; paid up water right; 2-a. bearing orchard, bal. alfalfa; 4-room house. Terms. No trade. Now rented to dairyman. B 11, Washington Farmer, Spokane, Wash.

HEAD FOR THE HEADWATERS OF the old Missouri; splendid grain and stock ranches. For information about climate and soil write Chamber of Commerce, Three Forks, Montana.

CHEAPEST WHEAT LANDS IN NORTHwest are in the Big Bend section of eastern Washington. Some sold on easy terms. F. E. Allison, Lind, Wash., will help locate you.

314 A. IN WHITMAN COUNTY; NEAR Oakesdale, with or without crop. Address Box 17, R. D. No. 2, Oakesdale, Wash.

ALFALFA, PLOW LANDS, HOP YARDS, orchards, business investments. Lusk Land Co., North Yakima, Wash.

MONTANA IN A NUTSHELL. FREE LITerature. Johnson Bros, Dillon, Mont.

## TO EXCHANGE—REAL EST. 705

WILL EXCHANGE THE BEST 25-ACRE 9-year commercial apple orchard in Spokane valley; 1¼ mi. from station; fruit warehouse across road; want well-watered stock ranch. Write, giving full particulars, to A. J. West, 901 First ave., Spokane, Wash.

# President Fixes Price for 1918 Wheat

## *Remains Practically Same as Last Season; Hoover's Pledge to Farmers Is Overruled*

Wheat producers, northwestern senators and representatives, and it seems Food Administrator Herbert Hoover himself, were given something of a shock Saturday when President Wilson issued a proclamation fixing the price of wheat for 1918 at approximately what it has been for 1917. The price is identical except for a few changes due to the addition of a few points as primary markets. It makes the price at Chicago $2.20, and at northwest coast terminals $2.05 a bushel for No. 1 northern. This is the same as last year. It specifies a price of $2 flat at Spokane, which would seem to be a small gain for the Spokane territory, as the freight to the coast is about 9 cents.

Woodrow Wilson.

### Cause of Surprise.

The surprise felt by growers and others at the president's proclamation is not due so much to the fixing of a price, but due to the fact that it is fixed 12 or 13 cents lower for northwestern points than Food Administrator Hoover promised the northwestern delegation to Washington last week that it would be.

But encouragement is given by a dispatch from Washington saying that Mr. Hoover promises to make good his pledge, though it is evident that to do so he must cause the president to rescind at least part of his regulation.

Mr. Hoover promised the growers that they would be allowed a price based on the Atlantic coast price, with an ocean freight rate to the Atlantic coast of $3.50 a ton, which would make wheat at Pacific northwest terminals $2.17 to $2.18 a bushel. This would be from 12 to 13 cents more than the price announced by President Wilson. It would make the price at such interior points as Spokane, Ritzville, Moscow, Pendleton and the like the coast price less freight, or $2.08 to $2.09 a bushel, or a gain of 8 or 9 cents over the president's specification for Spokane.

### Committee Obtained Pledge.

On the face of the Washington reports it would seem that unless Mr. Hoover is able to influence the president to alter his schedule of prices, the work of the northwest committee that has been in Washington for two weeks has been largely in vain, notwithstanding their complete success in negotiating with the food administration and the federal shipping board.

Here is the statement issued by President Wilson in explanation of his price-fixing proclamation:

"Under the food control act of August 10, 1917, it is my duty to announce a guaranteed price for wheat of the 1918 harvest. I am, therefore, issuing a proclamation setting forth the price at the principal interior primary markets. It makes no essential alteration in the present guarantee. It is a continuation of the present price, with some adjustments arising from the designation of a number of additional terminal marketing points.

Herbert Hoover.

"This guaranteed price assures the farmer of a reasonable profit, even if the war should end within the year and the large stores of grain in those sections of the world that are now cut off from transportation should again come into competition with his products. To increase the price of wheat above the present figure, or to agitate any increase of price, would have the effect of seriously hampering the large operations of the nation and of the allies by causing the wheat of last year's crop to be withheld from the market. It would, moreover, dislocate all the present wage levels that have been established after much anxious discussion and would, therefore, create an industrial unrest which would be harmful to every industry in the country.

"I know the spirit of our farmers and have not the least doubt as to the loyalty with which they will accept the present decision. The fall wheat planting, which furnishes two-thirds of our wheat production, took place with no other assurance than this, and the

# Must Consider Many Things

## Feed Is Not Only Consideration That Is To Be Counted in Production of Pork, Says Whitman County Man

COLFAX, Whitman County, Wash., Feb. 20.—Market conditions are splendid for all kinds of farm products. Farmers only need to make offerings to have their products readily absorbed. The average price farmers received for wheat was close to $1.80 per bushel; oats about $2.25 per hundredweight, hogs have averaged about 15 cents per pound on the hoof and cattle about 6 cents per pound. Hay brings about $25 per ton on the farm and baled straw about $6. Potatoes are a drag on the market at $1 per hundred pounds. Many farmers are thoroughly disgusted with potato growing. They say they got "stung" last year to the tune of thousands of dollars when they mistook the potato bee that was buzzing in their heads for a golden winged fairy. I would suggest that families in cities and town plant potatoes again this spring as few farmers are going to plant many. Butter and eggs are sold at the same price the dealer pays as they are always taken in trade. A profit is added to other farm products before it is sold. The market is mostly at outside places as farmers save enough of their products to carry them from year to year. I raised hogs for 10 years, up to 1914, and fed wheat, corn, peas, alfalfa and potatoes. I found the potatoes worthless, either cooked or raw. In the hog raising business one should consider a great many factors to correctly compute the cost of pork, such as original investment, interest on it, loss of pigs at farrowing time, the potential profit from land used for pasture if devoted to other purposes, destruction of crops and garden from breechy hogs, loss of poultry devoured by hogs, loss of fat hogs in marketing, loss through market manipulation by packing houses, dockage on "sows," "stags," "piggy sows," "lame hogs," etc. I can not say what it will cost to produce pork under present conditions, but I can say the inducement of $15.50 per 100 pounds has no effect upon me. Crop conditions appear encouraging. E. C. HUNTON.

### Markets Too Distant.

NEPPEL, Grant County, Wash., Feb. 17.—Regarding marketing conditions here, everything is at a standstill. There are plenty of cattle, hogs and potatoes for sale. One farmer shipped several dressed hogs two weeks ago, and has not received a notice of receipt of shipment yet. He had to dispose of them because he could no longer feed them. Many farmers are in the same position and are losing many hogs at $16 live weight, f. o. b Spokane, as there is nothing but wheat or its products to fatten them now. There is no good market for beef, so we are not fattening any. This condition will throw a lot of grass-fattened stock on the market in June and July, when hard to handle. The market price of coal here is $11.25 per ton in bulk lump, and flour is $2.80 per 48-pound sack, sugar 10 cents per pound, bacon 45 to 50 cents per pound, corn meal $2 per 25-pound sack, cattle hides 8 cents, dry; eggs 40 cents a dozen. One of our drawbacks is a poor local market and a too-distant market for small-lot shipments. The cost of producing 100 pounds of pork under our method at present could not be produced for less than 16 cents per pound, with no one anxious to go into it at that with the exception of the alfalfa grower, as young hogs turned on green alfalfa will grow a good frame and bone for fall fattening with grain, and this is our best and cheapest method of producing pork at a reasonably safe profit. The Jerusalem artichoke is easily grown here, and has been found a great help in finishing in the fall for hog harvest and also reseed by leaving enough small artichokes in the ground to make a good stand the next year. Crop conditions have never been better, so far, and most of the farmers have started seeding and are doing their best to get in a large crop and are working every hour available, as help is scarce, and some wheat farmers are paying as high as $100 per month and board for spring seeding help. No one wants less than $75 and board, and expects the farmer's wife to pack the five-gallon cans of slop to the stock in the bargain when the farmer is absent. But the good wife has provided against this also by helping to pay taxes to build and maintain efficient insane asylums where often many of them have to go when their minds break down under the heavy strain, in a great many cases, but they are faithful to the last. Uncle Sam need not look for the slackers among the farmers' wives, for they are backing this war to a finish for the benefit of their offspring and liberty.

MARTIN PENHALLICK.

### Must Figure All Costs.

MEAD, Spokane County, Wash., Feb. 16.—The following prices are paid by the farmer for some of the things he has to sell in this section. Wheat, $1.85 per bushel, oats $58 per ton, potatoes $1.25 per hundred, dressed hogs 19 cents. We have to pay $6 per hundred pounds for cracked corn, oatmeal $7 per hundred, rice 12 cents per pound, beans 15 cents a pound; apples bought for $1 per box are retailed at $1.35. Poultry, eggs, meats and butter are usually sold on the local or Spokane market. Apples and potatoes are usually shipped east and south. Allowing interest on investment in land required, fences, houses and hogs, and wages for time attending to the raising and killing or shipment of animals, hogs can not be raised in this section for less than 19 cents per pound, live weight. I notice in the figures given by the hog men from our state college feed costs are all that are given, nothing being allowed for interest on investment, wages of attendance, etc. These figures might have had some influence on the farmer years ago, but they will not avail now. Statements such as given out within the last month are doing more harm than good, judging from remarks of our best posted men of this section. All indications are for a good yield of general crops the coming season. Winter wheat continues to improve and there is more moisture in the ground than for several years at this season. GEORGE HINGSTON.

### Stock Do Well.

MALAGA, Chelan County, Wash., Feb. 20.—We have had a very open winter so far and the ranchers have been able to run their stock on the alfalfa in the orchards, which has saved feed so most ranchers have plenty of hay to carry them through the rest of the winter, and stock in general are looking fine. There has been some sickness and a few losses among horses, which the veterinary claims is due to eating moldy feed in orchards. Ranchers are working long hours in pruning to overcome the shortage of help caused by so many of our young men being called to the front. The light snowfall in the mountains is causing some worry among the ranchers, who depend on the creeks for their supply of water for irrigation. The unusually rainy season we have had this winter will help a great deal, the ground being soaked to a depth of three to four feet. However, there is some snow now and the water will mostly soak in the ground, as there is very little frost. Owing to the mild winter there will be very little, if any, ice harvested, as ice is only five inches thick now.

MRS. F. E. KINGSBURY.

### Produce Artificial Silk.

An original method of producing artificial silk is claimed by a Japanese inventor. The chief ingredients are vegetable essences and mulberry tree bark.

NEW WORLD LIFE

A FAIR QUESTION

Why do people go to the STRONGEST bank in town to deposit their savings?

STRENGTH, PROTECTION, SECURITY—is the magnet that attracts them, just as it is attracting the insuring public in ever increasing numbers to

TODAY *versus* YESTERDAY

Little more than a decade ago, giant steam tractors represented the highest achievement in mechanical farm power—and Holt steamers then held a place in the lead. Today, the old steamers have been almost entirely displaced by gas tractors, but Holt still holds the lead. Thirty-five years' manufacturing experience, combined with correct design and choice of materials, have made the "Caterpillar" Tractor first in strength, power and endurance. This superiority results in longer tractor service, lower operating and upkeep costs, larger profits.

The "Caterpillar" Tractor's achievements on European battlefields and the satisfaction it has given thousands of farmers, freighters and contractors are your safest guide to the right choice.

# Stockmen Want Stable Market

## *Conference Seeks Same Treatment for Meat Industry as for Wheat*

The live stock men of the northwest feel that the live stock industry is entitled to the same consideration at the hands of the food administration that the wheat industry is, and they see an inequality as at present. To illustrate: The recent delegation of grainmen to Washington secured the same rate on wheat for a Pacific coast terminal as Chicago gets, but the minimum price of $14.50 a hundred for hogs in the northwest still stands, notwithstanding the fact that the Chicago minimum is $15.50.

The second annual convention of the Northwest Live Stock association at Spokane last week went on record in the following resolution as opposed to this regulation:

"Whereas, The United States food administration has conceded that the Pacific northwest is entitled to the same price on wheat as the Chicago market, therefore,

"Be it resolved, That we express our belief that the same principle should apply in fixing a minimum price for hogs in the Pacific northwest, and that it is the sense of this conference that the minimum price of $15.50 instead of $14.50 should be fixed in all live stock markets of the Pacific northwest.

"Be it further resolved. That a copy of these resolutions be sent to the senators and congressmen from the four northwestern states, to the agricultural press, Herbert Hoover and Joseph P. Cotton."

Other resolutions adopted by the conference were: Endorsement of the county agent movement, with a request to the authorities for the appointment of an agent for every county in the northwest during the war to speed up production; endorsement of the movement for the creation of courses of instruction in animal husbandry and especially in animal feeding in agricultural high schools and other institutions of learning where practicable; urging the stabilization of the live stock market so that producers may know what they may depend upon, no matter what line of production they are engaged in; urging the appointment by the government of more farmers and stockmen on the various commissions and subcommissions of the food administration, with a view to giving the agricultural industry a greater voice in carrying on the war production work; recommending that city authorities be lenient with those who desire to produce a pig or pigs inside the city limits; recommending the abolition of the mongrel and useless dog by the placing of a liberal tax on dogs; indorsing the work of the United States biological department as conducted in the northwest by E. F. Averill at Pendleton, Ore., in the destruction of predatory animals that carry rabies; approving the legislation now on some of the law books prohibiting the running at large of scrub sires, and urging the enactment of more and more rigid legislation of this kind; indorsing the work of the Pacific Northwest Fair association, and that of the live stock shows; pledging loyal and unstinted support of the stockmen to the government for the prosecution of the war to a successful end.

The conference was one of the most successful and largely attended of any like conference in the history of the northwest. Though there was criticism of a number of conditions, this criticism was directed with a view to improvement, and throughout the entire meeting a spirit of patriotism was manifest. This spirit was especially in evidence at the banquet on the closing evening, when more than 300 stockmen and their wives and guests ate a Hoover meal together and listened to an excellent program of music and addresses. The evening began with the singing of "The Star Spangled Banner" by all those present. The day was that of Washington's birthday, and the speakers, under the leadership of President E. H. Lindley of the University of Idaho, who acted as toastmaster, thrilled their listeners with patriotism. Among the speakers were: President E. O. Holland of Washington State college: Dr. E. A. Bryan, commissioner of education for Idaho; Charles Hebberd, Washington state food administrator; A. D. Dunn, Shorthorn breeder of Wapato; E. F. Benson, Washington state commissioner of agriculture; Frank Brown, breeder of Carlton, Ore.; F. E. Faville, publisher of Portland; James E. Poole, editor Shorthorn World.

Probably the strongest note of patriotism at the convention was that sounded by Dr. Bryan at the Friday afternoon session when he put to shame those who are wont to speak of the sacrifices America is making for the war. He declared that no American is yet doing anything worthy the word sacrifice except those young men who have offered themselves upon the altar of their country and have gone or are going to the battle front.

It is no sacrifice to do without pork chops and beef steak when there are plenty of wholesome and palatable foods to substitute for them, even though the latter may mean a little more expense, he said. Neither is it a sacrifice to buy Liberty bonds or war savings stamps, the most perfect investment securities in the world. Neither should we call it a sacrifice to give to the Red Cross or the Y. M. C. A. to aid those organizations in their great humanitarian work.

We mustn't let these little disputes of market prices and feed prices trouble us too much, said Dr. Bryan, when civilization is facing such a struggle. It isn't a question of whether we are going to get just what we think we ought to, for we are in an "irrepressible conflict" that must be won at whatever cost.

"Whatever the sacrifice may yet be, we must make it ,we must make it! We are all drafted in the service of civilization. You stockmen are drafted to perform your particular line of work, and you must stay in it to the end. Stay in it, win or lose. You are drafted for that business and you mustn't refuse the draft."

**Not Afraid of Minimum.**

That the hog raisers need not be afraid of the minimum price that has recently been established was the declaration of C. M. McAllister of Portland, who predicted that hogs would not get as low as the $14.50 minimum in the northwest during the war. Mr. McAllister argued in favor of community shipments of live stock where individual farmers could not make up full carloads. He said that in communities that had shipped cooperatively the number of live stock had not declined as it had in communities distant from markets where this method of shipment was not used. He said that America was going to have to furnish the foundation herds of Europe after the war, citing the enormous losses of live stock during the war. The text on which he preaches throughout the stock producing sections is: "Cooperation and Organization Mean Efficiency, and Efficiency Means Success."

A. D. Dunn of Wapato, Wash., told the stockmen that they could not succeed in the stock business if they did not like animals. "You must like live stock; you must love the outside; you must love nature," he said. He said the three essentials to successful live stock production were feed, breeding and care. He laid special emphasis on the care, declaring that there were not enough real husbandmen feeding the stock of the country; that feeding was a science and an art worthy of being made the leading feature of a branch of agricultural education in the high schools and colleges of the country

Of special interest to stockmen of the large district tributary to Spokane was the statement of J. B. Campbell of Spokane that the railroads had made marked reduction in the freight on carload lots of stock shipped to the yards in that city. He said that the Northern Pacific had made reductions of from $1 to $47 a car, or an average of $23 a car. The Milwaukee had made reductions of from $2 to $47 a car, or an average of $25 a car. The question was taken up with the Union Pacific and they promised to look into it. He said that this really extended the Spokane territory several hundreds of miles, reaching Montana and southern Idaho producing sections. These reductions, said Mr. Campbell, were not a discrimination against other points, but were the correction of discriminations that have existed against Spokane.

There were numerous other speakers with messages to the stockmen.

Charles Hebberd, food administrator for Washington, told of the urgent needs for efficient food production and conservation. H. W. Hochbaum, county agent leader for Idaho, told of the work of that department, laying special stress upon the value of the farm bureau that is now organized in the state of Idaho. He said there were 28 county bureaus in 40 counties and he is now working on the organization of others. R. A. Blanchard of Portland talked on the subject of live stock finance. E. R. Gentry, representing Armour & Co., packers, told of the work of the packers and the development of the packing and meat producing industries. W. T. McDonald of British Columbia, live stock commissioner for the province, told of the industry in Canada. Animal disease as a result of malnutrition was the subject of Dr. Otto Menig of Spokane. E. F. Benson, Washington state commissioner of agriculture, spoke of various matters during the conference. He called attention to the need of California stockmen for range or pasture and urged upon the farmers the possibility of aiding that state in saving its stock and at the same time receiving benefit from the transaction. He said thousands of cattle in California were in dire straits because of feed shortage caused by drouth. Dean E. J. Iddings of the college of agriculture of the University of Idaho discussed the prospects for the live stock man. His address is reported on another page of this issue of the Farmer. James E. Poole, editor of the Shorthorn World, spoke of general market conditions and prospects. He said present conditions were distinctly unsatisfactory and expressed regret that the food administration had taken the action in many regards that it did on the conservation of meat. He urged the need of effective live stock organizations and argued in favor of more farmers and stockmen and fewer lawyers at the national capital. He cited numerous instances of absurd ignorance of high government officials of the commonest facts affecting the production and marketing of live stock. William Hislop, for a number of years head of the animal husbandry department of the state college of Washington, spoke on sheep production in war time, giving many valuable suggestions for improvement in this branch of the industry. Professor C. L. Roadhouse of the University of California spoke on the live stock policy that should be followed in the future. He showed the enormous losses to Europe due to the war, indicating that America must step in and replenish the depleted herds. Professor George Severance of the department of agriculture of the state college of Washington spoke on the crops that should be produced by the live stock farmer. His address and those of others at the conference will be treated by the Farmer in other places from time to time. The convention was filled with information that every farmer should possess and as space permits this information will be given publicity.

## TO RELIEVE HORSES

### Stockmen Give to the Red Star

At the stockmen's dinner during the conference in Spokane last week E. E. Faville of Portland appealed to those present in behalf of the Red Star association, a nation-wide organization for the relief of horses that are called into the service of their country at the battle front. C. M. McAllister of Portland and George M. Wilson of Wilbur, Wash., passed the hat and the stockmen and their friends present dropped $208 into the fund. The Red Star is to the horse what the Red Cross is to the soldier, and, with hundreds of thousands of horses already in battle and hundreds of thousands more ready or being prepared for service, the need of the relief work is readily understood. Horse hospitals must be prepared behind the lines and equipment for rescue work provided and manned.

## Delay Combine Case

### Will Try Creamery Men in Fall

Formal hearing on the charges of illegal combination on the part of the large creamery companies of the northwest has been continued in United States circuit court at Boise, Idaho, until the September term of court.

Indictment in this case was returned by the federal grand jury on February 24, 1917. Under the indictment nearly a score of the large creamery concerns doing business in the west and northwest are charged with illegal combination for restraint of trade on the part of the small concern. Special Agent Leon Bone of the U. S. department of justice has charge of the case for the government, but wartime duties have prevented his preparation of the government's argument.

A few days ago Ex-Governor James H. Hawley, representing the Jensen Creamery company, one of the defendants in the case, requested postponement owing to his various duties in connection with the war savings stamp campaign for Idaho, and the United States attorney was willing because the government still wishes additional information.

President Jensen of one of the principal defendant companies, residing in Salt Lake City, is largely engaged in war service in that city in connection with the larger movements, and this was also given as one reason by Ex-Governor Hawley, attorney for the Jensen interests, for further postponement of the cases.

In the event of final hearing or trial the cases must come before United States Judge Dietrich at Boise.

**Early Day Buttons.**

The ancients lacked buttons—one wonders, indeed, how they got along without them—but evidently they possessed studs of modern pattern, such as those with which we fasten our cuffs and collors. And, in truth, they did even have a kind of button (though not sewn on), which fastened garments with a pin and hook exactly in the way our brooches and clasp pins operate.—Exchange.

# Camp Life Easy

## So Thinks Duroc Jersey Breeder

Robert Nelson, "the boy Duroc Jersey breeder," of North Yakima, Wash., is now one of Uncle Sam's soldiers. Robert began showing Durocs when a mere boy and in the few years he has been breeding had advanced to the front rank of red hog breeders, winning a large share of the ribbons at his home and other stock shows, in the strongest competition. With it all he has been modest and a good fellow with every one, making him one of the most popular breeders on the circuit. In a letter to J. M. Fruitts of Enterprise, Ore., he tells interestingly of his life in camp and exhibits the same sterling qualities that made him popular on the show circuit.

Robert says he enlisted about the first of the year and was first sent to Fort Lawton, Wash., then to the Presidio at San Francisco. He says, "I write to let you know my next show circuit will be in France." He is in battery C, second field artillery, and says: "This is certainly a lazy life compared with what I am used to, but a fellow has to make the best of it. I sometimes feel that it would be a real honor to get stuck in the guardhouse, so that one would be sure of 10 hours of hard labor." He adds that since he sold his hogs he has had hundreds of inquiries and realizes that he quit the business at the wrong time, "but there was no choice and, besides, a man owes something to the country that offers him all the opportunities that this great nation does."

Robert concludes: "If the war lasts until fall, as it undoubtedly will, you can bet there will be one soldier whose heart is with the stockmen on the circuit. If I am one of the lucky ones I will probably be showing again, but it is hard to tell when."

The letter was written from the army Y. M. C. A. rooms. Robert expressed an earnest desire to hear from his friends and I hope he (and all the soldier boys) may receive many and frequent letters. His address is Charles R. Nelson, battery C, second field artillery, San Francisco, Cal. H. A.

# Work With Soldiers

Fortified with the approval of President Wilson, the unqualified indorsement of Secretary of War Baker and the commendation of the national and state councils of defense the Salvation army is making an appeal for funds to finance its war work in France.

On the authority of Samuel Insull, chairman of the state council of defense of Illinois, it can be said that not a dollar of the found to be collected will be devoted to any other purpose than war work with the soldiers.

The Salvation Army has been in the war from the beginning. Its men are fighting in the trenches, manning ambulances, working in the hospitals, preaching in the hutments, attending the sick and dying and doing everything that is required of a soldier or a civilian in these perilous times. Military authorities tell us that the huts are well managed and that those who manage them do much to preserve the morale of the soldiers.

The Salvation Army women are as near the firing line as the military authorities will permit. These devoted women are big sisters to the men in the trenches. They cook, sew, knit, write letters to their friends in America and in many other American ways serve the boys at the front.

## Argentine Seed Distribution.

According to the review of the river Plate the central committee appointed by the national government to distribute seed to agriculturists in the form of advances for the forthcoming harvest, has recently presented its report to the ministry of agriculture. It appears that 10,500 applications were received, representing 1,902,700 acres and 88,309,000 pounds of seed in the following proportions: Buenos Aires, San Luis, Santiago del Estero and Pampa territory, 1,388,624 acres, granted 67,652,119 pounds of wheat and 1,812,402 pounds of linseed; Entre Rios, 420,076 acres, granted 12,332,532 pounds of wheat and 6,511,947 pounds of linseed. The average cost price to the committee of the seed advanced after taking into account railway freight, administration expenses, etc., and making reservation for contingencies and for interest at 8 per cent per annum up to March 31, 1918, works out at $4.47 per 220 pounds of wheat and $11.83 per 220 pounds of linseed, for Entre Rios. For Buenos Aires and the other districts above mentioned, the wheat works out at $7.73 and the linseed at $12.62 per 220 pounds.

# What The Washington Farmer Free Information Bureau Means to You

*It Can Assist You in Your Farming, Help You in Your Home, Tell You How Best to Serve Your Country, Post You on New Laws and Government Orders, Answer the Questions Every One Is Asking About.*

Summed up in a phrase, the object of The Washington Farmer Information Bureau at Washington, D. C., is to tell you, without charge, "Whatever You Want to Know."

The Information Bureau endeavors to answer questions in such a way that the answers are of the greatest practical value. It replies to your inquiry by personal letter. In addition, it sends you any books, pamphlets or documents published by the United States government bearing on the subject in which you are interested.

### FOR FARMERS.

Progressive farmers will appreciate without the need for discussion the value of an expert and comprehensive Washington information service at this time.

The great mass of new legislation, executive orders, licensing systems, and similar instances of government activity affecting farm products raise problems almost daily. Where these problems affect your business you will want, not a generalized idea of the nature of the laws and rulings, but specific and definite information, and perhaps printed copies of bills and executive orders. The Information Bureau stands ready to supply you with these things upon request whenevr they are avilable.

### FOR WOMEN.

The Information Bureau is in a position to give service of great value to women. Every household problem has been studied for years by the government. There are literally hundreds of publications available along this line, showing how to save time and labor and money in the home.

The next time some household problem comes up in your own home—some task that you think might be done better or more easily if you knew how—some annoyance that you think might be done away with—sit down and write to the Information Bureau about it. It will surprise you to find how many questions of this sort, from ants in the ice-box and moths in the clothes closet to the proper food for young children, the federal government has thoroughly worked out and solved.

### HEALTH PROBLEMS

There is much valuable information on health problems to be had in such great Washington offices as the United States Public Health Service. For example, the care of babies is a question which has been made the subject of a great amount of expert study, and facts and advice of great value to mothers have been published in simple form.

Every woman should write to the Information Bureau for government publications telling what the United States asks her to do in helping to win the war. The length of the struggle and the success of the American armies are largely dependent on the part played by American women.

And in general—we urge our women readers to make free use of this information service, asking it any question that they like. The increasingly important part played by women in business and politics makes a service such as this of greater value to them every day.

### NO CHARGE

There is no limit to the number of times you may call on the Information Bureau for service. It will always be willingly rendered, as promptly as possible.

There is no charge of any kind for this service. You need not be a subscriber to this paper to make use of it. The sole requirement is that you enclose a three-cent stamp with your query for postage on reply. All inquiries are held strictly confidential.

Certain classes of medical and legal questions can not in their nature be answered by the bureau. Any question along this line which is of such a nature that it can safely and usefully be answered by mail will be willingly attended to, but the bureau is careful not to supply data necessarily incomplete in cases which demand the personal services of a physician or a lawyer.

Enclose a three-cent stamp with each inquiry for return postage. Special pamphlets, bulletins, etc., announced for free distribution require only a two-cent stamp.

Address all inquiries to:

*WASHINGTON, D. C.*

# Sugar Beet Prizes

## Company Would Inspire Grower

With a view to giving the production of beets for sugar making purposes added stimulus, the Utah-Idaho Sugar company has announced a series of prizes to be given those who grow beets under contract this season. For the purposes of the contest the entire territory is to be divided into three districts, No. 1 comprising the state of Utah, No. 2 the state of Idaho and No. 3 the states of Washington, Oregon and Nevada. Those entering the contest can compete for one prize only, and each contestant must go into the class in which he belongs, according to his contracted and planted acreage:

To the growers in each district contracting, planting, growing and delivering beets from an area between one-half acre and .99 acre, inclusive, prizes in money amounting to $100 will be offered for the largest tonnage grown on a half acre, divided as follows: Largest tonnage, $50; second, $30; third, $20.

To the growers in each district contracting, planting, growing and delivering beets from an area between one acre and 1.99 acres, inclusive, prizes in money amounting to $150 will be offered for the largest tonnage grown on one acre, divided as follows: Largest tonnage, $75; second, $45; third, $30.

To the growers in each district contracting, planting, growing and delivering beets from an area between two acres and 2.99 acres, inclusive, prizes in money amounting to $200 will be offered for the largest tonnage grown on two acres, divided as follows: Largest tonnage, $100; second, $60; third, $40.

To the growers in each district contracting, planting, growing and delivering beets from an area between three acres and 3.99 acres, inclusive, prizes in money amounting to $250 will be offered for the largest tonnage grown on three acres, divided as follows: Largest tonnage, $125; second, $75; third, $50.

To the growers in each district contracting, planting, growing and delivering beets from an area between four acres and 4.99 acres, inclusive, prizes in money amounting to $300 will be offered for the largest tonnage grown on four acres, divided as follows: Largest tonnage, $150; second, $100; third, $50.

To the growers in each district contracting, planting, growing and delivering beets from an area between five acres and 9.99 acres, inclusive, prizes in money amounting to $350 will be offered for the largest tonnage grown on five acres, divided as follows: Largest tonnage, $175, second, $115; third, $60.

To the growers in each district contracting, planting, growing and delivering beets from an area between 10 acres and 19.99 acres, inclusive, prizes in money amounting to $400 will be offered for the largest tonnage grown on 10 acres, divided as follows: Largest tonnage, $250; second, $125, third, $75.

To the growers in each district contracting, planting, growing and delivering beets from an area between 20 acres and 29.99 acres, inclusive, prizes in money amounting to $500 will be offered for the largest tonnage grown on 20 acres, divided as follows: Largest tonnage, $250; second, $150; third, $100.

To the grower in each of the three districts delivering the largest tonnage of sugar beets, regardless of acreage, $500.

To the grower in each of the three districts harvesting the largest acreage, $500.

# To Handle Grain in Bulk

Palouse country farmers are preparing to handle a large part of the 1918 grain crop in bulk. Elevators are to be built at many places on the railroads of that county and grain bins and tanks will be built on the farms. Cashup, on the Spokane & Inland Empire railway, between Steptoe and Thornton, is to have an elevator with capacity for 100,000 bushels of grain. A corporation with $50,000 capital has been formed by Charles Hart, Frank Davis, W. J. Stillson, N. M. Crider and C. T. Lathen to build and operate this elevator.

The Farmers' Warehouse company of Mockonema, six miles west of Colfax, on the O.-W. R. & N. railroad, organized recently to build an elevator with a capacity for 100,000 bushels in addition to their sacked grain warehouse, which has capacity for 200,000 bushels. Mockonema handles an average of from 400,000 to 500,000 bushels of wheat annually.

Tekoa is to have a big grain elevator to be built and operated by the farmers' union and Palouse, Garfield, Pullman and Oakesdale are also considering the proposition of building bulk grain elevators. The high price of grain bags, which are now quoted at 24 cents, and the uncertainty of getting them is driving farmers into handling their grain in bulk.

J. E. N.

# Food Shortage Serious in the East

## *Hoover Declares Problem Goes Far Deeper Than Supplies to Allies*

Food Administrator Hoover declares in a statement just made that the situation is the most critical in this country's history and that in many of the large consuming areas reserve food stores are at the point of exhaustion.

Mr. Hoover's statement follows:

"In response to many inquiries I beg to say it is true that since the first of December we have fallen far behind our agreed food program with the allies. By the end of February we will be short 45,000,000 bushels in cereal products which we undertook as our share of their supplies. We will also be short of the amount of meat and pork products that we were to deliver. This deficiency is due solely to the railway congestion since that date. The railway directorate, since coming into control on January 1, has made efforts to find a remedy, but during January the weather was insuperable, and although progress has been made since February 5 the situation is the accumulation of three months' delay.

**Problem Has Deep Meaning.**

"The next 60 days will be the most critical period in our food history. The simple fact is that the problem goes far deeper than supplies to the allies. During the last three months we have fallen behind in movement of foodstuffs from the farms to the consuming and storage centers. Up to February 1 less than 50 per cent of the normal ratio of corn had been moved, less than 80 per cent of the oats, and less than 60 per cent of the potatoes. From November 1 to January 1 we were short in the usual movement of grains and grain products into the terminals alone by over 120,000 carloads—over 120,000,000 bushels—and this was further aggravated by similar shortage outside the terminals.

"Furthermore, this year we have the largest percentage of soft corn in many years, and though we have a record crop of corn, a considerable portion of the soft corn will be lost by spoiling unless it can be moved in the next 60 days to the drying terminals. The least amount of grain that must be loaded for the next 60 days is 8,000,000 bushels per day, and we have not yet attained that. Less than this will solve neither the allied nor our domestic situation.

**Potatoes Are Spoiling.**

"We had about 130,000 carloads of potatoes on November 1 which should have been moved from the principal producing centers, and up to February 1 we had moved about 28,000 carloads, while we should have moved over 50,000 in this period. The result is that potatoes are piled up spoiling in the producers' hands and the consuming centers have only been supplied by virtue of the summer gardens and other stores carried over from last year. There is a great deal of live stock which has been ready for the market for some time, but is still held in the farmers' hands through inability to secure transportation. These cattle are eating their heads off without increasing their meat value and are only adding to the costs of the farmer and consuming the grain.

**Many Unfortunate Effects.**

"The effect of this delayed movement has been many-fold:

"First—To jeopardize the safety of a great deal of the soft corn and perishables, such as potatoes.

"Second—The stricture in flow of distribution has entirely disturbed the price conditions in the country by virtually suspending the law of supply and demand. The margins between the farmer and the consumer in many commodities were never wider than they are today, because the cosuming trades are under-supplied and the farmers compete for transportation. Prices of the coarse grains have reached unheard of levels, while the limited transportation has diminished the farmers' returns.

"Third—The cost of grains for feeding live stock has so increased to the feeders of finished cattle that they face serious losses. The costs of the dairying industries have necessorily greatly increased.

**Living Off Reserves.**

"Fourth—Through the large consuming areas we have been living off reserves through the period of scant supplies. These reserves are in many sections approaching exhaustion.

"Fifth—We have been unable to transport to seaboard the necessary foodstuffs for the allies. This has not been due so much to the actual inability of the railways giving priority to foodstuffs for allied shipping as it has been to bringing products from the farms to the terminal markets, where it can be aggregated, prepared and purchased by the allies.

"The economic ramifications of this whole delay in the movement of the national harvest are almost countless and they present the most critical of situations, of which no solution exists but a continued expansion of the efforts of the railway administration in the movement of foodstuffs in every direction to the exclusion of much other commerce of the country. Considerable progress has been made in the last 10 days, but continued rises in the price of cereal commodities and the failure to secure sufficient surplus over immediate domestic consumption to feed the allies are evidence that there is still a deficiency in food cars and that they need be still further increased.

"Comparisons of the movement from day to day during the last few days, with movements of similar periods last year reflect the efforts being made by the railway directorate. We have, however, a long accumulation to be got over and to be got over within the next 60 days. The situation calls for every cooperation of the public—through the quick loading of cars, loading them to capacity and discharging them quickly—and in every way reducing the tax on the railways. Cooperation can be given by reduction in consumption of foodstuffs, by the consumption of home and local stores to the exclusion, so far as may be, of transported articles. If every interest cooperates we shall supply the allies and remedy the distribution of our abundant domestic supplies, for our farms are full of foodstuffs.

"No effort is being spared to move allied food as fast as it can be accumulated in the interior and today the railway directorate is arranging special trains to carry meat and packing house products from Chicago to load the waiting ships."

# Shorthorns Sell

## Good Breeding Stock Distributed

Eighty-eight head of purebred Shorthorn cattle were sold at the Spokane Union stockyards February 23 under the auspices of the Northwest Shorthorn Breeders' association. They brought a total of about $23,000, or an average of $262 a head. The highest price was paid for a bull that brought $750. The following were the consignors:

Consignors to the sale were: A. D. Dunn, Wapato; J. H. McCroskey & Son, Sprague; T. B. Gibson estate, Woodland, Cal.; Joe Turner, Meyers Falls; Day & Rothrock, company, Sprague; F. W. Downen, Pullman; University of Idaho; D. E. Pearson, Boyds; William Mulhall, Fenn, Idaho; W. H. Leonard, Pomeroy; M. S. Little, Fruitland; J. B. Campbell, Spokane; J. Houston McCroskey, Garfield; A. V. Bradrick, Palouse; W. D. Barkhuff, Colton; J. E. Nordby, Genesee, Idaho.

Some of the higher figure sales were:

Bull, Onward Lad, Day & Rothrock company, to J. W. Fox, Cedonia, Wash., $405.

Bull, Snow King, Gibson estate, to R. W. Rader, Walla Walla, $475.

Bull, Hercules Goods, Day & Rothrock company, to S. A. Whiteman, Reardan, $550.

Bull, Charity King, A. D. Dunn to M. S. Little, Fruitland, $500.

Bull, Scottish Secret, J. H. McCroskey & Son, to G. A. Hutchinson, Chesaw, $325.

Bull, Copperfield, William Mulhall, to B. F. Hurley, Davenport, $300.

Bull, Ringleader's Goods, Gibson estate to Theodore Bajou, Inchelium, Wash., $550.

Bull, Roan Gem, University of Idaho, to E J. Frantz, Thornton, $385.

Cow, Flora II., Day & Rothrock company, to Carl Grief, Uniontown, $380.

Cow, Ford, Day & Rothrock company, to O. L. Worthley, Hunters, $325.

Cow, May of Roselawn, Gibson estate, to Ike Dunn, Molson, $440.

Cow, Victor's Maid, Gibson estate, to Ira Sanger, Molson, $410.

Cow, College Goldie, Joe Turner, to J. W. Ford, Cedonia, $300.

Cow, May Elberg, Gibson estate, to Ira Sanger, Molson, $410.

A complete list of the sales will be given in next week's issue of the Farmer.

# What Are the Points of a Good Hog?

## *Idaho Man Describes Ideal Animals as He Sees Them*

The qualifications of a good sow and a good boar, as A. L. Wilson of Greenleaf, Idaho, one of the prominent breeders of the northwest, sees them, were outlined by Mr. Wilson before the recent swine breeders' convention in Idaho. After declaring that the first essential of success was to like the hog business, he outlined the characteristics of the first-class animal as his experience had taught them to him. Here are extracts from his address:

"Three of the most essential considerations in the order of their importance are one's own personal inclination, the money there is in the business and the effect on the community. No matter which breed or family in a breed is the best and most profitable, a man will be at a disadvantage in his work unless he is personally interested in it and goes into it with his whole heart and soul. Certainly the man who goes in a business expecting to make a profit and possibly a living from it is going to give it every possible attention.

"The beginner should bear in mind that no one breed or family of one breed has all of the good hogs. The best one in most any breed is better than the common ones in any other breed.

"The most profitable sows in my herd are two years old or over. That is, the matured sows that have raised pigs. No one could reasonably expect the gilt to produce as many and as good pigs as the matured sow for three important reasons. She must take care of her own maintenance, put on growth herself and furnish nourishment for the development of the unborn litter. The older sow has the decided advantage. This does not mean, nowever, that the tried sow will produce better than all gilts.

**The Characteristics.**

"The sow should be an outstanding individual with a neat, clean head of medium size, carrying ears that are not too large and thick, but in proportion to the size of the body, a short to medium nose and a docile, matronly expression. A big, heavy ear denotes poor feeding qualities. Her back should be evenly arched from the top line of her head to the root of her tail, but not too short and steep over the rump There should be plenty of spring of ribs and long, deep, even side lines. The legs should be straight and symmetrical, set well under the four corners of her body and of sufficient length to carry the udder well up off the ground. A large bone with lots of quality is one of the essentials. The coat of hair should be short, thick and as fine as possible. The feet, one of the most important considerations of the body, should be short and the toes close together instead of being spread

# French Farm Lands

## A Call for Men and for Capital

The 325,000 acres of wheat land retaken from Germany this year in northern France may be made to produce enough wheat next year for 1,000,000 men, according to the estimate of a mission appointed by the agricultural department of France, which has been examining the liberated territory. Both men and money are required and the mission asks for 1000 volunteer American farm hands and a loan from American capital

# Dairy Show Is On

The Western Dairy Products show is opening at Yakima today, February 28, with a promise of an excellent show. It is reported that nearly 200 exhibits are in place, and that numerous problems of the dairy industry from the production of feed to the disposition of the milk and butter will be discussed and illustrated. G. E. Frevert of Salt Lake City, manager of the show, has general supervision.

## Interested in Tractor School.

Interest in the tractor as a war necessity was never more marked than at the tractor school conducted in Spokane February 20 to 23 by the J. I. Case company. An average daily attendance of 200 was registered. Farmers and farmer boys from all parts of the Inland Empire were interested students. Some came distances as great as 300 miles and all went away feeling they had spent the four days in a highly profitable manner.

Tuition was free and all who desired were given careful instruction as to the operation of the tractor and coached as to the manner of obtaining the best results therefrom under various soil conditions. Among the instructors were E. S. Echlin of Chicago, who later went to Pullman to assist in tractor instruction there; G. H. McCray of Racine and W. S. Selbe of the Kokomo Electric company.

# Real Danger That Half of the World May Face Starvation Within Two Years

A statement by Charles Hebberd, United States food administrator for Washington state, before the second annual northwest live stock conference in Spokane last week, should be a stirring incentive to every farmer to put his very best thought and unflagging industry to the work of increased food production.

Mr. Hebberd is in almost daily communication with Mr. Hoover, and has made numerous trips to the national capital this winter. He speaks advisedly when he declares that there is real danger that half the world may face starvation in two years.

And his further grave statement, that the condition of the allies was worse than it ever had been on food and was relatively worse than that of the enemy, is borne out by information from other sources. Mr. Hoover says that for lack of transportation we are disappointing the allies, and Lord Northcliffe of Great Britain says the food situation in Germany and Austria is distinctly better than it was a year ago, owing to the capture of supplies in Rumania and the extension of cultivable areas throughout the lands of the central powers.

Since that utterance by Lord Northcliffe Germany seems to have further bettered her condition through the collapse of Russia and the negotiation of a treaty with the new Ukraine republic that has split off from old Russia.

The cry is for non-perishable foods—for wheat and other cereals, for meats (particularly pork products), for larger production of beet sugar, and for butter and other dairy products.

No farmer should hold back from fear of lack of transportation. The first duty is to grow the things we want to ship. The government must and will work out the railroad and ship problems.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Hard Luck? Be Ashamed to Complain, Whatever Your Lot!*

"If any one thinks he is getting the worst of it he should stop and think of the boys in the trenches." So says a reader in a letter to the editor.

Isn't that a good sentiment to carry around with us every waking hour! Hard luck? Why, man, you have food and shelter and freedom from danger. You have your friends and your family. You have peace! Across the ocean—think of millions of men actually killed and as many more maimed for life. Think of hundreds of thousands of widows and millions of orphans. Think of whole nations starving, whole nations with scarcely a child left. Think of days and weeks and months in the trenches, with cold, muddy clothing, wet feet, shells bursting everywhere. There are men in the trenches today who have not seen their families, or even heard from them, for three years. There are thousands of men in the trenches who know that back home, or in the exile of slavery, their wives or mothers or sisters or sweethearts are suffering their lives away. Hard luck in America? Let the blood of shame rush to the face of every man in America who complains.

## *Crop Adaptation to Environment*

Ecology is the science that treats of the homes of plants; why they grow under certain conditions and will not grow under others.

Why do the cacti grow in the deserts and kelp in the ocean?

Why is corn so well adapted to Illinois and Iowa, and wheat to Kansas, Nebraska and the Dakotas?

Why are apples profitable in some sections of Washington, Oregon and Idaho and not profitable in other sections of the same states?

These contrasts illustrate interesting points in regard to the one crop methods of many farmers and while, in general, they have been condemned, nevertheless, there are some reasons in their favor. We have thousands of fruit farmers who buy their hay, vegetables and meats. We have wheat farmers who buy their fruits, and stock growers who not only buy their meats, principally, but almost entirely live out of tin cans.

One of the reasons for this is in the fact that when a man devotes himself to one crop and specializes, by giving it his undivided attention, he can produce enough more, by that means, to buy the other things that he needs. If a land is specially adapted to that one crop he will probably be able to produce enough more to buy what he needs and have a profit, besides.

The German government recently issued a circular, urging a decrease in the raising of animals, because more than half the food value is lost in that way. Cattle raising is said to be the most wasteful form of feeding human beings. Grain comes next. Here is the population, per sqaure mile, which, under the extremes of economy, various crops will support:

Wheat, 1860; corn, 3025; legumes and peanuts, 2397; potatoes, 6000; peaches, 3500; apples, 8727; walnuts, 11,636; bananas, 41,890.

Cattle on a range, only 53 persons to the square mile.

It should be borne in mind that a family can not live on one article of food, such as wheat, corn, potatoes and fruits, but the question to be decided is whether the one-crop man can produce enough to pay the transportation charges and still have a balance to his credit.

## *Ask for Information You Want*

There is no other one place in the United States, if in the whole world, where so much information is obtainable as in Washington, D. C., our national capital. With this thought in mind, The Washington Farmer has established in that city a national information bureau, and throws it open for the use of its readers. The bureau will answer any inquiry that a reader makes if it is answerable—and all reasonable inquiries are answerable. In our issue of last week, February 21, on page 7, is a diagram showing the almost limitless branches of government at Washington to which the Farmer's information bureau has access. It will pay you to turn back to that issue and read the announcement over again, and then clip it out and lay it away for future reference.

Many bulletins and official and semi-official publications will be sent out by the bureau to those who ask for them from time to time, as they will be announced. Right now we want to call special attention to the cook book that is available. It is prepared specially with a view to the conservation of foods, and will prove a great help to the housewife who wants to do her bit by substituting healthful and palatable foods for the things that are so greatly needed abroad for the winning of the war. Use the coupon found on another page in this issue and get this book.

Remember, it costs you nothing to get information from the Washington Farmer's bureau at Washington, except postage in cases where it is so stated in coupons or special announcements. Feel free to use the bureau at any time. We are glad to be able to serve our readers in this way. And always bear this in mind:

Do not address your inquiry to the home office of the Farmer, but address it directly to The Washington Farmer Information Bureau, Washington, D. C.

Somebody has said that it does not come natural to most people to work. Possibly so, but the man to whom work is onerous is indeed to be pitied. Work with the hands, real physical toil for the production of something worth while, is the most noble thing this world possesses. To be able to work is one of the greatest blessings in human life.

## *What Others Say*

Nebraska Farmer: From many quarters the suggestion is coming that retired farmers must prepare to do what they can to help relieve the farm labor shortage.

Farmers' Review: A sensible and safe war program for farmers everywhere is to produce better than ever what they can produce best, because "We have a victory to win."

Hoard's Dairyman: The higher the producing capacity of the cow, the less does her milk cost. The intelligence with which she is fed also lowers the cost of milk production.

National Stockman and Farmer: On most farms the "women folks" have charge of the poultry, and this is the time to see that they have the means of doing their work easily and well.

## *Why Not Carry Out the Idea?*

An effort is being made to enlist young men in food production as well as in the army which will fight with guns for our liberties. Why not carry the army idea farther in this work?

A young man said to the writer not so long ago: "I suppose I ought to stay and farm, but it is hard. All my friends have gone." He was really patriotic in resisting his natural desire to go where the band played.

If we are to have an organized army of producers, why not establish ranks, promote the successful ones, give those deserving command over others as yet less skilful, reward hard work, give insignia of some sort.

Let all know that this sort of work is just as honorable and regarded as highly as that of the man with the gun. Carry it out and make it more apparent. We believe the result will be good.

This has been a great season for educational gatherings. Probably never before in the history of the northwest have there been so many gatherings of farmers for educational purposes. Not only at the state colleges, but all over—groups of stockmen, wheat growers, dairymen, orchardists and so on. The sentiment of the entire country is being fired for greater efficiency in line of production, and out of it all is coming, and coming rapidly, a new agriculture.

## *Washington Gleanings*

County Agriculturist H. E. Lattig of Douglas county has resigned. He will manage a large wheat ranch in Canada.

Thomas Drumheller, a stockman, has completed, near Ephrata, a sheep barn capable of housing about 10,000 animals.

Federal authorities will begin the improvement of the road over Blewett pass in the spring just as soon as weather conditions permit.

James A. Alexander of Chehalis is feeding his hogs cull potatoes as a means of crowding them for the market during the next few weeks.

J. C. Wilson, manager of the federal labor bureau at Yakima says with spring labor opening up he is assured of an ample supply to meet immediate needs.

During the 12 months ended January 31, the Horticultural Union in Yakima did a fruit business aggregating $1,001,080, according to the report of Chief Accountant John P. Evans.

Farm laborers in the region of Walla Walla, who used to get $30 to $35 a month and and board are being paid $2 a day, or $50 a month and the government employment service reports a shortage.

Organization of Grays Harbor county for food conservation has been completed by County Food Chairman Mrs. L. G. Humbarger and grocers, bakers, wholesalers and all other food dealers have been warned.

Apple growers and shippers in the Yakima valley face a shortage of box material for next season, and shoulld begin now to take serious concern about it, according to Fred Eberle, manager of the Horticultural Union.

B. F. Dickinson of Dayton was elected president of the Wenaha Wool Growers' association at the annual convention with S. V. Dain of Walla Walla, vice president; Elmer D. Bryson of Slater, secretary, and T. A. Van Hollebecke of Eureka, treasurer.

The Yakima Commercial club has been asked to support a request to Charles Hebberd, state food administrator, to have potatoes accepted as an official substitute for flour. Yakima has a surplus of about 1200 cars of potatoes.

The Conconully Cattle and Horse Raisers' association shipped in a carload of young bulls recently from Prineville, Ore. Six Durham Shorthorns and 12 Herefords were in the bunch, which were bought by farmers of Conconully and vicinity.

With a total capitalization of $120,000, the Royal Dairy Products company of Bellingham nas taken over the property of the Royal Dairy company, and has purchased the building known as the Bellingham Bay brewery, preparatory to the establishment of a milk condensery.

Director Thornber of the extension service of the Washington State college at Pullman has received notice from Washington to the effect that in purchasing the supply of nitrate being brought to this countr for sale at cost to the farmers by the government the county agents are to act as intermediaries.

# Trappers of the Ozarks

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

### CHAPTER I.

### Away to the Wild Country.

ONE September afternoon, in the year 1811, three persons were standing at the shady end of a big log-barn, and not far from a big, two-story farmhouse. The farm that the house and the barn belonged to lay 15 or 20 miles west of a little fur-trading post, perched on the right bank of the Mississippi, and known as St. Louis.

Of the three people in the shade of the barn, two were young men, very different in appearance, but both smooth-faced, and both bronzed to an honest brown by the sun. The third of the trio was a girl of 18 or 19 years, dressed in home-spun, but far from unpleasant to look at. So, at any rate, thought the older of the young men, who had deserted his work to talk to her.

In addition to these three human occupants of the barn-yard, there were three others, not human. One was a big dog, tawny and shaggy in appearance, and of dignified mien. Another was a little black-and-white-spotted dog, with a short tail. Just now the little dog was frisking and capering about the big one, which took no part in the playful antics, but tolerated them in a good-natured way. The remaining occupant, a little black mule, was at one side of the barn, trying hard to work an elusive ear of corn out between two logs.

While the older of the young men was giving all his attention to the girl, the other stood by a work-bench, busy with several pieces of wood. After vainly trying to get the pieces together without assistance, the worker turned to the girl, his sister, and said:

"Rachel I do wish you'd go back to the house! You had no business to come out here to talk to Ben. You know how busy we are. And you know Ben won't earn his salt—don't do a hand's turn—as long as you're here to bother 'im."

The girl's fair face flushed indignantly. "I didn't come out there to talk to you, did I, Benoni?"

"No, you didn't," promptly agreed the young man addressed. "You came out here to—"

"To bring the pigs some buttermilk"—she shook the empty bucket on her arm—"and—"

"And I stopped you and made you talk to me. But never mind Jodo. He doesn't mean any harm by what he says."

"No, I don't mean any harm. But I mean that Rachel ought to go back to her spinning, and let you come here and help me bolt this packsaddle together."

"All right Jodo. I'm going back to my spinning. But you know well enough that if Betsy was here you'd take time to talk to her."

Jodo's fair face flushed slightly. Like his sister, he had light hair and blue eyes. He would be 21 years old on his next birthday.

"Maybe I would. And it's well that she's not here. How are Ben and I ever to get started on our trapping trip into the Ozarks if we spend all our time talking to you girls? We haven't a minute to lose, it seems to me. We've got a long, hard tramp ahead of us, through a rough, wild country. And cold weather is likely to set in before we can reach our destination and get housed in our winter quarters."

"Oh, we'll arrive there in ample time, and have our cabin up in ample time—don't you fret, Jodo," remarked Ben.

"And you ought to be glad to talk to us girls while you can. Think how long—how dreadfully long it will be before you see us again—a whole half year and more. And so many things may happen to you while you're away out there in that wild region." A wistful look came into the girl's face, her voice trembled, and her lips seemed on the point of quivering.

Hastily Ben spoke up: "Oh, we'll come back all safe and sound! Don't you go to worrying about what will happen to us, little girl." He reached out and patted her arm reassuringly. "This is not my first trip into the wilderness—not the first by several, you must recollect."

"Yes, I know. But it will be your last, won't it, Benoni?" The girl raised her blue eyes appealingly to the dark ones of her stalwart admirer.

"If Jodo and I can make this trip pay as well as we have a right to hope for this will be my last trapping trip. From that time on my occupation will be farming, or some other civilized employment. You know I've already promised you that, Rachel. If I hadn't fully decided to swap my steel traps for a hoe and my rifle for a plow, after this coming winter, I'd now be on the headwaters of the Missouri with Manuel Lisa and his crew. And I'd have spent next winter in the Rocky mountains."

"I'm glad you didn't go with that wild, rollicking gang. I wouldn't want anybody that was anything to me to be out with such a crowd as those fellows have the reputation of being." The girl paused and half shuddered. "And your mother didn't want you to go, either."

For an hour or two Ben Armstrong and Jodo Henderson applied themselves to the packsaddle. While working they glanced often toward the little mule; so often, in fact, that one could easily have guessed that this particular packsaddle was being made for that particular mule.

The frame of the saddle completed, they fastened on two girts and then various straps and strings. That done, Ben went and caught the mule and led him around to the shady end of the barn. Now a saddle blanket was folded up and placed on the mule's back, the packsaddle placed on the blanket and the two girts fastened, one just behind the animal's fore legs and the other just in front of his hind legs. Two straps were also buckled, one around the mule's breast to keep the pack from slipping back and the other around his hams, to keep the pack from slipping forward.

One thing might have been noticed—the care with which Ben, the mule's owner, and Jodo kept away from the mule's heels.

"Spunky is safe enough as long as you stay close to his head," Ben remarked. "But his heels are like a gun—always loaded, and always in danger of going off. And they're worse than a gun in one respect—they're sure to go off sooner or later, whether you pull the trigger or not."

The prudence of giving the mule's heels plenty of room was soon demonstrated. The fastening of the flank girt had seemed to irritate him; and scarcely had the ham strap been buckled when his great ears dropped suddenly till they lay along his neck.

"Look out! Here she goes!" yelled Ben. Jodo ran backward.

Now Spunky's head went down and his heels began to fly. And for the next minute or two they kept flying out so fast that the eye could scarcely follow them. The only thing struck was a half-bushel basket, with a handle, which happened to be sitting on the ground close by. It went rolling till stopped by the rail fence, 30 yards away.

At length the flying heels stopped flying, and Spunky drew a long breath, snorted a satisfied snort, and stood quietly. Ben slapped him on the neck. "Feel better now, don't you, old fellow?"

When the packsaddle and all its straps and fastenings had been made satisfactory the saddle was taken off and hung up. Now Ben went to the farmhouse for another word with Rachel. He and the girl had much to talk over; for they made no secret of the fact that if the coming trip into the wilds proved even fairly profitable they would be married not later than the following fall. Jodo busied himself with other preparations for the journey.

Just before sunset Ben went home, leading the mule and taking the packsaddle. But after supper all the Henderson family walked over to the Armstrong house, barely a quarter of a mile away, and the two families remained together till bedtime.

The Armstrongs and the Hendersons had been neighbors in Kentucky. Also, they had migrated to this new country together in the fall of 1804—only a few months after President Jefferson had completed the Louisiana purchase.

Since his home had been near St. Louis, Ben had spent two winters as a student in a Kentucky college. And Jodo Henderson was starting on his trapping trip for the express purpose of earning money enough to enable him to spend at least a year in the same institution.

At this time the name Missouri had not yet been given to any division of country. The present state of Louisiana was known as the Territory of Orleans. And all the rest of the Louisiana purchase, extending to the British possessions on the north and to Mexico and the Pacific ocean on the west, was named in law the District of Louisiana. But it was commonly spoken of as upper Louisiana. Not even a territory as yet—it had not white people enough for that—it was attached to Indiana Territory, and had the same governor.

The hour was rather late when the Hendersons started home. Ben walked with them as far as their yard gate, where he and the girl stopped. The others went on to the house, but Jodo called back:

"Now, Rachel, don't you go to keeping Ben up late. He and I want to get an early start tomorrow morning. And we want to make a good day's travel, too. If I'd had my way, we'd have been on the road a week ago. Soon be time for wet, cold weather."

Ben said that he would be out of bed as early as his friend next morning, and both were up at the first breaking of day. Before sunrise the packsaddle had been girted on Spunky—not without a kicking spell—and bags of flour and meal, together with such other things the young trappers would take with them, were being packed on the saddle and strapped fast. The last things to be put on were two medium-sized washpots, joined by a piece of rawhide, which hung bottoms up.

Now came the leave-taking at their homes, and a little later Ben and Jodo were on the way. Rachel and Betsey, Ben's 17-

(Continued on the following page.)

**The Indians Discover the Hunters.**

**Ben and Jodo have discovered signs of Indians in the wild region, but are unaware that the savages are spying upon them seeking a good chance to capture them. One day while out visiting their traps they learn that the red men know of their presence and are after them. A cruel faced Osage stealthily creeps upon them, peering cautiously through the underbrush as they work over a trap. He signals his fellows and, without warning, they part the brush and rush upon the frightened boys. Thus begins their warfare agnist the cunning reds, a warfare of wits and physical prowess that does not end until the lads finish their hunting trip and are well out of the Osage country on their homeward journey. The incidents of this warfare fill chapter after chapter of this story.**

**Troubles Never Come One at a Time.**

**If Indians had been the only menace to the young hunters, it would have been less of a problem for the lads to protect themselves. But troubles never come singly. Merciless Indians, terrible cold and hungry wolf packs combine against them. It was during one of their hard races with pursuing savages that Ben and Jodo outwitted and outfought a horde of ravenous wolves. The story of the blood-chilling adventure is told in chapter 15 of "Trappers of the Ozarks."**

**With snow on the ground and in the air, an icy wind blowing, a band of warriors in pursuit but left well behind, the boys discover that they are being trailed by a pack of howling, famished wolves. For dear life they race until they suddenly burst out of the timber into a little clearing where a settler's home had been destroyed by the Indians. Nothing but a huge log fence about the clearing and the old stone fireplace and chimney remain. The fireplace is the salvation of the hunter lads. Quickly they start a roaring fire, and turn to meet the wolves with fire brands as their weapons. All that night and all next day and night the battle is waged, broken into by the arrival of the Indians, who have discovered the boys through the sight of the smoke from their fire. It is no longer merely a problem of fighting wolves and zero weather. The old menace of Chief Snapping Turtle and his horde of Osage savages must be met again, too.**

# Trappers of the Ozarks

.....BY.....
LEWIS B. MILLER

(Continued from the preceding page.)

year-old sister, were with them—were going to walk with them as far as the end of the lane.

Ben and Rachel were in front, the young man leading the pack mule. Behind Spunky came Jodo and Betsy, good friends of life-long standing. Jodo was armed with a far-reaching switch—farther reaching than the range of those vicious heels. And close behind the latter couple followed Bose, Ben's big dog, and Tinker, Jodo's little dog. The dogs would accompany the trappers.

At the end of the lane the forest began, and there the whole party halted.

"Now you boys do be careful of yourselves, away out there in that wild country," pleaded Rachel. "You'll be in the hunting grounds of the Osages, you know, and they resent that. No telling what they'd do to you if they catch you there."

"And beware of all Indians," urged Betsy. "Any of them would be likely to murder you and rob you, out there where nobody ever would know. You recollect what that man said—the man who told us of the Pottawatomies' raid on the Boone's Lick settlement, when several white men were killed. He mentioned that the Pottawatomies had been down in the Osages' country, hunting, and fighting the Osages. And they're worse than the Osages, the Pottawatomies are. The Osages do pretend to be friendly to the whites, but the Pottawatomies don't. They'd as soon kill you as look at you."

"Risk us to keep a sharp lookout for all redskins and all kinds of redskins," Ben answered lightly. "This is not the first time I've hunted and trapped in the Ozarks, you must remember."

Rachel replied: "We know that Benoni. But we're afraid you'll grow careless. Please take good care of yourself and of Jodo too. This is the first time Jodo has been far from home. We're all depending on you to see that that no harm comes to him."

"You know I'll do my best, Rachel."

Betsy's dark eyes had a twinkle of mischief in them as she said:

"And, Jodo, please take good care of Benoni, won't you? This is his first venture into the wild country without a Frenchman or some experienced woodsman to look after him. We're all depending on you to see that no harm happens to him."

Jodo glanced at Ben's stalwart figure and then grinned. "Betsy, I'll guard 'im. I'll watch over 'im like a hen watches over her little chicken."

At this everybody laughed. But there were soon tearful good-bys; for all knew how long it might be, and how many things might befall them, ere they met again. To Ben, Rachel held out a little vial, tightly corked, and wrapped around many times with a buckskin string.

"Here's what I promised you, to put your message in. There's some paper in it to write on, and a piece of pencil to write with. Be sure to tie the string hard and fast, to keep brush from raking it off. And be sure to cork the vial tightly, so that water won't get into it if Spunky has to swim any rivers."

Ben received the vial, examined it carefully, and dropped it into his ammunition bag. "All right, little girl! You shall have a message from us if we send any messenger back. In fact, if we can find anything to feed him through the winter I almost know that we'll keep him out there till spring. So you mustn't be disappointed if he doesn't come."

"Anyhow, he'll start before you do, and he's likely to get home before you do. So you'll send a message by him when he does come, won't you, Benoni?"

"You shall certainly have your message if there's any way to send it."

For a few minutes longer the four stood talking together, saying the last words they would be able to speak for many a day. Then the two parties separated, the young trappers moving on into the forest, and their sisters turning their faces homeward. But at the mouth of the lane the girls stopped and stood gazing. When the trapping party was about to disappear, Rachel waved her handkerchief and cried:

"Goodby, Benoni—and Jodo! You won't forget the message?"

Ben took off his cap and waved it. "Goodby, Rachel—and Betsey! We won't forget the message—we couldn't forget the message!"

The two parties kept waving to each other till the winding of the woods road hid each from the other's view. Then the girls went slowly back through the lane, while their brothers tramped briskly on into the forest.

In front, and still leading the pack-mule, strode Ben, slightly more than six feet tall, dark-haired and olive-skinned, 24 years old, and very strong-looking. Behind the mule followed Jodo, with his cautiously-long switch. For Spunky greatly preferred a civilized farm to the uncivilized wilderness. Though a well-seasoned farm boy, toughened by plenty of hard work, Jodo was not so tall, and he looked a mere stripling compared with his stalwart friend in the lead.

In dress and accoutrements they were much alike. For Jodo had fitted himself out in imitation of his older and more experienced companion. Each wore a 'coonskin cap, with the ringed tail hanging down behind, and coarse, homemade boots. And each wore buckskin pantaloons and a buckskin hunting shirt, so-called—coat would describe it better—confined at the waist by a belt.

On his shoulder each of them carried a long, flintlock rifle, with much brass on the stock. Ben's rifle had been used, but Jodo's had the polish and brightness of newness. On one side of each hung an ammunition bag, and on the other a thin-scraped powder horn. In his belt each carried a flintlock pistol, a hunting knife, in a sheath, and a light hatchet, or tomahawk. Both the knife and the hatchet, while useful for many purposes in the woods, could be employed as weapons in a hand-to-hand fight with either beast of prey or man.

Till noon the two young travelers tramped ahead steadily, one at each end of the mule. Sometimes the road led by a log house, set at one corner of a little, rail-fenced field, thickly studded over with girdled, deadened trees. The two dogs either trotted along by their masters, or busied themselves with hunting through the woods by the road. Bose had been on two trapping trips before, but Tinker was going for the first time. The further the travelers tramped, the fewer became the houses, and the dimmer grew the woods road they were following.

Noontime came and they stopped for dinner by a spring at the foot of a hill, in sight of a settler's cabin. After removing Spunky's pack, watering him, and turning him loose, with a rope on, to graze, they themselves sat down by the spring to eat. While the two were at dinner, a man came from the cabin for a bucket of water, and stopped to chat.

"And so you're bound for the Ozarks, or Black mountains as some still call 'em, for a winter's trappin', eh?" the settler remarked, after hearing how Ben and Jodo came to be there. "And what use do you expect to make of this pair of pots? Cook your meat in 'em? or turn 'em bottom up and set 'em for traps?"

Ben laughed. "Neither. On my last trip I discovered a little salt spring up in that country. While hunting and trapping we expect to be boiling down some salt water. We hope to bring back at least 20 bushels of good salt to sell."

"Salt's in bully good demand just now. Wouldn't mind to have a bushel or two myself. But how are you figurin' on gettin' it home?" he glanced toward the mule. "Expect little long-ears to pack it?"

Ben laughed again. "Hardly. Not any more than he can lick up. We're going out by land, but we expect to come home by water. And we hope to load one good-sized canoe with salt."

"Oh, I see. But what will you do with your mule? Leave 'im out there to rustle for 'imself?"

"Not Spunky. We couldn't leave the little rascal if we tried. He makes a bee-line for home as soon as he's turned loose. The danger is that he'll get loose and come home before we're ready for him to come.

"We expect to spend the coming winter along the Big Niangua river."

"So I see. That would be a fine trip, some ways. I'm fond of huntin' and trappin'; but that's a long ways from home, and there's ruther too many redskins roamin' that neck of the woods to suit this chap. My scalp's worth more to me than all the coonskins and otter skins and beaver skins in Upper Loozanny. Everybody that's been among 'em says the Indians is gettin' sulky at the way the white settlers keep movin' in. They're liable to start to killin' and scalpin' any day, the reds air."

"Such a thing is possible, of course, but we'll hope it won't come to pass. I've heard my father and old Mr. Boone—Daniel Boone—tell too much about the Indian wars back in Kentucky. I hope this country may be spared such experiences."

For a good while longer the settler talked. Then he dipped up a bucket of water from the spring and returned to his cabin. Having rested long enough, the two travelers caught Spunky, lifted his pack on and fastened it, and were soon on the march again.

On they went, tramping, tramping, the pack-mule between them. Their backs were to civilization, and their faces were set steadfastly toward the wilderness.

**A Thrilling Incident From Chapter Fourteen.**

**For once in their score of hair-raising experiences with the savages of the Ozark region, the hunter lads have the advantage and make use of it. Driven to a cave high up in a cliff and pursued to the retreat by the blood-thirsty red men they baffle all attempts at their capture. Discovering the hunters' hiding place, the Indians assemble at the base of the cliff and prepare to ascend by means of a buffalo rope. Members of the marauding party climb to the top of the cliff and let the rope down past the mouth of the cave and begin drawing one of their members up.**

**"I can stop that," whispered Ben, as he jerked out his hunting knife and stood waiting. The moment he caught sight of the Indian's black head, he leaned forward and drew his knife across the tightly stretched rope.**

**Discovering the knife, the Osage uttered a fierce war whoop. The Indians above and those below began to yell. But it was to no purpose. The buffalo hide parted under the keen-edged knife and the warrior dropped straight down, clutching at the rocky edge as he fell.**

## CHAPTER II.

### Threading a Wilderness Trail.

At the time when Benoni Armstrong and Jodo Henderson started out on their trapping trip, the region called Upper Louisiana was settled mainly along and near the west bank of the Mississippi river. With the exception of these settlements, and of a few very scattering settlements strung for a good distance up the Missouri, the whole half of a continent, from the Mississippi to the Pacific ocean, was one mighty wilderness, roamed over by savages. Twice only had explorers penetrated it, and its geography was little known. But the trapper and the Indian trader had ventured into it often. The region toward which Ben and Jodo had started, though only 200 or 250 miles distant, was one of the wildest and least known parts of that great wilderness.

Hour after hour the two young travelers tramped away from the settlements and on into the wilds. Ben led the way, followed by Spunky with his pack, and Spunky by Jodo with his switch. Not a little pulling and prodding were necessary to get the reluctant brute away from home.

Toward the southwest they were traveling. Sometimes they were in thick woods and sometimes in scattering woods; and now and then they crossed little patches of prairie. But there were always hills and vales, and deep ravines with spring-fed streams, and a never-ending, ever-changing variety of striking scenery. They had to choose every step of their way; but Ben—this was his fourth trapping trip—pushed ahead with all the skill and certainty of an old-time woodsman.

When the sun was low, Jodo took the rope and led the mule, while his companion went ahead in quest of game for their supper and breakfast. There was not a bite of meat among their supplies in the pack. Their rifles would have to furnish that.

Scarcely was the hunter out of sight among the scattering woods when the report of his gun startled the silence. The noisy flapping of big wings could be heard, and through an opening between trees Jodo saw a flock of wild turkeys running and taking to flight. A few minutes later he came upon Ben, who was standing near a little spring at the foot of a hill, reloading his rifle. A fat turkey gobbler lay less than a yard from the spring.

"Ehot 'im while he was drinking, didn't you?"

Ben nodded. "Nice little spring, too, this is. We might as well camp here as anywhere, I guess."

Jodo glanced around. "Yes, this is all right for a camping-place. Plenty of water and grass for Spunky, and plenty of wood and water for us."

The pack-saddle was soon ungirted and lifted from the mule's back. Then Spunky's fore feet were hobbled with a piece of rawhide, a not very large bell from the pack was buckled on his neck, the leading-rope was taken off, and he was turned loose to eat and drink to his heart's content.

While Ben was looking after the mule, Jodo gathered wood for their camp-fire. Then, taking a tinder-box from his ammunition-bag, with flint and steel he struck sparks into some tinder, and soon had a fire burning not many yards from the spring. In a little while the two travelers were sitting by their fire, each with a stick in his hand, broiling a piece of the turkey. Their long day of tramping had given them sharp appetites.

Soon darkness had settled down upon camp-fire and campers.

The two were soon lying in their blankets. The woods were noisy with the hooting and screeching of owls, with the howling of wolves, and with the cries of other night-flying birds and of other night-prowling animals. The dogs sometimes sprang up and

# Prospects for the Live Stock Man

## *Present Situation Points to Successful Business in Line of Work That Is of Real Service*

By E. J. IDDINGS

This survey of live stock prospects by Dean Iddings covers his presentation of the subject before the Northwest Live Stock conference at Spokane last week.

In discussing this question with you, one of very great importance to the live stock industry of the northwest, I shall present views which I have had for some time, modified in some respects and reenforced in many others after attendance for two days at the recent notable gathering at Salt Lake, the annual meeting of the American National Live Stock association.

There are two important things to attain at the most serious stage of the world's history in connection with the live stock man's business. In the first place, there can be no question as to his patriotism and his desire to meet the needs of the nation in the way of food production. The great need, therefore, is to bend and divert every effort in such directions as will enable every community to yield the greatest possible amount of animal products.

> The farmers and stockmen expect only the same rule as is applied in the shipbuilding industry, to the munition factory and to any other American manufacturing enterprise directly allied with our efforts in the war.

This is clearly our first duty, but, in addition to this we must, as it were, "keep the home fires burning." After the war the flocks and herds of continental Europe and the British isles will need to be reorganized and largely replenished. We need protect, therefore, not only the future of our own industry here in America, but in addition to prepare to meet the foreign after-war demand. We must keep the nucleus of our flocks and herds in such shape that we can present the right front when once peace comes.

It is estimated, for instance, that 54,000,000 head of sheep, 38,000,000 head of cattle and 32,000,000 head of hogs have been lost in the old world as a result of devastation of the war.

To replenish this loss would take practically all the sheep, nearly all the beef cattle and almost one half of all the hogs of America.

The information that comes to us through the food administration is that the bread line and meat famine may come to England and France almost any day. It is, therefore, clear that the situation is serious and that the live stock man's assistance is one of the vital needs of the present day.

> With the labor problem becoming more serious there is a disposition to use horses even more largely than in times of peace.

It is only right at this particular time to make clear one point in regard to the live stock industry: A point where there has been considerable confusion. The federal government should not expect the live stock men to turn over their products for national use at a loss any more than the same thing is expected of the many different lines of manufacturing industries. The farmers and stockmen expect, therefore, only the same rule as is applied in the shipbuilding industry, to the munition factory and to any other American manufacturing enterprise directly allied with our effort in the war. He expects and should have a reasonable profit as the result of his skill and effort, and also has the right to expect as stable a market as is possible to obtain by the direct action and direct intervention of the food administration.

So far the food administration has accomplished several things, some of them of direct benefit to the stockmen.

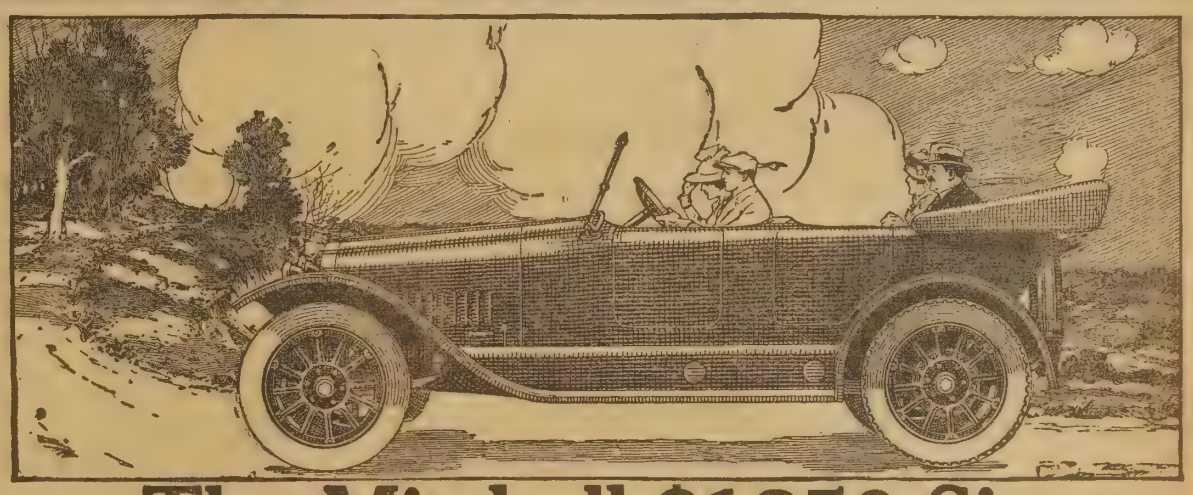
First, the large packing plants have been put under federal license and federal control.

> It is estimated, for instance, that 54,000,000 head of sheep, 38,000,000 head of cattle and 32,000,000 head of hogs have been lost in the old world as a result of devastation of the war. To replenish this loss would take practically all the sheep, nearly all the beef cattle and about two-thirds of all the hogs of America.

Second, there has been a minimum price set at Chicago for hogs.

Third, there has been adopted and put into operation a system of zones from which live stock are to be shipped, thus stabilizing the market and making more equal each day the numbers of live stock that appear upon the market.

Fourth, the first effort in the way of control of certain feed prices has been taken, in setting prices for millstuffs.



These actions are real accomplishments, and have been of encouragement and of direct and substantial benefit to the live stock industry.

In view of the needs of the nation and of such action as has already been taken in connection with the live stock industry, I will therefore discuss in a rather brief way the situation as I see it in respect to the production of horses, dairy cattle, beef cattle, sheep and swine.

Horses—There are two needs for horses. First, for the army, and second, for the farm. The federal government now is buying horses freely for artillery purposes, requiring a medium weight, strongly built and active type of horse, such as is produced on many of the farms of the west. This demand takes a considerable number of horses, and is acting as a direct stimulus in connection with the market situation.

The need for horses on the farm is one that will not decrease during the period of the war. The demand last spring was, in many sections, far greater than the supply, and horses of some age and of inferior conformation frequently sold during the early spring last year for prices such as are ordinarily paid for perfectly sound horses. With the labor problem becoming more serious, there is a disposition to use horses even more largely than in times of peace, and this fact, in connection with the need for making every acre produce the maximum, is certain to maintain during the period of the war a strong demand for good farm horses. After the war is once ended the horse supplies of Europe, now in many sections almost entirely exhausted, will

# The Mitchell $1250 Six

## 120-Inch Wheelbase—A Powerful Motor

## Nothing Like It in the Fine-Car Field Today

THIS is to men who want a car of the highest grade and standards — built to last a lifetime. A big roomy, powerful and luxurious five-passenger car. And who want it at minimum price.

You need not go back to four-cylinder cars to get a great car at $1250 today. You need not be stinted in room or power. You need sacrifice no beauty, no sturdiness, no comfort, no endurance.

The Mitchell — to meet the ideas of the times — is building a wonderful Light Six. It has a 120-inch wheelbase, a 40-horsepower motor. It has all the over-strength, all the beauty, and nearly all the extra features of the $1525 Mitchell. It has shock-absorbing springs, reversible headlights, a power tire pump, a dashboard engine primer.

Yet it undersells any other car of like size and power and class.

### The Secret Is This

This matchless Light Six is our latest example of Mitchell factory efficiency. It is built in enormous quantities. It is built complete — chassis and body — in a model efficiency factory. In a plant built and equipped under famous experts to produce this one type economically.

It is the result of eliminating waste. Of cutting labor cost in two. Of doubling production without building additions.

It is also the result of unusual standards. Of maximum margins of safety. Of combining all the best attractions in a single car. It also shows — by its superb luxury and beauty — how much more we can give you by building our own bodies.

### Please Compare It

Compare this new Mitchell with other $1250 cars. Compare the size and room and motor. Compare the finish and equipment. Note how many things you find which other cars omit.

When you buy a fine car — a car to keep — this is the type you want. Here it is in superlative quality, at a price below any other car of like size and class and power.

This is the greatest thing that Mitchell ever did. Go see it. If you don't know our nearest dealer ask us for his name.

# Dairy Questions

## Are Answered by A. B. Nystrom

To the Editor: Please let me know through your valuable paper: First—Is block salt mixed with sulphur good for milch cows? Second—What root crop is the best for milch cows? H. P. Libby, Mont.

Ans.: Sulphur is mixed with the salt so that the latter will not dissolve so fast when exposed to rain. The cow gets all the sulphur she needs in the usual ration, but what she gets with the salt in the way you mention does no harm whatever.

There is no best root crop for all conditions. One root crop will be best in the one case and one in another. It depends largely upon the conditions under which the crop is grown and fed. Since all root crops are from 80 to 90 per cent water it is plain to be seen that these feeds are used more for the succulent properties than for the nutritive value. Root crops have a beneficial effect upon digestion. The best rule to follow is to grow that crop that will give you the largest yield of palatable roots at the lowest cost. When feeding roots, feed a good quality of hay and the proper grain mixture and good results will be obtained from any kind of roots that are palatable.

To the Editor: As I am planning on putting up a silo this season, I would like to have a little advice from people who have had experience with silos. Will a round, wooden hoop silo, with the hoops three feet apart and an iron hoop between each of the wooden hoops and two courses of six-inch shiplap with weather proof building paper between the shiplap, be air tight enough to keep the silage from spoiling? After the silage is put in the silo, how long will it have to be there before it can be fed, and how long will it keep in the silo? Will green wheat that has a lot of Jim Hill mustard in it make good silage when cut green? Which is the best way to use green rye for silage? How many tons of ready-made silage will a silo hold which is about 10 feet in diameter and 18 feet high?

R. L. B.

Odessa, Wash.

Ans: It depends upon the strength of the hoops and the quality of the wall material. If iron hoops are used, you would need for a 10-foot silo, a 5-8-inch hoop. Place the first one six inches from the bottom of the staves. The next one two feet above and then increase the distance between each successive hoop until you reach the top. If wooden hoops are used make them of straight grained fir or white pine. Plane them down to about three inches wide and 3-8 inch thick. It takes at least four-ply and preferably five-ply of this material to make a strong hoop and these should be placed two feet apart on the silo. Two layers of 1x6 shiplap or even 1x6 common, free from knot holes will do very well for the sides. Building paper is desirable, but not necessary between the layers. Silos built according to this plan will last 20 to 25 years, and preserve excellent silage every year.

Silage may be fed just as soon as the filling is finished. Many dairymen prevent the usual loss from moldy silage on top by beginning feeding while the fodder is still green—before any fermentation has taken place. While fermentation is going on the cows do not relish the feed as well as later, but no injurious effects will result from using the feed at this stage, and there will be no waste. If the air is kept away from the silage it will remain in good condition for many years. The writer has seen silage seven years old that gave as good results as fresh silage.

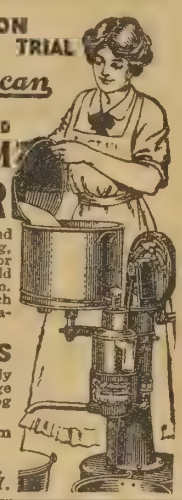
Silage can be made out of almost any green plant that a cow will eat in its natural state, and sometimes from crops that cows do not relish unless it is made into silage. A mixture of wheat and mustard is not as good as wheat alone; still you will get considerably more feeding value from the silage made from this mixture than from the same mixture fed green or as hay.

Rye should be cut for silage when the grain is in the soft dough stage. Be sure to run it through a cutter, pack it well in the silo and add plenty of water. Rye mixed with a legume such as vetch makes a better silage than rye alone.

A silo 10 feet in diameter and 18 feet high will hold approximately 28 tons. I would advise you to make your silo at least 20 feet and preferably 24 feet high.

# Cream Separator

## What It Does for the Dairyman



**By R. A. Lamson, Dairy Department, Purdue University.**

No progressive farmer who sells or churns cream can afford to be without a centrifugal cream separator. But a short time ago it was impractical for the farmer with only three or four cows to operate a separator. Now, however, most separator companies make machines of all sizes, some as low in capacity as 100 pounds of milk per hour, so that even the small dairyman can now find a separator of proper size for his herd.

The advantages of a separator to the dairyman are many. In the first place, more of the valuable butterfat can be extracted from milk by this means than by the so-called gravity method of creaming. A table taken from Indiana bulletin No. 116 shows the loss from these methods as compared with the hand separator with from one to 20 cows.

The table, which assumes that an average cow will give 6000 pounds of milk per year, and that the butterfat is worth 37 1-2 cents per pound (the average of Elgin prices from August 25, 1916, to August 26, 1917) shows that the hand separator effects a saving of from $5.46 to $9.87 per cow per year. These facts, based on accurate experi-

ments under practical conditions, should convince the dairyman of the necessity of a cream separator on his farm.

The second great advantage of the hand separator is in the quality of the cream and skimmilk. Cream cooled at once after separation and marketed three times a week can be sold at a premium. The creamery industry is realizing that quality of cream is fundamental to quality of the resulting butter. Therefore clean, sweet cream will sell at a higher price than cream of poor quality. It pays the dairyman to work for this extra price. The hand separator finishes its work within a half hour, while the water dilution system requires 12 hours, the deep setting system 24 hours and the shallow pan system 36 hours to obtain the cream, and then much of it is lost. Because of this long time, gravity cream for marketing or churning and gravity skimmilk for feeding to calves or pigs is in very poor condition. When fresh milk is run through a hand separator the skimmilk is in the best possible condition to feed, and good results can be obtained by feeding it to chickens, calves and pigs, as will be seen from a later article on this subject.

A third advantage lies in the fact that the richness of the cream can be controlled. All separators have a cream regulating screw by which the percentage of fat in the cream can be raised or lowered. The creamery man wants a 35 to 45 per cent cream, as it makes better butter, and the dairyman will get more for his cream, usually, if it tests within these limits; in fact, some creameries cut the price per pound of fat when the test is too low.

A fourth advantage is in the clarifying action of the separator which cleans most of the dirt and slime from the milk during the skimming process. This is of great importance from the sanitary viewpoint, but it has a meaning in dollars and cents in the improved quality of the cream and the butter made from it. Furthermore, the centrifugal separator does not expose the milk and cream to the air, dirt and bacteria, as do the open-top, gravity pans and cans.

## Veterinary

Dr. S. B. Nelson

**Stifle Hurt**—I have a cow that has had her stifle hurt for the past two months. What is a good liniment?
W. P.
Stevensville, Mont.

A very good liniment which is frequently used is composed of soap liniment, six ounces; tincture of iodine, six ounces and tincture of cantharides, four ounces. Apply morning and evening.

**Cow Loses Hair**—I have a cow that is losing hair around the hips and neck. I thought it might be mange, but there seems to be a few short hairs growing again. H. J. S.
Oroville, Wash.

Apply the following salve or mixture very lightly to the part where the hair is off, going into the part covered with the hair slightly. Take a pound of flower of sulphur. Then add kerosene or coal oil to it until it is a semi-liquid soup. Now take a small paint brush and paint this without any great friction on the affected parts. I think that one treatment or two or three, four or five days apart will be of value.

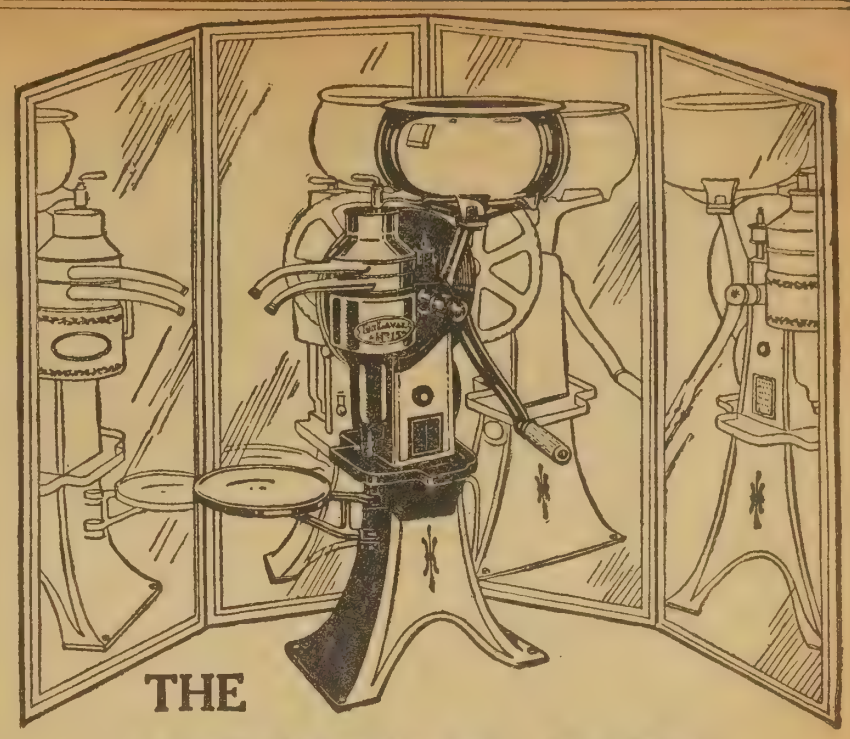
**Growth on Teats**—I have a heifer that calved last June and two months later small white lumps began to appear on the teats and gradually increase in size to a small filbert nut, only long shaped, then the end begins to die and it finally drops off.
S. S.
Yelm, Wash.

Buy one pound of Squibb's chemically pure magnesium sulphate. Make a saturated solution of it. Give the cow one tablespoonful in her drinking water morning and evening; also bathe the teat in this solution after milking. You will, of course, have to divide the solution so that you will have one part for use on the teat and the other to be given internally.

**Milk Fever**—Kindly tell me how to take care of a fresh cow with milk fever.—W. L., Nahcotta, Wash.

The treatment for a cow with milk fever if she has lost consciousness is to give her no medicine by the mouth, but inject the udder with air. To do this use a force pump of any kind, and after disinfecting the udder and teat carefully with a 2 per cent solution of lysol, dip the teat into tincture of iodine and then inject the end of the nozzle. The best kind of a nozzle to use is the glass end of a 5-cent eye dropper into the teat and then pump the udder full of air. In order that the air may not escape tie a piece of cloth about as wide as your finger around the end of the teat, not too tightly, but just so the air can not escape. It may be necessary to inject the udder with air in four or five hours again. It is also wise to give the animal enemas of hot water every two or three hours until she can get on her feet so that she can be drenched with one pound of epsom salts in three quarts of water. Do not try to drench the animal unless you are sure that she can swallow, for you may choke her.

**Symptoms of Rheumatism**—I have a litter of pigs about four weeks old. About two weeks ago one got sick and died, and now three more are acting the same way. They seem to show symptoms of lameness, and are unable to stand up or walk around. One of them is making a grinding noise with its teeth. There seems to be something the matter with the mother pig, too, as she keeps tramping around from one foot to the other.
L. H., Blossburg, Wash.



It seems to me that your pigs and sow all show symptoms of rheumatism. I am going to advise you to give the sow from two to four ounces of castor oil in her feed, depending upon her size. Then follow this treatment with 15 grains of potassium iodine in her feed once daily for three or four days. Do not give anything to the little pigs. Be sure and provide dry, comfortable, clean quarters for them where they are out of the draft. Be sure that they are out of the draft.

## Test 380 Cows During Month.

According to the report of Victor Morgan, tester of the Ferndale (Wash.) Cow Testing association, there were 380 cows tested during the month of January. The average pounds of fat per cow was 26.22 pounds; the average pounds of milk per cow, 631.8; the average feed cost per cow was $12.89. Thirty-six cows produced 1000 pounds of milk or more, and 33 cows produced 40 pounds of fat or more. The highest herd, owned by George Steiner, produced an average of 44.15 pounds of butterfat.

Mr. Hillier's herd at Laurel has been from month to month one of the most consistent in the association up to the present time. So far this winter he has fed his cows a ration made up mainly as follows: 40 pounds of oats and vetch silage and 7 pounds of clover hay, per cow per day, and a grain mixture consisting of equal parts of bran and shorts, fed at the rate of approximately one pound of grain for every three and a half pounds of fat produced in a month. Mr Hillier is a strong booster for silos, and says that silage is one of the most indispensable parts of a ration.

George Steiner's cow "Queen," with 106 pounds of butterfat in 30 days, will come very near being the highest producing cow in any testing association in the United States for the month of January. At the time of the association test she had just completed an official test, wherein she made slightly better than 30 pounds of butter in seven days.

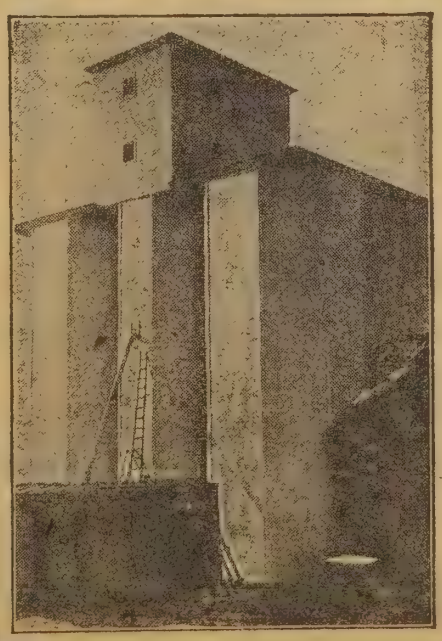
THE
NEW DE LAVAL
CREAM SEPARATOR
Every Reflection
Shows Perfection

VIEWED from every angle, the De Laval is distinctly in a class by itself. It has a business-like appearance. It looks as if it were well made, and it is. It looks sturdy, and it is. There is no make-believe about it anywhere, from the wide-spreading substantial base to the solid, seamless, symmetrical supply can.

It's no wonder that big dairymen and creamerymen who have for years made a careful study of dairy methods and machinery refuse to consider any other separator but the De Laval. They know that from every angle—clean skimming, ease of operation, freedom from repairs, durability—there is no other cream separator that can compare with the De Laval.

They know that it has a record of 40 years of service behind it. They know that it can be depended upon. They know that they can't afford to take chances with any other cream separator—

And neither can you.



**Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or if you don't know him, write to the nearest De Laval office as below.**

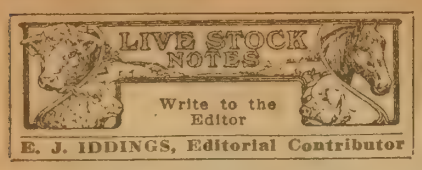
SAVE ALL YOUR WHEAT

The day of the grain sack has passed—they cost more than they are worth, even if you could get them. And wheat today is too valuable, in dollars and cents as well as for food, to lose any of it through improper handling.

The way to save ALL your wheat, this year and in the years to come, is to build a

Tung-Lok Elevator



**Home-Built, Singly or in Series.**

The TUNG-LOK Elevator provides **permanent** storage for **all** your wheat. It is quickly and easily erected without skilled labor and it lasts a lifetime. A group of Tung-Lok Elevators (see accompanying cut), built by community cooperation, cost so little they will pay for themselves in one year in grain saved from deterioration and loss.

Notify us NOW, and one of our agents will call on you and explain the Tung-Lok method to you and your neighbors. That costs you nothing. **Now is the time to act, if you would save all of this year's wheat!**

You realize, of course, that labor conditions have been extremely unsettled in all industries in the last year, and the future is uncertain. While conditions with us now are such that we can take care of all orders promptly, we ask that you act at once if you are planning to erect a Tung-Lok Elevator this year. Don't wait for the summer rush!

UNION LUMBER COMPANY
Makers of the Famous Tung-Lok Silo.
Union Mills, Dept. B. Washington.

## Grain for Feed

### Is Better When Not Cooked

To the Editor: I was reading the item on "Potatoes for Feed," by E. L. Potter. He says not to cook grain with potatoes, as the grain becomes less digestible when cooked. I have some discolored oats that I have been cooking and feeding to the hogs, thinking that I would get better results from cooking and feeding than if I ground the oats or fed them whole without cooking. The oats when cooked swell up two to three times normal size, making it easier for the hogs to chew the grain. The grain being larger, the hog is less apt to swallow the oats whole, while feeding hogs whole oats without cooking, a large percentage of the oats passes through the hog; that is mainly my reason for cooking the oats, also cooking requires less labor than grinding.

The hogs that I have fed are in butchering condition now and I would like to know if it would have been more profitable for me if I had fed the grain without cooking it.

I have some potatoes and I was thinking of cooking them with the oats that I have. I would be glad if you would inform me of a better way of feeding oats with potatoes either through the Farmer or directly.

Sequim, Wash. L. S.

The cooking of grain has been demonstrated very thoroughly to be detrimental rather than beneficial. In a series of trials covering nine years at the Maine Agricultural college as reported in their report of 1878, every test showed that the grain was damaged rather than benefited by cooking. The Kansas experiment station, as shown in their report of 1885 found the same thing. The Ontario report of 1876 showed the same results. At Wisconsin the experimenters starting in with the firm belief that the cooking must increase the value of common foods, found after 15 trials that the cooking was not beneficial. These experiments have been duplicated in a lesser way at many other experiment stations since this time, all with the same results except as stated in the article that potatoes give some advantage for cooking.

Later experiments have shown that the starch of the feed is slightly benefited by cooking whereas the protein and mineral matter is damaged by the formation of insoluble combination of the protein with the minerals. In feeds such as oats, barley or corn containing fairly high proportions of protein and mineral matter and but a limited amount of starch, the damage offsets the benefit and more besides, whereas potatoes are almost entirely starch and contain very little protein or mineral matter. In this case the benefit from cooking the starch much more than offsets the very slight damage which would come from the limited amount of mineral matter and protein present.

You speak of the oats apparently being more digestible when cooked. In this connection, will say that you can get the same results from soaking the feed without cooking. In any case, however, the increased digestibility from soaking or grinding is not as great as appears to be since the whole dry grain will oftentimes pass through the animal entirely whole and can be seen in the manure whereas if the feed has been ground, soaked or cooked, particles will pass through undigested, but can not be seen in the manure, hence the feeder assumed that the feed has been entirely digested which is not necessarily the case. E. L. P.

## The Milch Goat

**By A. E. Gipson.**

Referring to the discussion of the "Nannie Goat" and the question "Why Not?" by E. E. Elliott in the Farmer of February 14, the writer is inclined to the view that Mr. Elliott has made out a pretty good case for her ladyship, Mrs. Nannie.

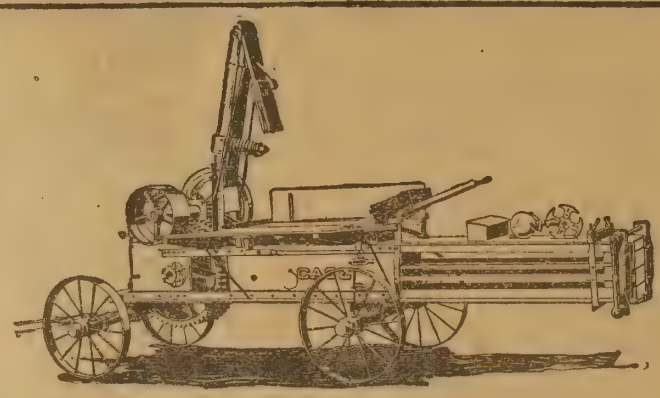
The failure of the people of this country to appreciate and popularize the goat would seem to be largely a matter of prejudice and of failure to understand the value of the goat for the dairy. Still, in some parts of our country, particularly in California, goats for family use are becoming quite the thing, and are said to be giving entire satisfaction. In fact, there are several good sized commercial goat dairies in that state.

The writer has been investigating the milch goat for several years, and has come to the conclusion that the animal should be thoroughly tested in Idaho and the Pacific northwest. Not that she should supersede the dairy cow, but that she may fill a place, possibly, that the dairy cow does not and can not fill satisfactorily, in the nature of things.

The wholesomeness of goat's milk, and its value, particularly as a food for children and sick people, has been known for a long time. The freedom from many of the diseases to which the cow and other domestic animals are subject is pretty generally conceded. The small cost of keeping a goat, as compared to that of keeping the family cow, and other things that might be suggested, and to which Mr. Elliott refers, all combine to make a showing for the goat that should entitle her to a trial, at least.

While the milch goat seems to keep more in the milder climates, as a rule, there does not appear to be any good reason why the climate of Idaho and other portions of the Pacific northwest would not be adapted to her needs. She should be given a fair trial and a square deal.

### A Domestic Tragedy.



Janet and grandpa had a disagreement during the morning, and at luncheon she did not take her usual seat beside him. "Grandpa and I are unspeakable," she explained briefly.

BAG BALM
MADE BY THE COW-KURE PEOPLE
The great healing ointment that thousands of dairymen swear by. Used with quick effect on Caked Bag, likely to occur when a cow freshens; also splendid for all udder sores, cuts, chaps, bruises, cracks, bunches or inflammation. Bag Balm protects, penetrates and induces quick, normal healing. Keep a box on hand constantly.
Sold in big 50c. packages by feed dealers and druggists. Write for free booklet, "Dairy Wrinkles."

Founded 1842 CASE Famous the World Over

Extra Strong
Weighs Less
Big Capacity

EVERY farmer owning a Tractor should also have a Baling Press. It extends the use of your Tractor, and makes money where your engine would ordinarily stand idle. You can not only take care of your own hay, which brings more money when baled, but there is always an opportunity to do custom baling for your neighbors.

Case Baling Presses have extraordinary features not found in other machines. Case Balers handle extra large feeds without danger of breakage.

Case belt power Balers are built in two sizes, 14x18 inches and 17x22 inches. The former has a capacity of 3 to 4 tons per hour, and the latter 3½ to 5 tons per hour.

They are constructed entirely of the best steel, the frame extra heavy and hot riveted. This keeps all parts permanently in line, and eliminates an endless amount of trouble found in balers constructed of wood and cast iron.

In addition, we also manufacture a sweep power press for those who do not require the capacity of belt power balers. Write today for our booklet which describes Case Hay Balers in detail, with pictures. A copy will be sent free for the asking.

We also call your attention to the other Case power farming machinery named below, should you wish information regarding Tractors, Threshers, etc.

When you write to advertisers, be sure to say that you saw their advertisement in this paper.

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

## Wants No Weed Silage

Hugh Wilson, of Joseph, Ore., has proven to his own satisfaction that the oft-repated assertion that "it pays to put just anything you can cut into your silo" is false. His silo was filled last fall mainly with peas and barley. He had one patch of barley, grown on an old feed lot to assist in producing all the crops possblie, for the government, that was practically taken by pig weed, or lambs' quarters, as it is sometimes called. Still, there was some barley in the field and it was all cut and put in the silo. When it was reached at feeding time it looked different from the other silage and did not smell good. Most of the cows did not like it and some would not eat it at all, but he did not discover any bad effects on the cows except that some went down a little in their milk. The work horses did not like it and as Mr. Wilson was feeding them silage he put grain on it, thus inducing them to eat it. Some outside horses were fed the "leavings" from the cows' managers. They ate it, but not readily. The horses began to die and he lost seven before he quit feeding the bad silage. As the first symptom of trouble the horse would walk shaky, then stagger, then lie down, and never get up. Some died quickly and some lingered two weeks.

Mr. Wilson called County Veterinarian Flack, County Agriculturist Hoke, and finally State Veterinarian Lytle. With all the facts before them and after examining the animals the opinion was unanimous that the silage did it. And no more died or sickened after the feeding of the bad silage was stopped. So Mr. Wilson has resolved that there will be no more weed silage for him and no silage of any kind for his horses. H. A.

## New Railroad Map

The state public service commission, Olympia, Wash., will be glad to furnish the latest railway map of the state, issued in 1917, giving all the railroads of the state in operation, as well as dotted lines indicating railroads projected or under consideration. The map also indicates the counties' boundaries and an alphabetical list of towns of the state, indicating those having a railway station, a telegraph station or a telephone station or all three, and so arranged as to be easily found on the map.

The public service commission will be glad to send this map to any reader of The Washington Farmer, if postage is sent, as follows: Mounted wall map, 15 cents; unmounted map, 2 cents; folded map, 2 cents.

## Has Bought a Gangplow.

C. T. Bracken, manager of Dr. Park Weed Willis' "Orchard Hill Farm," has just purchased a gangplow with which to expedite the spring work. Mr. Bracken explains that with the present shortage of farm labor he finds it necessary to make full use of labor-saving machinery.

# Blackhead in Turkeys

To the Editor: Will you please tell me what is the matter with my turkeys and what is the cause of their sickness? I have lost old turkeys every year with the same disease. They have a yellow discharge. Their heads turn blue and they seem to have a rattling in their throats and won't eat. They stand around drowsily and when they are dead I have opened them and their livers are hard yellow sores. The first thing I notice is a yellow discharge. MRS. M. F.
Scio, Ore.

From the description given the turkeys probably have blackhead. This disease has already been described in The Farmer. It is the result usually of close confinement and heavy feeding. The turkeys should be encouraged to range as much as possible. Put them on limited feeding for a while and this will induce ranging or exercise and do not confine them in close houses. Fresh air, fresh feeding ground and plenty of exercise are the preventives for blackhead. J. D.

WILL SAVE YOUR CHICKS

Any reader of this paper who writes P. J. Kelly, the Poultryman, at 69 N. 2d st., Minneapolis, Minn., will receive a free copy of his new booklet, "White Diarrhoea in Baby Chicks." It tells how to prevent, remedy and save the whole hatch. Write for this valuable free book at once.—Adv.

**Tells why chicks die**

E. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease every night and actually raises 95 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

Los Angeles, Cal.

## Another Large Egg.

To the Editor: I note in the Idaho Farmer issue of January 24, 1918, an item regarding an Egg owned by G. S. Brooks, of Tillamook, who believes it to be the largest hen's egg in existence. While I do not care to take the record away from Oregon in general or Tillamook in particular, I wish to say that in 1911, while living at Armour, S. D., I had a double-shelled hen's egg in my zoological collection that was larger than the one mentioned in the Idaho Farmer.

This egg measured exactly nine inches in circumference the long way and seven and five-eighths the round way. With my instruments for preparing birds' eggs for museum specimens, I drilled a hole in the outer shell, through which I blew the contents and then with a smaller drill, reached the inner egg through the outer sell, and blew it also. This left the smaller egg which was of normal size inside the outer shall, and as both were properly prepared, it may be considered a perfect specimen. This specimen is now in the oological collection of A. M. Barnes, editor of "The Oologist' of Lacon, Ill., and was recorded in volume XVIII of that magazine.
ALEX WALKER.

Tillamook, Ore.

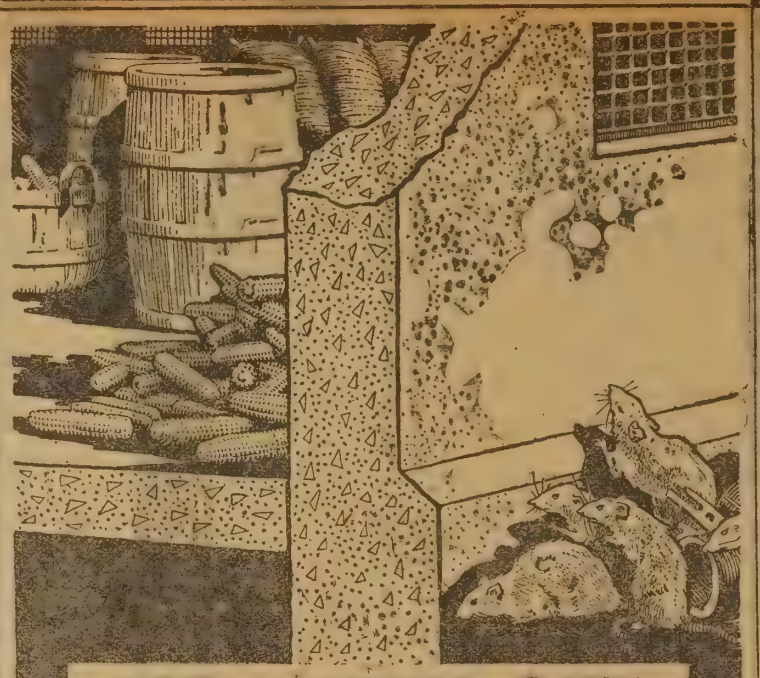
## Catarrhal Roup.

To the Editor: I have kept hens for more than 40 years, but now I have something I do not understand. Have had trouble about one year. Some of them always shake their heads exhaling air through the nasal passage and one of them when doing that utters a short chip sound. They are out of sorts when so troubled. However, some of them recover without treatment. Others finally act as with roup. None have died. A SUBSCRIBER.
Hillyard, Wash.

The fowls are no doubt suffering from a form of catarrhal coup. Try dipping the head of the fowl in a 2 per cent solution of permanganate of potash. Hold the head in the solution for quarter of a minute or long enough so as not to strangle the bird. Repeat this two or three times, or twice a day for two days. J. D.

## Raise More Turkeys.

In the present campaign of the United States department of agriculture to increase the production of poultry upon the farm, the turkey raiser is particularly well able to respond. The turkey is a farm bird, first and last, and is especially suited to the grain and stock farms where there is ample ranging ground abounding in such turkey food as grasshoppers and other insects, weed seeds, waste grain, such as is left in the fields after harvest. Farmers' bulletin 791, "Turkey Raising," describes the most successful methods of breeding, feeding and management. This bulletin may be obtained free upon application to the United States department of agriculture, Washington, D. C.



## Finds Profit in Poultry.

Harry Miller of Newburg, Ore., is a poultry breeder who made a good profit on White Leghorns during 1916. He had 435 hens and made a net profit of $1930. Mr. Miller bought grain in October, so he got through on an expense charge of $1.50 per hen, but says it costs considerably more now. It costs 20 cents per month per hen or a little more.

Mr. Miller used electric lights to lengthen the days last year, and says the lights are nice to get them up in good time in the morning, but he is not impressed with the idea and is not using them this year. H. A.

## Office Methods on Farms.

Progressive farming more and more implies something in addition to the implements with which to till the soil or harvest the crop. Some one has figured up that farmers are buying $5,000,000 worth of typewriters a year. This means office methods of efficiency on the farm; that increasing numbers of farmers are taking annual inventories, keeping careful book accounts throughout the year, and at the end of the year striking a balance to discover what their incomes have been and the sources from which they have come; also what the outgo has been and where it has gone. In this connection it is interesting to read that more than 200 Minnesota country banks have purthased through the Minnesota Bankers' association 30,000 farm account books for distribution as complimentary copies among such farmer customers as may be interested in adopting a simple and useful system of farm records.

# The Bemis Garden

## Successful Method Is Described

The Bemis farm garden near Ralston, Adams county, Wash., has a good reputation. It is in the dry farming district, and is an answer to the often asked question, Can a successful garden be grown on a dry farm. Some time ago the Farmer wrote to Mrs. Bemis and asked her for a description of her method, and we are now glad to publish the following letter from her:

To the Editor: Our garden occupies a spot sloping to the west and slightly north and is about 50 feet by 130 feet in size. Each spring the ground is deeply plowed and well pulverized. Then a furrow about 10 inches deep is turned every four feet across the short way for laterals and one long furrow at the side for a main ditch.

The main ditch is left open and the short ones filled with fresh, strawy manure from the horse barn and the soil between trenches worked down with a garden rake into good shape for planting.

The varieties requiring the maximum of warmth and moisture and the longest period of growth, such as melons, tomatoes, peppers, egg plant, etc., are planted as close as possible to the edge of the trench, while the quick growing varieties and those requiring rather less of moisture, like cabbage, peas, carrots, etc., are planted nearer the middle of the bed.

A windmill furnishes most of the water for irrigating the garden and a gasoline engine comes to the rescue when the wind fails.

This system of gardening furnishes us each year an abundance of lettuce, radishes, rhubarb, peas, beets, turnips, spinach, beans, cabbage, carrots, melons, cantaloupes, cucumbers, tomatoes, peppers, egg plant, lima beans, parsnips and salsify, through their respective seasons, while many varieties are prolonged till frost by means of successive plantings.

I always can enough of the "cannable" varieties to last till the next growing season and store a generous amount of beets, carrots, cabbage, etc., for our own use and to furnish green feed for the chickens through the winter.

In addition to this, I sold last summer, $50 worth of surplus vegetables. Having had no thought of my garden breaking into print, I kept no separate account of the amount of each variety sold, but the sales consisted largely of cabbage, green beans, cucumbers and tomatoes.

From my 32 tomato plants, I canned 104 quarts, made four gallons of catsup and sold seven boxes of ripe and 15 boxes of green tomatoes.

These plants were started in a sunny window in February, transplanted to a cold frame in April, and were blooming freely at the time they were put into the garden in late May.

The plants were pruned at the last transplanting and stalked up, and fruits set from almost the first blossom clusters, giving us our first ripe tomatoes July 20. We had an unusually long ripening season last year, having no killing frosts till past the middle of October.

In a letter from L. J. Campbell of Walla Walla to the Farmer, he writes of having trouble getting good ears of corn from seed from Iowa.

We had the same trouble with sweet corn seed from the east, but by saving for seed the best of what we raised each year. In a few years it became acclimated and we now get very satisfactory sweet corn without irrigation.

MRS. O. BEMIS.

Ralston, Wash.

### Nation's 1917 Tomato Pack.

Complete reports for 1917, secured by the United States food administration, give the total pack of canned tomatoes as 15,076,074 cases of two dozen cans each. This is the largest amount packed since 1914 and is equivalent to more than three cans of No. 3 size for every person in the United States.

## Trees

# Crops for the Orchard

By C. I. LEWIS, O. A. C.,
Corvallis, Ore.

Orchardists are asking themselves at this time what they can grow in their orchards to help the food situation. In young orchards from one to five years of age, under normal conditions, the best crops to grow are such crops as strawberries and hoed crops such as tomatoes, melons, squash, peas and beans. To a certain extent, even under war conditions, such crops should still be produced, but the acreage is somewhat limited—at least the market for the acreage of some of these hoed crops is somewhat limited—and orchardists should see to what extent they can grow crops requiring the minimum of labor and yet give large returns of the world's food.

Navy beans should be considered. Seed potatoes, corn for ensilage or for hog feed, strips of vetch such as purple vetch to be raised for seed purposes, or vetch and oats for hay, such grains as wheat, barley, oats and buckwheat may also be planted.

In these young orchards, however, good wide strips should be left close to the trees so that the grain will not take away food and moisture which the trees need. If you are not careful, you will be robbing the trees in order to grow a temporary crop and will injure the orchard more than the money you will obtain for the crop.

Where hogs are to be kept on the farm a rotation of crops could be grown to good advantage. In the early spring Canada field peas should be planted and this will give some very good feed to help in turning off the hogs. For summer planting about th middle of July drill in such crops as Aberdeen and Cow Horn turnips, vetch

(Continued on page twenty-six.)

# How to double the life of your engine

THE life of your engine—whether in motor car, truck or tractor—depends on the lubrication it receives.

Any well-built engine can run, after a fashion, for weeks, sometimes for months, on inferior oil—but with rapidly decreasing efficiency. And then come troubles, in endless succession; worn and broken parts, requiring costly replacements, and, finally, the scrap heap.

Do you want this to happen to your engine?

Ordinary oil after use — Veedol after use

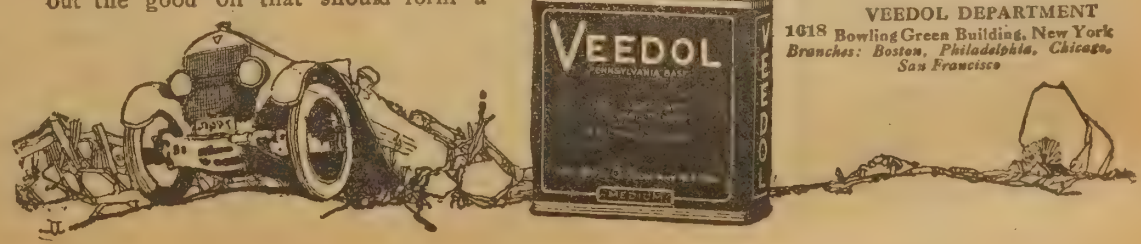
*Note that the ordinary oil contains five times as much sediment as Veedol*

### Sediment in ordinary oil means wear

Ordinary oil causes rapid wear because it breaks down under the terrific heat of the engine—200° to 1000°F.—forms large quantities of black sediment and evaporates rapidly through the oil filler pipe.

Sediment is the greatest cause of friction and consequent shortened life of automobile, tractor and stationary engines. It crowds out the good oil that should form a protecting film between moving metal surfaces. As sediment has no lubricating value, these metal parts grind together, producing friction and wear.

### How the sediment problem was solved



For years prominent engineers and chemists sought a new method of refining which would produce a lubricating oil that would not break down and form sediment under the heat of the engine, and that would give greater mileage due to minimum evaporation.

The result of their research was the discovery of the Faulkner Process. By this process—exclusively used by this company—was produced Veedol, the lubricant that resists heat.

**An 80-page book on lubrication for 10c**

The most complete book ever published on engine lubrication, written by a prominent engineer and used as text book by many schools and colleges. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

TIDE WATER OIL CO.

# President Fixes 1918 Wheat Price

(Continued from page one.)

farmer's confidence was demonstrated by the fact that they planted an acreage larger than the record of any preceding year, larger by 2,000,000 acres than the second largest record year, and 7,000,000 acres more than the average for the five years before the outbreak of the European war.

"It seems not to be generally understood why wheat is picked out for price determination and only wheat, among the cereals. The answer is that while normal distribution of all our farm products has been subject to great disturbances during the last three years because of war conditions only two commodities, namely, wheat and sugar, have been so seriously affected as to require governmental intervention.

**Meet Government Obligation.**

"The disturbances which affect these products (and others in less degree) arise from the fact that all of the overseas shipping in the world is now under government control and that the government is obliged to assign tonnage to each commodity that enters into commercial overseas traffic. It has consequently been necessary to establish single agencies for the purchase of the food supplies which must go abroad. The purchase of wheat in the United States for foreign use is of so great volume in comparison with the available domestic supply that the price of wheat has been materially disturbed and it became necessary, in order to protect both the producer and the consumer, to prevent speculation. It was necessary, therefore, for the government to exercise direct supervision as far as possible to control purchases of wheat and the processes of its exportation. This supervision necessarily amounted to price fixing and I, therefore, thought it fair and wise that there should be a price stated that should be at once liberal and equitable.

"These peculiar circumstances governing the handling and consumption of wheat put the farmer at the very center of war service. Next to the soldier himself, he is serving the country and the world and serving it in a way which is absolutely fundamental to his own future safety and prosperity. He sees this and can be relied upon as the soldier can.

"The farmer is also contributing to the army, and I am keenly alive to the sacrifices involved. Out of 13,800,000 men engaged in farm industries, 205,000 have been drafted, or about 1.48 per cent of the whole number. In addition to these, there have been volunteers, and the farmers have lost a considerable number of laborers because wages paid in industrial pursuits drew them away. In order to relieve the farming industry as far as possible from further drains of labor, the new draft regulations have been drawn with a view to taking from the farms an even smaller proportion of men, and it is my hope that the local exemption boards will make the new classifications with a view of lightening the load upon the farmers to the utmost extent.

"The secretary of war has asked for authority to furlough soldiers of the national army if conditions permit it so that they may return to their farms when assistance is necessary in the planting and harvesting of the crops. National and local agencies are actively at work, besides, in organizing community help for the more efficient distribution of labor and the drawing upon of new sources of available labor. While there will be difficulties, and very serious ones, they will be difficulties which are among the stern necessities of war.

"The federal railway administration is cooperating in the most active, intelligent and efficient way with the food administration to remove the difficulties of transportation and of the active movement of the crops. Their marketing is to be facilitated and the farmers given the opportunity to realize promptly upon their stocks.

"The department of agriculture and the food administration will continue to cooperate as heretofore to assist the farmers in every way possible. All questions of production, of the marketing of farm products, of conservation in the course of production and of agricultural labor and farm problems generally will be handled by the department of agriculture; while all questions of distribution of food supplies to the allies and of conservation in consumption will be handled by the food administration; but the chief reliance is upon the farmer himself and I am sure that that reliance will be justified by the results.

"The chief thing to be kept clearly in mind is that regulations of this sort are only a part of the great general plan of mobilization into which every element in the nation enters in this war as in no other. The business of war touches everybody. It is a stern business, a cooperative business, a business of energy and sacrifice, a business in the largest and best and most stirring sense of that great word."

The schedule as announced is as follows:

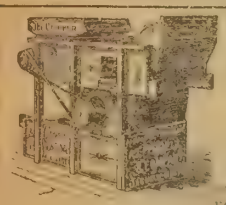
## Hoover Makes Good.

**As the Washington Farmer goes to press advices are being received from Washington indicating that Herbert C. Hoover, national food administrator, is making good his pledge to the farmers of the northwest that they would be given a wheat price "approximately the Chicago price." It is evident from telegrams received, one of them from Mr. Hoover himself, that the eastern price will be paid in the northwest, less a freight rate to Atlantic coast terminals of $3.50 a ton. This seems to assure the northwest a price of something like $2.17 at Coast points and about $2.08 at interior points for No. 1 Northern spring wheat. Here is Mr. Hoover's telegram to Charles Hebberd, food administrator for Washington:**

"The shipping board has undertaken to transport the excess production of 1918 wheat or flour from the Pacific coast in government vessels and has made a rate of $6 (a ton) for flour and $3.50 for wheat. In consequence the food administration will be able to raise the basis for 1918 harvest at Pacific coast points to approximately the Chicago basis. Give this publicity."

Here is a message received by E. T. Coman of Spokane, who was chairman of the delegation that went from the northwest to Washington to negotiate with the authorities relative to an **equitable price for the 1918 crop.** The telegram is from Senator Charles McNary of Oregon:

"Food administration promised Saturday night to stand by the original agreement which will give Chicago base."



**Satisfies Wheat Growers.**

"The situation could not be more satisfactory to the northwestern wheat growers," said Mr. Coman. "Under the price plan announced, the New York price is $2.28. The freight rate from Portland to New York has been fixed by the shipping board on the basis of $3.50 a ton or 10 cents a bushel. The Spokane rate to Portland is 10 cents a bushel, which is also the rate from the average interior point to Portland. The average interior price then, including Spokane, will be the New York price of $2.28, less 10 cents freight to Portland, less 10 cents freight Portland to New York, or $2.08.

"This will yield the northwestern wheat grower 10 to 15 cents a bushel more than he received for his wheat in 1917. The average 1917 price in the interior was $1.95. Because of abnormal crop conditions, many farmers got as low as $1.75 and the average probably was around $1.80 a bushel.

*Clean Your Seed*

# The Wheat Problem

To the Editor: I wish to offer a few suggestions in regard to the situation that is confronting the wheat farmer. By reason of the extremely dry falls of the past two years practically no winter wheat was sown. Last year the spring wheat made a fair crop and with the price prevailing at that time the grower made some money. The season just ended was very dry and a short crop was harvested, some fields are making only three bushels per acre, the general average being about seven bushels. Increased wages, in fact, increased cost of everything, that entered into the production of the crop, made it by far the most expensive crop ever raised in this country. The price of wheat prevailing before and at harvest time, together with the unprecedented demand, led the farmers to expect at least $2.25 per bushel for his wheat, some being sold here at $2.40 per bushel. Then came the price fixing commission and a price of $2.20 per bushel at Chicago was fixed, with a discrimination of 30 cents per bushel freight against northwestern wheat, and the farmers were bitterly disappointed. Our food commission placed a liberal construction on the freight question and a price of about $1.90 was offered at interior points.

A meeting was then called at Portland to protest against what was considered by both grower and business men an unjust discrimination against the northwest and a committee was sent to Washington to take the matter up the authorities there. They agreed upon an advance of 15 cents per bushel over price formerly fixed and the farmer felt better for a few days, thinking he would get at least $2 per bushel for his wheat, but another construction was placed on the freight proposition and again he was disappointed. And the change of grades from those of former years by which wheat that had formerly passed as No. 1 was docked 3 cents per bushel was another cause of complaint. As an illustration of this point I will give you a little of my own experience. I shipped a car of wheat to Portland. The test was 57. Under the rule of former years it would have been docked 1 cent per bushel. Under the present system it was docked 6 cents. These things have worked to cause the wheat grower to look upon the present managers of the wheat game as being decidedly antagonistic to their interest and if, the same unfriendly attitude is to continue they see a still lower price for next year's crop.

We are compelled again to depend on a spring crop and at present are deficient in moisture, therefore the outlook is not promising. The consequence is that men are afraid in the face of vastly increased expenses to take the chance of increasing their farming operations and some outfits that run three or four teams last year are cutting down to two. While the acreage sown the coming year will be about the same as last year, there will be a decided falling off in the next year's acreage, unless something is done to change the morals of the wheat farmer. I know the man in town does not and can not look at this proposition as I have outlined it to you, but if he had in a wheat crop last year, worked hard the entire season and found that instead of getting anything for his work he failed to make expenses by several hundred dollars he would look at it differently and do what a great many wheat growers are doing—quit the game and go to work for the high wages now prevailing and let the other fellow take the chances.

Personally I think the fixing of the price of wheat at the present figure was a grave mistake and wish to submit the following reasons for so thinking: The present bread allowance at the Spokane restaurants is two ounces, but assuming that three and a half ounces are used each meal that would require practically two ounces of flour which at the present retail price of $11.20 per barrel in Othello, Wash., would amount to five-sevenths of a cent. This leads me to believe that the high cost of living is not due to the price of wheat. On the other hand, if I feed an eight-horse team four and a half pounds of wheat each I feed flour enough to supply 192 men for a meal. Therefore, placing a price on wheat that put it into the class with feed grains was a mistake. Not one bushel of wheat should be fed to stock under present conditions, but it is the cheapest feed on the ranch today and more wheat is being fed to stock in Adams county at the present time than is being consumed by its people.

(For obvious reasons the writer of this article wishes his name withheld.)

# Win the War by Preparing the Land, Sowing the Seed and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

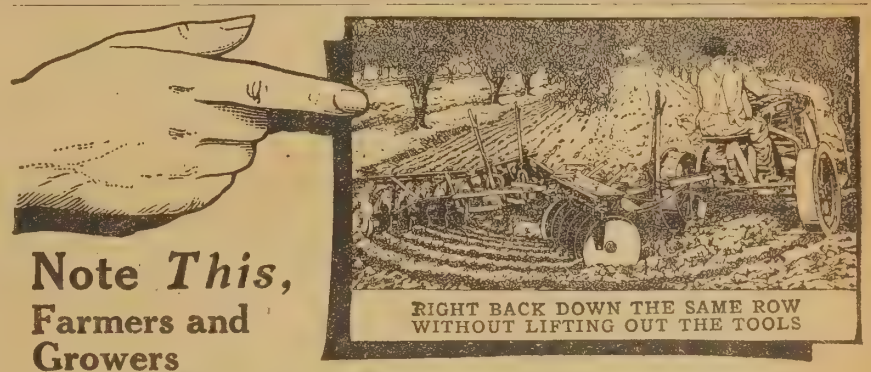
To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

**U. S. Employment Service, Dept. of Labor**



**HIDES** **WOOL, PELTS, MOHAIR, CASCARA BARK**

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day as goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not at inflated values.

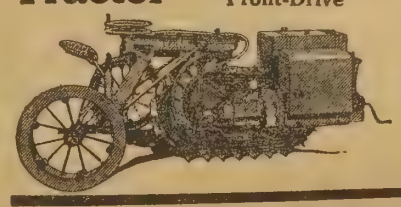
53-55 No. Front St., PORTLAND, ORE. 206 3d Ave. So., SEATTLE, WASH.

**Note *This*, Farmers and Growers**

# "Right-About Face" with FULL POWER!

**Remarkable Performance with Small Tractor**

BEFORE you write out your check for any tractor, note how the Bean TrackPULL turns right around into the same row with *tools down deep all the way, without pivoting, or overloading one side* of the tractor, or doing *anything else* that is injurious, or difficult, or that a tractor shouldn't do. Note how this tractor takes its turn with its *full load*, just as easily at it takes the same load down the *straight-away*. Note the reason for this in this tractor's *single track* with which *it pulls* and *you steer*. See how *easy* it is to steer, and how that great PATENTED SINGLE TRACK FEATURE also makes the TrackPULL Tractor as *flexible as the best team you ever had.*



**"Almost Like Animal Intelligence"**

"Mine acts like it understood—almost animal intelligence," is the way one man puts it—and you'll want that, too, in a tractor. For ease of handling, as well as the ability to make right-about-face turns with full power, has *got to be* in the tractor you use in an orchard or vineyard or in the field, where there's a lot more than just straight-away work to do.

Be careful about "acrobat" tractors—for tractors that will spin around at a fair aren't necessarily tractors that will *turn short with a full load in the field.* Make them demonstrate to you with their tools hitched on.

Send right now for the Bean TrackPULL catalog, learn the price of this great machine, and get the name of the nearest factory-agent who will demonstrate how the Bean TrackPULL Tractor does the kind of work that's waiting for it *on your place.* Mail us this coupon, now before you forget it. Find out the truth about tractors right now!

**Bean *TrackPULL* Tractor** With Patented Front-Drive

# The Master Crime

## *Germany Ravages Helpless Russia*

With a view to appropriating land and supplies and probably slaves to till the soil under despotic control, German is overrunning helpless Russia after the bolsheviki, surely but probably unintentionally, betrayed that land into the hands of the vandals. With the bolsheviki on their knees, arms laid down, armies disbanded or disbanding, German hordes have been ordered to march forward and appropriate all that is before them.

They talk peace, but Germany's terms of peace are little short of a quit-claim deed to Russia and her resources. Here they are in part:

> One hundred and sixty thousand square miles of territory, with a population of 18,000,000 people, and more than $1,500,000,000 indemnity.

In addition to these terms Germany would require the Russian government to cease all war activities and all propaganda of every kind in Germany.

Owing to the complete helplessness of the Russian people, the Germans are marching forward comparatively unretarded, with Petrograd as their objective point.

Reports of the capture of large stores of foodstuffs and munitions have been made, but the greatest advantage to be gained by the invasion of the country is the capture of large areas of agricultural land and men to work them for the production of crops this season. The release of large numbers of Germans held prisoner by the Russians is another advantage, though it is doubtful whether any considerable number could thus be released for work on the French front.

The advantage of large territorial gains and man power would seem to make the end of the war more and more remote. Once Germany has been allowed to retrench herself well into the Russian empire, if she follows out that policy, and her powers of self-maintenance will be practically illimitable until her soldier force is actually wiped out by shot and shell.

What the attitude of the Russians will be as the German invasion gains greater headway is problematical, but it is generally conceded that the most vigorous resistance possible will be made before Petrograd is given up. The resistance likely will be in the nature of guerrilla warfare.

### The Western Front.

What of the western front? Who knows? Who that does know will tell? That the most stupendous battle of the war is pending on the western front is the consensus of opinion. It has been proclaimed far and wide that the German and Austrian forces were planning a gigantic offensive for this spring and that the allies were merely preparing to resist. Some authorities in position to predict have even predicted that the Germans would be victorious in the spring campaign and make again great inroads into France. But there is another sentiment that finds some expression, namely, that the British and French and American armies on the French frontier are not only ready to withstand attack, but are possibly contemplating an allied offensive to surprise the central powers. This sentiment finds some encouragement in the prospect of a portion of the German arms being utilized in the invasion of Russia.

### Pass Railroad Bill.

The United States senate has passed the administration's railroad bill appropriating a revolving fund of half a billion dollars for the federal operation of the roads during the war and providing that the government shall retain control of the roads for 18 months following the conclusion of the war. The measure now has to be acted upon by the lower house of congress. Much debate is being made on the matter of government control after the war. Some congressmen favor the continuation of control by the government indefinitely after peace is concluded.

### Making Rifles.

The ordnance branch of the war department announces that since the United States became involved in the war this country has manufactured over 700,000 modern rifles of the Springfield and Enfield types. It is likewise stated that the manufacture of ammunition has kept pace.

### Build Sub Destroyers.

Henry Ford, automobile manufacturer, is soon to have built a plant for the manufacture of submarine destroyers. The plant will be located at Detroit and will employ no fewer than 10,000 men. The boats will reach the ocean through the Detroit river and the Great Lakes.

### Women Work on Farms.

There are reported to be 1,800,000 women working in agricultural industries in the United States. Of this number about 1,000,000 are colored. The majority of the women workers of both races are in the south.

### Make Smokeless Powder.

The war department announces the letting of contracts for the construction of two smokeless powder plants that will have a capacity of 500,000 pounds of powder each per day. They will have started operations by August, it is stated.

### Jericho Is Captured.

Jericho, that old Bible land city, has been captured by the British army from the Turks after centuries of occupation by the Mohammedan people.

# Growing Demand for Baby Beef

Three Good Types of Baby Beef Animals.

By RICHARD HAMILTON BYRD.

Live stock markets during recent years have experienced a constantly growing demand for well-fattened beef animals weighing from 900 to 1200 pounds. This has been due to the increasing demand by beef consumers for light-weight, high-grade cuts. Such a demand must necessarily be supplied by well-finished animals from 14 to 20 months old, carrying a large percentage of the blood of one of the early maturing beef breeds, usually, that of the Hereford, Aberdeen-Angus or Shorthorn. To distinguish them from animals of other beef classes these yearlings have come to be designated as baby beeves. The preparation for market of this class of beef requires more skill than is necessary in the production of animals marketed at more mature ages, since the growth in the latter is made largely on the cheaper roughages of the farm.

With the growing scarcity of feeder cattle and the advance in value of farm lands the baby-beef industry is of increasing importance and is receiving the attention of farmers in all live stock sections of the country.

Feeders at the present time show an increasing tendency toward finishing off their beef cattle at younger ages. In general this tendency is created by two causes: First, consumers are demanding small, high-quality cuts of meat; second, the cost of producing beef, due to advance in land values, feeds, labor and taxes, has increased to such an extent that feeders and breeders can seldom hold their cattle to advanced ages at a profit. General conditions in the last few years have indicated that no class of beef yet produced more nearly fulfils the requirements of both producer and consumer than baby beef, and the feeding of baby beeves has been increasing in popularity.

In a generally way the following are the advantages in favor of finishing cattle at younger ages rather than waiting an additional year or two before they are placed upon the market, according to S. H. Ray of the bureau of animal industry, department of agriculture.

Young cattle make better gains than older cattle on the same quantity of feed. Yearlings can make 25 to 40 per cent more gain than mature cattle on the same feed. The quantity of feed necessary to make 100 pounds of gain increases with the age of the animal. The herd of cattle on hand at any one time is smaller, since the breeder selling catte as yearlings no longer has steers 2 or 3 years old on his farm. The surplus feed and pasture which become available when the cattle are sold before 2 years of age may be used for maintaining a larger breeding herd, and this provides for the production of a large number of calves. By feeding calves as baby beef the money invested can be turned over in 18 months or less.

Open heifers when finished as baby beef at 900 to 950 pounds sell as well as steers. As a general rule it is better to dispose of them at such weights, although frequently well-finished heifers weighing up to 1050 pounds are not discriminated against. When they are over 2 years of age, however, they seldom sell as well as steers, because heifers and cows carry a great deal of bunched internal fat, which makes them less desirable on the market.

Well-finished beeves when fattened for market under 2 years of age offer greater choice in the matter of selecting the date of marketing. The average consumer prefers the size and quality of the cuts which are obtained from the carcass of a well-bred, highly finished yearling. In addition to high quality, thickness in steaks and other cuts of beef is desired by the consumer, and these can be produced more economically in the well-matured yearling than in any other class of beef animal.

Markets are paying a premium for this type of beef, and the market for baby beef in recent years has been more stable than for any other class of cattle. During the last few years this class of beef has practically had a market of its own, and until packing centers can command a larger supply relatively greater stability in prices for fat yearling beef may prevail. Prime baby beef usually commands a price equal to that of the highest grade of mature fat cattle.

# Buy That "Baby Bond" by Mail Today

"They are the biggest little blow to the kaiser that I know of."

This is the way one man described the war savings and thrift stamps, and he was exactly right. Through them every man, woman, boy or girl in America can actually add a blow to that monster monarch that is covering all Europe with blood and misery. Every time we buy a 25-cent thrift stamp or a $5 war saving stamp we are putting powder in the guns of the boys over there with which to drive Prussianism back across the ravaged lands of Belgium and France. Herewith is printed a coupon by which you can order stamps of either variety direct from this paper without a penny's cost except that of the stamp. The thrift stamp is always 25 cents; the war savings stamp costs $4.14 if bought during the month of March. Fill out the coupon and mail it to The Farmer and The Farmer will send you your stamp or stamps by return mail.

# Put Families on Farms

To the Editor of The Washington Farmer: Many are writing just now of different ways to increase food production. I notice many farmers writing in your valuable farm paper are fearful of shortage in farm help next season and well they should be, owing to the draft and calls for helpers in connection with war needs. Right here I wish to suggest something which would help materially if gone after properly. It is this: Here is a family that could be of more service on the farm than where we are, three boys and myself. My oldest boy is able to do an able-bodied man's work. The other two are able to do very much on the farm. I am a practical farmer and the boys have some experience at farm work. The oldest boy and myself have to support the family of 10 by our days' work. We do not have steady employment in this locality. The two younger boys are not employed at all because they must be able-bodied men to get wages. The idea is to get just such families and the farm together in some way. We would take a farm to rent, everything furnished, or move onto a farm where we could all be employed and some garden ground for raising vegetables for family use. No doubt there are many other families similarly situated. I. P. HOWES.
Grays, Wash.

To The Washington Farmer: Enclosed you will find twenty-five cents for which send me your most helpful magazine, The Washington Farmer. Your paper is very interesting and helpful, and I know it will be of much value to me in my school work.

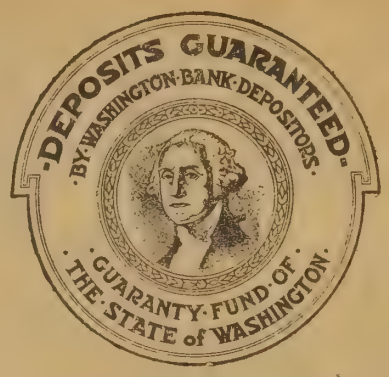
AGNES ERICKSON.
State College, Pullman, Wn.

# FLORA FLIRT SEEKS TO WIN THE TENOR

Flora Flirt feels very gay—
To the opera she's on her way.

A box close to the stage she gets,
And wears a bunch of violets.

She thinks the music most entrancing,
Likewise the ballet gaily dancing.



A tenor sings with wondrous art,
And soon has won poor Flora's heart.

She grabs that bunch of violets sweet
To throw them at her hero's feet.

She aims too high, and down his throat
They fly and spoil his highest note!
**The Moral**—Now, girls, to flirt is quite a lark—
**If you don't "overshoot the mark."**

SYMBOL OF SAFETY

# MONEY INSURANCE

To save enough from one's earnings to start a bank account is one thing; to feel secure that one's hard earned money is in safe hands—to know that you can walk into the particular bank that holds your all and draw every cent that belongs to you, together with accrued interest, is another.

This uncertainty is exactly what the Legislature of Washington had in mind when it framed and enacted into law at the 1917 session the Washington Bank Depositors' Bank Guaranty Fund, acknowledged to be the best law in existence for the protection of bank depositors.

The sponsors of the act took as their guide the best features of similar laws in force for many years in the states of North and South Dakota, Nebraska, Kansas, Oklahoma and Texas, resulting in a measure that absolutely insures and protects such depositors as intrust their moneys to banks that are members of the Guaranty Fund.

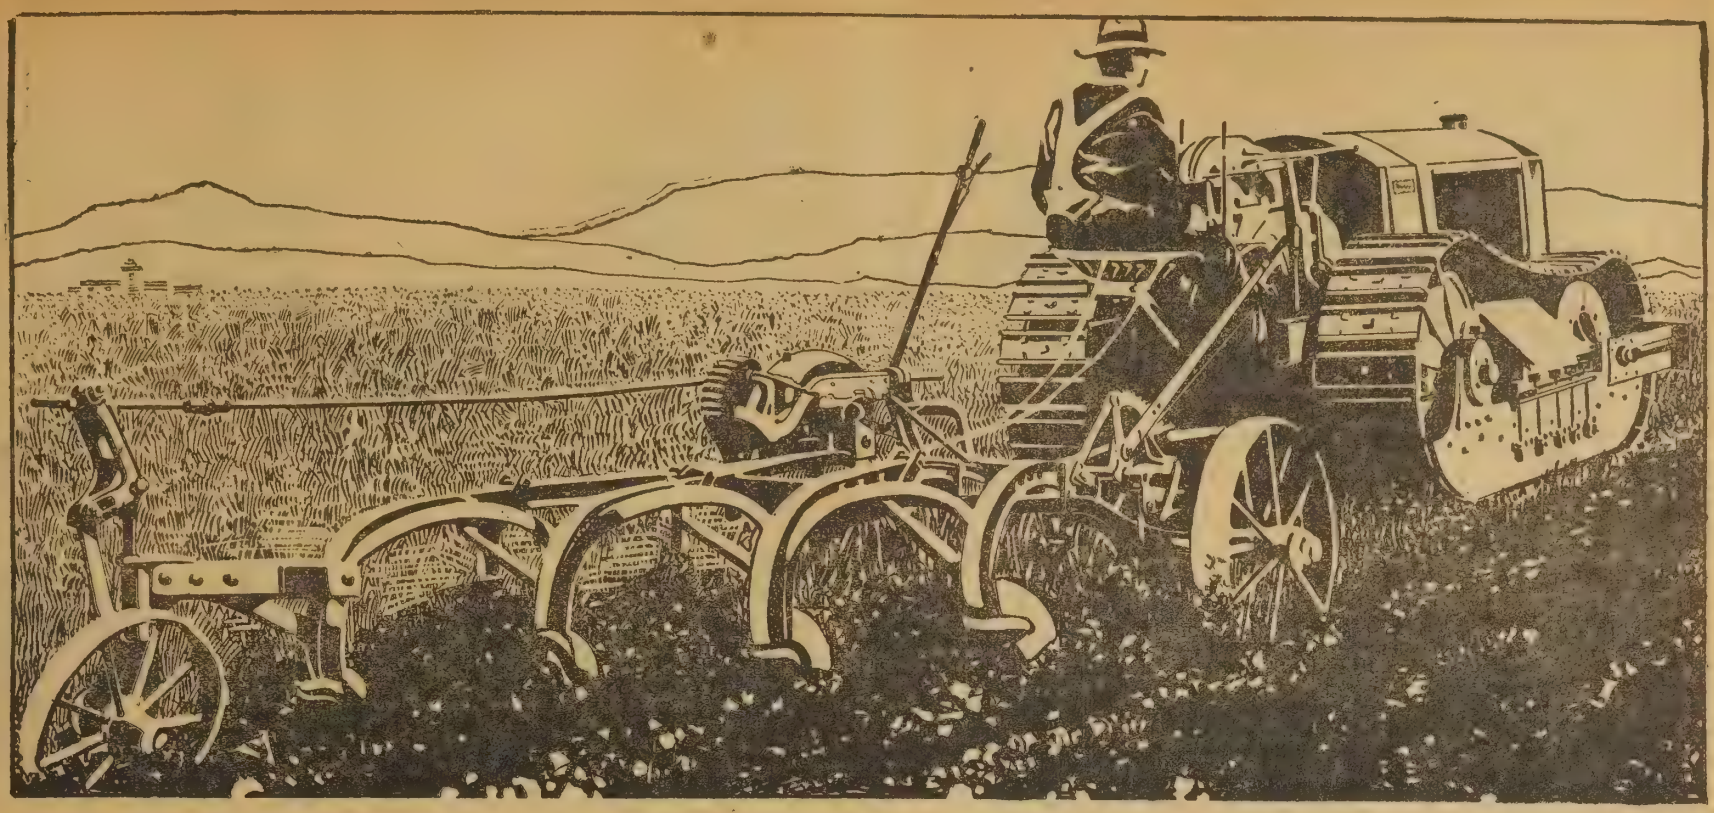
In fact the Guaranty Fund might truly be termed Money Insurance, for it is just that, differing only from Fire and Life Insurance in that it costs those benefiting absolutely nothing for the protection.

John Skelton Williams, Comptroller of the Currency, in his annual report to congress recommends the enactment of a law to provide for a guarantee of all deposits in National banks where the amount to the credit of each individual is less than five thousand dollars. The State of Washington places no limit under its Guaranty Fund act, every depositor, large and small, being absolutely protected. Mr. Williams evidently realizes that at the present time there is no guaranteed protection of any kind for depositors in National banks.

It is a matter of official record that never has a depositor lost a single cent in Guaranteed banks in any of the states where bank guarantee laws are in force.

Sixty-six state banks of Washington scattered throughout the commonwealth; banks that have proved strong enough to withstand the rigid examination required under the new law; banks that not only must pass the highest test as to their financial standing, but also a close inquiry into moral and ethical standards of banking as well—these have already become members of the Washington Guaranty Fund. Many others have filed their applications to become members and, just as quickly as they can qualify, will be mustered into the ranks of Guaranteed banks.

The Symbol of Safety at the top of this page is adopted for the purpose of distinguishing Guaranty banks. It is YOUR guide to a strong, conservatively managed banking institution.



The Guaranty Bank list of Washington includes the following representative banks.

Almira State Bank.
Bank of Stevenson.
Bank of Clallam County, Port Angeles.
Bremerton Trust & Savings Bank.

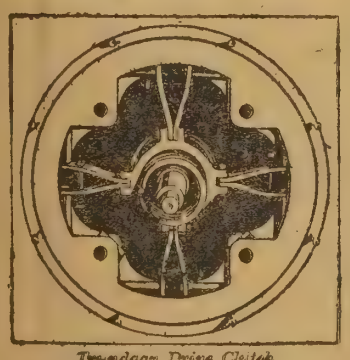
*The Trundaar Tractor is a one-man outfit. Buy this tractor for service, and get what you pay for*

# When every day is worth $1000



***Many days are worth more than that in busy seasons on the farm. How a Trundaar Tractor will save you many days a year***

*Massive Trundaar Transmission*

*Trundaar Tread and Driver*

*Trundaar Drive Clutch*

Can you remember how many times in your business career you would have cheerfully given $1000 or more just to save a day?

Such occasions are only too frequent in the rush and drive of modern farm work, especially when labor is scarce and weather conditions are uncertain.

A Trundaar Tractor will save you many days in a year, besides enabling you to feel that, whatever the work may be, it is being done quickly and well.

You can work a Trundaar any day in the year, no matter what the weather may be like.

All the accumulated knowledge and experience of 23 years in the tractor industry has been built into the Trundaar Tractor.

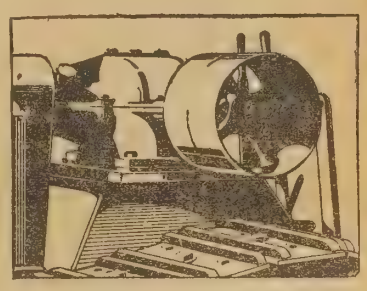
### Practical engineering principles develop ideal tractor

Its patented Trundaar Tread grips the ground so that the traction is positive, yet its area of 2160 square inches on the ground prevents soil-packing. If the ground is rough and uneven, traction is not impaired on the Trundaar, owing to the flexible nature and elastic operation of the double three-point suspension—another exclusive Trundaar idea. This suspension also absorbs all shocks and strains so that the power plant and other parts of the tractor remain unaffected.

The Buckeye-Waukesha special tractor engine develops more than enough power for any possible requirement in farm work.

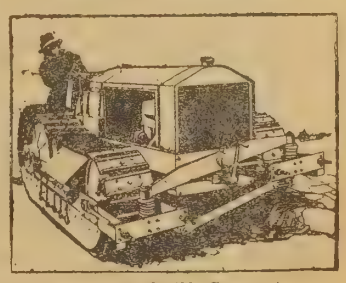
Trundaar owners have cut their fuel bills down to a minimum, due to the Buckeye-Deppé Integrator—exclusive equipment on the Trundaar. This system makes low-grade fuel operate like high-grade gasoline.

Dust cannot possibly affect the Trundaar as every vital part of this scientifically built tractor runs in oil.



A big, strong belt pulley is conveniently located for stationary work. It is always ready and is quickly connected.

Powerful multiple disc drive clutches control each tread—a new principle in tractor engineering.



The massive Trundaar transmission is built with a 20 per cent margin of safety so that it is practically wear-proof. This transmission requires no differential and delivers maximum power to the drawbar.

Business farmers are writing us daily for our illustrated advance catalog, which describes the Trundaar in detail. Write today to our nearest distributor for your copy.

## *Bill in Congress to Appropriate $50,000,000*

The following letter has been received from J. M. Baer, the nonpartizan league congressman from North Dakota, in reply to the campaign which The Farmer has been waging for a food production administrator:

Your letter of January 31, received and will say that I am very much interested in the campaign you are making for national war-time food production administrator.

I did not receive the copy of the issue of The Farmer, but I know that you have a good argument for such an executive.

I have introduced a bill for $50,000,000 to aid the needy farmers who require seed and feed. There are vast stretches in the northwest where there is plenty of land and man-power but the farmers have not sufficient credit to buy seed. This land ought to be utilized or we shall face a world famine. Similar conditions prevail in the southwest where the young stock is being slaughtered and dying off on account of lack of feed. Briefly, the cradle of the cattle industry is being robbed.

My bill is for seed and feed and I think it will be a lifesaver to our armies and the allied armies if the government will take action on it. Mr Hoover appeared before the agricultural committee and showed the need of such legislation. Mr. Herbert Quick, David Lubin, Lord Rhonnda and many others have showed the necessity. I am enclosing a copy of the bill, which, of course will be amended and revised to suit the wisdom of the committee. In fact, I believe that the money should be handled through the federal reserve system.

J. M. BAER.

The following is the text of the bill introduced by Mr. Baer:

**A BILL.**

To appropriate $50,000,000 for the purchase of seed grain and feed for live stock, to be supplied to farmers and stockmen, and to create boards in the respective states to assist in carrying out the provisions of this act.

Be it enacted by the senate and house of representatives of the United States of America in congress assembled, That the governor and two other state officials of the respective states be designated by the president as a state board to investigate into the necessity for federal aid to farmers and stockmen who are unable to cultivate and crop their farms, or maintain their live stock and herds during the year 1918 because of drought or failure of crops during the year 1917. The board so created, and particularly the boards of the states of North Dakota, South Dakota, Montana, Nebraska, Kansas and Texas shall forthwith organize, make provisions and report their findings to the secretary of the department of agriculture and shall do all such other acts and things as may be necessary for the purpose of carrying out the provisions of this act.

Sec. 2. That it shall be the duty of the boards of the respective states and particularly the boards of the states of North Dakota, South Dakota, Montana, Nebraska, Kansas and Texas, where the farmers and stockmen are already severely suffering as a result of drought and crop failure in 1917, to gather data showing the amount of seed grain and feed needed by the farmers and stockmen of their respective states who must have aid and credit in order to cultivate and crop their lands and to maintain their live stock and herds during the year 1918.

Sec. 3. That there is hereby appropriated, out of the funds of the treasury of the United States not otherwise appropriated, the sum of $50,000,000, for the relief of the farmers and stockmen, or so much thereof as may be necesary, $6,000,000 for North Dakota, $4,000,000 for Montana, $3,000,000 for Nebraska, $3,000,000 for South Dakota, $4,000,000 for Kansas, $5,000,000 for Texas, and so much of the remainder for the other states as the secretary of agriculture may deem necessary.

Sec. 4. That the moneys hereby appropriated shall be expended by the secretary of agriculture in the purchase of seed grain and feed and in the necessary expense incurred in carrying out the provisions of this act. The seed grain and feed so purchased shall be sold on credit and distributed to the farmers and stockmen heretofore mentioned at a price not to exceed the cost to the government, the purchaser to give promissory note therefor, payable in one year from date, to the treasurer of the United States, and bearing interest at the rate of 4 per cent per annum.

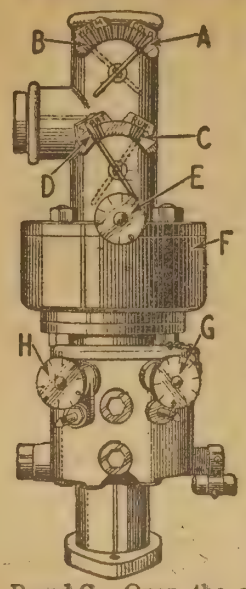
## Information Bureau

The Farmer will be glad to answer questions of general interest, as well as those of a practical nature, relating to the farm or farm home. There will be no charge for this service. Questions must be signed with your name and postoffice address and will be answered either by personal letter or by publication when of general interest.

Address Farmers' Information Bureau, Room 35 Review building, Spokane, Wash.

How are photographs produced in natural colors? D. P.
Loon Lake, Wash.

A. L. Melander, professor of entomology and head of the department of zoology, Washington State college, gives the following answer to the above question:



There is no practical way of making photographs in color on paper. There are a number of ways, however, by which they can be easily produced upon glass and then used as transparancies. The most familiar of the color photographs on glass are made by the Lumiere autochrome process. You can purchase Lumiere plates through any dealer in photographic supplies, and these can be used in any plate camera, but will take pictures in color only when the special ray filter is used. The plates are clamped in the plate holder with the glass side facing the lens. The ray filter is put on the lens and exposure made as with an ordinary dry plate. Development is easily done in a very dark room and is usually accompanied by the time method. Following the development the plates are brought out into the open daylight and are placed in the reducing solution which dissolves out the metallic silver first deposited by the first development. When all the silver has been dissolved the plates are then put in the first developer again which brings about the reverasl from negative to positive, and permits the color in the individual starch grains which coat the plate underneath the emulsion to show out and the picture then appears in natural color.

Turn Kerosene into Power

MOGUL kerosene engines will be bought for many thousands of farms this year because so many farm power users finally realize that lasting engine satisfaction comes only with perfect kerosene engine design, best materials, long manufacturing experience, and prompt, dependable repair service.

Take a few profitable minutes to glance over this diagram of the patented mixer which enables Mogul engines to operate successfully on kerosene, and *which can be found on no other engine.* To start engine, place the dampers as indicated by A and D. Open the gasoline valve, E, which will supply gasoline from the small bowl, F, used only for starting. After the engine is started, place the dampers in the positions indicated by B and C. Open the valve, G, and the engine will run on kerosene. When the engine is warmed up, supply a little water by opening valve, H, which is needed for the successful using of kerosene by large engines. (No water is used on the smaller size engines.)

The simplicity and effectiveness of this Mogul mixer are of tremendous importance because kerosene is the great economy engine fuel nowadays, cutting power cost in half. Kerosene economy, coupled with the known value of International Harvester machine construction, makes the Mogul the right power for all-around use on any farm. Send for our catalogue and study Mogul details, then see the Mogul engine dealer. Mogul engines are of all styles, ranging in size from 1 to 50-h. p. Write the address below for catalogue.

# Prospects for the Live Stock Man

(Continued from page nine.)

need to be replenished from some well-organized source of supply, and of all the horse-producing sections of the world America is one equipped to do a large share in the way of supplying the European need.

Only a few months ago the consumer did not have a clear understanding of the real cost of producing dairy products, and was bitterly opposed, on the whole, to every effort made to get adequate prices for the dairyman. It is very fortunate that this feeling has been overcome, largely due to educational efforts and the dissemination of accurate information concerning production costs. The consumers of dairy products now understand that it is either a question of paying such prices as will enable the dairyman to continue at the business at a reasonable profit or the dairy business will be so checked that milk, butter and cheese can no longer be had in adequate quantities. The response of the market to this necessity of better prices has resulted in butter fat prices today ranging from 48 cents to 75 cents per pound. Seventy-two to 75 cents per pound is certainly satisfactory to the dairyman, and is a price paid by condenseries both in the intermountain and the Coast sections.

The consumers of dairy products now understand that it is either a question of paying such prices as will enable the dairymen to continue at the business at a reasonable profit or the dairy business will be so checked that milk, butter and cheese can no longer be had in adequate quantities.

It is true that there was a time when a considerable number of dairy cattle were being sent to slaughter. Fortunately, the first cattle that were eliminated were those that were unfit and were probably being kept at a loss. On the whole, only a small number of really profitable dairy cows have been sacrificed, and the average of the herds has been raised rather than lowered by the sale movement that prevailed a few weeks ago. The whole dairy industry is in quite stable condition, with fair prices prevailing and with future prospects bright. In this connection let me say that the word that went forth soon after the declaration of war for the saving of all heifer calves was a distinct mistake. The dairy heifer calves that promise well in production should be saved if possible, but dairy steer calves or inferior heifer calves had better be sold for veal than kept one or two years with heavy consumption of feed and with no great prospect of profit to the owner.

The beef cattle situation is now in a state of uncertainty, particularly in regard to the feeder situation. The latest available figures indicate an increase in beef cattle in America during the last year of 1,900,000 head. It is possible that this increase is apparent rather than real, since we have had, in all probability for the first time, a real, adequate live stock census. It is a fact, however, that there have been marketed during the last year at 52 of the leading markets of America 4,400,000 head more of beef cattle than in the preceeding year. There has been taken to the feed lots 782,000 more feeder cattle than in 1916. This might be regarded as a healthy wartime situation were it not for the fact, due to lack of transportant facilities across the Atlantic, that beef supplies are accumulating in storage. Records show 57 per cent more beef in storage than one year ago, and as a result the prices to the producer are far from satisfactory.

The sheep situation has been a wonderfully satisfactory one up to within recent days. The census figures show a gain of 1,300,000 head during the last year. Prices had been quite satisfactory up to within the last month or six weeks, when there was a distinct falling off in the demand for sheep for mutton purposes. Some of the feeders who bought at from 15 cents to as high as 18 cents a pound do not stand much chance of coming out well on the enterprise unless the present situation is much improved. There are probably two reasons for the comparatively little demand for sheep for meat purposes. Meatless day has unquestionably had its influence, but a factor that has been probably much more potent is the mistaken notes that were sounded early in the war. The movement opposing the use of lamb for human food was a mistaken policy. On the other hand, those of us who know and understand the sheep business realize that when the lamb has reached 75 to 90 pounds and is in condition fit for slaughter that lamb has produced the greatest possible amount of human food, taking into consideration the consumption of grass and other feeding stuffs in attaining that result. The keeping of a lamb over to a yearling results in the displacement of a ewe which would bring the same fleece and also is capable of producing one or two lambs the succeeding year to replace lambs that have gone to slaughter. The use of lamb for carcass purposes fits in directly and it is entirely consistent with the program of food conservation.

After the cattle now in feed lots are finally disposed of, which will be completed by middle or late May, the demand will be more active for beef cattle and the price situation in all probability satisfactory.

One movement that has been particularly noticeable during the last year has been the very great increase in the number of small flocks on the farm. This is a healthy movement; one that will increase our wool supplies for army purposes and mutton for feeding our own people, and will also prove a profitable enterprise for the farmer. The men who have invested in these flocks are entitled to every encouragement, and those who give these flocks adequate care and attention are practically certain to find their efforts successful. Outside of the temporary unsatisfactory feature in regard to the demand for and prices paid for lambs from the feed lot the sheep situation is, therefore, satisfactory and the business deserving of extension and development rather than a policy of retrenchment.

There was a time in Idaho history, and quite recently, when central and southern Idaho alone shipped 3200 cars of hogs in a single year. One county had the proud year's record of shipping 500 cars. This situation is entirely different today, as most of you know. One irrigation district has 52 per cent of the hogs of one year ago; another well-known district has 47 per cent of its supply of one year ago and only 23 per cent of the number of two years ago. In some sections of the state there is scarcely one hog where there were 10 two years ago.

The food administration has adopted

# This Cook Book Will Help You Hooverize

It is no sacrifice to Hooverize. It is no sacrifice to eat corn muffins and oat meal mush and fish and rice and fruit and chicken and vegetables. But it is a sacrifice to leave home and friends and mother and sister. It is a sacrifice to cross the ocean where submarines are stealing about seeking to send you to the cold, slimy bottom. It is a sacrifice to go into the wet, muddy trenches by day and roll up at night in a blanket on the cold ground. It is a sacrifice to face, day and night, hour after hour, the bursting shell and the whistling rifle ball. It is a sacrifice to lay down your life.

Read the coupon herewith. Write now, today, for the Hoover cookbook. It will help you save food for the fellow—somebody's son, maybe your own—who is making the supreme sacrifice.

**When writing for this book do not address the state office of the Farmer, but write directly to The Washington Farmer Information Bureau, Washington, D. C. This will prevent a delay of several days in receiving the book, which you ought to have at the earliest date possible.**

U. S. Rubber Footwear

a definite and vigorous policy, and expects the American farmer to lend his efforts for a campaign for increasing swine production. The reason for this is quite apparent. The hog population of America has increased 4,000,000 head during the last year. The meat of the hog can be cured easily, transported long distances in comparatively small space and kept in good condition for a considerable length of time. There are three and one-half times as much hog products used in the American army and for allied army needs as compared

One movement that has been particularly noticeable during the past year has been the very great increase in the number of small flocks on the farm.

with beef. Furthermore, the fat produced by the hog is greatly needed to meet the demands for fats and oils in the British isles and continental Europe. It is, therefore, quite natural to turn to the hog as the readiest and cheapest way of supplying our army and the allied army with meat and other animal products. If one cared to adopt a slogan which would stand for the fundamentals from the food side in the winning of the war the whole needs of the case can be expressed in "wheat and hogs."

There arises immediately in connection with the efforts of any community not only to increase its supply of hogs but to even maintain the present rate of production, the question of proper feeds for hogs. Wheat is being fed in some sections, and we all realize that wheat should not be fed except in a case of absolute necessity. Alfalfa hay and alfalfa pasture, shorts, skimmed milk, buttermilk and possibly imported corn are feeds suggested in the way of offering substitutes for wheat. If the food administration can go so far as to place a definite price on corn it is possible that we will be able to lay corn down here at such a price as will

If one cares to adopt a slogan which would stand for the fundamentals from the food side in the winning of the war the whole needs of the case can be expressed in "Wheat and Hogs."

enable us to finish our hogs in a proper manner for market.

The feeds above mentioned can be used to supplement pasture during the early growing period, and we can grow our hogs to 100 to 150 pounds in a comparatively cheap way. Some such concentrates as field peas, barley, wheat or corn are necessary, however, in order to get the final finish. In this connection I would like to suggest the feasibility of maintaining a heavy wheat acreage and yet take the proper care in planting the crops of the year that we do not lack a reasonable amount of feed for live stock. One of the possibilities in the way of producing splendid hog feed and at the same time help solve the labor problem is the seeding of field peas and possibly other crops for hogging-off purposes. In tests, where the hogs were carefully weighed, from 800 to 900 pounds of pork per acre have been secured in hogging off field peas on the Minidoka tract. With hogs at the present price there are few crops that can be grown on the farm that will yield as much net profit as will field peas used in this way.

In conclusion, I will say that the live stock man must not falter, even though his prospects of heavy or even reasonable profit do not seem assuring. The needs of the nation are clear, and we will all have a distinct duty to do in our particular field and a certain portion of most important national service to perform. The stockman must, therefore, go forward with courage and with confidence and a purpose in his business. It is a distinct satisfaction to see considerable promise of obtaining from the live stock industry a reasonable profit, such as has been laid down as the general rule in handling other lines of business necessary to the government at this time. At the same time we are performing a really patriotic duty of American citizenship.

In horses, dairy cattle, beef cattle, sheep and swine a premium will of course be placed upon good management, efficiency and real skill in live stock breeding, feeding and management. With the exercise of care in this direction the situation at present strongly points to a successful business in a line of work that is of real service and to reasonable profit in the next few years to come.

**Poor Baby!**

Little man, aged 5, talking to baby brother in the cradle said: "You poor little thing, you hasn't got no mudder, only mama, and she works so hard."

To The Washington Farmer: I thank you for writing me your combination offer. I will renew my subscription for The Twice-a-Week Spokesman-Review for one year once more and the new offer for The Washington Farmer for three years.

E. J. SCHIMKE.
Newport, Wash.

# Keep Up the Acreage

AMERICA needs a big 1918 corn crop. Corn is our most important farm product. Added to its many daily uses, it forms a necessary substitute for grains that can be more safely shipped to Europe to feed our army and reduce the food shortage of our allies.

Lack of seed now places the corn crop of the entire Northwest in danger. Careful investigation has failed to locate one-half of the seed that will be needed. By actual tests, a small percentage only has been found fit to plant.

Patriotic farmers can do their part to keep up the needed acreage. They should see that every kernel of seed corn is used to advantage. Wherever there is an extra ear, it should be supplied to those who need it most. The best way to accomplish this is to report all surplus to the nearest bank or state experiment station.

Test your seed corn now. Use the best you can obtain. Much corn of low germination must be planted, but in such cases, sow thickly enough to obtain normal stand. Do not use corn grown too far south to ripen in your locality, unless you want fodder only.

At best there will not be enough seed corn to plant a normal acreage. Substitutes next in value should be selected. For increasing the food supply, sow small grains such as wheat, barley, oats and rye. For increasing the meat supply, sow legumes, grasses, forage, and soiling crops; such as alfalfa, clover, timothy, millets, vetch, fodder corn, and rape.

Plant every available piece of land. Reduce labor and prevent loss by sowing the best seed you can get. Use improved farm machinery to supply labor at lowest cost. Make your farm do its best to help win the war.

# Trappers of the Ozarks

(Continued from page eight.)

ran off a few yards to bark, but the men paid little attention to the noises.

While Ben was broiling some turkey and eating his breakfast, Jodo girted the pack saddle on Spunky. There was a brief kicking spell, and then the various things were packed on the saddle and strapped fast. By this time Ben had finished eating and the little party were soon pushing on into the wilderness again. All the rest of the day, with only a brief halt at noon, they kept tramping.

Late in the day the sky became overcast with clouds. And when the travelers camped for the night there were strong indications of rain. After they had stopped, Jodo, who wanted to try his new rifle, went in quest of meat for supper. While he was absent Ben, with an ax from their pack, cut two forks, drove them into the ground, laid a pole on them and stretched their tent over the pole. After that he ditched around the tent and made preparations for a possible rainstorm. For already the clouds were growing black in the northwest and sometimes the booming of thunder shook the air.

At dusk Jodo returned to camp with a half-grown deer on his shoulder. While skinning the game the two decided that, as a change from broiled meat, they would like a stew. So some of the venison was soon in their little camp kettle and on the fire to cook. Spunky, after being watered at a near-by creek, was tethered to a bush with a small but very strong hair lariat, 50 feet long. As a matter of precaution, the bell was fastened on his neck.

An hour or longer was required to stew the venison properly. And by the time it was done rain was beginning to patter down. After feeding the dogs all they could eat, and more, Ben had tossed a rope over a limb and drawn the deer up out of reach. The pack was already in the tent, and Jodo carried the kettle of venison back into the same shelter. Bose and Tinker sat by the fire till the rain grew hard, then retreated into the tent.

"What's in that package?" Jodo inquired, while they were eating. He was pointing toward their things.

Ben glanced at the package. "That's three pounds of sulphur I bought."

"Sulphur! What in the world do we want with three pounds of sulphur? Do you expect to eat it?"

"No. But I thought if we found time we might try a little experiment."

"How—what?"

"To see if we could make some gunpowder."

"Oh, all right. Yes, I'd like to try that."

It was well that the travelers had shelter. Harder and harder grew the rain, till it became a downpour; and the wind blew till it threatened to tear up the tent pegs.

Having finished their supper, Ben and Jodo spread down their blankets, and after assuring themselves that their powder was double-wrapped, and that everything was keeping dry, they lay down.

The rain was still pattering on the tent when they awoke, and daylight had come. The first thing that Ben noticed, on looking out, was their campfire, still smoldering, and the next thing was Spunky, cropping the grass with an undiminished appetite. The creek was still roaring, though not so loudly, and the whole earth was drenched and every leaf dripping.

The drizzle soon ceased, and not long after that the sky began to clear in the northwest. The travelers rekindled their campfire, and then broiled some venison.

Not very much later, Spunky was saddled, the pack and the pots were on, and the travelers were on the march.

Late in the day the party arrived at a small river.

"Now what?" demanded Jodo, when they had halted on the river bank.

"That's a question. There are indications of more rain. But even if not another drop falls, this stream won't be fordable till some time tomorrow, and maybe not till the morning after. So, if we are to ford it, the only thing is to sit down and wait patiently for the water to run by."

"We can't well swim it with our things. Spunky couldn't swim and carry his pack. And even if he could, he'd get our flour and meal and things wet."

"He certainly would. He can swim all right without his pack, though. And there are other ways of getting our things across."

"What ways, Ben?"

"Well, we could make a raft and raft them across, for one way. And this stream's deep, but not very wide. I believe we could bridge it and carry everything across on the bridge—on a foot-log."

"A foot-log will be best and safest, if we can find a tree that's tall enough, and that will fall in the right direction."

They followed up the river bank half a mile or more, and at length came to a big, straight sycamore that promised well for their purpose. After deciding that it could be made to fall across the stream, they unsaddled Spunky and let him graze, then got the axe out of their pack and fell to chopping. They took turns with the axe, and soon the great tree began to totter on its stump, then to crack and pop, and then to fall.

As the tree went down, Ben and Jodo watched anxiously, first to make sure that it would fall across the stream, and after that to see whether it was long enough to reach the far bank. There was also danger that the long trunk, if it had a weak spot, would be snapped in two by the fall.

But the outcome proved to be exactly what the axmen had hoped for. The huge top crashed down on the far bank, and the trunk stretched a straight bridge between the two banks.

Scarcely was the tree at rest when Bose sprang upon it and went trotting across, with Tinker at his heels.

"Our bridge stands ready! Now to carry our things across," remarked Ben. "But to make sure that she lies solid and immovable, maybe I'd better stroll across first."

He stepped upon the stump, and from that sprang upon the log. Cautiously he started, not knowing at what moment the big log might begin to roll under him. But he crossed safely, and finding the top in a stable position, he turned and came back.

Jodo crossed without mishap, deposited his things on the far bank, and was soon coming back.

Other trips the two made, going and returning safely, till nothing remained to be carried over but the pack saddle itself, and the pots. Ben took up the pots by the rawhide that connected them, and laid them across his shoulder.

"Better be cautious with those sinkers, Ben!"

"Hadn't I, though! If I happened to step off, you could hear me bump the bottom!"

"What a pity Spunky can't walk a log!" Ben exclaimed, when they had the little mule at the water's edge. "There's going to be one trouble with him. This river is swift. By the time he can swim across it, it'll have him 50 yards down stream."

**Shortly after Ben and Jodo had reached the wilds of the Ozarks the latter had one of the stirring experiences of his young life, and it is doubtful if ever a pack donkey had a more exciting chase than that which Spunky, Jodo's mount, had in getting away from the enraged buffalo bull. In fact, he would never have escaped if Ben had not come to the rescue with his flintlock rifle. This incident is told in an early chapter of the story.**

"Then we shall have to turn 'im loose and drive 'im across."

"We could try that. But 10 chances to one he'd drift down a good distance, and then make back for the bank he'd started from. He'd rather go home than travel on, anyhow."

"Could we hold 'im with the lead-rope?"

Ben shook his head. "There'd be danger of pulling his nose under water. But if you can lead him across, I believe I can fasten the lariat around his body and hold him against the current."

"Won't the stream drag you off the log?"

"Not if I keep myself braced. But if it proves too strong for me, I shall just have to let the rope go—that's all."

So the hair-lariat was tied around the mule, just back of his fore legs. Then both men climbed up and started along the log, Jodo holding the leading-rope and Ben the lariat. The water and the bank were almost on a level, but the mule had decided objections to plunging in. After much urging, he laid his ears down angrily, doubled himself up, and jumped as far out into the stream as he could. He disappeared altogether, but soon bobbed up. Then he went swimming by lungés, as if doing some kicking under the water.

The swift current boiled noisily against him, and tried hard to drag the little fellow down stream. But Ben threw himself back on the hair rope and held him in spite of the current. And thus, Jodo leading and Ben holding, they gradually towed little Longears across the river. At the far bank they had to work nearly a hundred yards down stream before he could find a sloping place to climb out.

Not a great while later Spunky had been saddled and packed and the travelers were pushing on. A few miles beyond the river they came to a well-beaten trail which looked much like a cattle path.

"At last!" exclaimed Ben, and turned into it.

"What's this?"

"An Indian trail—a hunting trail."

A mile or two farther on they came to a low place, where a pond of muddy rainwater covered the path. While the party were passing around the pond, the mule's small, sharp-hoofed feet cut through a thin turf, and he sank knee-deep into a treacherous bog. Furiously he struggled, but, weighted by his pack, only made his condition worse. Before any assistance could be given him, his short legs had disappeared and his body was resting on the mud. Now he was past struggling.

(To be continued)

**It is told in chapter 11 of this story how the two young hunters became captives in the hands of the Osage Indians, and how they were kept for days in a wigwam with red-skinned guards preventing even so much as a look out at their surroundings. Under these circumstances, imagine their feeling when a big hand suddenly appeared before their faces, thrust through the buffalo flap of the wigwam. What did it mean, this mysterious intrusion of the hand of an unknown Indian? Was it a friendly or a hostile sign? It was natural that they should consider it the latter, but it did not prove so. It was the hand of an Osage squaw, and day after day during their captivity it came and supplied them with buffalo meat, venison and parched corn. And the old squaw later did something that the boys had occasion to remember to their dying days.**

# Crops for the Orchard

(Continued from page fifteen.)

and rape. This will make most excellent hog feed in the fall and winter. In orchards six or eight years of age, which are not bearing heavily but which are very vigorous, grain is the ideal crop. Such grains as barley and oats can be sown for hog feed and the hogs can harvest such grains to very good advantage.

Another crop which should receive more consideration from the orchardist is buckwheat. This crop allows for late seeding. It should be put in an orchard where climatic conditions have ruined the crop for the coming year. It will grow with a relatively small amount of moisture and can be handled fairly easily among the trees and is a good cash crop and a good substitute for wheat in our food ration. A much larger amount of buckwheat should be raised among the orchardists than has ever been raised before. The buckwheat, in addition, has a tendency on the heavier soils to make them lighter and less compact and improve their physical condition.

Orchardists should not neglect the possibilities of sheep feeding. Right now in many orchards in western and southern Oregon there is most excellent sheep feed. Sheep could be turned into these orchards and could be allowed to run until about the time of the spring plowing. Of course if the ground is poorly drained and too heavy this practice might be questioned, but in the majority of orchards this is not true and mild winter has given a wonderful amount of feed which could be turned into mutton and wool. Orchards which have very good cover crops will support sheep at this time to very good advantage and the manure from the sheep will compensate to a large extent for the loss of organic matter. If sheep injure trees they must be removed, but this seems to be the exception where there is plenty of feed.

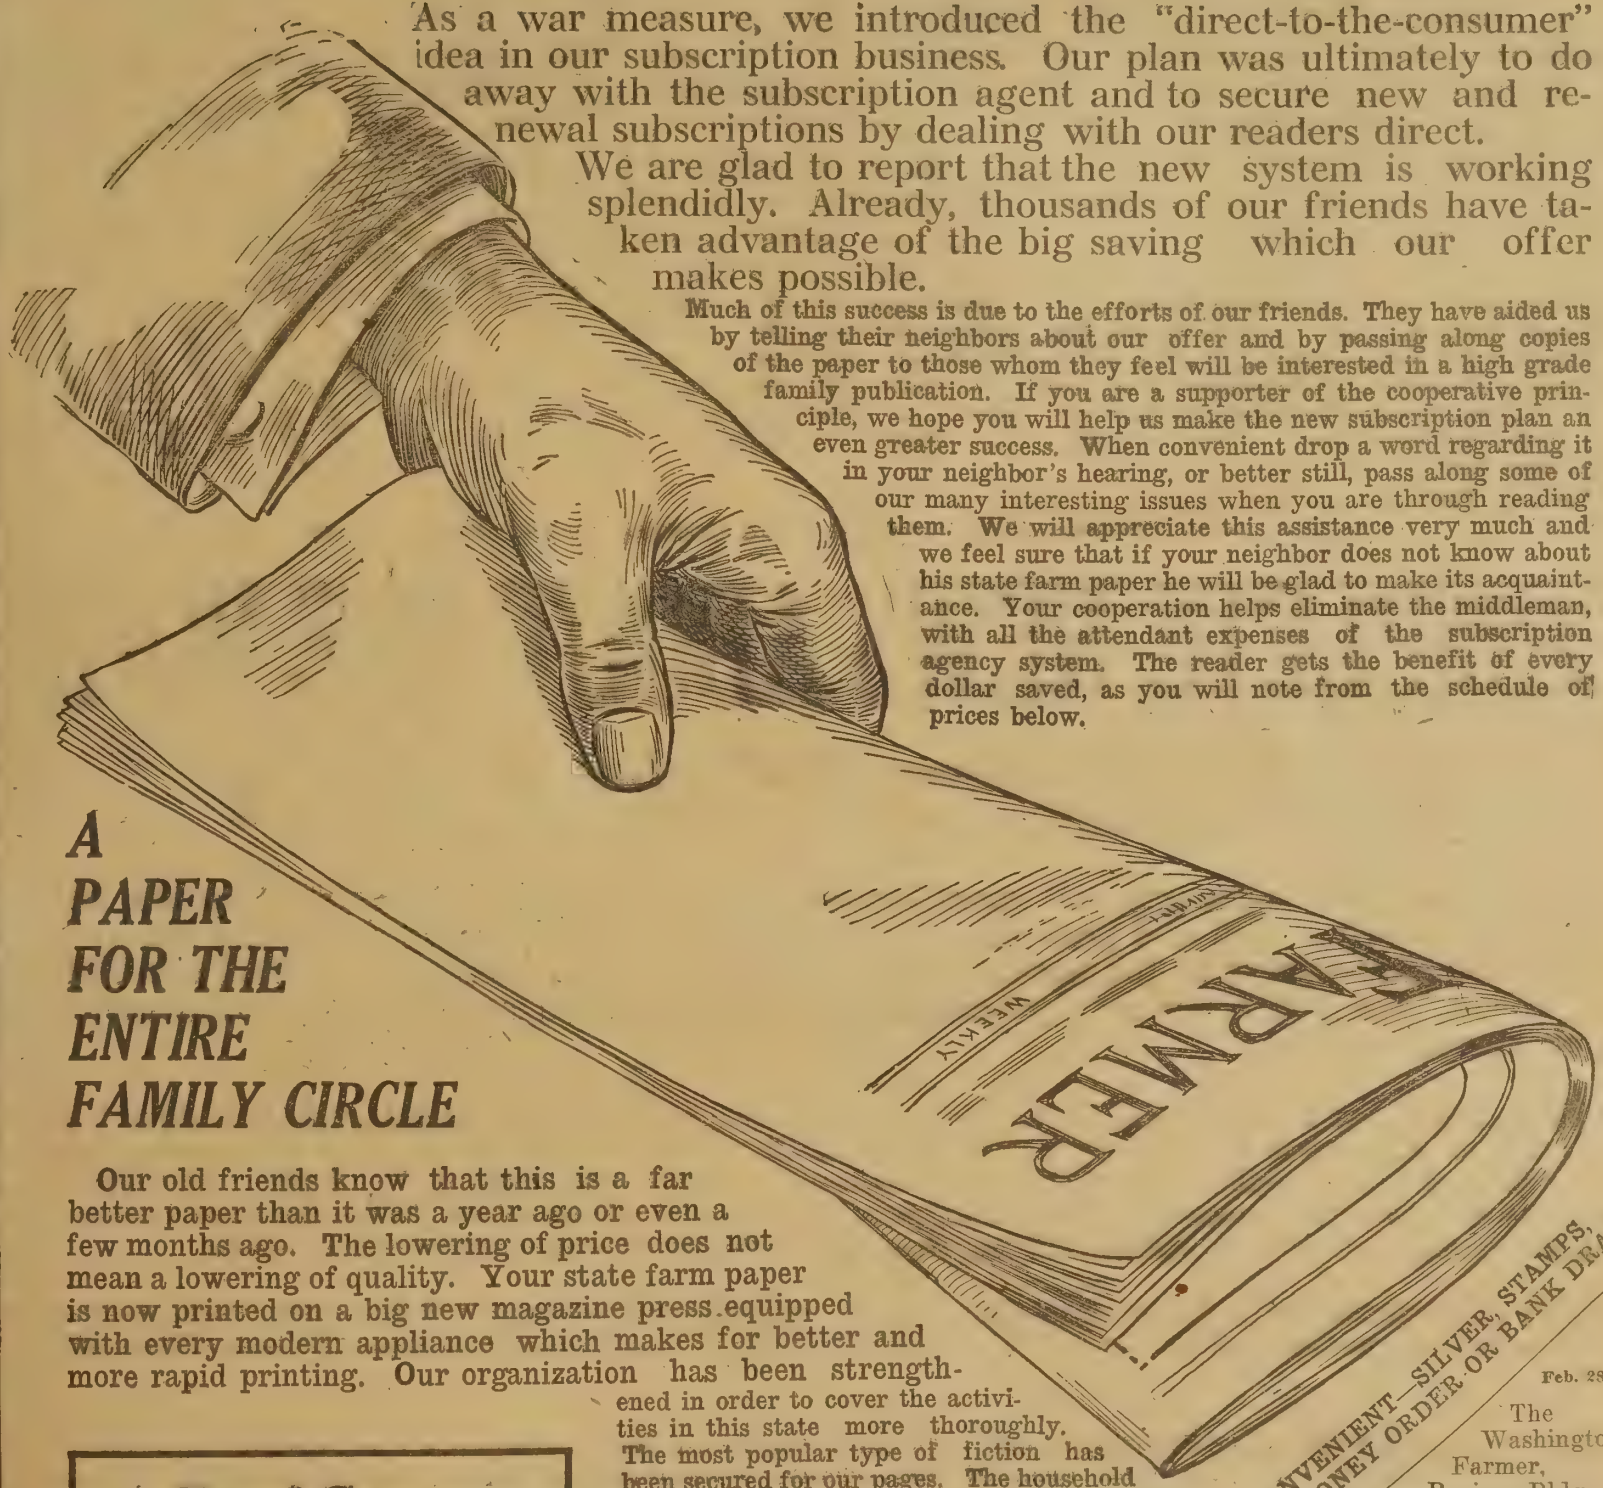
Where orchards are mature and in bearing and are unirrigated there is practically nothing that can be grown to advantage unless one could pasture off some of the cover crops this spring. In irrigated districts where alfalfa and clover can be grown abundantly, sheep can be used to good advantage.

In all these practices, however, one should watch the trees carefully to see that there is no injury by the animals or by having all the moisture and food taken away from them.

## Reservoir Dams in Tunis.

Already the French are looking forward to the rapid development of the province of Tunis in Africa. According to a civil engineer who has been investigating the matter there are about 35 localities in that country where dams could be constructed, with reservoir capacities ranging from 3,000,000 to 400,000,000 cubic meters, and water power ranging from 30 to 6000 horsepower of continuous energy. The engineering difficulties are stated to be small in comparison with those of dams already built in Europe and the United States, and the utilization of the water for irrigation, electrical power, and in one case canal navigation is estimated to furnish a good margin of profit. The numerous ruins of Roman dams found in Tunis show by what methods the country became "the granary of Rome" under the empire, and the ruins of large cities, with coliseums, baths and temples of great size standing in what are now bared plains, are evidence of the success of the organized methods of irrigation of those ancient times.

## Do You Know That



The United States is appropriating $20,000,000,000 for uses in carrying on the war against Germany?

# PLEASE HAND YOUR COPY OF THIS PAPER TO A NEIGHBOR

As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct.

We are glad to report that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible.

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those whom they feel will be interested in a high grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

## A PAPER FOR THE ENTIRE FAMILY CIRCLE

Our old friends know that this is a far better paper than it was a year ago or even a few months ago. The lowering of price does not mean a lowering of quality. Your state farm paper is now printed on a big new magazine press equipped with every modern appliance which makes for better and more rapid printing. Our organization has been strengthened in order to cover the activities in this state more thoroughly. The most popular type of fiction has been secured for our pages. The household department has been made more interesting and helpful. In fact there have been improvements all along the line. Through our cooperative plan you actually get this superior paper for a mere fraction of what it has cost in the past.

## A Real Saving

*Following Rates Now in Effect for Subscriptions to The Washington Farmer*

**25c** FOR ONE YEAR

**50c** FOR THREE YEARS

**$1** FOR FIVE YEARS

## Act Now!

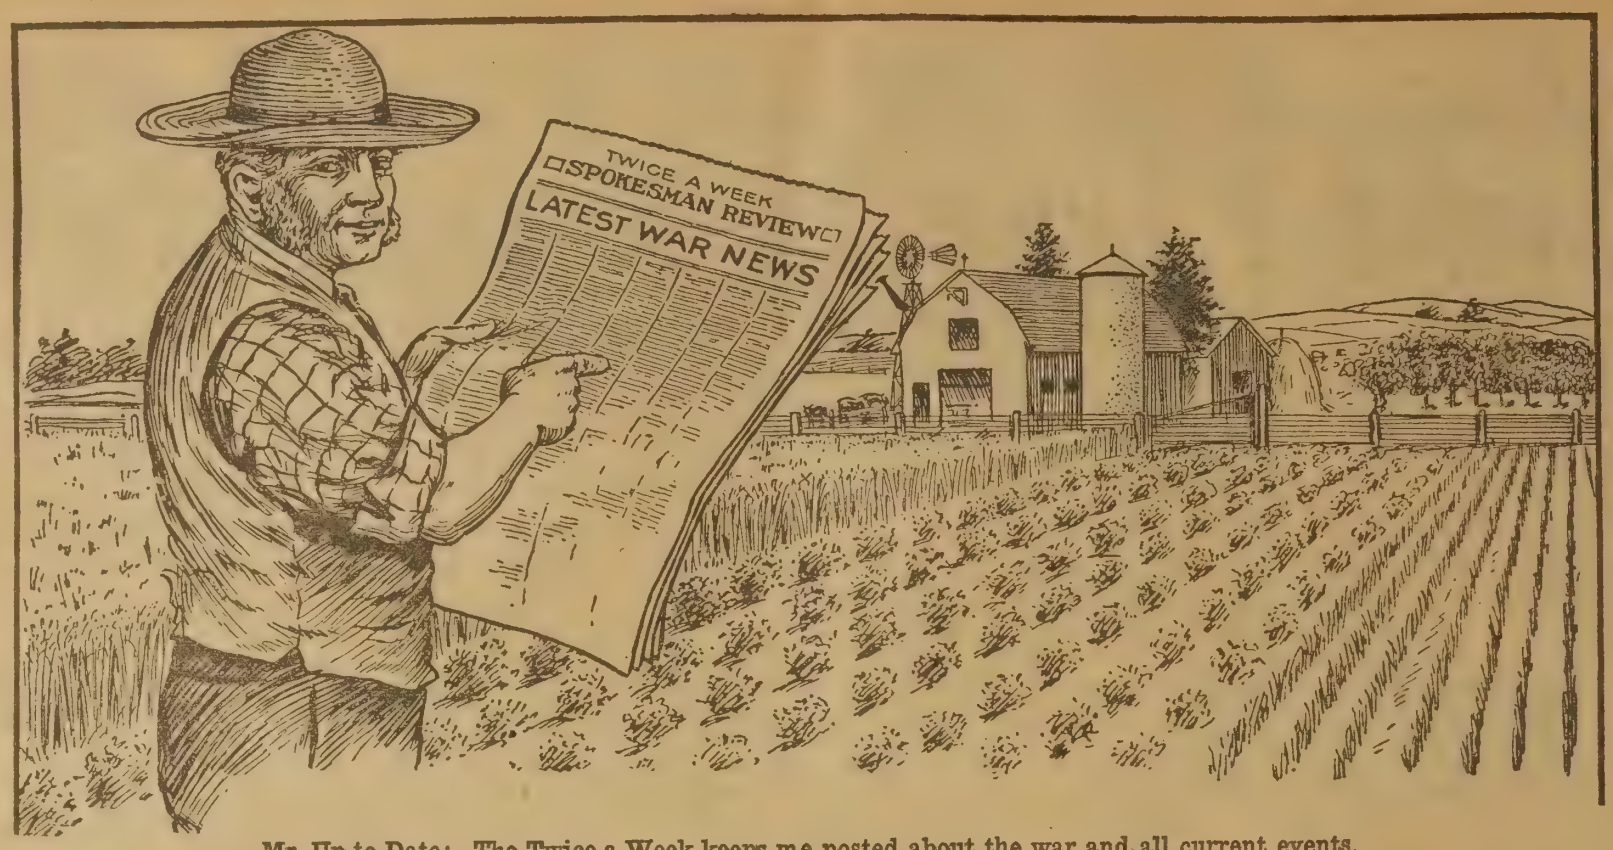
YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

Feb. 28.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.



If you are already paid in advance your subscription will be set forward from the date to which you are paid.

Mr. Up-to-Date: The Twice-a-Week keeps me posted about the war and all current events.

# COMPLETE NEWS ABOUT THE WAR

## Twice-a-Week Spokesman-Review, One Year The Washington Farmer 3 Years, Both for... $1.00

The present war is the greatest, most far reaching and stupendous conflict in the history of the world. You and your family will want to keep in touch with every move in this tremendous drama of the nations. You can do so at low cost by accepting our clubbing offer. The Twice-a-Week Spokesman-Review presents a reliable, condensed review of all current events.

Being a member of the Associated Press, the worth while happenings are flashed to it without delay from every place of importance throughout the civilized globe. It pays particular attention to the war news of special interest to the people of the Pacific Northwest. It reports the progress of the draft; and from its pages you will learn who among your friends and neighbors have joined the colors. When the great transport Tuscania was sunk it gave the names of those from the Northwest who were either lost or rescued.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officals.

In addition to this intensely interesting and important war news the Twice-a-Week brings you an accurate summary of local, state, national and international events. It is published every Tuesday and Friday. Purchased in any other way it costs $1.00 per year. Certainly an offer so liberal should appeal to every one of our readers. Every issue contains important news. If you have not acted already, send in your dollar now.

**ORDER BLANK**

**THE WASHINGTON FARMER, Spokane, Washington. Feb. 21.**

Gentlemen:

I desire to take advantage of your special clubbing offer. Enclosed is $1 in full payment for one year's subscription to The Twice-a-Week Spokesman-Review and three years' subscription to THE WASHINGTON FARMER.

In Canada add one cent per copy for extra postage.

# All the World's a Stage, and All the Men and Women Merely Players

## German Crown Prince.

The German crown prince has telegraphed his congratulations to the different airdromes in Germany on the occasion of the 100th air raid on London. These raids have resulted in the killing of hundreds of men, women and children.

## Guns Roar, but School Goes On

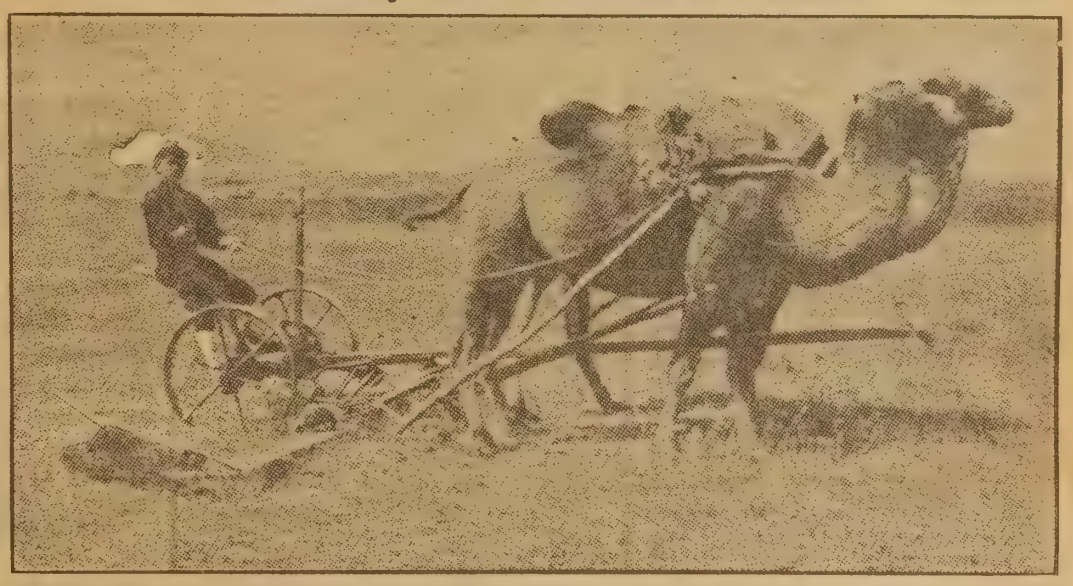
(Copyright—Com. on Public Information, Supplied by I. N. S.)

The old teacher of a little school for peasant children in Belgium is shown in the above photograph gathering wood to keep her pupils in comfort while they are in her care. The little school has been damaged by gunfire, but it keeps, although the roar of the big guns can always be heard.

## Scotch Nurse in U. S.

Miss Kathleen Burke of the Scottish women's hospital has arrived in this country on her second visit to raise funds for the Scottish hospitals.

## New Winter Outfit of Sailors



Here is a photograph of one of Uncle Sam's fighting Jackies on lookout duty while at sea. Notice the new winter outfit, which includes a life belt, in case that the Jackie is washed overboard by the high seas that roll continuously over the ship.

## Trying to Scare Everybody to Death

—Wichita Eagle.

## Dromedary Used as Draft Animal

Modern methods and machinery have not been introduced to any measurable extent in Siberia. The picture shows dromedaries being used as draft animals. The picture is taken from Harvest Scenes of the World issued by the International Harvest company's service bureau.

## Plowing in Ancient Days in Egypt

The picture shows the way plowing was done in Egypt long ago. The early Colonial farmer plowed in much the same primitive manner with a wooden plow, sowed his grain broadcast by hand, harvested his crop with a scythe, and threshed the grain on the barn floor with a flail. The picture is taken from Harvest Scenes of the World.

# Magazine Department of The Washington Farmer

## What a Farmer Thinks of Things

It is up to the Farmer to keep its readers informed of the trend of thought among farmers in all parts of the country, as well as in our own state. In a letter written to the editor of the Pittsburg Dispatch a Pennsylvania farmer speaks out his convictions freely:

After a careful review of the facts published since we went into the war, to my mind, the big outstanding features are the efficiency shown by the naval department and farmers, and the comparative lack of efficiency every other part of our national machinery has shown. Didn't the farmers, with the greatest shortage of labor ever known, respond to President Wilson's call with record crops of everything but wheat? And it was in the ground and could not be increased until another crop year. We gave the country the greatest supply of foodstuffs on record. How were they handled, and who was responsible? For instance, the mill where I sold my wheat paid $2 for mixed and $2.10 for red wheat, charged me $12.75 a barrel for flour, and I hauled it from the mill, while they sold a barrel to a storekeeper and delivered it a mile from the mill for $12. I have a dairy and have to have protein feed for the cows. I raised corn; oats and wheat. Corn is 7 per cent protein, oats 9 per cent and wheat 14 per cent. I could sell corn at home for $2.50 per bushel. To get $2 for the wheat I had to haul it 12 miles. Then I would have to come home and go 10 miles in the opposite direction to get oil meal or cottonseed meal at $62 per ton to supply the protein I had sold in the wheat. It amounted to this: I could stay at home, sell the corn and grind the wheat for the cows, make 50 cents per bushel on the wheat and save the long haul of heavy loads. What would any business man you know have done under the circumstances? Do you think it was patriotism or lack of business intelligence that caused me to haul the wheat to the mill when I knew the exorbitant price I paid for the cottonseed meal was due to a willingness to allow profiteering, or incompetence on the part of the food controller. I leave it to you to guess what the foreign element on farms and the pacifist and pro-German farmers have done under these circumstances.

How many wheatless days will it take for you, and your staff, to save enough wheat to make up the hundred bushels some Polish farmer ground for feed because the price of cottonseed meal was not controlled. After the farmers overworked themselves early and late to raise larger crops, doesn't it take a lot of brass to ask them to make sacrifices to prevent their efforts from being nullified by official incompetency.

I am going to confess for myself and a lot of other farmers I have talked with, to a lack of confidence in the administration. President Wilson was elected by the pacifist vote, because "He kept us out of war," and the labor vote obtained through the medium of the Adamson law. I don't believe you will dispute the statement that the people who are strong supporters of the war—I mean from conviction not policy—are not the people who voted for President Wilson.

Many of us think the delay in adopting and contracting for armament and supplies was due to auto-intoxication caused by pacifist germs still hidden in the administrative body.

I believe the farmers generally consider the attitude of the administration toward organized labor as the greatest weakness of the United States in prosecuting the war. If the war continues two or three years farmers expect to see labor making demands for more pay from time to time, getting it; and eventually demanding a six-hour day with eight-hour pay, and a continued effort to make a lower cost of living by government regulation of prices. We thank heaven for a congressional election next fall. Now, don's get me wrong. I'm not a political sorehead, but an independent nonpartizan voter. As witness, I am a reader of The Dispatch. If the government makes the price of the farmers' produce it is fixing the price of his labor, and therefore should fix the wages of industrial labor.

The farmers are the only laborers that are a vital force in the prosecution of the war that have stuck to their post and made good without threat of strike for more pay or shorter hours. I would like to say to those in control of the government: The farms are the foundation of our national power; don't discriminate against us. If shipbuilding, transportation and the war department had been as faithfully and efficiently handled as the farms, not only Uncle Sam, but our allies as well, would have cause for rejoicing.

There will probably be a national federation of farmers some day and, as the precedent is now established, maybe some administration seeking reelection will push a law through congress to enable farmers to get as much pay for an hour of labor as is paid in other lines of industry. Or, in other words, give us a square deal.

I am for winning the war, not by diplomacy or parleying, but by walking all over Germany until she yells so the whole world will know she is whipped. I have been gradually getting that feeling ever since they tried, or showed an inclination to try to interfere with Dewey at Manila.

My grandfather was born at Wittenberg, Prussia, and believe I know what they need.

I would like to say to the administration—Quit playing to the grandstand and play to win the game.

To congress—Quit playing politics and attend to business.

To the food and fuel administrators—Shut up and get busy.

To the newspapers—When any 22-caliber officials want to get some personal advertising into your columns camouflaged as news, tell them to conduct their offices so ably that the public will notice them.

To the workers on shipbuilding—Forget you are putting in time at so much per hour, and remember every extra effort is saving lives.

To the railroad man—Don't be throwing monkey wrenches in the gears; buck up and haul freight.

To the coal miner—Don't be afraid you are not appreciated; you are moving the world.

To the farmer—Don't be yellow; stick it out. What if help is scarce; there's a good fight left in you.

For myself—I am going to try just as hard or harder than last year. I raised big crops, and didn't make enough over expenses to buy a few records for the Victrola at Christmas, while the industrial workers around me could buy anything they wanted, from barrels of beer to automobiles. But I'm not going to quit till the kaiser does.

I wrote this to you personally, but you may publish it if you wish, as I have the courage of my convictions, even when it takes money out of my pocket, or skin off my nose. Your for winning the war. L. W. SHOUP.

McKees Rocks, Feb. 7, 1918.

### Cattle in North Dakota.

Any one who believes that the day of the cattle king has passed in North Dakota is invited to take note of the fact that C. P. Burnstad, owner of the largest individual ranch in North Dakota, is to be found within 80 miles of the state capitol, in almost the center of the state, and that he is absolute lord of 33,820 acres of land; stands at the head of a clan of 35 of the doughtiest riders the cow country has ever produced, and has on hoof 5000 head of cattle, 300 horses and 1200 sheep, not to mention a general store, an automobile agency and sundry other little enterprises included in the town which bears his name.

## Community Farms

Canada expects a stream of immigrants at the close of the European war, and the government of New Brunswick already is preparing to provide suitable settlement areas for those who may elect to make their homes in this province. A provincial advisory board has been created.

The New Brunswick government proposes that when a block of land is finally accepted, it shall be surveyed and laid out according to a special pan. The railroad will pass through it diagonally, and two main roads will cross it at right angles to each other. The railroad will serve as a base line for lots, with a corresponding line for the base on the other side of the block. Every farm will commence at the main road and run back to one of the base lines. No farm will have land on both sides of the track. Each block or community is to have at its central point a model farm, managed by a practical farmer placed there by the government. This farm will produce the seeds required by the surrounding farmers.

The land in each community will be divided into sections ranging from 10 to 100 acres each. The government proposes to sell these farms at actual cost, on easy terms. Each purchaser will be required to pay 10 per cent down and will be given 20 years to clear the remainder. The government will erect a house and a barn and dig a well on each farm. The purchaser will furnish his own implements, with the exception of certain special appliances to be shared by the whole community and loaned by the central model farm.

## It Depends on the Man

### *If You Want a Good Time Take It With You*

**By Granville Lowther.**

In every field of industry, in every profession, in every department of life, success depends on the man. In every sphere there have been successes and failures with averages in between. There are enough uncertainties in life, enough obstacles in nature, enough difficult problems to solve, and so much that can only be learned by careful study and observation, that the man who will not think will fail, while the man who will not put his energy and soul into it will only become an average man in his business. It is estimated that ninety per cent of all the business men fail some time during their business career. It is estimated that of the number who fail and who are above fifty years of age, not one in four thousand ever recover from their failures, in so far as to be considered successful in the future.

In traveling over a country, or viewing a landscape, the pleasure derived from it depends on what the man is. In reading a book or visiting a library, the good we get out of it depends on what we take with us. In visiting an art gallery or listening to music, the pleasure depends on what we are. If we are going out for a picnic or a pleasure drive, the way to have a good time is to take it with us.

I have traveled over a good many sections of country, talking with farmers, fruit growers and others, and have invariably found in every community I have visited persons who are cheerful and happy and others who were gloomy and despondent. Two men may be living side by side with exactly the same environment, tilling the same kind of land, growing the same kind of fruit, and marketing at the same prices, the one will be happy and the other miserable. If you want a good time take it with you.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How to Care for Your Feet---Exercises Strengthen Them

Dr. Hirshberg

To have a perfect enunciation and a speech free from defects, there must be perfect harmony between the speech and voice apparatus, perfect mind control and deep breathing from the diaphragm. When these conditions are not present there is chaos which causes lisping, stammering, stuttering, agitophasia—that is, excessive rapidity of speech which causes omission of syllables, slurring and otherwise mutilating the sounds.

Foremost among these are stuttering and stammering. They do not come from malformation of the organs of speech and voice, but from the incorrect use of these organs, and the interference of the action of certain muscles as well as from imperfect harmony.

Just as a little child learns to pronounce its first short words, so must he who suffers from speech defect be taught. He must—after training by such a method as that suggested by Professor Cadwallader of Cleveland—articulate without conscious effort. Just as a person swallows food with an involuntary action, so the words must flow smoothly forth.

Some excellent rules for treatment to correct impeded speech are:

Training the muscles of speech through the sense of touch at the points at which they meet when speaking.

Eliminating monotone.

Breath control from the diaphragm.

Exercises in short phrases to eliminate rapid, continuous speech and to prevent talking when the breath is exhausted.

Retaining new perfection in speech by reading aloud and conversation.

**Training Speech Muscles.**

In the training of speech muscles letters are first pronounced, then words and phrases. Each letter of the alphabet is carefully spoken. B should be made with a light meeting of the lips and the contact broken as quickly as possible. This invokes the entire power of the jaw, lips, tongue and throat. M, P, B, W, with the lips, slightly touching each other, and the jaw, tongue and throat at rest. The gutturals, K, Q, G and the hard C are made in the throat, with lips, jaw and tongue in nonactivity.

In the correction of speech deep breathing plays a major role. This must be practised to relieve the vocal cords of the duty of controlling the breath and the inevitable throat clutch. These deep-breathing exercises are taken in this manner:

Stand erect in the ordinary position of "attention," chest high and active while taking in breath, expand at the waist with diaphragmic muscles. Hold the breath while counting 20. Then slowly increase by gradual degrees to 40. The sensation of tightness and fulness in the throat experienced when first taking these exercises will pass away after you have become accustomed to them.

The monotone—a common disturbance of speech—is corrected, according to Professor Cadwallader's method, by conversation and reading aloud. The passages to be read are marked with the proper signs to tell whether the voice is to be raised or lowered.

In the treatment of small children picture books and cards are used. The mother or guardian should come with the child and thoroughly understand the treatment so it can be carried on at home all the time. Rules and tasks are repulsive to a child, therefore the treatment must be carried on by games, so that the child is unconsciously taught.

**Careful Work Necessary.**

"How long will it take to cure me?" can be answered only by telling the patient that this depends upon the responsiveness of the abnormal speech-conditions, the pupil's industry, his patience and perseverance. The cure does not lie in the knowledge of the treatment, but in the diligent perseverance of the afflicted person to practise the methods.

To eliminate all imperfections of the speech and voice, the instructor must be a voice specialist as well as a speech specialist. It is impossible to eliminate such imperfections without preserving and training the singing voice as well as speaking voice. Those who fail to do this acquire and develop weak and husky voices.

Class work in schools for stammering doesn't correct the defect, it is through the study and application of the methods taught that the individual obtains perfection in speech.

# Food Shortage in Sight

## *Every Day Adds to Gravity of the Situation*

Every succeeding day for the last two months has added to the gravity of the food production situation for 1918. Every day it has become more and more important that a national war-time food production administrator should be putting in his 16 or 18 hours of war-time activity.

A movement for the immediate creation of the office of a national war-time food production administrator was launched in Spokane December 29, 1917, when a telegram was sent to President Wilson declaring:

The crisis demands the immediate appointment of the ablest available man in the country as national war-time food production administrator, who will fire the imagination of all the people, consumer as well as producer, to the supreme necessity of increased food production, and who will establish far-reaching cooperation with the agricultural department, agricultural colleges and farmers in all sections of the country in meeting their war-time food production difficulties, just as Hoover has brought home to every family the need of food conservation, and just as the Red Cross campaign has swept the entire nation under the leadership of Davison.

Many men of eminence in the nation, as readers of the Farmer well know, have indorsed this movement.

Only recently Samuel Fraser, a Genesee (N. Y.) farmer, the spokesman for a delegation of farmers, told Secretary Houston of the United States department of agriculture that famine threatens the land in 1918. As a result of their appeal to the secretary Mr. Fraser says they were told "that they should be hopeful and talk patriotic." "The growing of food for 1918," says Mr. Fraser, "is one of the most serious problems controlling the world today. Awake or we perish! We have basked in fancied security long enough."

Only a few days ago President Jacob Gould Schurman of Cornell university declared before a gathering of farmers that "of all the great problems of this colossal war, the food problem is now the most important," emphasizing this fact with the warning that "the nation is confronted with a danger of starvation in the next 12 months," and that "the energies of our farmers are paralyzed by price fixing and the fear of price fixing."

And here is an editorial from the Country Gentleman of February 16:

### Still Planning.

We don't know!
We can't tell!
We are planning!

The department of agriculture has not as yet taken out patent rights on the above phrases, but apparently it has standardized them as pat replies to all pilgrims seeking general or specific information wherewith to render service in the 1918 food drive.

Nine months ago the department of agriculture announced that it was planning in a big constructive way—

To help solve the farm labor problem.
To help solve the seed problem.
To help solve the fertilizer problem.
To help solve the farm machinery problem.

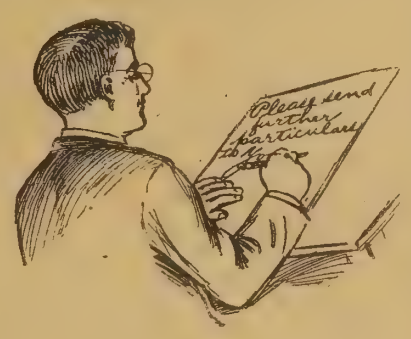
To make an intensive food survey that would show us this spring just where we stood on food reserve and food production needs.

To work out a definite plan for war-time food production.

To reshape and improve the department's public information service.

A large order, yes; but with a fund of $40,000,000 to draw on and a staff of 20,000 trained workers to serve, we are amply justified in expecting both big plans and big accomplishments. We have been expectant; likewise patient. And as plowing time approaches and we hear, growing increasingly urgent, the call for more crops and still more crops, we are inclined to ask for a showdown.

We are bit fed up on plans, plans, plans; optimistic conjectures; cavalier evasions; that venerable and tottering subterfuge: "It's too early to announce results, but presently we'll do a bulletin on it." Really, it would cheer us infinitely to hear of something done and doing.



It would be mighty stimulating these days to see something big and upstanding, with hairy chest, smashing big arms, unafraid of sweat and dust, emerge vigorously from the department of agriculture and shout in a he-man's voice: "Come on, boys, I've got the tools and the seed and the how-to-do-it dope; let's swing at it and get it done. I'll help you find a market for every peck you can raise at a price a little better than worth while." There'd be a wholesome humanness about such a sensation.

But, alas! Nothing of the sort seems to be on the cards. The department of agriculture remains a hidebound bureaucracy, muffled to the eyebrows in academic seclusiveness and scientific secretiveness. Invade not its high-browed portals and disturb not its dignified and heavy-thinking functionaries and factotums, for about all the satisfaction likely to accrue from your efforts will be as stated above:

We don't know!
We can't tell!
We are planning!

## Advertising Food Product Doubled Size of Package and Lowered Cost

"We believe that advertising actually reduces cost to the consumer, and our experience proves it," says the advertising manager of a widely-advertised breakfast food. "When our produce was first put on the market the package was only about two-thirds its present size and sold for 15 cents. Advertising so stimulated demand as to justify larger and more systematic production and more economical manufacturing and selling methods, directly resulting in almost doubling the size of the package, and at the same time justifying us in reducing the price to 10 cents."

Yes, advertising has a strong tendency to lower the cost of manufactured articles of all kinds. Even more important, it gives the buyer the assurance of quality. If a manufacturer or dealer advertises a claim, there is no backing down; he must stand by his printed statement.

In addition, the reliability of every advertisement appearing in this paper is guaranteed, making your assurance of fair dealing doubly sure. Note the iron-clad nature of this guarantee on our editorial page. Then, why not write our advertisers to tell you more about the articles they have for sale.

# Triplet Wheat

## It Is a True Winter Variety

To the Editor of The Washington Farmer: I would appreciate it if you would make a statement in your next issue to the reader somewhat as follows: "The new variety of wheat called Triplet, which was discussed at the meeting of the Washington Grain Growers', Shippers and Millers' association, is a true winter variety and will not mature grain if planted in the spring. While it has shown a remarkable yield in both field and nursery trials at Pullman, little is known concerning its adaptability to other sections of the state. It should be grown only in an experimental way for at least two or three years before being recommended anywhere outside of the Palouse country. The college has about 20 acres of this variety for the coming harvest. The seed will probably be handled through the county agents of the various wheat producing countries for experimental tests in 1918 and 1919." E. F. GAINES.

Instructor in Farm Crops.

Washington State College, Pullman, Wash.

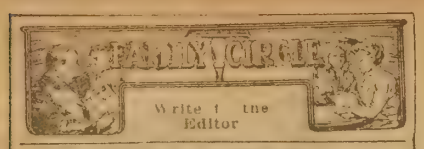
# DIRECT from the PRODUCER to the CONSUMER

## AN UNEQUALED BUILDING SERVICE IS OFFERED TO THE PUBLIC AT THE TOWNS SHOWN ON THIS MAP

BLUE PRINTED WORKING PLANS covering any type of wood constructed buildings, together with an itemized list of all the necessary material GUARANTEED to complete the building, prepared under the personal supervision of one of the most efficient Architectural Engineers in the West, are offered ABSOLUTELY FREE to purchasers of **Potlatch Quality Lumber.**

## All Guesswork Eliminated!

We are prepared to tell you the EXACT COST of your building BEFORE YOU START ITS CONSTRUCTION. Grown in our immense forests in Northern Idaho and Western Washington, manufactured in our World's largest and most modern mills, our lumber is offered direct to the users at lowest possible prices—no middleman. This wonderful service is only offered to the people who live in or tributary to the towns where our distributing yards are located.



If you will kindly fill out the attached coupon and mail to Spokane, Wash., our representative will call with complete information and prices.

**THIS IS THE COUPON—USE IT NOW.**

# Women Organize

## Every Locality to Be Represented

The organization of a council of women in every county of every state of the nation, to work in every district and community of each respective county is part of a gigantic plan of the federal department of agriculture to bring to the women of the United States a direct working understanding of the needs of war-time conservation. The plan is yet in its infancy, but the various government agents in each county are rapidly completing the details.

Each county is to be divided into small districts; each district to elect a representative who will have charge of the work in her section. The general supervision of the district leaders will be carried on through a county organization of the leaders by the federal county agents, who will direct the work and instruct the district leaders.

Although food conservation, because of the present urgent necessity for the saving of foods by the housewives of the nation, will be one of the first problems dealt with, other lines of household management will also be taken up. The shortage of wool, linen and cotton materials is presenting a new problem to the women of these times, and the study of textiles and clothing will be carried on in all probability very soon through this women's national organization.

Other subjects which may be taken up are sanitation, the most economical management of the home, various labor-saving devices and other problems may present themselves.

The organization is not to be entirely a war measure, but probably will be continued in times of peace.

# Meats and Soups

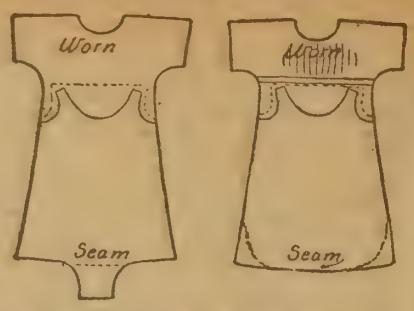
Dear Family Circle: It has been such a long time since I wrote to you about things to eat that it may seem as though I am not interested in "eats" any more. This is not true, for I have given more thought to foods and how to cook them during the last few months than ever before.

In these times of meatless and wheatless days it behooves us to give our best thoughts to providing substitutes and to preparing those substitutes so that they will give the most nourishment possible.

We are asked that the country shall save meat, so along this line we should prepare the meat we do use that it may reach as far as possible.

I have learned a new way to make a meat loaf, and it is delicious. Take a leg of beef, the last three cuts called shins which is sold for soup meat. Boil till it falls from the bones. Before it is done, or during the last hour, add to the meat and stock about six good sized potatoes cut into inch cubes, four onions and three or four carrots also cut into pieces about an inch square. When the vegetables are thoroughly cooked strain the stock off, remove all bones, let the meat cool, then put it through the meat grinder. If you have not salted it sufficiently while it is cooking add more, and pepper and some sage if you like it. Mix the vegetables, which should be thoroughly cooked, all through the ground meat; add enough stock to the mixture to hold it together but no more; pack firmly into an oblong bread pan or anything convenient, and place on it a weight of some kind like a flat iron and cool thoroughly.

It slices very nicely and is surprisingly good. It is fine for sandwiches for school lunches, and goes twice as far as if served any other way. We never consider the soup meat very choice, but made into a meat loaf it is fine.



Then you have the stock in which you have cooked the meat left for soup. I have written the Family Circle before about soups, but since that time I have seen so many people in so many different places serve such poor, sloppy stuff for soup that I want to urge you to cook your vegetables long and slowly so that the flavor will be brought out into the stock. I am talking now of vegetable soup, which I think is the very best of any when it is made right. I put every kind of vegetable that I have in the soup, but only a little of each, then I add a little rice, only a little, or it will be too thick, also I add a few pieces of macaroni and some canned tomatoes, only a very little of each. The days I make soup I always look around in my ice box to see if there are not some odds and ends left over and any sort of thing at all suitable goes in. For instance, there might be a small portion too little for a meal; if baked beans, they go in. There might be one dish of cold breakfast cereal, like oat meal or graham mush. I slide that into my soup kettle. You will understand that one way and another I am producing a dish of real nourishing food, and on a cold day it surely is good. Be careful not to make a stew of it instead of a soup. There must be only a very little of each vegetable, remember. Sometimes I take a notion to strain the broth through a coarse sieve, but in that case I never use the rice or macaroni. All the other things will press through the sieve and the soup will be smooth. Another time I will tell you of ways I have learned to make bread for the wheatless days.

A. W. B.

## *Wonderful Egg Producer*

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker, write E. J. Reefer, poultry expert, 4662 Reefer bldg. Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today or ask Mr. Reefer for his Free Poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

## Teddy Bears for Children.

Either a kimono nightgown or a nighty with set-in sleeves may be made into a teddy bear. As a rule, the upper part of a nightgown is split or worn thin, but the lower part is usable.

# Household Hints

In making oat meal bread it improves the flavor to let the oats scald a half hour in the liquid, although the rolled oats may be used dry if preferred.

It is a good idea in making the first few trials of war bread to measure the ingredients. The "own judgment" method of many very good cooks has been known to fail in the case of wheat substitute breads.

The government suggests that if you find you can not make a success of your bread with over one-fourth wheat substitution, rather than spoil all your bread make the substitution in other ways, as not using wheat cereals for breakfast, and using more of the quick baking powder breads, such as corn meal, which can easily be made with a 50 per cent substitution.

## Make Waists Into Corset Covers.

Thin white waists make dainty corset covers for summer wear and the heavier waists may be made into corset covers to be worn under woolen dresses in the winter.

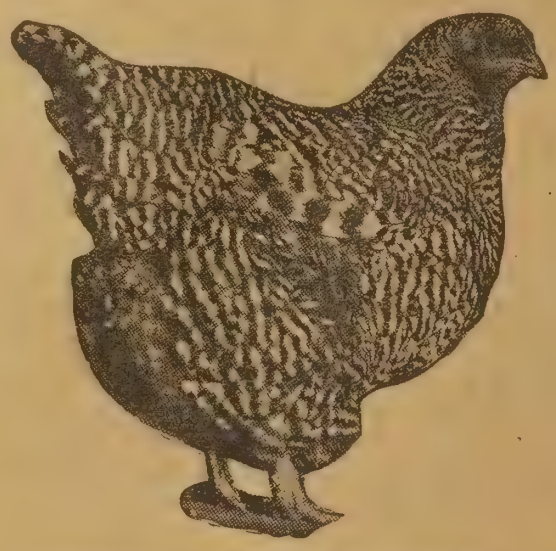
# When You Buy a Piano it Pays to Buy a Good One

When you buy a Piano it is usually intended to last a life time. Therefore special care should be used in its selection.

You should not be guided by cheap prices or special inducements. Pianos, like everything else, are priced according to their intrinsic worth. If you do not possess expert knowledge of piano making you must rely greatly on the Piano Dealer. Therefore it is certainly to your interest to go to a dealer who has the reputation of carrying only pianos of merit and true musical worth, who is known to price his pianos consistently, and who has only one price for everybody.

We carry a number of well known makes, each the very best in their grade. Prices of new pianos range from $300 upward; good "used" pianos from $125 upward. If desired, we arrange convenient terms of payment.

**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**



WE ARE DEALERS IN STEINWAY AND OTHER PIANOS, PIANOLA PIANOS, AEOLIAN PLAYER PIANOS, ETC.

# POULTRY FOR PROFIT

**Every rancher who can raise poultry during the period of the war is not only assured a good profit, but is giving another proof of patriotic interest in building up one of the world's most vitally needed food supplies.**

## GET STARTED RIGHT

**Have heavy egg producers of some breed and strain that has been bred up to a high standard. You will find on the "Want Ad" page and the breeders' page of this paper hatching eggs, baby chicks and breeding fowls from some of the best stocks in the Pacific northwest.**

## POULTRY BREEDERS

**The demand for foundation stock-hatching eggs, chicks and birds for breeding among ranchers, can not be supplied by present advertisers. Advertise your surplus in the classified or poultry breeders' department of our papers and help to supply this demand, at the same time adding to your own profits.**

## THE WASHINGTON FARMER

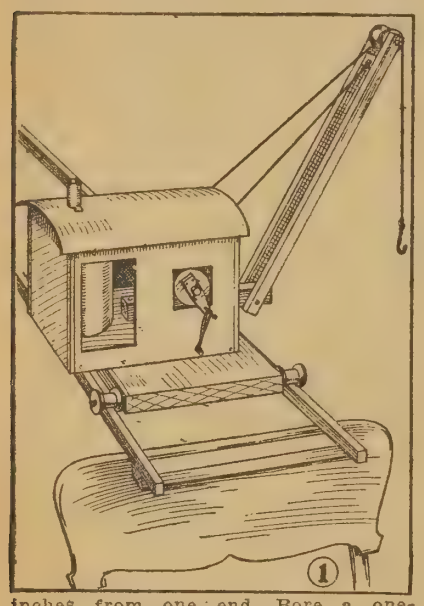
# Handicraft For Boys



By A. Neely Hall

(Copyright by A. Neely Hall.)

## A Toy Crane.

This little crane travels along an elevated track supported at its ends upon the tops of chair backs (Fig. 1). It is more fun to have the track at an elevation than on the floor, because it provides a greater distance for hoisting things.

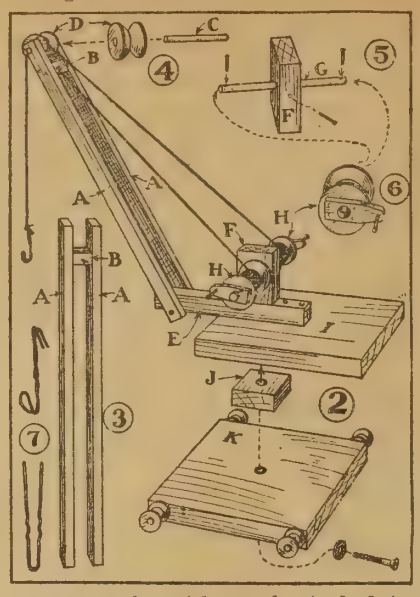


Fig. 2 shows details of the crane, windlasses and turntable, and Fig. 3 the cabin walls and roof. The crane boom is made of two strips (A, Fig 3) 14 inches long with a short block (B) fastened between, one and one-half

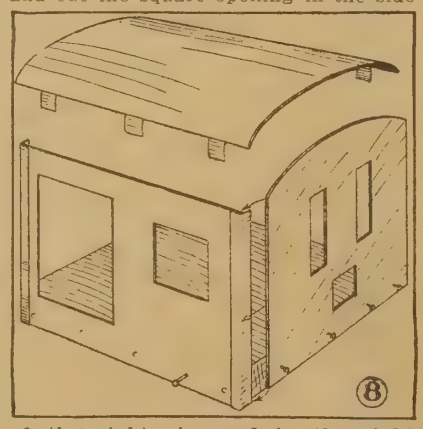
inches from one end. Bore a one-fourth-inch hole through each strip near the upper end for the axle C (Fig. 4) to fit in, and a one-eighth-inch hole near the lower end through which to pivot the boom. Make the pulley of two spool ends nailed together (Fig. 4).

## To Make the Windlass.

After completing the boom, cut beam E (Fig. 2) about eight inches long, to fit between strips A of the boom. Cut the windlass block F (Figs. 2 and 5), and bore a hole through it for a one-fourth-inch stick shaft (G) to run through. Make the windlass drums



out of spools, with cranks tacked to their ends as shown in Fig. 6, and after slipping them upon the shaft drive brads through the shaft ends to hold them on. Nail beam E to the lower edge of block F, then nail it to the turntable (1), a block five by eight inches in size. Center the beam in the width of the turntable, and allow three or four inches to project over the end, as shown in Fig. 2.

The turntable I is pivoted upon the base K, a block eight inches square, with a small block (J) inserted between them. Bore a one-fourth-inch hole through the center of base K and block J, so the screw pivot will turn freely, and slip an iron washer over the screw to keep its head from pulling through the holes. Drive the screw into the under side of turntable I, three inches in back of its forward end. Fasten four spools to the side edges of the base with nails, for wheels.

Screw the lower ends of the boom sticks A to the end of beam E. Drive a nail into block B, attach one end of a three-foot piece of cord to it, and tie the other end to one windlass. This is the cable by which the boom is raised and lowered. Use a cord five or six feet long for the hoisting cable, tie one end to the second windlass spool, run the cord over pulley D, and tie the other end to a hook bent out of a hairpin (Figure 7). Figure 1 shows how the windlasses are laced by loops of string.

## Cardboard Cabin.

Build the cabin of cardboard. Figure 8 shows the front and one side. Cut the two long openings in the front for the cables to run through, and the square opening for beam E to fit in; and cut the square opening in the side

of the right size and in the right place for the windlass spools to pass through (Figure 1). There need be but one doorway. Tack the walls to the edge of the turntable, then bind together the corners with paper strips. Fasten on the roof with strips of paper, as shown.

The tin can in the rear portion of the cabin (Figure 1) serves the double purpose of make-believe boiler, and counterweight for offsetting the effect of loads hoisted by the boom. Fill the can with earth or sand.

Make the tracks of strips just wide enough for the spool wheels to run upon, and connect them with cross-pieces.

### Legal Status of Siamese Women.

The women of Siam are in supreme command in that little tropical country, where they have legal status with men. They are the legal head of the household, and no business transaction of a married couple is valid without the signature of the wife.

**Fun in the Auto Bus.**

Dear Aunt Nellie: I am 10 years old. I have dark brown hair and gray eyes. My birthday is on the 21st of April. Have I a twin? If I have will they please write to me. I do not care if it is a boy or a girl. I have three brothers and one sister. My sister's name is Helen. She is 17 years old. She will graduate this year. My brother's names are Robert, William and Clark. Robert is 3 and William is 8. Clark is 19. He is a soldier. I have a cousin who is a soldier, too. We had two horses, but one died. We have one cat and one dog. We call the dog Booze. We have two cows. Their names are Daisy and Spot. The snow is just melting. I thought it was lots of fun while it lasted. Yesterday I rolled up some real large snowballs. Some of them were two feet through and I carried them. This morning when I woke up my back hurt me so that I could hardly move, but it is better now. I am just learning how to knit. I already know how to tat, embroider and cross-stitch. I like school very much. I have to go two miles to school in an auto bus. We had lots of fun Friday. There was no top on the bus and it was snowing. In our school there are 1000 pupils, I believe. There are 43 in my grade. I am in the fifth grade. We have five teachers. My teachers are Miss Cannahan, Miss Holgerson, Miss Saunderson, Miss Ehle and Miss McRae. I live on a poultry ranch.—Margaret Coleman, R. F. D. 2, Box 32, Auburn, Wash.

**"Nigger Tom" Is Leona's Pony.**

Dear Aunt Nellie: May I join the Children's Corner? This is the first time I have written to the Corner. I am 11 years old and in the third grade at school. My birthday is on the 17th of February. I go to school every day and have three playmates. Their names are Thelma, Gertrude and Louise. We have lots of fun at school. I have two sisters and three brothers. My brothers' names are Leo, Teddy and Tom. My sisters' names are Della and Wilma. Della goes to school and all three brothers go to school. Wilma is 3 years old and Della is 7 years old and is in the first grade. I go to the White Swan public school, district No. 88. There are three rooms and also a basement and a bookroom in the school. There are about 120 children in our school. I have a pet lamb, and also two dogs. The dogs' names are Nick and Jack. I have a pony and his name is Nigger Tom. Have I a twin? It has been snowing here. There were four inches of snow, but there are about three inches of now.—Leona Frances Ohms, White Swan, Wash.

**Likes Their New House Fine.**

Dear Aunt Nellie: I am going to write another letter to the Corner. I am very interested in reading the letters in the Farmer, so I suppose other children are, too. I am 12 years old and will be 13 August 7. I have two sisters and no brothers. Their names are Myrtle and Mary. We call Mary Betty. Myrtle is 9 years old and Mary is 2. I had three sisters, but one died. We just moved into our new house last May. I like our new house fine. We live on an 80-acre farm. We have horses and five cows and some pigs. We have one dog and three cats, two big ones and one little one. The cats' names are Bob, Spot and Beauty. We have a pet calf. Her name is Dolly. We like her very much. The other morning when we woke up the ground was covered with snow. We were surprised. My papa said I didn't have to go to school that day. But I said I didn't want to miss any day, so he said I could go.—Hazel Jean Webster, Box 62, Route 1, R. F. D., Olalla, Wash.

**Isola Likes to Knit for the Soldiers.**

Dear Aunt Nellie: This is my first attempt to write to the Children's Corner. I was 12 years old January 14. I like to read the Children's Corner. For pets I have four kittens and one pup called Don. I have one brother and one big sister. Her name is Effie and she teaches at district No. 46, near Cunningham. I live three miles from school and my brother and I go to school horseback. My brother and I have been knitting washrags for the soldiers. We both like to knit. Have I a twin? If so I hope to hear from her.—Isola Starks, Washtucna, Wash.

**A Nice Little Letter From Evelyn.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We have two horses, one cat and one dog. I have a little baby sister. She was 3 months old the 10th of January. Her name is Wilma Audrey. I have two sisters and two brothers. Their names are Vierbie and Clay. My sister's name is Mary. My name is Evelyn. I hope you will enjoy my letter.—Evelyn Miller, Cloverland, Wash.

**Iris Is Getting Fat.**

Dear Aunt Nellie: I thought I would write again. There isn't much to say, but I guess I can think of something. I hope the cousins are all fine. We have two little calves. One is a week old and the other isn't a day old. One is named Virgel and the other one Jingel. I found both of them. I like to milk cows. I can do anything outside on the farm and like to work outside. I can work inside. We have nice times at school playing games. The games we play are running games, so when it is blowing it is fine to play, because it keeps us warm. The sixth grade here is getting awful poor at school. It seems like they can't get their lessons. The teacher said the fifth grade is beating them. I would be very glad to hear from Elsie Gronka, route 2, box 31, Sequim, Wash. I surely would answer her letter. We had our picture taken at school today. I got a letter from my cousin today. They do not get the Farmer. I haven't any brothers in the war, but have a cousin in the navy. I set a hen this morning. Put 13 eggs under her. I like little chickens. I think they are awful cute. Aunt Nellie, I am getting fat! The last time I weighed 89 pounds and now I weigh 103 pounds. We killed one of our pigs and now we only have two. My little sister is getting awful big. She can climb in chairs, go upstairs and get into mischief, too. She surely is a pretty little girl. Well, I guess I will go and get some apples and finish this when I come back. Well, I got them. Our Corner was pretty large this last time. I will be glad when it is nice weather so I can go boat riding and fishing. Day after tomorrow we have a test at school. The teacher is reading a book. It is a pretty good story. It is about animals and a man. I'll bet Lucile Gerlitz sure was glad to get that piano for Christmas. We have an organ. I play on it once in a while. I hope to hear from some of the cousins. It doesn't matter how old they are. Be good to yourself, Aunt Nellie.—Iris J. Chevalier, Provost, Wash.

**Snow Did Not Last Long.**

Dear Aunt Nellie: It seems so long since I wrote last. My first letter was in print. My sister and I are taking music lessons. Our teacher has a little boy. He is two years old. We like him very much. His name is Carl. We had our first snow last Friday. We had lots of fun at school, but the snow only lasted two days and now is raining again. I just love to read the Farmer. I can hardly wait till the Farmer comes. We get it on Saturday. We had a program at school, Lincoln's birthday. I saw Bertha Jennings' letter in the Corner. I wonder if she is the same little Bertha that used to live on Grays River.—Onida Wilson, Box 102, Grays River, Wash.

**Just Discovered the Corner.**

Dear Aunt Nellie: I am a little girl 9 years old. I have just discovered the Children's corner in the Farmer. I was very much interested. I thought I would write a letter for the first time. I live in a new settlement on a 40-acre farm which my papa has cleared since we came here six years ago. I have one little sister. She is 6 years old. We live four miles south of Mount Spokane. I am only one-eighth of a mile from our log schoolhouse. My teachers' name is Miss Wilma Fuher. There are five pupils in our school. There are four girls and one boy.—Ruth Wilma Peterson, R. F. D. 2, Mead, Wash.

**Glad to Hear From Lila Smith.**

Dear Aunt Nellie: This is my first time to write to you. I hope it won't be the last. I am 11 years old. I will be 12 years old the 7th of May. I have one mile and a half from school. I go to Sunday school every Sunday. I have one brother and one sister. My brother's name is Wesley and my sister's name is Viola. We have 10 horses and 48 head of cattle and 20 milk cows. I have two dogs. Their names are Jack and Ted.—Lila Smith, Mold, Wash.

**Verona Tells About Her School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live on a 480-acre farm. I will tell you about our school. I am in the second grade. We have 10 pupils. I am seven years old. We have 12 horses. My teacher's name is Miss Larsen. We have one pig. I have a riding pony. Its name is Pinky. We have 13 head of cattle. We have two dogs, Shep and Billy. I enjoy reading the letters. My papa takes the Farmer. —Verona Faulkner, Bickleton, Wash.

## The Famous Mastiff.

The mastiff is a very large dog with a broad head and strong neck and limbs. This kind of dog lived in England before Caesar invaded the island in 55 B. C. It was much prized by the Romans on account of its great courage and was used by them in the sports of the circus being matched to fight with different wild animals, sometimes even with a lion. Alexander the Great brought mastiffs to Greece with him when he came back from India. These are supposed to be the great mastiffs of Thibet, which are the fastest of their kind.

**Jean Is Buying Thrift Stamps.**

Dear Aunt Nellie: I have never written to you before, but I hope that this letter will be printed and never see Mr. Waste Basket. I have a little sister nine months old. She has two teeth. Her name is Virginia Holletta, but we call her Virginia. I have 11 Thrift Stamps. A boy at school has 12, and the teacher owes him two, so that when the teacher gets some more his card will be filled. It isn't hard to earn 25 cents when you try. I wish I could fill one of the War Saving cards this year and I hope each cousin gets several of the $5 stamps before the year is up.—Jean Salisbury, Friday Harbor, Wash.

**Clay Tells bout His School.**

Dear Aunt Nellie: This is the first time I ever wrote to the Children's Corner. I hope that you will enjoy my letter. I will tell about my school. There are 20 children in our school. I am in the fourth grade. I am 11 years old. We live on a farm of 16 acres. I have three sisters. Their names are Mary, Evelyn and Wilma. Wilma is a baby. We have two horses and 16 pigs. We have nine little pigs. I live a third of a mile from school.—Clay Miller, Cloverland, Wash.

**Fern Is a Cousin Now.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I go to school and like it fine. My teacher's name is Miss Foxwell. We live on a 20-acre farm and have a pig, one cow and 14 chickens. I hope to see my letter in print. May I join the Children's Corner?—Fern Bolender, Box 57, Route 2, Olympia, Wash.

**Cousin Melvin Lives on a Farm.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old. My birthday is March 21. We have been taking the Farmer for some time. We live on a farm. We live nine miles from Colfax. We have cows and horses.—Melvin Kammerzell, Colfax, Wash.

**A New Cousin From Mansfield.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have two cats. Their names are Tom and Pussy. I am 10 years old. I have two brothers. We have four horses and one colt. I go to school. It is half a mile to school. We have two cows.—Villa May Gahuey, Mansfield, Wash.

**A Letter From Cousin Wynne.**

Dear Aunt Nellie: How are you and all the cousins? I have three brothers and two sisters. Their names are Fern, Maxine, George, Raymond and Gilbert. My little sister, Maxine, is 2 months old.—Wynne Stallcop, Pomeroy, Wash.

**How Many Cousins Can Knit?**

Dear Aunt Nellie: My father takes The Farmer and we like it very much. I am 9 years old now and will be 10 the 25th of May. I have two brothers and one sister and their names are Ilma, Kermit and Russell. We are milking 25 cows now and have lots of sheep. I have a little lamb and it is awful cute. How many of the cousins can knit? I don't know how, but I am going to learn. I got lots of things for Christmas and hope Aunt Nellie had a merry Christmas.—Ethel Halsey, Joseph, Ore. (Aunt Nellie and all the cousins are glad to have you with us again, Ethel, and hope that you will write more often in the future. I hope that you will learn to knit and help make articles for the soldiers. Thanks for your kind words, Ethel. I hope you, too, had a nice time.—Aunt Nellie.)

**Started to Take Music Lessons.**

Dear Aunt Nellie: This is my first time of writing to the Corner. My father takes the Farmer and I read the letters. I am 11 years old and my birthday is the 18th of December. Have I a twin? If I have, I would like to have them write to me. We live in Joseph, Ore. I have two brothers and one sister. We have a pet cat and are going to have a dog. I take music lessons and I have taken my third lesson. Mrs. Green is my music teacher and Miss Shot, who lives in Condon, Ore., is my school teacher. I am in the fifth grade. If I see my letter in print I shall write again.—Winfred Beith, Joseph, Ore. (Aunt Nellie and all the cousins welcome you to our Corner and we hope you will write often. I am sure you will find a twin. Aunt Nellie.)

**Expect Floods Again This Year.**

Dear Aunt Nellie: I have got a new Corner girl. Her name is Minnie Harris. I am going to send some riddles and answer some of Freda's, too. As I was going across London Bridge I met my sister and I cut off her head and left her body standing. Answer—a beer bottle. Answer to the third is, one was going to St. Ives. I am going to send some now: Twelve pears hanging high. Twelve men riding by. Each man took a pair and left 11 hanging there. 2. It's black and white and red all over. 3. It goes all over the field by day and sits in the cupboard at night. 4. Round as a biscuit and busy as a bee. It snowed about a foot last week, but last night it rained and all day today the snow has been melting very fast. Tonight when we were coming home from school there was a big ditch to cross and we had one big pole to walk across on. The water was over the top of it. I expect we will have another flood this year like we did last year. Last year when the flood first started my schoolmate and I were out playing and the first thing we knew the ditch was clear full of ice and water. The ditch was very deep and when the water broke loose it splashed over our high fence.—Blanche Weaver, Box 202, Wallowa, Ore.

**Two New Mills Near Them.**

Dear Aunt Nellie: I have been reading the letters in the Children's Corner and like them very much. I will be 10 years old the 19th of next November. I have one sister and two brothers. My sister's name is Etta and my brother's names are Harry and William. They are all older than I am, so I am the baby. Papa has one pig, one cow, two mules and some horses. I am going to school and am in the fourth grade. Our teacher's name is Miss Winnie Bayley. I live half way between the schoolhouse and the postoffice. I have only about 50 yards to walk to school. We have Sunday school and Christian Endeavor every Sunday. Mama plays the organ. My sister is knitting for the Red Cross. There are two new mills near here. Papa is sawing wood with a gasoline saw. I can't think of much to write, but like to read the other children's letters. Papa told me that if I would write maybe I would get my letter put in the Corner.—Magdaline Fletcher, Pine Grove, Ore. (Write to us often, Magdaline; your letters will all be printed. We are glad to welcome a new cousin to our Corner. Aunt Nellie and all the cousins are glad that you like our letters. —Aunt Nellie.)

**Raise Teasel Where Anna Lives.**

Dear Aunt Nellie: I am a little girl of 12 years. I am in the sixth grade. We have many playthings at our school. We have a play shed and a game of basket ball. I like to play fine. There are 52 scholars at our school and one teacher. There are some boys and girls sitting together at our school. Our teacher's name is Mr. Woodworth. He has taught for five years so you see that speaks well for him. We like him fine. We go to Teasel Creek school. They raise some teasel here. I will tell you more about it if you wish to know in my next letter. We live in the country on a farm. I have one sister of 13. She writes stories at our school. Our mother died when we were small. We live on a farm with our grandma and grandpa. My father is in Alaska. My sister and I can do all kinds of housework. I have three uncles. Their names are Uncles Will, Roy and Don. They are all married.—Anna Drummond, Molalla, Ore. (I am sure, Anna, that every one of the cousins and Aunt Nellie, too, would be very glad to learn more about teasel. Tell us what it looks like, how it is raised, and what the plant is used for. We are glad that you are one of our cousins. Aunt Nellie.)

**Knitting a Scarf for Brother.**

Dear Aunt Nellie: I saw my letter in print so thought I would write again. I do the dusting for mama and help her do the dishes every morning and evening and it is my job to gather the eggs, and every Sunday I get lunch for mama. I like knitting very much; I started it by making a scarf for my doll and now I am making a scorf for my brother. I am going to school and am in the fourth grade. I walk two miles to school; my teacher's name is Miss Loura Hurnidge, and I like her fine. I will close as my letter is getting long. If I see this in print, I may write again.—Mary Louise Hillgen, R. 2, Dufur, Ore. (Aunt Nellie is glad that you help your mother, Mary Louise, and I am sure that she appreciates it very much. You did not tell us how old you were, but I am so pleased that you know how to knit. Write us often. —Aunt Nellie.)

**Plays Right Guard on Ball Team.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. My father subscribes for The Farmer every year. I wish the Corner was larger, because the letters are so interesting. I have a twin sister. We are the only children. Her name is Linda. She is in the eighth grade. I am in high school and enjoy it very much. I take algebra, ancient history, literature and Latin. I am 15 years old, weigh 163 pounds and am 5 feet 11 inches tall. I play right guard on our basket ball team. We live about two and a half miles from town on a farm of 80 acres. We have 12 head of cattle, about 80 horses, seven sheep and one dog. He is a bird dog and his name is Kazan. My letter is getting long so I will close. I would like to hear from some of the cousins.—Grey U. Munjar, Dayville, Ore.

**The Books That Mildred Has Read.**

Dear Aunt Nellie: This is my first letter to the Corner and I hope it won't be the last. Can I join the Corner? My papa takes the Farmer. I read the letters and I want to know what it means when a boy or girl writes and asks if they have a twin. My papa owns a store. We have two horses, Tony and Molly; two cats, Tom and Martha Washington; about 20 chickens, two rabbits and about 80 pigeons. I go to school and I am in the fifth grade. My mother died when I was 2 years old. She had tuberculosis. She died in Phoenix, Ariz. I like to read. I have read "A Golden Heart."

(Continued on the following page.)

# Children's Corner

(Continued from the preceding page.)

"A Wilful Maid," "Only an Irish Boy," "The Shepherd of the Hills," "The Trail of the Lonesome Pine," Michael O'Halloran," "The Crisis,' "Hidden Hand," "Rebecca of Sunnybrook Farm." I saw the last played by Mary Pickford. Some of the books are the same as the ones Clara Olson read. At school today we built a kaiser out of snow and threw snowballs at him. I can knit and crochet a little bit. I wish Cousin Sally Garry would write to me or some other girl of my age. I think I would like Sally very much. I will write soon.—Mildred Tormey, Spokane Star Route, Wash. (Of course, you may join the Corner, Mildred. When a cousin asks if he has a twin, he wants to know if there is some other Corner cousin, who is the same age and whose birthday comes on the same day of the year, as his does.—Aunt Nellie.)

**Schoolmates Belong to the Corner.**

Dear Aunt Nellie: This is the first time I have ever written to the Corner. I am 13 years old and will be 14 next January. My teacher's name is Della Barclay. I like her very much. We live on an 80-acre farm. I like the stories in the Farmer and like to read the cousins' letters. Some of my schoolmates belong to the Corner. There are six children in our family, four girls and two boys. I have a baby brother 6 months' old. His name is Lavern. I have one uncle and a cousin fighting for Uncle Sammy and I hope they will win. My mother and father belong to the Red Cross and I am going to join. Have I a twin? If I have I wish she would write to me.—Thelma Hazel Owens, R. F. D. 2, Oakesdale, Wash.

**Mama Calls Loretta Her Tomboy.**

Dear Aunt Nellie: I hope my letter will be in print. I am 11 years old. My birthday is December 11. I like to ride horseback and go after the cows for papa. I live on an 80-acre farm and we have 520 acres altogether that we farm. We raise wheat, peas, and oats. I haul water for the men in the summer. Mama calls me her Tomboy. Have I a twin? I wish if I have that she would write to me. I like to read the Farmer. I feed the pigs and do some of the chores for papa.—Loretta Owens, R. R. 2, Oaksdale, Wash.

**Not Much Winter Yet.**

Dear Aunt Nellie: I have not written to the Corner for a long time. We have not much winter yet. I have two new, dandy twins now. Their names are Sallie Salina Garry anad Vera Allen. Sallies is 3 months older than I. I hope all the cousins had a Merry Christmas and a Happy New Year. I wish the Corner would grow. For Christmas I got a nice box of stationery, hair ribbon, handkerchief box, candy, nuts, oranges and a few other things. I am in the sixth grade, but I don't take geography and history with the sixth. I like my teacher better than any teacher I ever had. Her name is Irene Geoway. I hope I shall see this letter in print. I am 14 years old and will be 15 in July. If any of the cousins are my age I hope they will write to me. I surely will be glad to answer her. I wish I could win a prize some time.—Anna Straube, Lacrosse, Wash.

The Cowlitz county agricultural council voted recently to urge potato growers to place their names on every sack of potatoes marketed, hoping thereby to raise the standard of the product and create, as a result, a greater demand therefor. The council has not decided just what method of grading it will recommend, but some system will be adopted.

"While we are disposed to cooperate in every way possible with the government's war program it is hard to comply with the appeal to clear more land as an emergency war measure on account of the labor shortage and the increased cost of stumping powder," said F. C. Hamilton of Woodland, Wash., the other day. "There is a good deal of work that can be done, however, especially in picking up and clearing brush out between the stumps."

"It is quite impossible for us farmers to realize the great responsibility that rests upon us during this war," said Leander Martin to a representative of The Farmer, recently. Mr. Martin is chairman of the Cowlitz county agricultural council. He has a farm at Castle Rock. "When this war is over," he continued, "a great number of people in all parts of the world will be foodless. Germany itself will need help and we want to be in position ot help its people. Even though we may conquer Germany we want to conquer her again by our example of humanity. I feel that every farmer should ally himself with some organization working to aid the food production campaign. We should all be soldiers."

Before this reaches print the Yakima plant of the Utah-Idaho Sugar company will have closed down for the season. It will remain idle until the early part of October, at which time the 1918 crop of beets will be ready. Resident Manager T. R. Horne is rushing work on the company's two new plants at Sunnyside and Toppenish. At each of these places the company is sending aproximately $2,000,000. This includes the cost of the site and the construction of a modern plant. This huge expenditure is being made in addition to the big plant which operated at Yakima this season for the first time. Farmers are beginning to realize that the beet business means a solid, permanent industry in this section, and that it is doing much to stabalize land values. Sixty thousand tons or beets were produced in the valley this season and a campaign for increased tonnage around Yakima is now under way. All beets used at the Yakima plant this year will be grown north of Union Gap, and all those produced south of Union Gap will go to the Toppenish and Sunnyside plants.

A. W. Crane of Castle Rock expresses the same opinion voiced by large numbers of other farmers regarding the standardization of farm products. "I feel that as communities we should standardize," said Mr. Crane to The Farmer recently. "In Cowlitz county, for instance, it would be good business for us to decide on some variety of potatoes which we can produce profitably and all grow that paritcular variety. We would soon create a demand for the Cowlitz potato because, working on a cooperative basis, we would learn how to produce a better potato. As it is now we go hit and miss, raise all varieties and not enough of any one variety to make our product particularly sought after."

Among active county agricultural councils of Washington the Cowlitz county council should have a place well to the fore. Projects upon which active work is being done include crop rotation, seed selection and growing of adapted varieties and standardization of products. Members of the council are: Leander Martin, Castle Rock, chairman; D. A. Hooper, Castle Rock; J. K. Conger, Castle Rock; A. W. Crane, Castle Rock; E. A. Johnson, Castle Rock; George Smith, Castle Rock; Charles Marsh, Kelso; William Mayelin, Carrolls; B. F. Blair, Mount Solo; Ernest Doble, Carrolls; E. W. Robinson, Woodland; H. E. Dort, Arill; Victor Seeborg, Kelso; C. E. Libby, Kelso; F. G. Hamilton, Woodland; J. A. Pennington, Yale; F. L. Jenkins, Pigeon Springs; Fred Schroeder, Yale; F. M. Lane, Kalama; Earl Barnes, Silver Lake; J. H. Rogers, Kelso; Avariel Thiel, Woodland. R. W. F.

## Who Will Tell?

To the Editor: Can you tell me of any method for breaking a cow of fence jumping. I have bought a young cow that I would like to keep if I can break her of this habit.

L. G. M'CORMICK.

Kennydale, Wash.

CUTTER'S

BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

| | |
|---|---|
| 10 dose pkge. Single pills | $1.00 |
| 50 dose pkge. Single pills | 4.00 |
| 10 dose pkge. Double Pills | 1.50 |
| 50 dose pkge. Double Pills | 6.00 |
| Cutter's Pill Injector.... | 1.50 |

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Catalogue will interest and it will be mailed to all who write for it to

## Heart's Delight Farm, Chazy, Clinton County, New York

Reppert and Jones, Auctioneers

# News for Breeders

Luther Benson, who farms on quite a large scale, besides breeding draft horses at Heppner, Ore., recently purchased from S. Metz & Sons of Pendleton, Ore., the Percheron stallion, Livarison. Livarison is a horse of good size, of Percheron type and excellent quality. Metz & Son intended to show him at the Lewiston and Portland winter shows, but he went off feed and they held him over. They consider him one of the very best horses ever brought west.

W. W. Green has a roan heifer calf out of his great cow, Scottish Flower 3d, and by his equally great sire General Hampton. It has substance and quality, together with the finest of Shorthorn type. When Mr. Green paid Alex Chalmers $805 for Scottish Flower 3d with a fine bull calf at foot, some of his friends called him foolish. But he has refused $600 for the bull calf, because he wants it for his own use and now the little heifer seems even more valuable, while the cow is just in her prime and likely to produce several more high-class offspring. Mr. Green still considers it good policy to pay good prices for Shorthorns. H. A.

## Recent Guernsey Sales.

Among recent Guernsey sales reported by C. T. Bracken, farm manager for Dr. Park Weed Willis of Seattle, are the following: Glenwood Bob White of Orchard Hill, No. 43532, to Robert Anderson, Snohomish, Wash.; Glenwood's Main Stay of Orchard Hill, No. 36326, to the Pilchuck Ranch company, Pilchuck, Wash.; Chief Seattle of Orchard Hill to Eric Nelson, Everett, Wash., and Royal Governor Glen of Orchard Hill to Ellen H. Reynolds, Walla Walla, Wash. This latter animal is out of Sammamish Topsy, No. 46992, holder of the best Guernsey record for a 2-year-old west of the Missouri river (629.66 pounds of butter fat in one year).

At the present time Mr. Bracken adds that there is not an animal on the farm for sale.

"As a matter of fact," he says, "it's difficult to find Guernsey heifers for sale anywhere. The demand is far in advance of the supply."

## Prize Winning Shropshires.

To the Editor: The following registered Shropshires, fed and bred by A. J. Knollin, Soda Springs, Idaho, were prize winners at the National Western Live Stock show, Denver, Col., January 20-26:

Fat class—Grand champion yearling wether, grand champion carload lot of lambs, champion fat lamb, reserve champion fat lamb, first on yearling wether, first on pen of five fat lambs, first, second and third on three lambs. He also won the American Shropshire special.

Breeding class—First and champion on 2-year-old ram, second and third on yearling rams, first, second and third on ram lambs, first and champion on yearling ewe, second on yearling ewe, first, second and reserve champion on ewe lambs.

A. Nicholson and E. W. Cook, sheep herders.

The grand champion carload lot of lambs averaged 114 pounds and sold to the Brown Palace hotel of Denver, Col., for 35 cents per pound.

The grand champion yearling wether weighed 210 pounds, sold to the Coffy Packing company, Denver, Col., at 50 cents per pound. E. W. COOK.

Soda Springs, Idaho.

## Purebred Shorthorns.

Officers elected for the present year by the Canyon County (Idaho) Purebred Shorthorn Cattle Breeders' association at its annual meeting at Caldwell are as follows: President, Thomas Tarr, Caldwell; vice president, H. W. Dorman, Caldwell; secretary and treasurer, Charles Howard of the Pleasant Ridge community; directors, L. M. Beal of Kuna, S. G. Tucker of Notus, W. A. Hall of Hall's Station and George Halton of Nampa.

Though the new organization is to be known as "The Canyon County Purebred Shorthorn Cattle Breeders' association," the breeders of Ada, Payette, Gem and Owyhee counties are eligible to membership in it. The association represents an ownership of 379 purebred Shorthorn cattle.

Caldwell was named as the headquarters of the new organization and the first Wednesday of September of each year was designated as the date of its annual meeting. A county-wide propaganda is to be initiated by the newly formed organization for the elimination of "scrub cattle" and the substitution in their place of the best of purebred cattle.

## New English Breeder.

Among the newer breeders of Shorthorns in England is Hildebrand Harmsworth of newspaper fame, and the owner of the Freshwater herd of dairy Shorthorns, situated at Freshwater Grove, Shipley, Sussex. Mr. Harmsworth has been buying female stock with rare good judgment, according to the London Live Stock Journal, and his most recent purchases include such cows as Veracity, Ash Muriel 6th, Hadnock Charming Lass 3d, Lady Clara, Turner 19th, Morecambe Lily, Lady Isabel and Primrose Day, a catholic taste in back breeding, all will agree, but a selection made on sound and right lines. To head his herd, some day, he has just secured at the figure of 750 gs. a 10-months-old bull calf, Kelmscott Conjuror 8th, bred by Messrs. R. W. Hobbs and Sons of Lechlade.

## Jean Armour Dead.

The Ayrshire Breeders' association, with deep regret, announces the passing of Jean Armour, one of the greatest dairy cows in history. Jean Armour 25487 was bred by H. & J. McKee, Ontario, but was developed by Mrs. F. D. Erhardt, Vermont. She was the first Ayrshire cow to produce over 20,000 pounds of milk; her official record, which also made her breed champion, being 20,174 pounds milk, containing 774.73 pounds butterfat. In her fourteenth year she produced 18,382 pounds milk, containing 716.36 pounds fat.

## Purebred Horse Sale.

At a sale to be held at the Union Stockyards, Chicago, March 8 and 9, Heart's Delight Farm of Chazy, N. Y., will offer 95 head of purebred Percherons and Belgians.

## HOLSTEIN CATTLE

Registered Holsteins.
Herd sire, Model Annie De Kol Segis, grandson of the famous King Segis. We have no bulls of service age, all having been sold, but we have some splendid young stuff, from 6 to 8 months old, coming on. If you are looking for real foundation stock, write us for particulars and pedigrees.
MOOREHEAD & HOBSON.
Breeders of Purebred Holsteins.
Outlook, Wash.

## 365-DAY HOLSTEINS

24,667 lbs. milk—1026 lbs. butter—is the a. o. advanced registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.
THE HERD WITH YEARLY RECORDS.
WESTERNWOLD RANCH, Prineville, Ore.

## Registered Holsteins

Glenwood herd offers for sale a few A. R. O. cows with records up to 24.32 lbs. Also a few bred heifers.
A. H. BUCK & ED HOEM.
Snohomish, Wash.

REGISTERED HOLSTEINS.
One 30-lb. bull with grand champion sire and dam; also young bull calves. Here is production and type we hear so much about.
H. R. BOOMER, New Plymouth, Idaho.

## AYRSHIRE CATTLE

## Edgewater Farm

Government accredited herd, headed by Peter Pan, 83d. Bull calves available.
E. M. CHANDLER, Burbank, Wash.

## SHEEP

## SHEEP

Full blood Lincolns, Romneys, Corridales and Hampshires. Ewes and rams, small or large lots. For sale by
H. STANLEY COFFIN,
Breeder and Importer. Yakima, Wash.

## BERKSHIRE SWINE

## Riverby Orchard Berkshires

Riverby Orchard Berkshires won 12 out of 15 first prizes at the Washington state fair, 1916, also many prizes, including grand champion sow at the Panama-Pacific world's fair. We offer for sale a few good boars and young sows.
D. C. BUNN, Prosser, Wash.

# Breeders' Department

## SHORTHORN CATTLE

## Herd Bulls

Imported Doune Radiance No. 609412
and
Gainford Perfection No. 442173.

## Hercules Shorthorns

We can supply you with choice, well grown bulls and females of breeding age. Your inspection of our herd is invited. Visitors always welcome.

## Day & Rothrock Company

205 Exchange Bank Bldg. Spokane, Wash.

## LELAND BROTHERS

Breeders of top registered Shorthorn cattle.
Correspondence solicited.
WENDELL, Idaho.

REGISTERED SHORTHORN COWS,
Young bulls and heifers, sired by Scotch bulls; liberal terms.
CALDWELL CATTLE CO., Caldwell, Idaho.

## JERSEY CATTLE

## Waikiki Farm Jerseys

We offer several young bulls and heifers of exceptional breeding. Send for descriptions and breeding.
WAIKIKI FARM, R. 7, Spokane, Wash.

## A FEW COWS AND HEIFERS

MELLOW LAWN FARM HIGH PRODUCING JERSEY HERD.
HERD AVERAGE, APPROXIMATELY 700 POUNDS BUTTER.

Every cow in the herd on test. Our herd is getting too large to give proper care, with present labor scarcity, so am forced to sell a few. Some of the best in the herd, now milking around 50 lbs., are for sale. Write for pedigree and prices. Ranch 7 miles south of Silverton, 12 miles east of Salem.

*F. A. DOERFLER, Silverton, Ore.*

## POULTRY

## White, Buff and Blue Orpingtons

(Capt. De Bathe Strain.)

Speckled Sussex and Anconas. All single comb. Aldrich strain Orpingtons, Sheppard Anconas. My birds took first prizes at all leading shows of Pacific Coast. Prices for stock, eggs and chicks reasonable. All from best laying birds. Finest lot of cockerels I've ever raised. A few White Holland and bronze turkey toms for sale.
IRA N. DELINE, Olympia, Wash.

HATCHING EGGS.
BARRED PLYMOUTH ROCK — Thompson's Ringlet strain and Morningside trapnested, bred-for-eggs strain.
S. C. RHODE ISLAND RED — Tompkins' strain.
S. C. WHITE LEGHORN — Trap-nested English strain. Also a few Tompkins' Rhode Island Red breeding cockerels left for sale. Write for prices. Morningside Poultry Farm.
FEHNEL & KIRCHNER, PROPS.
Box 146. Blackfoot, Idaho.

PRIZE WINNING W. ORPINGTONS.
Kellerstrass strain, S. C. eggs, $10 per 100; $3 per 15. 1 hen scored best fowl at 1916 Wash. state fair; several others over 280 eggs. 1st prize cock, 1st hen, 1st pullet, 1st pen, cock and hens; 1st pen, ckl. and pullets, state fair, 1915.
MRS. E. B. WADE, R. 4, Yakima, Wash.

PARKS BRED-TO-LAY BARRED ROCKS.
My pen, 5 Barred Rocks, at Pullman laying contest laid in Nov. 88, Dec. 100, Jan. 104 eggs. Eggs from this winter-laying strain, $1.50 15, $8 per 100.
F. J. WIRTNER. Mica, Wn., R. 1.

## S. C. Rhode Island Reds

Golden Sebright and Black Bantams.
CHAS. E. LUCAS, R. F. D. 3, Missoula, Mont.

## S. C. White Leghorns

Heavy laying strain. Hatching eggs from hens averaging 245 eggs per year, $2 per 15.
E. C. FISK, Olalla, Wash.

S. C. AND R. C. RHODE ISLAND REDS.
Cockerels, $2.50 to $3.50; eggs from S. C. R. I. Reds, heavy winter layers, $1.50 per 15; $7 per 100. Flemish Giant does, $1.50.
W. T. WILSON, R. 3, Weiser, Idaho.

## Heavy Laying Strain

S. C. White Leghorns, hatching eggs, baby chicks and stock.
MT. ANGEL COLLEGE POULTRY RANCH,
St. Benedict, Ore.

VIBERT STRAIN S. C. REDS.
Cockerels, $2.50 to $25; eggs, $8 per hundred; $1.50 to $15 per sitting. Three special pens headed by cockerels from a 289-egg trapnested hen. One pen headed by magnificent cock bird that has kept his wonderful color through the moult and well into his second season. He is one great bird. If you need new Red Blood, you need Vibert blood from the largest pure Vibert flock on the Pacific coast.
MRS. ROMINGER. Underwood, Wash.

RHODE ISLAND REDS AND WHITES
both combs. Mammoth Bronze turkeys and Mammoth Touluse geese. My birds are true blue—winners and qualities. Have a few S. C. Red and R. C. White cockerels at $3 and $5 each. Have a limited number of Mammoth Bronze gobblers at $8 and $10 each. We are booking orders for eggs. Write for mating list. No baby chicks.
HIGHLAND FRUIT AND POULTRY RANCH.
J. Nonnenmacher, R. F. D. 3, North Yakima, Wash.

## BABY CHICKS

Rhode Island Reds, White Leghorns. Don't wait until March or April to order and then be disappointed because you can't get them. But order now from our heavy-laying strain. Send card for price list.
MAPLEBROOK POULTRY FARM.
Box 3, Southworth, Wash.

## TRAP-NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen trap-nested. First pen has, I believe, for past two years highest Barred Rock av. egg record in the world. All other pens practically same blood lines.

Pen 1, 12 hens, av. over 240 eggs, crossed to yearling cock, parents av. 260 eggs, $5 setting of 15. Pen 2, 25 yearling hens, av. over 200, crossed to 2 sons of No. 44, 708 eggs in 3 yrs., $5 setting of 15. Pen 3, about 20 hens and pullets, with reserve cocks and cockerels, same breeding. $3.50 per 15. A few cocks and cockerels from $5 up. IRVINE P. GARDNER. Riddle, Ore.

## DUROC-JERSEY SWINE

DUROCS.
Boars and open or bred gilts of excellent breeding.
E. E. PRICE, CABINET, IDAHO, OR
JAMES N. PRICE, Yakima, Wash.

## RABBITS

BARBER RABBITRY.
Pedigreed and registered Flemish and Checkered Giants. Bucks at stud. Stock for sale. Correspondence solicited.
MRS. R. W. BARBER, R. 4, Boise, Idaho.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Feb. 25.—Notwithstanding that big receipts pulled down grain values today, the effect was subsequently more than overcome by adverse weather conditions and by the lifting of embargoes on various railway lines from here to Atlantic seaboard. Corn closed firm, $1.27½ March and $1.26⅞ May, the same as Saturday's finish to ¼c higher. Oats gained ½c to ⅝c. In provisions there was a setback ranging from 12½c to $1.

Receipts of grain were the heaviest yet this season, and in corn arrivals at primary centers were more than double last year's figures. A further bearish factor was President Wilson's proclamation disapproving a higher guaranteed price on wheat. About the middle of the session, however, sentiment changed, and thereafter the market tended upward.

Oats paralleled the action of corn. There was much short covering as a result of a ruling at Minneapolis that settlement of defaults would be based somewhat on the value of cash oats in all markets.

General commission house selling weakened provisions.

**Chicago Futures.**

| | Open. | High. | Low. | Close. |

## Portland Market.

PORTLAND, Ore., Feb. 25.—The fixing of oats prices in the east put a stop to the advance in the local market and at the close of the week prices were a dollar lower than on the preceding day. Barley suffered in sympathy with a similar decline.

There is reported to be a strong demand from California for alfalfa. Stockmen in that state need 50,000 to 60,000 tons before the new crop comes on. The government's buying of hay is also becoming heavier. As a consequence it is believed all stocks in the northwest will clean up closely before the season is over. Alfalfa has advanced here to $24.50 and other kinds of hay are also stronger.

There has been a free movement of wool during the last week. One of the local warehouses sold 350,000 pounds at prices ranging from 44 to 65 cents. Wool men are advised that shearing will begin in Yakima on March 5.

The potato market is working lower each week. Buyers are offering 85c @$1 at country points and selling for shipment is on a larger scalce. Jobbing trade is slack. Onions continue weak and inactive.

Canadian orders for eggs are on the market and the larger receipts clean up readily.

Butter is very firm with a general demand for extra cubes. No change in the cheese market is expected in the near future.

Country dressed meat receipts have been light all week and prices are quoted strong. Very little poultry is arriving.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $69 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $69; brewing, $72 rolled, $67@69.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24.50; grain, $22.

Eggs—Oregon ranch, case count, 43c per dozen; candled, 45@46c.

Poultry—Ducks, 30@35c; turkeys, live, 25c; geese, 20@22c.

Butter—City creamery, prints, 52@53c per pound; cubes, extras, 48 1-2@49c.

Cheese — Tillamook triplets, 25c; Young Americas, 26c.

Dressed meats—Veal, 20@20 1-2c; pork, 21@21 1-2c.

Hops—1916, nominal; 1917 crop, 16@17c.

Potatoes—Oregon, buying price, 85c @$1 per hundred.

Wool—Eastern Oregon, 44@65c; valley, 50@55c.

Beans—Buying prices: Oregon white, 9 1-2@10c; colored, 8 1-2c.

## Fat for Margarine.

On account of the shortage of other materials for the margarin industry experiments have been made for some time with hardened whale fat. In Denmark whale fat has been in use ever since 1914, but in Norway it has not been necessary until recently to use this substitute for other fat. In 1914 Denmark used 20,000 barrels of hardened whale fat in the margarin industry. It is also stated that this product has been proved to be well suited for making a margarin that keeps well and tastes well and to be even better suited for making lard. For the latter purpose it is only necessary to add a smaller part of the vegetable oil, such as cottonseed oil or sova oil.

## Butter and Eggs.

PORTLAND, Feb. 23.—Butter, prints extras, 52@53c; cubes extras, 48½@49c; prime firsts, 48c; dairy, 32@34c.

Butterfat, Portland delivery, No. 1 sour cream, 55c.

CHICAGO, Feb. 23.—Eggs, lower; receipts, 2394 cases; firsts, 46c; ordinary firsts, 44@45c; at mark, cases included, 44@45c.

SAN FRANCISCO, Feb. 23.—Butter—Extra, 52@54c.

Eggs—Fresh extras, 45½c; firsts, 44c; fresh extra pullets, 42c.

## Seattle Market.

SEATTLE, Feb. 23.—Difficulty of securing cars for shipping apples and potatoes from the Yakima valley is strengthening the market, although it must be admitted such pressure is insufficient to hold spud quotations.

Actual sales of graded Yakima gems have been made today at $1.25 per sack, or 15 and 25 cents under levels of a week ago for the same quality. Local whites are bringing $1 per bag, and while there have been occasional sales at the former price jobbers report that it is almost impossible to get any better money.

Apples have come to be the best sellers on Western avenue today. Jobbers generally report that cheap fruit has been cleaned up. Upward of 2500 boxes of jumble packs, stored by individual houses early in the winter, have been moved, and quotations withdrawn by a majority of the holders. The inquiry has swung over to the fancy and extra fancy, although buyers are slow to take on stock that sells at $2.25 and $2.50. Levels of $1.75 and $2.25 are most popular.

Storage butter at 47 and 50 cents per pound and such country creamery offerings of merit as brokers are able to bring in are preventing this market from going higher. City creameries are unable to supply the demand, notwithstanding that they have been reaching out into more distant territory to make up the supply for which they are steadily outbidden by the condenseries.

The cleanup of fresh ranch eggs for the week was generally at 45 cents, although a few sales at 46 cents were reported. For the last 10 days in the face of extremely light receipts, the market has been declining.

Cheese is unsteady owing to price cutting by packers. Triplets are 25 cents.

**BUYING PRICES.**

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 40c per dozen.

Poultry—Springs, 25c lb; 4 lbs and under, 25c; old roosters, 16c lb; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.

Butterfat, 58c lb; dairy butter, 35@36c.

Beef—Buying prices: Prime beef, steers, 11@12c lb; cows, fat, 9@11c lb; heifers, 10@11c lb.

Hogs—Light, 18@20c lb; heavy, 17@18c lb.

Veal—Fancy light, 17@18c lb; heavy, 9@16c lb.

Hides—Salted, 14c lb; flint-dry hides, 29c lb; salt kip, 16c lb; green hides, 11c lb; green calf, 23c lb; dry calf (under six pounds), 29c lb; bulls and dry salts, 4c lb less; green bulls, 9c lb; dry full wool sheep pelts, 36@39c lb; salt bulls, 11c lb.

**SELLING PRICES.**

Feed—Scratch, $76 per ton; all grain chop, $74 per ton; oats, $75 per ton; rolled oats, $76.50 per ton; bran, $33.50 per ton; shorts, $35.50 per ton; soy bean meal, $67 per ton; whole corn, $78 per ton; cracked corn, $77 per ton; alfalfa meal, $35; rolled barley, $76.50; sprouting oats, $81 per ton; Milo maize, $75 per ton; white gyp, $75 per ton.

Hay—Eastern Washington timothy, $36@37 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $29@30 per ton; straw, $15.

Butter—Washington creamery extras, cubes, 52c lb; do bricks, 53c lb.

Eggs—Fresh ranch, 45c dozen.

Potatoes—Puget sound, $1@1.35 per cwt; eastern Washington, $1.25 per cwt.

## Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

**Potatoes**—New local potatoes, $1.25@1.50 cwt; sweet potatoes, $4.75.

**Apples**—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, 2.25; Winter Bananas, $1.50 box; Jonathans, $1.10@1.25 box; Wageners; $1@1.50 box Rome Beauties, $1.75 box; Spitzenburgs, $2 box; King Davids, $1.10 box; Grimes Golden, $1.35@1.65 box; Stayman Winesaps, $1.75 box.

**Butter**—Blanchard cartons, 53c lb; Medo-Maid, 53c lb; Cascade, 49c lb; Gold Leaf, 53c lb; Better Butter, 53c lb; Attalia, 53c lb; Diadem, 53c lb; Hazelwood, 53c lb; Solid Pack, 52@53c lb; Jersey Belle, 51c lb; Peerless, 47@48c lb; Snowcap, 38c lb; cooking butter, 38c lb.

**Cheese**—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Winconsin limburger, 32@33c lb; brick cheese, 33@35c lb; domestic Swiss, 38c lb; Young Americas, 27c lb.

**Eggs**—White filler, guaranteed, $13 case; selected storage, $12.

**Live Poultry**—Hens, 13@16c lb; broilers, 18c lb; old roosters, 9c lb; ducks, 15c lb; geese, 20@23c lb; turkeys, 28@32c lb.

**Dressed Poultry**—Hens, 28c lb; broilers, 32c lb; old roosters, 14@17c lb; ducks, 20@23c lb; geese, 20@23c lb.

**Hide Quotations.**

**Green Cows and Steers**—25 lbs and up, 11c; salted cured, 14c; green bulls and stags, 10c; salted cured, 12c; kip, 15 lbs. to 25 lbs., 16c; calf skins up to 15 lbs. 23c; dry flint hides, 30c; dry, salted, 25c; dry calf skins, under 10 lbs. 28c; dry sheep pelts, 30@35c; dry shearlings, 10c@$1 each; green horse hides, $2.50@4 each; dry horse hides, $1@2 each.

## Seattle Wheat.

SEATTLE, Wash., Feb. 23.—The committee appointed to work with M. H. Houser, agent of the federal grain corporation, of which L. P. Baumann, assistant general manager of the Centennial Mills is secretary, to take a census of wheat holdings in this state, has made poor progress. Only meager facts have been forthcoming. Mr. Houser has shipping orders for 23,000,000 bushels, but does not know where he is going to get the wheat. The Oregon-Washington railway yesterday embargoed loading of all boxcars east of Huntington as part of a plan, it is revealed, for assembling 4000 boxcars for shipping wheat out of the Oregon territory, destination not disclosed.

Seattle feed dealers have written Mr. Willcox at Portland, agent of the food committee in administration of flour distribution, that millers here are selling flour, mill and poultry feed direct to country dealers and have failed to segregate the jobbers' part of the handling in flour as distinct from the costs of production allowed by the government. They ask that these items be kept and shown separately to the government, after which they will have no objection. They also claim that in order to get poultry feed country dealers must buy flour and millfeed and that the production of millfeed at this time is heavier than ever before, as the mills are running full shift and with day and night crews. These jobbers ask Mr. Willcox for a hearing.

The grain and feed committee of the merchants' exchange yesterday telegraphed President Wilson, Herbert Hoover and the Washington delegation in congress urging that barley, corn and oats prices be placed under federal regulation, stating that as substitutes for wheat these foods have risen so high in price that poultry growers of western Washington can not pay it and remain in the business.

**TURPENTINE AND ROSIN.**

SAVANNAH, Ga., Feb. 23.—Turpentine firm, 42; sales, 50c; receipts, 113; shipments, 324; stock, 25,091.

Rosin, firm; sales, 423; receipts, 725; shipments, 908; stock, 88,963.

Quote: B, D, E, F, G, 600; H, 595@620; I, 595@620; K, 605; M, 615; N. 635; WG, 645; WW, 670.

**Serves Double Purpose.**

Basic slag, otherwise known as Thomas' phosphate, is the only known phosphate material that serves the double purpose of phosphating and liming crops.

for hides and prompt returns made same day shipment arrives. Write for price list and shipping tags. Address

**PACIFIC HIDE & FUR DEPOT.**

**Joseph Thiebes and C. T. Symmes.**
**1101-9 Railroad Ave., Spokane, Wash.**

## Peeling Saves Posts.

All fence posts should be peeled. Peeling keeps boring insects out of the posts, says J. H. Allison of the Minnesota college of agriculture. Since peeling is desirable it is best to cut posts in the spring. If the posts are not to be given preservative treatment they need not be seasoned. Records show that unseasoned peeled posts last just as long as peeled ones.

THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XLI. NO. 10. MARCH 7, 1918. WEEKLY.

# CHEVROLET

THE PRODUCT OF EXPERIENCE

# ASK YOUR BANKER!

You are contemplating the purchase of an automobile—because you realize the lack of a good motor car puts you at a great disadvantage in a business way as well as keeping you out of your proper environment socially. But you must have a reliable car. How are you going to get it?

ASK YOUR BANKER what is the best guarantee of the reliability of a product and he will tell you it is the responsibility of its maker.

Back of every Chevrolet car is an $80,000,000 corporation operating factories in the principal districts of the United States and Canada. At the head of this company is W. C. Durant, "the master mind of the motor industry," and the head of the General Motors Company, controlling Buick, Olds, Cadillac, Oakland, G. M. C. Truck Co., and others. At Oakland, California, the Chevrolet Motor Company has invested nearly two million dollars in a factory to give service to Pacific Coast Chevrolet owners. This factory operates branches at Spokane, Wash., and at Portland, Oregon, to carry Chevrolet service closer to you people of the Pacific Northwest.

In every Chevrolet car is bred a quality that can only come of years of experience in the building of motor cars; a quality that reflects the ideals of its makers to produce a really high grade car at a popular price. The purchase of such a car is an INVESTMENT, not alone because of its small first cost, but because of the little it costs after purchase.

Economy, though the most important consideration, is not the only requisite of the modern motor car. You want a good-looking car, and the Chevrolet has it in full measure. Vanadium steel, used wherever unusual stress occurs, insures its strength. Your comfort wishes are satisfied to the fullest degree by proper spring suspension, roominess and comfortable upholstering. The wonderful valve-in-head motor, with which every Chevrolet is equipped, provides power far in excess of ordinary requirement or emergency, and the direct-application-of-power principle insures the maximum of power on the minimum of fuel. Last of all, you must have balance if you are to get the full benefit of the use of your car, and in the Chevrolet you will find a car so evenly balanced that the driving of it will be a source of the keenest pleasure, second only to the pride of ownership.

## Will Pay Dividend

### Land Bank Becomes Well Grounded

The federal farm loan bank for the northwest is progressing so satisfactorily that it will declare a dividend to its stockholders during the present year. This is the confident prediction of President D. G. O'Shea.

During the first several months of the existence of the farm loan bank there were no sources of income, but the expenses were very heavy, due to the work of organization and the setting in motion of the institution's machinery for business. Now, however, the bank has a source of income, namely, the payment of interest and a small percentage of principal by the farmers who took out the first loans through the bank. The provisions of the law require that twice a year payments be made by borrowers on an amortization plan, which means that each payment shall be such as to cover the interest due on the whole loan and also a small portion of the principal, thus reducing the principal with every semi-annual payment. President O'Shea states that since January 1 these payments have been coming in to Spokane at an average rate of more than a thousand dollars a day.

The actual work accomplished by the farm loan bank is nothing short of remarkable. In considerably less than a year it has actually placed in the hands of its farmer borrowers $10,734,925. There are yet pending before the bank applications for approximately $30,000,000 more in loans, the total applications up to March 1 being $40,619,921. The board of directors has approved loans totaling approximately $20,000,000, of which, as shown above, more than half has actually been distributed to applicants. Indicating that the board is exercising due care in the making of its loans, its books show that applications have been rejected for loans totaling nearly $4,000,000. It is the policy of the Spokane district board to require perfect security for the loans which it makes. They argue that if the security is ever found to be the least bit faulty, financial interests will not wish to purchase the bank's bonds, which are issued on a basis of the mortgages given by the borrowers.

## Food Production Day

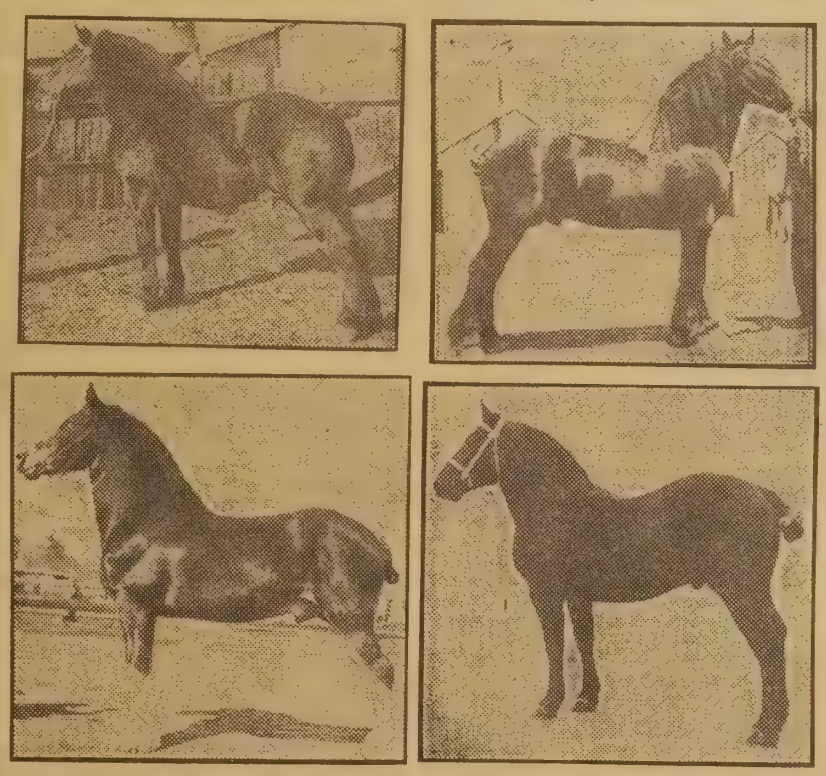
With a view to stimulating the production of food throughout the state of Washington, Charles Hebberd, state food administrator, has sent word to all county food administrators designating Saturday, March 9, as state food production day. The following telegram indicates the object of the movement and the method of carrying it out:

"Farm production, marketing of farm crops, farm labor and farm problems generally come particularly under direction of national and state departments of agriculture. The agencies of the national department of agriculture, including the agricultural department of the Washington State college, its agricultural extension department, county agricultural agents and club leaders are primarily charged with responsibility for increased food production.

"Hoover feels, however, that the food administration has a prime duty to fire the imagination of the producer to the national necessity, and to enlist all agencies in the state in food production he desires that the federal food administration use every possible method to consolidate public sentiment and the national service back of the responsible agencies of the national and state agricultural departments in a campaign for greater food production in 1918.

"I am, therefore, wiring all county food administrators, asking them to call together in their respective communities on Saturday, March 9, all food committees, farmers' organizatons, county defense councils, school superintendents and principals, commercial, labor and women's organizations and all other agencies in a mass food production convention within the county, with county agricultural agents and other agencies of national and state agricultural departments, in a statewide campaign for the largest possible food production in 1918.

"The problem of increased food production varies in each section of the state. Therefore each county should work out its own plan of campaign. Will you not undertake to put your county in the van, both in farm production and in home and school war production for 1918?"



### A Big Little Help.

County Agricultural Agent H. W. Hockbaum of Idaho refers to the war savings stamps now being offered for sale as "the biggest little help we can give the boys over there."

### For the Kitchen Sink.

A paper box that fits a kitchen sink strainer has been patented to receive garbage and facilitate its removal.

## Typical of the Four Big Draft Breeds

**Here are shown four good horses, typical of the four big breeds of draft animals, the Percheron, Shire, Belgian and Clydesdale. At the top are: Left, Bismark, a Belgian owned by W. T. Tracy of Kennewick, Wash., and right, Wilson Idol, a Shire owned by W. R. Ledbetter of Alicel, Ore. At the bottom are: Left, Decoration, a Clydesdale owned by R. E. Reynolds, La Grande, Ore., and right, Diligent, a Percheron, as owned at 2 years old by B. F. Burge of Albany, Ore.**

## Trappers of the Ozarks

You will become intensely interested in the adventures of these two young pioneers in the wilds of Upper Louisiana, now the state of Missouri, by beginning to read this new serial, the second instalment of which begins on page 34 of this issue. The buffalo hunt related in chapter six is first class reading of itself, but with the summary of the preceding chapters you can enjoy every bit of the following instalments. Here is the summary:

In September, 1811, two young men who lived near St. Louis—Ben Armstrong and Jodo Henderson—taking with them their two dogs and donkey, Spunky, started on an all winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring, close to the River Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting.

### The Front Cover.

The photographs on the cover of this paper are the work of W. O. Reed, photographer, of Spokane, and were submitted by Roberts Bros. of the Spokane Union stock yards. The lower picture shows a four-horse team of heavy draft horses moving a giant piece of machinery that weighs 18 tons, approximately five times the weigh of the horse flesh that hauled it. The photographs at the top show a pair of heavy geldings, the kind that it is supremely worth while to raise. They weigh around the 1750 mark each, and are representative of what can be accomplished by the use of good high grade mares and purebred sires.

## Want Dairy Council

### Show at Yakima Is Great Success

A resolution was adopted at the Western Dairy Products show last week at Yakima, Wash., favoring the creation of a western dairy council for the purpose of concentrating the efforts of those interested in the solution of dairy problems. Another resolution was adopted urging the appropriation by each of the 11 states represented at the meeting of a fund for use in animal husbandry work, with special reference to the dairy industry.

The show and the conferences held under the leadership of experts from all over the west, together with instructors' sessions with dairymen from many states, proved one of the organization's greatest successes.

There were 76 exhibits of milk and cream from seven of the western states, 36 being from Oregon, and the producers of Portland carried away the highest honors in the contest for rank. In class 7, board of health averages for five highest scoring dairies, Portland was first, with an average score of 97.76.

Three college teams competed in the judging contests on butter, cheese, milk and dairy cattle. The team from Washington State college took first place in the final summary with a score of 2353.95. Idaho university took second rank with a score of 2325.1. On butter, milk, cream and cheese Idaho was first with a total of 1149.8, Oregon 1142.85, Washington 1133.3, but in stock judging the Washington team was first by 80 points, scoring 1889 out of a possible 2400 points.

### LIMIT TWINE PRICE.

### Food Administration Acts.

Under an agreement with manufacturers of binder twine with sisal importers the food administration has announced the maximum advance over cost of sisal which may be charged by the manufacturers, the scale being on the present price of 19 cents a pound for sisal fiber.

Standard and sisal binder twine containing 500 feet to the pound should be sold in carload lots of 20,000 pounds or more at a maximum advance of 4 cents per pound above the cost of sisal. Lots of 10,000 pounds or more, but less than 20,000 pounds, are to be sold at an advance of not more than 4 1-2 cents a pound.

Twine that contains 550 feet to the pounds should be sold at a maximum advance of 1 3-4 cents above the price for standard twine; 600 feet to the pound at an increase of 3 cents, and 650 feet to the pound at 4 cents to the pound. Pure manila twine containing 650 feet to the pound should be sold at an advance of not more than 6 cents per pound above the price of standard twine. All prices are f. o. b. factory.

### Engineer's Periscope.

An Englishman has invented a periscope to be mounted in a locomotive cab to enable an engineer to see the track ahead or the whole of his train.

# Horse Ailments Are Genuine Scourge

## *Great Effort Should Be Made to Conserve Every Ounce of Horse Flesh*

By W. H. LYTLE, State Veterinarian of Oregon

Unfortunately we have regarded many of the ailments and diseases of horses more in the light of a necessity than a scourge. We have today many examples of diseases and maladies that could be practically eradicated or at least easily avoided by a proper effort along the line of precautionary vaccination or judicious handling.

The necessity for an elaborate effort at conservation of horseflesh is, this year, more apparent than ever. The season just opening should be one in which unusual returns should be realized from the horse and mule industry. Indeed, those who champion the horse against motor power competition can best further the interests of this noble beast by making him return such a profit that to do away with him will be the most obvious of follies. Horses are rendered inefficient because of disease, improper care and handling and an abnormal loss of the young at foaling time. To more successfully avoid some of these pitfalls will be the attempt of this article.

**"The Heaves."**

In the Pacific northwest there are two separate and distinct divisions of the horse raising district. The arid portion of this region is, properly speaking, what might be called a vast sanatorium for many of the horse ills that are to be found in the coast region of these states; here what is commonly spoken of as "heaves" is unknown. Conversely, many of the ills that the horse is heir to in the arid sections of the Pacific northwest are unknown to horses inhabiting the coast regions.

Perhaps no one disease has been of so much concern to horse raisers in the Pacific northwest as has what has been designated as the walking disease. This malady has been prevalent only in the arid sections of this district. For some six or more years, particularly during the summer months, unusual losses have been recorded in horses, particularly those that are harbored on wheat farms. A number of different theories have been evolved and likewise a number of experiments have been conducted, all of which have not, so far, tended to prove or disprove any one theory. During the summer months a report was had from certain French veterinarians who brought forth the theory that the bot was responsible for the disease known as infectious anemia. Such experiments as have been made would not tend to link the disease, infectious anemia, with the so-called walking disease.

**Treatments Mixed.**

At one time we had carried out a treatment on walking disease patients with an idea in mind of freeing the animal from bots. Unfortunately other treatments were carried out at the same time and it could not be definitely proven what particular line of treatment was responsible for the good results that were had. Some 180 or more horses were treated in three different bands with a loss of only three horses subsequent thereto. The following year a different theory was produced and consequently a different treatment was carried out obtaining the former satisfactory results, hence we are now showing a tendency to assign the bot as a cause of the disease, termed by the layman walking disease.

A particularly interesting coincidence has been noticed in connection with walking disease patients. Mules that have always been allowed to associate with horses never have been reported to show this infection. Practically all of the different books on animal parasites do not mention the mule as being susceptible to bot infestation. For that reason it is thought that the mule has escaped this highly fatal malady. Horses in the valley districts are thought not to become infested with the particular species of bot that probably either carries an infecting oganism or elaborates a particularly deadly virus; or, it is possible, the rains of this section wash away the bot eggs before they are taken into the system and the larvae hatch out.

Those owners who have experienced repeated losses from walking disease should consult their veterinarian and have him administer a treatment that will assist in the expulsion of bots. No drug seems to have been so successful as carbon bisulphide. This treatment is of such a nature it must be given carefully and by an expert in the administering of drugs of this nature. Those breeders who are located in remote sections of districts where the services of a veterinarian are not procurable should place their animals on a treatment of flowers of sulphur, about a tablespoonful twice daily in the feed. Good results have been reported from the administration of carbolic acid and salt, one ounce of pure carbolic acid to the pound of salt, animals allowed to eat at will. Horse owners who have experienced losses from this malady should be careful to curry off the bot eggs from their horses' legs. It might even be better to spray the regions of their body that are covered with eggs with a 2 per cent crude carbolic acid and water spray. This will have a tendency to kill the larvae at the time they hatch.

A disease frequently termed mountain fever, occasionally swamp fever, and sometimes plain paralysis, has doubtless occasionally been confused with the so-called walking disease of the northwest. It is apparently a form of hemorrhagic septicemia. At least numerous bands of horses that have plainly showed characteristic symptoms have been protected from this ailment by the administration of hemorrhagic septicemia vaccine. The chief symptoms of this disease are that animals will show an intermittent fever, frequently pneumonia complications will result and if such animals do not die early in the attack they follow out a chronic course, grow very thin and sometimes present a wobbling-like appearance much the same as is seen in hogs suffering from hog cholera.

The treatment of this ailment is not as a rule satisfactory and only through precautionary measures can good results be had. The manner in which infection spreads is not thoroughly understood. It is quite possible that infected surface water is the means of spreading the malady. It would seem that the same precautions should be used as are used in treating hogs infected with cholera. Doubtless, the urine contains an infecting virus or is the means of carrying the organism that is responsible for this ailment.

**Glanders Troublesome.**

Probably glanders is more frequently seen on the range than any other one horse disease. This ailment is one of the oldest of known horse diseases. It has been existent in the Pacific northwest since the early immigrant days and was probably introduced into this district by immigrants coming to the Pacific northwest over the old Oregon trail The very chronic course that this disease follows in high, dry altitudes proves one of the obstacles to its successful eradication. Horses frequently show this malady only during the winter months of the year. When the dry season of the year comes the nasal discharge seems to dry up and frequently the glands under and between the lower jaw, which in the winter time and in advanced cases are seen as hard, swollen bodies, are absorbed and reach their normal size and consistency during the dry summer months.

Generally speaking, glandered animals show a discharge from one nostril. Frequently this is said to be the left nostril, but apparently the right nostril is quite as frequently the seat of involvement. Frequently both nostrils will be seen to be discharging a thick, viscid pus, which is unusually sticky and agglutinous. The large hairs which protrude from the nose and nostrils will frequently be found thickly coated from this puslike discharge and will occasionally present the size of a small shingle nail. It is thought by many that the discharge from glandered animals is of such a consistency that it will sink in water. Generally speaking, this is true, but one would not be warranted in basing his diagnosis on this particular characteristic of the discharge. Frequently small ulcers can be seen high up in the nostril. The inner lining membrane will present a ragged, starlike ulcer, which in many respects resembles the starlike cracks in thin ice, only, of course, small in comparison. The edge of these ulcers are very ragged and overhanging and occasionally they converge one into the other and present a considerable size.

**Have Veterinary Test.**

Bands in which glandered horses have been discovered should be treated to an ophthalmic mallein test by a reliable veterinarian. Those animals

Continued on page forty-two.)

# Will Handle Grain

With a view to carrying out the principles of cooperative unionism, the farmers' unions of Oregon, Washington and Idaho have organized what will be known as the Tri-State Union company. Its purpose will be the handling of grain. It is announced that the company will have a capitalization of $1,000,000.

For a long time there has been a marked sentiment among the three state organizations for a closer union in the conduct of the warehouse and grain-handling business. Heretofore the farmers' union warehouses have been more or less local in character, but under the system as now being worked out for the new company the management of this line of the organization work will be centralized. It is understood that there are approximately 200 of the local farmers' union warehouse companies in the three states, and the capital stock of the larger company will be made up, in part at least, of part of the capital stock of these individual companies.

While the organization will have a definite effect upon the handling of grain during the coming season it will not be fully organized and operative before the first of next year. Speaking of the new venture, President A. A. Elmore of the Washington and Northern Idaho Farmers' Union says:

"Under the organization now in progress we shall be able to bring the entire three states into one comprehensive working organization. We have been in the grain handling business 10 years, and the plan we are now working on is the result of our experience. We have made mistakes, and intend to profit by them. We believe we are now on the way to a better plan of handling our grain. The scope of the new organization will include providing bags and such other things as are necessary to the grain business."

## It Is Horses Like These That Make the Hearts of Their Owners Thrill With Genuine Pride

This is a scene at the Spokane Interstate fair when a few of the good horses were lined up before the camera. These and their like of all the draft breeds are the kind of stock that is needed on the farm and in every line of work where horse power in its original form is required.

# Substitute Potatoes for Wheat

## *Will Farmers Increase Plantings Without Guarantee Against Loss?*

By ROBERT S. DOUBLEDAY

Among all the close-at-home problems confronting the farmer of Washington state at this time, no other is more important than the closing out of the 1917 potato crop at reasonable prices.

E. F. Benson, commissioner of agriculture, pointed out some months ago the likelihood of the development of the conditions which now exist, but little or no heed was given to his statements and prophecy. Whether this lack of appreciation of Mr. Benson's intelligent presentation of the matter was due to mere public indifference, or what is more likely, due to lack of proper publicity for his department because of the lop-sided niggardliness of a legislature, would be an interesting subject in itself for investigation and discussion. But in any event Mr. Benson's warning went practically for nought—and now comes the whirlwind—and it is not so small at that.

Just by way of indicating what the present situation is, let me refer to a recent issue of the Daily Produce News in which it may be found that the leading article is headed, "Immediate action is essential if potato crop is to clean up." And up to this moment there has not been any immediate action worth while that has tended to move the balance of the crop at all. On the contrary the growers of potatoes who promptly and properly and patriotically responded to the call for growing more potatoes find themselves well loaded up still with a large part of last year's crop. Spring is close at hand, potatoes are spoiling where not properly stored or storage costs are absorbing the profit where they are stored, and yet the necessary and proper distribution and the encouragement to consumption is still lacking.

We are in dire need of a few competent potato colonels and rutabaga majors and the like. Probably the material for such officials is abundant enough, but the state has no proper machinery for employing them. Some of us have insisted for a long, long time that these matters of distribution and market direction are properly enough matters of state concern. The evidence of the correctness of this contention is abundant enough at all times. When war, with its unusual demands and abnormal conditions, comfronts us, the truth is brought home to us in a way that will not be denied, that is all. With needs unsupplied in some directions and wasting surplus in others, we are found fiddling around with finely drawn "standardization" details and academic statistics embracing juicy information concerning averages of this, that and the other under conditions which once no doubt existed, but which do not now obtain.

What the farmer needs at present, so far as potatoes are concerned, and therefore and to that extent what the state needs, and what has right along been needed, is to most advantageously dispose of the big crop of potatoes that the farmer raised, the big crop that he raised under special urging and patriotic impulse.

Certain of the information issued by Commissioner Benson in the spring of last year, and certain information afterward sent out, all of it too largely ignored by the press that loves the farmer ever so dearly, reads now like the prophecies of a man who is unusually gifted with foresight. Unfortunately, after having made either a right good guess or an "a number one" prophecy, Commissioner Benson quit. I doubt if he wanted to, but he had reached the limits of his jurisdiction, in any event, and that is another matter.

Let me quote you from one of Commissioner Benson's circulars of last year, referring to probable conditions at this time:

"Next spring, if we have a slump in prices, many farmers may be glad to sell for less than $20 a ton, besides sustaining a loss of 25 per cent to 75 cent between digging time and opening the pits several months afterward." Commissioner Benson saw also in this connection the sins of certain farmers who were disposed to be speculators first and farmers afterward. Said he: "There will be little sympathy next spring for the farmers who refused $25 to $30 a ton at digging time." And, also he added: "One reason for the farmer's speculative notions this year is that last year the speculators made huge profits on the farmers' prices."

Incidentally, is it not curious how many farmers there are who will howl themselves positively purple about the grievous sin of speculation—by somebody else—in foodstuffs, but who can see no remedy for the evil, but to speculate themselves? Verily, there are farmers and farmers and once again farmers. No one should be allowed to speculate in foodstuffs, and the rule has no class application. Speculation in foodstuffs at any time is evil enough. In time of war it loses no whit of its ordinary sinfulness, but takes on that of being traitorous as well. Incidentally, also, it may be worth while to remark at this juncture that farmers have no longer the former right to complain of being wholly at the mercy of middlemen and bankers. At Seattle, the largest market in the state, there are public storage facilities under the Seattle port commission; storage of very great capacity and conducted on a basis of cost only; and the national administration, under the new banking laws, has made warehouse receipts for potatoes, under certain proper conditions, acceptable for commercial loans at any national bank, on low rates of interest.

One effect of the present potato situation is likely to be a lesser planting of potatoes than would otherwise have been made this year. If this shall prove to be the case it will be as unfortunate as it is unnecessary. All that was said a year ago to urge farmers to plant potatoes might well be repeated at this time with added emphasis and considerable amplification. The nation needs potatoes. It is going to need them more than it does now. Not that I mean to prophesy any particularly direful status, for I do not. But even normally we do not use potatoes as generously as we should.

Under the existing war conditions there is greatly increased need of the use of potatoes. Are we not already under the stern and absolute necessity of foregoing wheat to a considerable extent? Apart from properly trained and equipped soldiers, is there any other one thing we can provide and which is more obviously essential to the allies than wheat? There is not. And if we send away a considerable part of our wheat supply, what shall we substitute for wheat in our own domestic economy? Corn is, of course, the first suggestion. But, necessarily there are limitations in the possible use of corn. Besides, corn is greatly needed for live stock food, and furthermore, the use of corn for human food at the present time is not economical because of its high market value. Potatoes must more largely be substituted for wheat. But of what avail is it to urge the greater use of potatoes in other than the ordinary ways unless the potatoes are to be had under reasonable conditions and when required? What is the use of urging the substitution of potato flour for wheat flour, for instance, if potato flour is not to be had? And last, but by no means least, why expect farmers to increase potato plantings if there is no guaranty to them against loss and no intelligent control and direction of the distribution and marketing of the potato crop after it has been raised? This last is no such vast problem as some interests would like to make it appear. Intelligent officials with a grasp of the fundamental economic principles of marketing, with proper legalized authority, with sufficient funds provided, with the purely selfish influences disregarded, could properly balance so far as possible the supply and demand and at any rate guarantee fair market conditions for producer and consumer and serve a very great patriotic purpose at this time.

# Achievement Pins

## Lewis County Students' Awards

County Superintendent A. C. Canterbury of Lewis county has just received the list of boys and girls who have been awarded achievement pins for their work in the boys' and girls' industrial clubs for the last year.

In order to earn one of these pins a boy or girl must keep an account, make a final report to the state club leader, write a story of their project and show a profit.

There were 142 boys and girls to get these pins this year, showing a net profit of $1776.07. Those receiving pins were as follows: Rosa Cheatham, Beth Dodge, Billy Derington, Frieda Billen, Martha Black, Marjorie Burrows, Daisy Canterbury, Elsie Canterbury, Olive Canterbury, Albert Closner, John Deggeller, Betha Dodge, Bertha Faas, Leland Foister, Horace Fuller, William Fuller, Harry Giren, Lloyd Macomber, Clyde Madsen, Earl Miller, Charles Mulford, Lafie Phillips, Cleo Pier, Ewald Richardt, Norris Saindon, Alfred Scherer, Vern Scherer, Earl Simmons, Vernie Simmons, Bruce Stockand, Elenora Stout, Dorothy Lang, George Van deBoe, Weaver Vandegrift, Manna Whitcomb, Myrtle Zachman, Jens Svinth, Stewart Bassett, Edward Maurin and Oscar Nordwall of Chehalis; Rosa Addington and Julius Schoemouer of Ajlune; Zella Collins, Lloyd Carson, Laurence Carson, Bessie Morris, Clarence Landes, Robert Martin, Willie Graham, Hannabel Blankenship, Glen Moore and Ruth Walsh of Mossyrock; Hazel Johnston, Myrtle Kibbey, Rose Robison, Dorothy Stewart, Eva Cannse, Jack Kohtala, Lillie Kohtala, Leonard Niemi, Arne Niemi and Francis Osborne of Centralia; Emma Jordan and Lenore Perkins of Swofford; Bernice Sweany of Curtis; Marse Belanger, Claude Burleson, Edna Burleson, Lynn Burleson, John Burns, Grace Chaufty, Thelma Cunningham, C. R. Leathers, Doris Roe, Emery and Lillie Roe and Lyle Varney of Winlock; William Balch, Moree Cook, Ellen Jackson, Nellie Klub, Vivian Kowalsky, Otto Maurer, Frieda Serierinsen, Paul Smith and Edward Boyer of Pe Ell; Mansford Brabec, Catherine Connell, Albert Harmon, Edna Hoover, Kenneth Hoover, Buford Hopper, Melvin Howell, Edith and Ray Johnson, Mary Painter, John Pilz, Charles Ratkie, Roman Ratkie, Inez Schmidt, John Taylor and Leota Tucker of Dryad; Alma Bumann, Ella Bumann and Bennie Roundtree of Boistfort; Julia and Lucien Christian, Marcel Christian, J. E. Holcomb, Effie Thorp, Ida Milburn and William Wilburn of Neskill; John Delamater of McCormick; Adrian Duncan, Anna Jackson and Eddie Roundtree of Klaber; May Foister and Nora Rainero of Rifle; Bennie Geiszler, George Geiszler, Willie Keto, John Leonard, Frank Walter, Ida Walter, Mamie Walter and V. E. Waltar of Eagleton; Lottie Gessell of Forest; Ethel Gibson and Jack Herttua of Vader; Elsie Lahti of Castle Rock; Alex. McDaughlin and Florence Valentine of Littell; Russell Towner of Kopiah; John Sears of Mayfield, and Marion Stelloh of Nesika.

Deputy County Superintendent Heath has been appointed county club leader for this year.

# Spraying Program for Western Washington

Spraying in the orchard is one of the most important operations of the season's work, and if clean, first-class fruit is desired it should not be neglected. Plan the spraying in advance to secure maximum value. Know what pests are present, secure all materials early and follow a regular program. Use the right material in the right strength at the right time, says Arthur Frank, plant pathologist of the Western Washington experiment station at Puyallup.

**When the Buds are Bursting,** or just as they are swelling. This is the best time to apply the so-called "dormant" spray. Apply to all fruit trees. Use lime tsulfur solution, 1 gallon to 8 or 10 gallons of water. This controls **Oyster-Shell Scale, San Jose Scale, Blister Mite** (on apples and pears), **Red Spider, Anthracnose** (black-spot canker), and will keep down **Moss** and **Lichens.**

To control **Aphis,** use a **Combination Spray;** that is, combine black leaf 40 with the lime sulfur, using 1-3-pint to 50 gallons of the lime sulfur spray, which give a strength of 1-1200. For **Bud Moth,** add 1 pound of powdered lead arsenate to 50 gallons of lime sulfur spray.

**When the Blossom Buds Show Pink,** but before they burst. This is for apples and pears for **Scab.** Use Bordeaux mixture 4-4-50, or lime sulfur 1-30. For **Apple Mildew** add 2 pounds of iron sulfate (dissolved) to 50 gallons of lime sulfur spray. If not used in previous application for **Aphis,** add black leaf 40 (1-3 pint to 50 gallons of spray), and for **Bud Moth** add lead arsenate.

**When the Petals Fall,** on apples and pears for **Scab.** Use lime sulfur 1-30. If **Mildew** is present, add 2 pounds of iron sulfate (dissolved) to 50 gallons of lime sulfur. Add lead arsenate (1 pound to 50 gallons of spray), for **Bud Moth** or **Codling Moth.**

**Two Weeks to Three Weeks Later,** spray apples and pears again for **Scab,** with lime sulfur 1-30. The application depends upon weather conditions: If the weather is wet after the preceding spray, spray again in about two weeks; if the weather is clear and dry, delay this application, or it may not be needed at all.

**Peach Leaf Curl.** Use Bordeaux mixture 4-4-50, or lime sulfur solution 1-15 before the buds start to swell.

**Cherry Gummosis.** Although winter injury and other causes may produce gumming in sweet cherries, most of this trouble is due to a bark and fruit spur disease caused by bacteria. Carefully inspect all sweet cherry trees during the winter and spring for discolored patches on the bark or for gumming. Cut into such bark and remove all that is discolored, and then disinfect the wound with lime sulfur or other disinfectant and paint it with pruning paint or grafting wax. It is thought that the disease is carried by insects, so wrapping the trunks and main limbs with burlap is suggested for trial. The use of resistant varieties on which to graft sweet varieties is another way of avoiding the disease. The trouble is prevalent upon young trees of sweet varieties.

**Brown Rot of Plums and Prunes.** When the disease is serious, spray as follows:

(1) Just before the petals open.
(2) When the petals have fallen.
(3) When the husks are off.
(4) One month before the fruit is ripe.

Use Bordeaux mixture 4-4-50, or self-boiled lime sulfur. In addition to spraying keep the trees pruned. Pick up and burn all old decayed fruits from the ground beneath the tree, and also pick the old dried fruit off the tree. Plow the ground under the trees before blossoming time and keep the ground cultivated.

**Gooseberry Mildew.** Use lime sulfur solution, 1 gallon to 10 gallons of water, just as the buds are starting. Apply lime sulfur solution again, but at a strength of 1-30, just after the fruit has set, and again at 1-30 strength when the fruit is one-half to two-thirds grown. Add lead arsenate (1 pound to 50 gallons) for leaf-chewing insects, or black leaf 40 (1 pint to 50 gallons) for aphis.

**Bordeaux Mixture** is made by dissolving 4 pounds of copper sulfate in 25 gallons of water and slaking 4 pounds of lime in another 25 gallons of water, and then pouring the two solutions together.

**Lime Sulfur Solution** is the most reliable form in which to use this product, although there are several solution of nicotine sulfate. It is the most efficient spray for all types of aphis. The use of soap, or if used alone the addition of a little lime, adds greatly to its efficiency.

**Lead Arsenate** is the best poison to use against all chewing insects. Although it is apt to be rather higher in price this season, it is still the best material and under conditions the cheapest that could be used.

Mr. Frank adds that he is glad to answer any inquiries sent him in care of the Experiment Station, Puyallup, Wash., regarding the making of sprays, the use of materials, or any other spraying problems, and will be interested to hear from growers as to their results with spraying. Growers are invited to send in specimens of any plant diseases or of insects that are doing damage. Any information of these pests will be greatly appreciated.

### Cavite Flashes Time Over Pacific.

Since October 1 the radio station at Cavite, cooperating with the Philippine bureau of posts and the Manila observatory, has been sending the time signals of the 120th meridian east of Greenwich at 11 a. m. and 10 p. m. every day, says Science.

For the purpose of sending time signals, the transmitting clock of the Manila observatory is connected with the Cavite wireless station through the bureau of posts. Manila observatory time signals begin at 10:55 a. m. and 9:55 p. m., standard time of the 120th meridian east of Greenwich, and continue for five minutes. During this interval every tick of the clock is transmitted, except the 28th, 29th, 54th, 55th, 56th, 57th, 58th and 59th of each minute.

The situation of Manila in the Pacific makes this service of the greatest importance to the mercantile and naval fleets that ply upon that ocean.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Take No Chances With Crop!*

Secretary Houston appeared before the house committee on agriculture Monday with an optimistic view of the food situation. He said there was no need for any "hysteria" over a danger of shortage of any commodity.

Apparently the secretary of agriculture spoke against the proposed legislation to extend government loans to farmers to buy seed, for Chairman Lever of the committee said after the hearing that he did not think information given to the committee would warrant extending financial aid to farmers for purchasing seed.

Notwithstanding this attitude, congressmen from a number of western states insist that it is essential and will fight for the desired legislation.

**Danger of Over-Confidence.**

We fear that Secretary Houston is overconfident and that his over-confidence may injure the allied cause. It is not improbable that his optimistic statements to President Wilson explain the president's decision not to fix 1918 wheat prices higher than last year's guarantee.

We are at a loss to understand the reasons for Mr. Houston's easy-going cheerfulness. He seems, Micawber-like, to be trusting to "something to turn up." He is strong on appeals to the farmers to increase production, but weak on substantial support like stimulating prices and government loans to farmers needing seed in dry regions who have been having a pretty hard time for the past two seasons.

The overwhelming weight of opinion of such authorities as Mr. Hoover in this country and the food controllers in Great Britain and France is that the danger is exceedingly grave that America will not produce enough wheat this year to save the allied forces from short rations and possible hunger.

**Evidence Is Contradictory.**

Mr Houston's own department recently gave out a statement that contradicts his confident assertions Monday before the house committee. In that statement, issued February 18, the department said:

"While the area of winter wheat sown in 1917 was the largest on record, the condition of the crop as reported on December 1 was the lowest ever recorded, indicating a probable production of only 540,000,000 bushels."

Mr. Houston hopes that this probable shortage will be overcome by heavy spring sowing, but admits that "the total acreage will be greatly influenced by what is done in Minnesota, North Dakota, Montana and Idaho, wehe the conditions have not been the most favorable and where, in some sections, they have been decidedly unfavorable during the past two years. North Dakota's lowest acreage in the last five years was that of 1917." And the same is true, according to the department's statement of February 18, of Minnesota.

These are significant facts. Although wheat prices were high in the spring of 1917, North Dakota farmers seeded 657,000 less acreage than the five-year average, 1912-1916, and the Minnesota acreage of 1917 fell off 765,000 acres below that state's five-year average.

Although the department says much will depend on what is done this year in Minnesota, North Dakota, Montana and Idaho, it says further:

"What these states can do this spring it is difficult to determine. Because of the difficulties they have experienced, particularly during the last two years, a definite suggestion of acreage for these four states is not given in the accompanying table."

On this showing of facts—the department's own statement—it would seem that prudence would demand that no action be omitted that would stimulate increased production in these states. Mr. Houston admits that the growers have had "decidedly unfavorable" conditions for two years. It is known that many of them, particularly in Dakota and Montana, are pleading for financial aid to buy seed. But he dismisses their pleas with roseate guesses that all will turn out well at the next harvest.

**Take No Chances Now.**

We hope it will, but with the country at war we don't believe in taking any unnecessary chances. Why not provide the necessary funds for seed? It is not asked as a gift, only as a loan. If Mr. Houston is right, and the aid is not needed, no harm will be done. The fund would not be invaded. But if aid is needed, and for lack of that aid land is allowed to lie idle that could have been seeded, the loss will not be alone upon the affected farmers. It will be a national and allied misfortune.

## *The Horse Is Here to Stay*

The remarkable development of the gas-driven vehicles within the last few years has led to a widespread belief that the day of the horse is drawing to a close. A great many people have mourned over the passing of man's best friend. It seems logical that when a machine is made which does a horse's work its advantages will crowd the animal out of the place he has held so long. The increase in motor machines of all sorts made it seem probable, and yet investigation of the horse industry indicates that it is not true at all.

The day of the scrub horse is nearly gone, and the sooner darkness settles on him the better. But the day of the specialized horse—the horse bred for a definite place in the world as it is—is still in its first dawn.

The demands of the greatest war in history have been for more and more machinery. Cavalry we hear little of. The cavalrymen of today rides the air, and the rest of the army appears to have burrowed into the earth. And still the demands for horses for the war have been enormous. In spite of automobiles and tractors of all types the cry is for horses, more horses of the right type.

On the farm, while the tractor grows in usefulness, there is no denying the fact that the right kind of a horse is more in demand than ever. The machine does a certain amount of work; the horse is flesh and blood and can respond to an emergency. If the machine breaks down, it is done for until it is repaired. If one of a team of horses is crippled, the other horse can serve in a pinch and do more than his full share. While he has some disadvantages, he has just as many advantages. He has a place in economy from which he can not be ousted. The tractor has not destroyed the horse industry;; as a matter of fact, it has helped it, for they have made breeders scratch their heads and get to work producing an animal even better fitted to meet the new competition or to fit into a new corner of real economy.

When will we do away with the horse? Why, about the time we succeed in making a mechanical cow; when we grow wool by pulling a lever, or raise pork by pressing a button.

## *Washington Gleanings*

It is planned to build a $35,000 dock near the head of Port Townsend bay.

An active campaign for members is to be started by the Farmers' union of Walla Walla.

The Whitman county commissioners have purchased a caterpillar for road work in the LaCrosse district.

The Northwest Egg association has been organized at Walla Walla by poultrymen who hope to equalize prices.

F. E. Johnson has sold his ranch south of Chewelah to Mr. Nebrey of Idaho for $32,000, of which a large part was cash.

M. F. Elmore recently sold 1120 acres of land near Lind, which he had settled on 17 years ago, to Kiehn and Koch of Ritzville, for $50,000.

Fifty head of steers were recently shipped from Reardan by L. E. Ensor, which netted him over $6000, or more than an average of $120 each.

The sale of 800 acres near Keystone by I. N. Womach, a pioneer of Adams county, to David Greenwalt of Ritzville for $39,000 has been reported.

The difference in the price of wheat and in barley and oats has caused many farmers near Toppenish to change their wheat acreage to oats and barley.

A. B. Dorsey has sold his ranch of 1278 acres, located six miles northwest of Waterville, to Frank Malfa Jr. for $55,000. There are 575 acres of farm land on the place and the balance in pasture land.

At a recent meeting of the Whitman-Spokane County Cow Testing association the following officers were elected: Ira P. Whitney, Spokane, president; H. S. Curtis, Palouse, vice president; C. M. Bach, Pullman, secretary-treasurer.

In order to increase meat production, the trustees of the Sunnyside Waterusers' association have petitioned Secretary of the Interior Franklin K. Lane, to modify a recent ruling of his to permit sheep to graze in Rainier National park during the war.

Following a personal tour of grain-growing sections in eastern Washington, P. J. Sweeney, state grain inspector, reports excellent prospects that winter wheat this year will yield an average of 90 per cent of grain sown where 60 per cent was winter killed last year.

N. F. Thompson, plant disease specialist with the state college, and the United States department of agriculture, conducted a series of demonstrations and lectures on plant diseases and treatment of seed in Cowlitz county, in cooperation with County Agent L. S. Keyes, recently.

## *What Others Say*

Kimball's Dairy Farmer: Cooperative bull associations promise to accomplish as great a purpose as have the cooperative cow testing associations. They should become even more popular and more numerous.

Hoard's Dairyman: It should ever be remembered that the man who does hard work is entitled to good food and clean, cheerful quarters; he should have hours for recreation and study; for the demand for right living in this country has become so urgent that farmers in the future who do not furnish the right conditions for hired men will have serious difficulty in securing competent farm labor.

Wallace's Farmer: When we once begin to economize, we are likely to carry it altogether too far, and refuse to make expenditures which are really good investments. The man who "gets along somehow" with a practically worn-out implement, for example, will spend, in keeping it in repair and in time wasted, far more than the interest on the money invested in a new implement. There is such a thing as unwise economy.

The Farmer: The problem of persuading farmers to maintain their acreage will undoubtedly receive a very great deal of discussion during the next few weeks, and we would suggest that our readers take particular pains to post themselves very carefully both as to their duty in this matter and as to the possibility of adjusting their farming plans so that they will receive the greatest returns and at the same time be fair to their country.

REO

"THE GOLD STANDARD OF VALUES"

# A Seven Passenger Six That You Can Afford

THE GOLD STANDARD OF VALUES

**Salient Features of the Reo Six**

50 HORSE POWER, Six-cylinder motor cast in threes.

REO DESIGNED, Reo made—throughout.

126 INCH Wheel Base.

CANTILEVER rear springs—Semi-elliptic front springs.

FULL FLOATING rear axle.

TIMKEN BEARINGS throughout.

NOISELESS spiral-bevel driving gears.

REO ONE-ROD centre control.

HYATT QUIET bearings in transmission—at all points.

MULTIPLE Dry-disc clutch.

BOTH BRAKES operated by foot levers and provided with ratchet locks. Extra large and both operating on rear hubs. No hand brake.

CLUTCH AND SERVICE brake are interconnected.

TWO UNIVERSAL Joints in drive shaft.

TORQUE SHAFT relieves driving mechanism of road stresses.

SUB FRAME carries motor and transmission.

EXTRA LARGE—and round—spokes in wheels.

OVER-SIZE TIRES—34 in. x 4½ in.

PERFECT LUBRICATION at every moving point.

REO RADIATOR—Reo designed, Reo made.

REO-REMY Electric Starting, Lighting and Ignition system.

REO STEERING GEAR—exclusively Reo. No back-lash—self-adjusting for wear. Positive.

50 PER CENT OVERSIZE in all vital parts—crank-shaft, axles, driving shafts, gears, frame, wheels, tires.

NET RESULT—Reo upkeep equalled by no other 7-passenger car.

PRICE IS F. O. B. LANSING AND SUBJECT TO INCREASE WITHOUT NOTICE

WE ARE NOT THINKING of the price—for that isn't the primary consideration in the selection of a car.

YOU KNOW YOUR OWN NEEDS—whether a five passenger car is sufficient; or if you really need, at times, room for more.

AND YOU KNOW better than anyone else can tell you, what your price limit is.

AND SURELY AT ITS PRICE this Reo Six is the greatest value obtainable in a car of established reputation.

AND REO REPUTATION is second to none.

WHEN WE SAY "Here is a seven-passenger Six that you can afford," we are thinking of the same item that you, an experienced motorist, are considering—

NAMELY—UPKEEP. That is the first thing to consider in the selection of an automobile.

CERTAINLY YOU CAN afford to own a seven-passenger car—and you can treat yourself to the luxury of a sweet-running, silent Six—if you can feel that not only in first cost but also in cost of upkeep it will be well within your means and accord with your ideas.

ASK ANY REO SIX OWNER to tell you of the upkeep cost of his Six—and the longer he has owned and the farther he has driven his Reo, the better will his answer sound.

HE WILL TELL YOU that, having compared notes with friends who own and drive other makes of cars—fours as well as sixes—of the same passenger capacity, he has never found one that compared with his Reo Six in low cost of upkeep.

AND HE'LL TELL YOU, too, that he has yet to find even a five-passenger car—four or six—the operation, repairs, replacements and general upkeep cost of which proved as low as his Reo Six—except one the five-passenger Reo.

NATURALLY a five passenger car ought to be cheaper to maintain than one of seven-passenger capacity—but most are not, when you look up the figures.

REO DEALERS TELL US that their records for the past three years show that Reo Six owners on the average have paid less than eight dollars per car per year for replacement parts.

JUST READ THAT AGAIN—with thousands of Reo Sixes running in all parts of the country, over all kinds of roads and handled by all kinds of skilled and unskilled drivers; most of them owner driven and owner cared for (or neglected)—

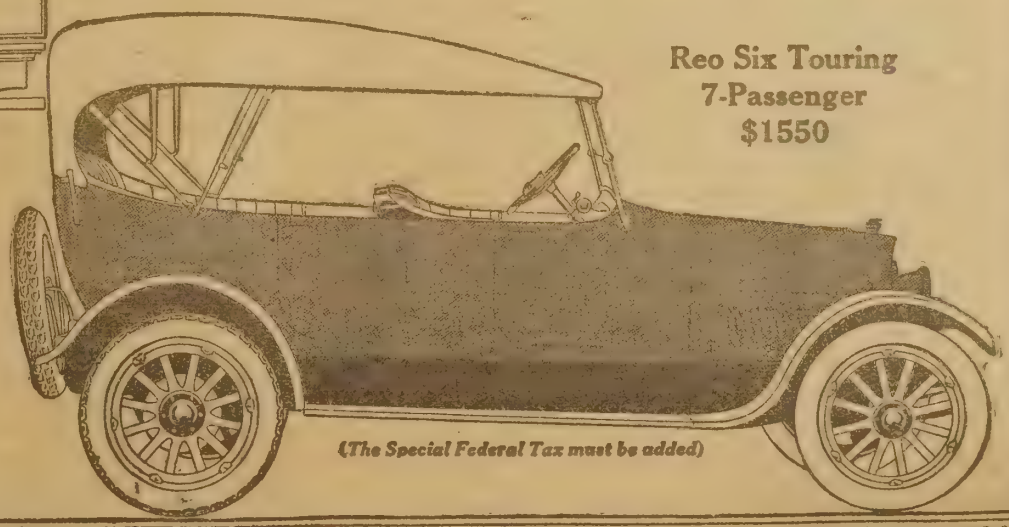
THE AVERAGE COST per car, per year; for replacement parts was less than eight dollars!

FRANKLY WE DON'T believe that record can be equalled by any other seven-passenger car on earth.

AND WE MAY ADD that the records on the five-passenger Reo show less than seven dollars per car.

THE SAME QUALITY—the same sound engineering; the same ripe experience; the same attention to little details and the same construction, inspection and testing of every car enter into the making of all Reo models.

COST OF UPKEEP is always uppermost in the minds of Reo engineers, when designing and when specifying materials. And since the same desire is uppermost in the minds of the most experienced buyers—we meet on a common ground.



WE ARE FRANK TO ADMIT that to a large extent the phenomenally low cost of upkeep of Reos is due to the fact that Reo buyers are, as a class, better informed and more careful in their selection than the average.

REOS DO NOT APPEAL to those who look only to superficials—Reos are built for connoisseurs and Reo owners are mostly men of ripe experience in motoring. They, therefore, combine prudence with intelligence in their choosing of an automobile.

IF YOU ARE ONE of that kind, we say to you, here is a magnificent, luxurious, seven-passenger six that, both in first cost and cost of upkeep, you can well afford to own.

REO EFFICIENCY sets the price lower—Reo quality guarantees low upkeep.

# Red Star Will Save the Horse

## *Will Be to Him What Red Cross Is to Soldier*

There is probably not a man or woman in America or in Europe who does not know the Red Cross and the work that it is doing in behalf of humanity, but as yet those who know the Red Star are in the minority.

The Red Star is to the horse what the Red Cross is to man, and while the latter is doing its noble work behind the battle lines in France the Red Star, if the people of America rally to its support as they should, will be performing the same kind of work in behalf of the army horse.

Already the allied governments of Europe have purchased from America more than 1,000,000 horses for army service in one capacity or another, and if America ever places 2,000,000 soldiers on European soil those soldiers must be accompanied by at least 750,000 horses. All nations participating in the war recognize the fact that the horse is indispensable, notwithstanding the great service which the automobile truck and "tank" are performing.

During the last three years, though there has been little said about it in the casualty lists, there have been thousands and thousands of horses left dead or mortally wounded on the fields of battle. Thousands of them have died unnecessarily because there had been inadequate organization for the purpose of their rescue.

From one end of this land to the other there is now being waged a campaign to raise funds to rescue these injured animals and restore them to service. Though live stock associations, especially horse breeders' associations, are taking the leading part in the movement, the campaign is one in which every person should become vitally interested. Like the Red Cross appeal the appeal of the Red Star is universal in character. Like the Red Cross its one purpose is the relief of suffering and the restoration of powers to serve.

If the people in this country contribute as they should to this movement there will be built hundreds of veterinary hospitals back of the battle lines in France and hundreds of pieces of equipment will be purchased and put into operation to bring back from the battle fields the injured animals. In these hospitals they will be treated by experienced horsemen and veterinarians in the same manner that the wounded soldiers are treated by the Red Cross nurses, surgeons and doctors.

America has responded to the Red Cross loyally, giving its millions for the sake of humanity. It must respond to the Red Star with similar loyalty and give at least its hundreds of thousands in behalf of humanity's best friend.

## Automobile Hints

Following are suggestions that are likely to be helpful to drivers of motor cars. It sometimes happens that emergencies come up where these practical pointers come in handy. If information along any specific line is desired write us.

For cleaning battery plates that have become encrusted with sulphate here is a good recipe: Half pound of ammonium acetate in a quart of water. Heat the solution while removing plates from battery, insert plates in hot solution and let stand for half an hour. If badly encrusted, leave in solution for longer time. Wash well in clear water after removing from bath and dry before returning to battery.

If there is some carbon in cylinders pour half an ounce to an ounce of kerosene into each cylinder at night while engine is still heated, let stand until morning and when carbon deposits are not too hard the results will be gratifying. This can be practices to advantage every few weeks if the car is much used.

Where an acid-proof coating for terminals, connecting bars or other battery fittings is desired melt small pieces of sealing wax in alcohol and let stand for a day. Use enough alcohol so that the solution will be of the consistensy of varnish. It can be applied the same as paint, dries quickly and is not affected by acid. This may be made to take the place of shellac varnish. The latter is made by dissolving flake shellac in alcohol If the mixture is kept in a bottle the cork should be waxed to prevent its sticking.

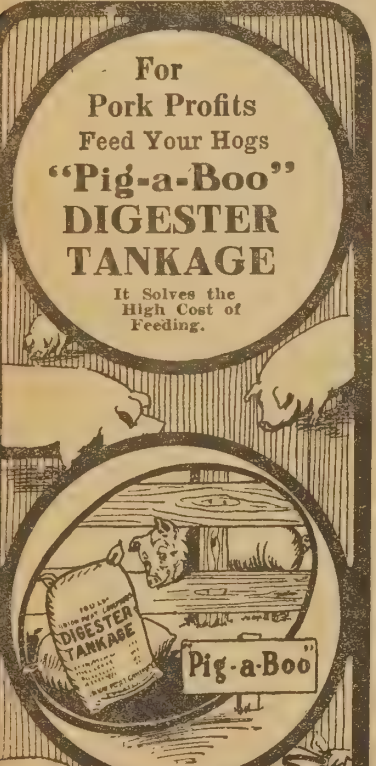
If you wish to test your fuel pour a few drops on a sheet of clean white paper. Note how long it takes to dry off and whether it leaves a greasy stain or discoloration. If the paper is stained or discolored the fuel contains nonvolatile impurities. If it is a considerable time drying the fuel very likely contains water.

To remove from the radiator the scale which forms in it fill the water system with a strong solution of washing soda and hot water. Run (but do not race) the engine for about 15 minutes and drain the solution from the system. The scale will come with it.

If a valve cap sticks run the engine until it is warm and then pour cold water into each cap. This causes a sufficient contraction in most cases to permit the ready removel of the cap from the cylinder casing.

A good temporary repair for a leaking water pipe may be made by bending around the leak several layers of string soaked in thick oil.

### A Result of Sugar Shortage.



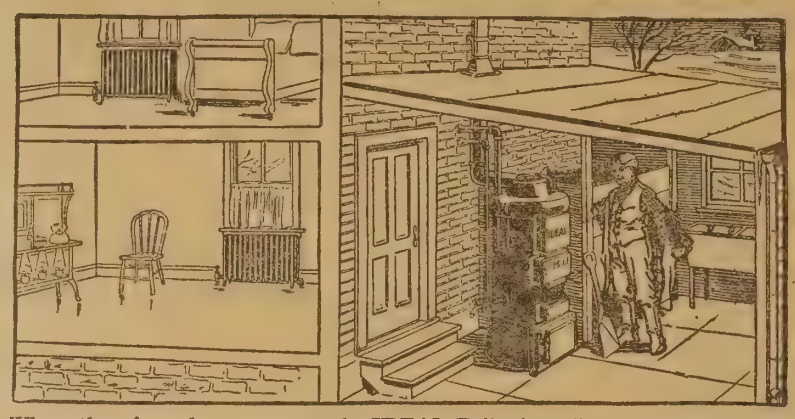
The sugar shortage has encouraged Louisiana planters to broaden the use of pure cane syrup, which is made from cane juice, without taking out any of its sugar. This juice is boiled to a point just below that required to crystallize it into sugar, and can be used not only for griddle cakes and candy making, but it is recommended by the planters as a sweetening for coffee and tea. It is practically sugar in a liquid form, and on a basis of 8 cents a pound retail for granulated sugar will yield economies of 40 to 50 per cent, at a price of 4 1-2 to 5 cents a pound for syrup.

### Dentists' Instruments.

For the use of physicians and dentists a tongue depressing instrument has been invented that switches on an electric light to illuminate a patient's mouth when it is used.

For Pork Profits Feed Your Hogs "Pig-a-Boo" DIGESTER TANKAGE

It Solves the High Cost of Feeding.



"PIG-a-BOO" as a balancing ration is indorsed by the best breeders and feeders and by the leading Agricultural Experiment Stations. Develops bone and muscle and makes hogs grow. FREE — Booklet Containing Valuable Information to hog raisers.

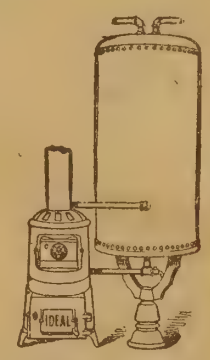
# Have IDEAL heating in any farm home

Where there is no basement, put the IDEAL Boiler in well boarded-up summer kitchen or leanto—water pressure not necessary for radiator heating

Every farm house *can* have and *ought* to have Ideal heating, which consists of an IDEAL Boiler, and Radiators located in the different rooms. The IDEAL Boiler burns the *cheaper fuels* of any locality—even down to screenings and lignites and develops the *greatest heat* from the fuel for heating purposes.

AMERICAN RADIATORS & IDEAL BOILERS



**IDEAL Boilers are known the world over as the greatest heat distributors. More IDEAL Boilers in farm houses and city buildings than all other makes together.**

## Greatest fuel savers known

Radiator heating is the IDEAL heating for the farm—it is cleanly—labor-saving—gives heat for any kind of weather. A small fire will furnish plenty for chilly days and the house is as balmy as June even in blizzard weather.

## IDEAL heating is a wise investment

Improve your house with IDEAL heating—give your family its comforts—pays back its first cost in fuel savings. IDEAL heating is safe, clean and durable—never needing repairs or over-hauling and lasts as long as the building stands.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

## Send today for free heating book

**Don't put it off another day—read up and get all information about IDEAL Boilers and AMERICAN Radiators. This book tells all—puts you under no obligation to buy.**

Sold by all dealers. No exclusive agents.

# The Man-Saver

THE Martin Ditcher is a man-saver, and a time-saver—therefore a money-saver. Two men, four horses and a Martin will make or clean more ditch *in one day* than they could plow and shovel out in *three weeks*—time and man saving are big items *now*.

## Fine for Terracing, Dykes and Roadwork

Made in 2, 4 and 6 horse sizes; can be used with tractor. Works equally well on side hill or level, or in wet or dry soil. Handles rocks and cuts alfalfa roots without plowing. Cuts or cleans ditches down to 4 feet deep. *All Steel, Reversible and Adjustable. Investigate the Martin NOW.*

OWENSBORO DITCHER & GRADER CO., INC.
1576 Wazee Street Denver, Colorado

# Heavier Draft Horses Are Needed

## *Farm Work Demands the Horse With Greatest Power Possibility*

By WAYNE DINSMORE

Horse breeders throughout the United States have been somewhat discouraged over the outlook for the next two years. Hay, grain, cattle, sheep and hogs have doubled or trebled in price. Horses, with the exception of the very best draft animals, have not advanced. Motor trucks and tractors have increased in numbers. Automobiles and light trucks have virtually eliminated driving, carriage and delivery horses. These factors have disturbed men who have been raising heavy horses and have caused a decided slowing up in our horse breeding operations. Investigations made by the Percheron society this past fall indicated that not more than 40 per cent of the mares of breeding age have been bred within the last two years.

The situation has changed. The large surplus of horses weighing from 1100 to 1500 pounds which we had when the war began has now been practically exhausted. Horse buyers who were formerly able to purchase two carloads per week now report that they can not buy over eight or ten in a week's time. Buyers of artillery horses are competing directly with farmers who need and must have teams to put in their crops this coming spring. Thousands of farmers sold themselves short this last fall to save feed. The acreage to be put in grain in the spring of 1918 will be greater than at any time in the history of the United States. This is particularly true of small grains. Pastures are being broken up. More land is necessarily coming into tillage to meet the great demand for foodstuffs in the present war emergency. More work horses will be needed on the farm than at any time in the last fifteen years. The surplus of horses weighing over 1300 pounds is shorter than it has been at any time in the last fifteen years. Auctioneers who have been making sales steadily all winter in Illinois and Iowa report that good grade draft mares weighing from 1400 pounds up are in very strong demand and that prices on these have risen at least $50 per head in the last thirty days. We must have these heavy draft teams.

**Raise Draft Horses.**

Since the war began we have sold to the allies more than 1,000,000 head of horses and over 300,000 head of mules. During this time small stuff not large enough for artillery needs and unsound horses which will not pass inspection have been steadily accumulating. They are today a drug on the market at prices ranging from $30 to $125 per head. Many have gone to the southern trade, but this is not large enough to take any considerable proportion of such horses and the result is that there are 3,000,000 or 4,000,000 horses in the United States alone that are of no special commercial value and which serve only to retard horse breeding operations. Fortunately, the breeding of these small horses has practically ceased and they will eventually be eliminated from consideration.

Men who formerly plowed three acres per day have bought more heavy mares and will use gang plows next spring, plowing 5 1-2 to 8 acres per man per day, instead of three. They have traded their old disk harrows in on new ones of larger size and will disk from 20 to 40 acres per day, instead of 10 to 12. They have sold their old 12-hole seeders and put in 20-hole disk drills, with which they can seed daily from 20 to 25 acres. They are selling mowers of five-foot cut and putting in machines with eight-foot sickles instead. They are buying side-delivery rakes and hay loaders to reduce hand labor to a minimum. They are buying corn harvesters with loading elevators so that the heavy bundles of corn can be loaded directly on the wagon from the corn harvester in silo filling, thus eliminating two laborers formerly required to hoist the bundles of corn to the wagon. All these changes reduce labor requirements and make the work that must be done much lighter, and all this is made possible through the use of much more powerful horses and more of them.

Aside from all this the yield per acre is being increased. Men with insufficient horse power prepare the land in a superficial manner. They do not realize their loss till it is driven home to them by the greater success of their neighbors.

Draft horses are essential to this more effective work. Any competent teamster can handle five to 10 horses weighing from 1600 to 1800 pounds; but not one teamster in a hundred can handle the number of smaller horses which would be required to deliver the same power units. Aside from this draft mares can be used, and the colts produced constitute an important source of revenue because they are readily sold at profitable prices; while there is no outlet for surplus small horses if any should be produced.

**Tractor Is a Factor.**

The one remaining question is the tractor. What effect will it have on the need for heavy horses on our farms? Will it eliminate or materially reduce the number of horses in farm use? Time alone can answer this question exactly. Developments to date, however, indicate that the tractor may supplement, but not displace heavy draft horses. In fall plowing, when horses are needed in the harvest field, the tractor can be used to advantage; and where there is enough need for belt power to make the tractor pay interest and depreciation charges for the balance of the year it may be well to buy one. The fact remains, however, that the horse is a self-repairing, self-reproducing motive power, and the tractor is not. The horse utilizes roughage, such as corn fodder, straw and pasturage, produced on the farm, as a considerable share of his fuel, and all fuel for the tractor must be bought.

The breeding of small horses must end. They have no place on our modern farms. The best of the small mares will, if bred to heavy draft stallions of extremely prepotent character, produce good farm chunks weighing 1400 pounds or over, providing the progeny is liberally fed and grown out, but the production of horses that will weigh under 1300 pounds should be discouraged. Small cayuses may well be converted into meat or fertilizer and their hides turned over to shoe factories which are in need of greater supplies of raw material for leather. No one need hesitate to produce all of the good heavy, well proportioned draft horses that he can possibly breed and raise. Prices are already rising, and will unquestionably continue to do so for the next few years, for there is a shortage of heavy horses suitable for work on the farm and in the city, and farmers generally are just beginning to awake to the true situation. I hope they go so high that farmers will have to pay $800 per pair for good grade draft mares. It will be a just penalty on those who have neglected to breed good horses in the last few years.

# Raise Your Own Colts

## *Brood Mares Are Profit Makers of Farm*

By A. R. HUNTER, Island City, Ore.

At the present time, with one of the worst wars in the history of the world, all foodstuffs and products of food animals are being regulated by the nations at war.

To a certain extent tractors are furnishing a part of the power to produce foodstuffs on the farm, but the draft horse is the largest factor in the production of farm power.

It is then time for all farmers and breeders to look forward to the conservation of the draft horse, to produce more grain and farm products.

**Here is a team of pure-bred Percheron mares on the farm of A. R. Hunter, near Island City, Ore. They are hauling 80 sacks of wheat to market. It is mares like this that Mr. Hunter refers to when he says every farmer should keep good brood mares and raise his own colts.**

This leads me up to my subject of the brood mare on the farm.

In some sections of the country where there are large areas of land farmed by one man or company it might be more profitable to use geldings or mules. But with the average farmer where there are but a limited number of men employed the brood mare will furnish all the farm power and raise a foal every year. And every farmer should keep a few good mares of good draft type with which to do the farm work. Under-sized, mongrel type animals—neither draft nor driving stock—of course, will not pay to keep. But good, big, sound draft mares do now and always will prove profitable.

Now, it has been my observation that the brood mares that do the regular farm work are the mares that raise the best colts, which grow into the best horses at maturity.

Tme mare is worked up to within two or three weeks of foaling time and after the colt is 10 days or two weeks old the mare is put back into the harness. The colt being in constant company with the teamster or groom becomes quite gentle and learns to eat from its mother's feed trough early in life, as the mare is fed the colt will get its share. The proper way to care for a colt is never to let the colt follow the mare, but leave it at the barn in a box stall or tie it up; that is, if the mare is being worked near the barn, where she will be in at the noon hour. If she is being worked at a distance from the barn, where she will not be in at the noon hour, put a small halter on the colt, tie him to the trace near the hame and he will soon be broken to lead and you can then tie him to the fence or wagon near the work. The brood mare on the farm, where she does her part of the farm work, can be detected in season, and in most cases the mares that do their part of the farm work produce a larger per cent of the colts than do mares that run in the pasture or on the range.

As the harvest season approaches and grain hauling time comes on, the colt is now about 4 or 5 months old and he has his own feed trough, and if fed crushed oats or oats and bran three or four times a day he does not miss his mother much at the noon hour and the mare will do her part in the harvest field or on the wagon delivering grain to the elevator. Later on, when the colt is 5 or 6 months old, you can gradually wean the colt away from its mother.

The colt is now well broken to lead and will not make much fuss when being weaned and the mare will not make much fuss over the colt being taken away from her.

You put the colt raised in this way in the lot with your pasture or range raised colts and you will find that this colt will be larger and more thrifty and will not lose flesh like the pasture or range raised colts.

# The Saddle Horse

## He Is a Product of This Country

By D. E. Richards.

With the exception of the American trotting horse, the American saddle horse is the only breed of horses which was developed in the United States. The very first use that was made of the horse was for riding purposes. In every locality horses are used for riding, more in some places than in others, but there are always some used as riding horses. The first horses used were small, lacked style and symmetry, and were too often "rough riding." With the continual use for riding purposes came a demand for horses with more size, style, and horses that were easier gaited.

Virginia, Kentucky, Tennessee and Missouri are the states that were most active in developing the saddle breed. Thoroughbred horses with quality and endurance were crossed on the best native saddle mares of these states, and the offspring selected depending upon their merits as riding horses, and this developed the foundation stock for the American saddle horse.

Kentucky and Missouri were heavy breeders and have always raised comparitively more of these horses than have the other states, and the name "Kentucky saddle horse" or "Missouri saddle horse" is often but wrongly applied to this breed.

The American Saddle Horse Breeders' association, incorporated at Louisville, Ky., is the recognized society for recording this breed.

There are two classes of saddle horses, the three-gaited and the five-gaited. The three-gaited or natural-gaited horses have the walk, trot and canter. The five-gaited horses, in addition to the walk, trot and canter, must have the rack and the running walk or the slow pace or fox trot.

The rack, commonly called a "single foot," is where only one foot strikes the ground at a time, differing from the two-beat gait of the trot and pace. This is a very easy riding gait for the man, but is tiring for the horse when he is kept at this gait for any length of time. A good racking horse develops considerable speed and makes a very flashy and showy appearance.

The "running walk" is a properly named gait, as the legs move in the same manner as in the walk. The running walk is termed a slow gait. The horse moves faster than in a flat-footed walk, but the feet strike the ground in the same rythm. It is an easy riding gait both for the horse and rider.

The slow pace is a two-beat gait, the right fore and right hind feet move ahead at one step, and the left fore and left hind moving at the next. When the horse is not urged out of a slow pace this is an easy riding gait and if the horse shows some knee action it is also a very attractive gait.

The fox trot is generally used on horses that can not develop a good running walk or a slow pace. It is used as a slow gait, being nothing more than a restrained trot or jog trot. It is little used except on rough ground, or to rest a horse from some of the other gaits.

The superior gaited horse should have the walk, trot, canter, rack and running walk. When the horse can not develop a good running walk the slow pace or fox trot may be used as a substitute.

The conformation in a addle horse is similar to that of the roadster of superior type. The saddler should have a short, strong back, be short coupled, with a good body. The shoulder and pastern must be sloping, strong and long to give a springy gait as well as a conformation that will last. The saddler must show style and quality, with a high carriage of head, arched neck, with a proud, rather high carriage of tail. The height ranges from 15 hands 1 inch to 16 hands 2 1-2 inches, the weight depending on condition, ranging from 950 to 1100 pounds. When the saddle horse shows quality, style, intelligence and good life, together with a good education and will go any gait at the will of the rider, he commands a very high respect in the horse world.

**President Gets $260,000.**

Somebody is always wanting to know how much salary the president gets. The total amount the government provides him for clerk hire and White House expenses, including his salary, is $260,000 annually. Of this $75,000 is straight salary, $25,000 for traveling expenses and $160,000 for the rest.

**Why Mary Was Late.**

A Topeka (Kan.) school teacher received the following note during the recent cold spell:

"Please excuse Mary for being late. We were out of coal and she had to sit on the wood while I chopped it."

# These Horses Are "On the Water Wagon"

**This is a picture taken at the Union Live Stock show at Union, Ore., where this handsome team of six kept the parade grounds well sprinkled during the show.**

# The Tomato

## Queen of the Vegetable World

The tomato is the Cinderella of the vegetable kingdom. Like Cinderella, its virtues were long unknown; its proud sisters of the garden looked on it with contempt. Then a prince came along one day and sought it out for favor and esteem, and now it is the queen of the vegetable world.

Elderly people can recall a time when the tomato was grown for ornamental display, and many of us remember our grandmothers saying that when they were little girls the tomato was called the "love apple" and people thought it poisonous.

People got over that notion long ago. More tomatoes were canned in 1917 than all other vegetables combined. A tabulation just compiled by the national food administration and the National Canners' association shows that more than 15,000,000 cases of tomatoes were packed last year—360,000,000 cans.

Maryland led, with a pack of 5,993,239 cases, enough to supply every person in the United States and France with a can. California came second, with 2,603,019 cases. Delaware was third, with 1,380,805, and the two Virginias fourth, with 1,170,504.

It is interesting to note that from the Andes mountains in South America the world received the two vegetables, hitherto unknown to Europe and Asia, that now surpass in popularity all others—the potato and the tomato.

In canned fruits the peach easily leads, with a total pack last year of nearly 4,000,000 cases. The pineapple was second choice and the apple third.

The complete statistics of vegetables and fruits as published by the national food administration, follow:

**Vegetable Pack for 1917.**

| Commodity. | Cases. | Can size No. |
|---|---|---|
| Hominy | 504,873 | 3 |
| Succotash | 134,002 | 2 |
| Spaghetti | 60,786 | 3 |
| Tomato pulp | 1,023,474 | 10 |
| Beans, green or wax | 1,892,407 | 2 |
| Red kidney | 413,135 | 2 |
| Lima, green dried | 450,807 | 2 |
| Pork and beans | 1,729,721 | 2 |
| Kraut | 1,379,169 | 3 |
| Cabbage | 113,963 | 3 |
| Spinach | 332,705 | 3 |
| Asparagus | 1,648,706 | 2 |
| Sweet potatoes | 238,250 | 3 |
| Beets | 739,565 | 3 |
| Pumpkin and squash | 1,065,483 | 3 |
| Other vegetables | 1,664,661 | 3 |

**Fruit Pack for 1917.**

| Commodity. | Cases. | Can size No. |
|---|---|---|
| Apples | 1,280,637 | 3 |
| Apricots | 925,034 | 3 |
| Cherries | 591,991 | 2 |
| Grapes | 43,106 | 3 |
| Peaches | 3,861,969 | 3 |
| Pears | 717,918 | 3 |
| Pineapple | 2,652,315 | 3 |
| Berries | 781,420 | 2 |
| Plums and prunes | 423,242 | 2 |
| Other fruits | 8,017 | 2 |

### Whale Packing House.

A company at Moss Landing, Cal., has established a packing house for whale meat and will soon supply consumers on the Pacific coast. The whales are caught with trollers and harpoon guns. The flesh is sold in steaks and roasts, free from bone and gristle, at 8 to 10 cents a pound, and resembles good beef in flavor, texture and appearance.

### Sell Linseed Cake.

Fifty thousand tons of linseed cake originally consigned to Holland will be sold at request of the consignees for consumption in New York, Pennsylvania and New England, according to an announcement authorized by the United States food administration. This amount of linseed cake, it is hoped, will supply a large portion of the concentrated feed needed this winter and spring in those states.

### U. S. Export of Gold.

Since the United States entered the war net exports of gold have been $78,000,000, or at a weekly rate of $2,168,000. Recently the outward movement has been curtailed, however, to a weekly average of $856,000. Imports now come mainly from Merico, Canada and South America, while exports are to Chile and Mexico.

### Good Morning, Bonnie Lass.

Meet Bonnie Lass, daughter of Princess Louise, a blue ribbon winner for nine consecutive years in the show ring. Bonnie Lass is a 4-year-old Shorthorn, bred and owned by Alex. Morrison of Valley, Wash.

# Germany on Two City Lots

## *Had War Garden Long Before Present World Struggle*

**By Andrew E. Murneek.**

Germany is starving! There is enough to eat in Germany! Again and again you have heard these contradictory statements expounded through our press, while Germany goes on, a little hungry, no doubt, but still defying the world, still opposing a united front of democracies. How is Germany managing to feed her eighty some millions of people from a tillable area not bigger than that of an ordinary state of this country?

Please come with me to 305 Orchard street, Corvallis, Ore., and you may find a pretty good answer to this puzling question. Here lives W. Gruening and wife and his family of five robust children. They occupy a comfortable five-room house on a lot of 75x150. The adjoining lot, showing a very weather beaten sign, "this lot for sale," is also theirs. Little by little, they have been paying for this property. It is "clear" and theirs now. The father of the household is working as a night watchman at the local state institution. Though of German descent, he is as staunch and patriotic American as one could desire to be.

But here is what we want you to see. The Gruenings have had a "war garden" long long before the present world struggle. Due to necessity of feeding seven hungry mouths it came into existence many many years before the fatal shot of a thoughtless student at Sarajevo set the spark to a fuse that resulted in the present conflagration.

"I have not paid a cent for vegetables, flowers or fruits for a number of years," said Mr. Gruening, while a broad, congenial smile rippled over his browned cheeks. "I believe you, I believe anything you may say about this matter, for I have seen your garden," is all I could manage out to stop a further discussion.

To begin with, Mr. Gruening is an orchardist, a vegetable grower, a florist, a family father and a good citizen, all tightly wrapped and knit together.

On the very line of the rear end of his property stand two large trees—an apple and a prune tree. They were loaded with enough fruit to supply a little grocery for the whole winter season with enough dried apples and prunes, apple sauce and jams and jellies. But the Gruening family have a little grocery of their own in the basement under their house, where there are many shelves stacked with labeled jars. Let us, however, return to the garden. The still unsold lot has been turned into a peach and plum orchard. If my memory does not play tricks with me there are three varieties of peaches and four varieties of plums in bearing. In the rear of the house luxurious rows of raspberries, gooseberries and currants are to be found. The back fence is bending over on account of large bushes of blackberries finding support on it. Two Bartlett pears of shining and smooth growth find shelter at the side of the house. They are still small, but exhibit each a dozen or so of large pendulous fruit.

The spreading apple tree to the rear of the yard is sheltering a cozy corner for a couple of pigs, a score of rabbits, living in a skyscraper fashion, and a little kingdom of a dozen Leghorns. What waste there comes from the house or the garden goes to this animal husbandry department.

Then the vegetable growing business of the Gruenings is conducted on such an intensive scale as to be most terrifying to the ordinary city dweller. All the "57 varieties" have been corraled and domesticated on the two lots. There are long rows of potatoes and beans under the peaches. These again are intercropped with such faster growing vegetables like lettuce, radishes, etc. Then there is sweet corn grown in New England fashion, with pumpkin carpeting the ground below. Indeed, you could not find as much ground as to put your palm on that does not support some sort of useful vegetation. Here you see little rows of carrots, onions, peas, beets; there cabbages, kohlrabi, cucumbers, tomatoes. But nowhere you could find a weed that had dared to show more than its head above the little trenches.

German efficiency in rotation of crops, manuring, watering, but above all in preserving and storing the crops is exhibited on every hand.

The Gruenings' basement is a regular byproducts plant and a storehouse for vegetables and fruits of every description. I have sampled in their house the finest of cider from their mill in the basement. I have tested their salads with vinegar of their own production—in fact, I have eaten whole square meals consisting of products from their own land, save pepper and salt.

One would be gravely mistaken thinking that it is all a "kitchen affairs." The head of this little Germany on two city lots is a great lover of flowers, so much so that all his landscape gardening effect around the house is distorted, due to the large number of varieties of ornamental plants grown. I counted no less than 40 varieties of flowers around the premises. How well the old man knows the name, characteristics, peculiarities in habit of growth, season and market value of his flowers was a great surprise to me. Still, in spite of all this profusion of cultivated plants, room has been found for a clean, well-kept lawn to face the street.

There is no question but that this family has been driven to this mode of exploiting a few square rods of land by mere necessity. But ever since my visits to Mr. Gruening and his remarkable garden, I have been keenly reminded of what one man alone can do in order to produce and save food. Now supposing every family in Germany adheres to such rules at present; supposing even half of Germany accepts such a regime of living, any, even ten millions or even five million families live like the Gruenings, what then? It makes me feel a peculiar warm itching, under my cap every time I think of this and then of the end of the war.

### Outbid Each Other.

One of the greatest difficulties met yet in trying to solve the labor problem on the farms is the tendency of farmers to bid against each other in the matter of wages. In many districts they are now agreeing upon fixed wage scales with a view to eliminating this competition. It appears that a definite and unbending wage scale is an absolute necessity for contentment among laborers.

### Everybody Should Save.

The federal government is asking at least 30,000,000 people to take an active part in saving through the thrift stamp and war savings stamp campaign. The need of this is clear when it is remembered that the cost of conducting the war is already about $24,000,000 a day for this country alone.

### Ahead of Times.

One of the draft questions is, in effect, "State all the occupations you have followed in the last 10 years, and how many years you followed each." A Fort Scott (Kan.) young man replied with so many occupations with such long periods at each that his terms of service added up to 38 years. The young man is 23 years old.

### New York Women Naturalized.

The naturalization of about 43,000 women of voting age who belong to the socialist party will be one of the first results of the suffrage victory in New York.

# Must Provide Farm Labor

## *Many Express Fear That Houston Is Mistaken*

We hope that time will justify Secretary Houston's assertion before the house committee on agriculture, that there is no need for fear over a danger of a shortage of any food commodity. We are at a loss, however, to understand the basis for his optimistic view of things. Farmers in all parts of the United States are frankly concerned, and Governor Whitman of New York has sent telegrams to the various draft boards in that state urging conservation of farm labor.

"I am alarmed," said the governor, "at the tendency of some district boards to classify in class 1 such a large percentage of farm laborers as 'unskilled.' Unless men are left on farms, the grain and food shortage will continue and famine may result."

There is reason to fear that the conditions found to exist in New York state are more or less general throughout the country. The New York board of trade and transportation recently sent out questionnaires to a large number of organizations representing farmers in all sections of the Union. It has received 100 replies, and says its inquiry shows "the present actual distress of American farmers—our farms denuded of labor," and it adds:

**"This means short crops—soaring food prices. The situation requires immediate concrete relief measures."**

The statement of the board summarizing the facts gleaned by it is:

**"The labor organizations insist there is no cause for complaint, while our information—from the farmers themselves—is gravely to the contrary. The actual present prospect is that acreage planted this year must be greatly reduced, with consequent short crops, meaning still higher food prices than have already afflicted consumers."**

The patriotic spirit runs through the scores of letters received, and while pointing out almost universally that the war's draft has taken the younger farmers away, the writers left at home are devoted in their expressions of readiness to make all necessary personal sacrifices—but are confronted by the physical impossibility of planting and reaping on the sufficient scale that the ordinary quota of help assures.

**Some of the Reports.**

John A. Roberts, agricultural commissioner of Maine, wrote to the board: "There is a great shortage of farm labor, and well-informed opinion is that acreage will be one-fourth to one-third smaller than last year."

Fred W. Davis, Texas agricultural commissioner, wrote: "We need more labor in Texas this year than ever before, but the supply is not up to normal nor anything like it." And out at another geographical extreme, T. M. Williams, master of the North Dakota State grange, said: "Labor shortage conditions exist here to an alarming degree. Our farmers are not only discouraged, but are absolutely prohibited from putting in normal crops on account of the absence of farm labor. Our people are just as loyal as you will find anywhere and are anxious to do their bit in furthering the cause of world democracy, but it is impossible to do what we could do if only cultivating help were available."

Elbert S. Brigham, Vermont commissioner, wrote: "The limiting factor in farm production this year is labor shortage, meaning a serious cut, which we can not afford in the country's crisis." Leslie R. Smith, master of the Massachusetts State grange, said: "The agricultural people of New England are going to do their utmost, but the amount of food they produce will be measured exactly by the amount of labor they have to do with. Reports from all over the country show to an alarming degree crops of last year unharvested, and I have noticed in a trip from New York to Washington all along the road acres and acres of corn shocked and unshocked, but yet to be taken care of. West Virginia people reported to me areas of corn and potatoes unharvested, and cotton planters told the same story."

From New Jersey, Wilmer Collins of Merchantville, treasurer of the state grange, wrote: "I have a farm of 276 acres that last year produced over $22,000 in gross sales, but I can not do it again without help." Alva Agee, secretary of the New Jersey department of agriculture, said: "The labor shortage is believed by farmers to be so great that the planting of even usual acreage will be very hazardous."

William T. Creasy, of the Pennsylvania grange: "Reports from all sections show shortage of labor." Robert W. Meyer, Pennsylvania agricultural department: "There is a tremendous shortage of skilled farm labor." F. P. Willits, president of the Interstate Milk Producers' association, Ward, Pa.: "Labor shortage will affect the whole agricultural situation." John A. McSparran, master of the Pennsylvania grange: "Agricultural conditions present the most serious situation we have to face in this country today. The farm exodus has been continuous. There are not enough farmers on the farms today to grow the crop we have to have. I have just been in a conference of all the farm organizations of the country in Washington, and they all say the same thing."

Leslie Gilbert, Alabama agricultural department: "We are wofully handicapped by lack of labor." William A. McRae, Florida agricultural commissioner, pointed out that the exodus of negroes, attracted by northern industrial wages, is chiefly responsible for bad southern conditions, and W. A. Dobson, of that state's farm extension department, hopes the government will bring Porto Ricans to Florida for relief.

From Ohio L. J. Taber, master of the state grange, wrote: "The situation is more acute than you can make the public believe."

The Indiana situation is indicated by Charles F. Kennedy, secretary of the Indiana state board of agriculture, who wrote: "During the seeding time of 1917 farmers did not sow the normal acreage because labor was so scarce. This difficulty has increased since last fall. There is less trouble, possibly, in getting the crop planted and cultivated than there will be in getting it harvested, and farmers will have this in mind when attempting to plant for 1918."

A. F. Pickard, master of the state grange of Illinois, wrote to the board of trade and transportation: "During 1917 there were more idle acres in this section of the country than ever known before, and I am afraid it will be worse this year." This terse presentation was supplemented by the following from Chicago by Edward F. Keefer, secretary of the National Live Stock Shippers' league: "There has hardly been a meeting of any agricultural or live stock organization of any importance in the last six months that has not either passed resolutions or sent memorials to President Wilson or Food Administrator Hoover in regard to the farm labor situation."

## Red Cross in Serbia.

A great constructive work of the American Red Cross, to make 40,000 Serbians in the neighborhood of Monastir self-supporting, and at the same time to reduce shipping of food by making the country productive, is the object of an appropriation of $244,438 by the Red Cross war council. The money is to be used for the reclamation of 21,000 acres of land in that region. This acreage is to be cultivated with modern machinery, under the direction of American farm experts.

Monastir is in the extreme south of Serbia, on the Grecian border; 40,000 villages in that region are now depending on charity. The enemy has stripped the country of all tools, machinery, foodstuffs, horses, and most of the oxen.

**Contribute Spy Glasses.**

The navy's appeal for "eyes" for the watch officers has brought more than 20,000 binoculars, spy glasses, telescopes, sextants and chronometers. Assistant Secretary Roosevelt states. One day's receipts amounted to 3000. However, more will be needed.

**No importer can sell as cheap as the breeder.**
**Eastern Oregon Jack Farm**
**B. F. SWAGGART, Prop., Lexington, Ore.**

# Feed No Hay at Morning or Noon

## *Veterinary Authority Urges Science for the Work Horse*

Do not feed the working horse any hay except at night.

This is the advice of Dr. S. B. Nelson, dean of the college of veterinary science of the State College of Washington, who is a member of a party of extension workers holding farmers' institutes throughout Spokane county under the leadership of County Agricultural Agent J. R. Shinn.

Dr. Nelson says he has found it common practice among farmers to feed their work horses during the working days about as follows:

Morning—First, grain; then hay, then water (after breakfast).

Noon—First water; then grain, then hay, then probably water as they start to the field.

Night—First, water; then grain, then hay.

This method he declares to be wasteful of feed and productive of less horse power than could be obtained by another system. Here is the system he recommends:

Morning—First, water, then grain. No hay.

Noon—First, water; then grain. No hay.

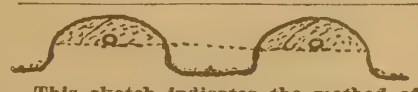
Night—First, water, then hay, then grain after supper, perhaps), then more hay.

During his lectures Dr. Nelson draws a picture of a horse's stomach, showing its shape, size and general character. He shows that the stomach of the ordinary 1200 or 1300 pound workhorse has a capacity of only from three and one-half to four and one-half gallons, and that the food goes into the stomach in layers and tends to remain that way during the digestive process. This is very unlike the case of other animals, and is the basis for Dr. Nelson's argument against the common method of feeding.

For instance, if grain is fed first it takes its position in the stomach nearest the outlet into the small intestines, and when the stomach is then filled with hay and water, part of this grain is forced or washed out before the digestive processes have taken place. Grain that reaches the large intestines before being digested is lost, says Dr. Nelson.

The doctor says that a horse in an hour will eat from four to six pounds of hay. If fed hay at night when he returns from the fields, he will eat this much by time to feed grain, and will then eat his grain more slowly. After eating the grain, he will probably stand or lie down and sleep for two or three hours. He will then arouse and eat hay for a while, go to sleep again for two or three hours, probably eat some more hay and be asleep when the farmer comes out in the morning. Thus the horse will not need a hay feed in the morning, but will be ready for grain and water only.

Dr. Nelson tells his audiences that a seemingly absurd fact is true of horse feeding: The lighter the horse and the faster the work being done, the greater proportion of grain will he consume, and the heavier the horse and the slower the work the greater the proportion of hay. That is, a horse doing light work wants more grain in proportion to the hay fed than if he were doing heavy work, and the horse doing heavy work wants more hay in proportion to the grain fed than if he were doing lighter work.



He says that experiments show another peculiar fact: The hay and grain rations should be reversed when feeding light and heavy horses. The light horse will require about one and one-quarter to one and one-half pounds of grain (the figures being for oats) for each 100 pounds of weight of the animal. The heavy horse will require about one to one and one-quarter pounds of grain to each 100 pounds of weight. The light horse will require about one to one and one-quarter pounds of hay to each 100 pounds of weight. The heavy horse will require about one to one and one-half pounds of hay to each 100 pounds of weight.

# Plants Potatoes on Top of the Ground

Here is a method of planting potatoes on irrigated land where the soil is heavy that W. J. Tapper of Richfield, Idaho, recommends. He says that he discovered it by accident, that some of his neighbors laughed at him first and then imitated him, and that he and they now produce first class crops in the accident way.

### The Method.

Plow the land in the fall. Plow it deep. Let it lie over winter unharrowed, rough so that all the rain and melting snow will be absorbed before running off. In the spring harrow it. If rough and uneven, level it by a floating process. Then drop a row of potatoes on top of the surface. Take an ordinary mouldboard plow and turn a furrow so that the outside edge of the upturned earth falls over the potatoes. Then go down the other side, turning a like furrow and covering the potatoes a little deeper. That finishes one row. Then drop another row of potatoes on the surface just far enough from the open furrow so that when you run your plow as close to the first furrow as possible it will cover the potatoes in the same manner that the first row was covered. Then plow down the other side, covering them a little deeper as was done in case of the first row.

**This sketch indicates the method of planting as practiced by Mr. Tapper. The dotted line indicates what was the surface of the ground. The sketch is a cross section of the ends of two rows of potatoes, with the irrigation ditch two furrows wide between them and the potatoes lying under the overturned earth on what was the surface of the ground.**

### The Result.

There you have it. The potatoes are on top of a fairly soft, yet fairly compact seed bed, and are covered by a loose mass of earth to whatever depth is desired.

**The two open furrows that are left between the rows serve as the irrigation ditch, which provides a sub-irrigation rather than a surface irrigation.**

Whatever harrowing is done after planting can be done in such way as to not uncover the potatoes nor fill the ditch too much with loose dirt.

Mr. Tapper said that he discovered this method several years ago on his irrigated farm near Richfield when he was in a hurry and had run out of selected seed. In order to hasten the patch he planted a few rows of cull potatoes on the surface after the manner described above. When digging time came he found the yield and the quality much better than that of his selected seed planted in the "good old-fashioned way." He says that it was not just luck that year, but that the new method has proved superior from season to season, not only on his own farm, but upon the farms of neighbors who irrigate. He emphasizes the point, however, that the method is not practicable except on heavy soils. On a light, sandy soil, he thinks it would not succeed.

**Don't Get Caught Like This!**

You'll need horse badly from now on. Why take risk or lay up because of lameness? Send for

**SAVE-THE-HORSE**

THE humane remedy for lame and blemished horses. It's sold with signed Contract-Bond to refund money if it fails to cure SPAVIN, Ringbone, Thoropin and ALL Shoulder, Knee, Ankle, Hoof and Tendon Diseases, and while horse works.

**Imported Shire Stallion**

BLAIDSON STANDARD 8623.

Foaled, 1904, bay, white stripe in face, weight about 2000 lbs. Sound and in good condition. Have used him three years and 40 of his colts can be seen on my place. Is a sure foal getter, but I need to change.

JAMES H. SCOTT, Howard, Crook Co., Ore.

**For Sale----Pureblood Clydesdale Stallion**

Won **first premium** at Ore. State Fair, 1917; will be **3 yrs. old** June 1, 1918. Bright bay, well marked, splendid disposition and well broke. Sired by Massasoit, also a **pure blood Clydesdale stallion, 9 mos. old.** Took second premium at 1917 Ore. State Fair. Color black, well marked. Sired by The Preacher.

BOTH STALLIONS PRICED TO SELL.

**Wm. H. Egan and Sons, Gervais, Ore.**

Route 2. Phone Salem 3F11

**Richly Bred Clydesdales**

**AT BARGAIN PRICES**

**Dunure Edward 15420,** one of the best bred, imported Clydesdales in America, going back through both sire and dam to Baron's Pride, sire of Baron O'Buchlyvie, that sold at auction for $47,500, and four times to Prince of Wales, sire of Baron's Pride.

**DANMORE 19547, foaled** August, 1915, and BEAU 19837 and RASTUS 19838, both foaled in July, 1916, all sons of Dunure Edward.

These high class Clydesdales are all offered at bargain prices.

N. K. WEST, La Grande, Oregon.

**Clydesdale Stallion Bargain**

**LYDE STAMP 11636**

Foaled May, 1904, weight about 1800; splendid conformation, with plenty of bone, good back, strong loin, typical Clydesdale head and good disposition. He stood second at the Oregon State Fair last fall, in a class of four. He is a proven breeder of high class colts and will be sold under guarantee.

Because I do not need him, will sell at a strictly bargain price. For any further particulars address owner.

A. T. JONES, McMinnville, Ore.

I also have another younger high class Clydesdale stallion and will sell either one at a bargain price.

**FAIRVIEW STOCK FARM**

**Shire and Clydesdale Horses**

CHIEF BENDER, grand champion Oregon State fair 1916, as yearling; is now coming 3 and it is safe to say he is the greatest individual Clyde in the northwest.

One horse-colt, coming yearling, very typy and well grown.

Write for prices and full pedigrees.

A few choice Shropshire Ewe Lambs now for sale.

W. R. LEDBETTER, Alicel, Ore.

**Hillside Stock Farm**

Breeder of

**Clydesdale Horses Holstein Cattle**

Ten head high class registered ewes now for sale.

RAY NORVALL. Summerville, Ore.

**CLYDESDALE HORSES**

Two bred fillies, coming 4, and one stallion, coming 3, all sired by imported Hiawatha's Pride, son of the Champion Hiawatha and out of a mare by the breed's greatest sire, Baron's Pride. The fillies out of imported mares. Attractive prices.

John Farmer. Route 1, McMinnville, Ore.

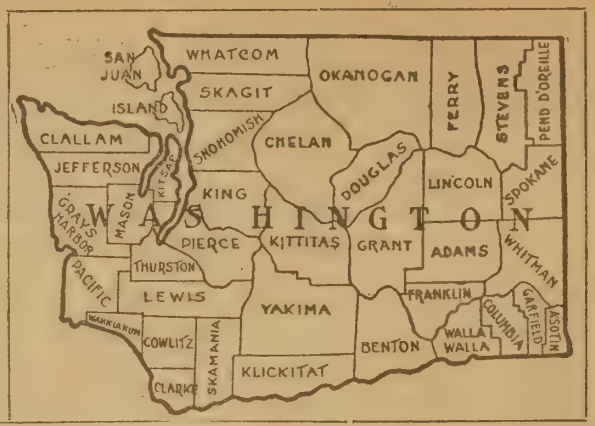
JOHN PAINTER, SALEM, OREGON.

**Clydesdale Headquarters**

For sale—STALLIONS and MARES, from yearlings up; sired by great horse MASSASOIT, 13530; grandson of BARON'S PRIDE, 9122, which sold in Scotland for $47,500, making them the BEST BRED HORSES in OREGON. The number of prizes won have been equaled by no firm in this country for the last ten years. WRITE FOR WHAT YOU WANT.

**CLYDESDALE HORSES**

The Grand Champion Stallion Decoration at head of the stud, Lady Jane, Grand Champion at Lewis & Clark and other stock shows, chief foundation mare. Blood of the great sire Baron's Pride, strong in the herd.



Breeding stock for sale.

# Should Ship Hogs Cooperatively

## Farmers Get Less for Hogs Than if They Raised More of Them and Shipped Them Out Cooperatively, Thinks County Agent

EPHRATA, Grant County, Wash., Feb. 21.—Grant county is almost specifically a wheat producing county. The rainfall is so limited that in many cases it harly pays the farmer to grow his own potatoes as many times he will not get his seed returned. However, most of the farmers pick out an especially good place and plant some garden that will mature early, as lettuce, radishes, and peas. This gives them some early garden truck which they can use in the house. The potatoes are also grown in the draws or where there has been an excessive amount of moisture. Owing to the continued dry weather many years it has been rather discouraging for the growing of potatoes and in some of the dryer sections of the county many of the farmers do not attempt to grow even their own potatoes. In some of the better sections of the county, however, they grow all kinds of garden truck, which are used for home consumption. There is very little shipped out of the county except in the irrigated parts or where people have water that they can irrigate some with during the hot weather; so, as a matter of fact, very little of the produce grown in this county finds an outside market excepting in irrigated districts. Many farmers are somewhat discouraged on the price and cost of producing pork. The farmers have only a small number of hogs and are not in this business to any great extent, as most farmers find that they have to take from one to two cents per pound less than they should for their pork. This is because there are so few hogs raised. If a few more were raised, they should ship cooperatively and get a very good price for them. Some of the best farmers find they are able to make money on hogs at the present prices, at 15 to 16 cents per pound. H. W. REAUGH.

### Conditions Are Favorable.

ALPHA, Lane County, Ore., Feb. 27.—The principal products for the market in this locality are cream and beef. For cream, or rather butter fat we receive now 54 cents per pound. The beef market is not so good, no sales having been made in this immediate vicinity for some time, but prices range around 4 cents on foot. There is not much produce sold to local dealers, nearly everything being shipped to Eugene or Portland. The cost of producing 100 pounds of pork from the by-products of the dairy farm is hard to estimate, depending on how much other feed is put in the hog. Feed seems to be starting early as spring approaches, and conditions look favorable for good crops.
L. H. BROOKS.

### Gouged on Machinery.

FAIRFIELD, Spokane County, Wash., Feb. 21.—This community is very largely a one-grain crop farming section so the local markets do not effect the farmers to any great extent. The main things they sell the price is fixed by the government so the local merchants simply act as weighers and get very little rakeoff from what they take in. However, when the farmer buys farm machinery then he is gouged properly. The local men say they don't make the prices, but it is very evident some one is getting a very good profit at the farmers' expense. No more hogs are produced on the average farm here than can be raised on the waste of the farm. My own hogs will not cost me, on actual money value of feed, $5 per hundred pounds, but if I had to buy feed at the prevailing prices, the cost would be at best three times that price. My stock hogs are wintering on cracked peas, wild oats and whatever they can find. They are fat and thrifty, and doing very well. We are hoping for an early spring, but can't predict crop conditions until warmer weather comes. ROY G. ADAMS.

## Agricultural Council

By MRS. WINNIFRED BUCKINGHAM.

On February 19 representative farmers from all over Pacific county met in South Bend with the county agriculturist, George A. Nelson, and organized an agricultural council. E. L. Swartz was elected president; Eli Rockey and E. W. Lilly, vice presidents; J. E. Buckingham, secretary and treasurer. An executive committee composed of leading men in their respective communities will hold councils there. The object will be to promote animal industry, cranberry culture, home economics, club work among the boys and girls, forage and potato crops, marketing and organization.

The following organizations were represented: Lebarn grange by Frank Griffin; Bay Center grange, Eli Rockey; Nasel grange, A. L. Mosher and W. W. Moffitt; Willapa Federal Farm Loan association, E. W. Lilly and Emil Scholtz; Mendo grange, E. L. Swartz and Victor Monohon; unorganized farmers were represented by W. S. Corruthers and J. E. Buckingham.

### Sell Wheat and Buy Flour, Bran and Shorts

To the Editor of The Washington Farmer: I am writing you today in the interest of the many farmers living in the Inland Empire, where they raise millions of bushels of wheat, and where not over 5 per cent can take their wheat to the mill and have it exchanged for flour, bran and shorts, but they have to sell their wheat and buy flour, bran and shorts from the feed or grocery store, thereby paying two profits on their wheat, after it has left their hands. I have often wondered if those things will be corrected when the nonpartizan league comes into power? A. M. NEWSOM.
R. D. No. 2, Spokane, Wash.

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

**Spreader Profit for You**

THIS year—if you own no spreader, you are not only losing out on the bigger yields and profits that should be yours, but you are contributing to a billion-dollar manure waste, and stopping your ears to the world-call for food.

We have facts and figures to show that in scores of cases the use of an International Harvester spreader has added to crops more than enough to pay for a spreader in one year.

When you know the situation, you will probably decide to buy a wide-spread **Low Cloverleaf, Corn King,** or **20th Century Manure Spreader.** These machines break the manure up into very fine bits and spread it evenly. They spread beyond the tracks of the rear wheels. The width of the spread is adjustable. Manure goes further and does the soil more good when spread with a **Low Cloverleaf, Corn King,** or **20th Century** machine.

Sold in all the best-liked sizes—disk wide-spread is regular, spiral wide-spread on special order. Buy a **Low Cloverleaf, Corn King,** or **20th Century.** If you will drop us a line, we will send you full information and tell you where you can see these machines.

**GURNEY'S BUGLESS POTATOES**

For the last four years thousands of successful farmers have been getting wonderful results from my Bugless Potatoes. These potatoes are practically free from bugs and I have letters from thousands of farmers, as well as the International Harvester Co., claiming that bugs will not eat the vines. The potatoes themselves yield up to 300 bushels per acre and are firm and solid clear through, although they are exceptionally large in size. Try some for yourself this year and be convinced. Prices 15 lbs., $1.50; 60 lbs., $3.50; 300 lbs. $15.

## Tractor Farming

Changes are taking place in the business of farming these days the world over. What was considered good enough a few years ago is obsolete now. The expression that we are living in a "motor age" has gone trite from overuse; yet it is nevertheless true.

First came the automobile—at first a plaything for the idle rich—next a luxury for the moderately well-to-do; now a universally accepted necessity which more than pays its way. Hauling and transportation look nowadays to the motor truck. And almost coincident with the advent of more speedy hauling by motor power came the tractor to cut down the time and the cost of plowing, harrowing, seeding, reaping, threshing and doing other jobs about the farm.

The question is still asked by some: "Is the farm tractor thoroughly practical and a sound, dividend-paying investment?" Broadly speaking, the answer is affirmative. The surest way to measure the practical utility of the tractor is to find out what encouragement tractor manufacturers are being given by tractor users. The very fact that thousands of tractors are now in use on farms throughout our own country and in other countries and that manufacturers of most types of tractors are finding it next to impossible to supply the present demand is proof that the tractor, generally speaking, has "made good."

This does not mean that every individual make of tractor is good, nor that the purchase of a tractor should be made without carefully weighing all the conditions that obtain on your own farm and apply to your methods of farming. Where conditions are favorable to the profitable use of a tractor—where it can cut down crop production costs by doing farm work at a material saving over the cost of doing the work with horses—then it is advisable to adopt power farming. So it is in every instance an individual problem.

Here is one farmer's experience:

A. J. Cole of Creston, Wash., uses a 20-35 tractor on his farm of 600 acres. He used his tractor during the unusually dry season of 1917 for plowing, harrowing, seeding, etc. He uses distillate for fuel and his machine pulls six plows. His tractor has taken the place of from 12 to 16 head of horses and with it he plows from 10 to 15 acres a day. "My tractor means a reduction of at least one-half of the hired help I would require if farming with horses," Mr. Cole goes on to say, "and in addition to harrowing and seeding at the same time with one man I can also run a threshing machine, haul grain to market, etc. With my tractor one man can put in 320 acres of fall wheat in eight days." In common with many tractor owners, Mr. Cole believes that the tractor buyer should be able to operate his own machine and he adds that "with a little practice they are easy to operate."

### Send Smileage Coupons.

The several hundred employes of Wilson & Co. of Chicago, who are serving their country in the United States army were remembered this week by the company, which sent each man a book of smileage coupons. As soon as the first book is used up another will go forward to the boys. These men are under military training in various cantonments in this country, and if any of them have been sent overseas their smileage will follow them. "The boys write us that they are enjoying army life," said Thomas E. Wilson, "and not one of them has even hinted in his letters to our soldiers' aid association that he would like to have the coupons. But we don't want any of them to feel that he is missing any of the fun he might be having if he were at home, so the smileage coupons have been sent to all of them."

### Tractors for Cultivation of Rice.

The French government of Cochin China has become interested in the employment of caterpillar tractors for the cultivation of rice. On September 29, 1917, a 45-horsepower track machine valued at more than $5000 United States currency, was purchased telegraphically. If the experiment is successful, larger orders will follow. Everything depends upon whether the tractor can operate in the soft rice-paddy fields of Cochin China.

### Letters.

It is estimated that about two-thirds of all the letters carried by the postal service of the world are written, sent to and read by English-speaking people.

*The Spirit of 1918*

# We must fill that basket!

**The farmer's duty is as important as the soldier's—one cannot win without the other. The cry of today is "Food and more food" with Europe devastated and every available man taken from the fields and factories to fight for his country in the trenches—what is the answer? The answer MUST be Plant—Plant—PLANT!**

A. B. NYSTROM, Editorial Contributor

# Not a "Boarder"

## Rather "Deadbeat" or Parasite"

"Three hundred pounds of butterfat must be produced by an individual cow if she is to show a profit," said A. B. Nystrom at a farmers' institute meeting in Clarke county, Wash. He was leading a discussion as to the possibility of staying in the dairy business during a time like the present when feed prices threaten to paralyze the industry.

"We've got to look this thing right square in the face," he continued. "If I own a herd I am going to charge every member of it with everything she needs at full market price, whether I raised her feed or bought it at retail. If a cow can't make good on a system of this kind I am going to take her to the butcher.

"Too many dairymen have kept cows thinking they were all right, when as a matter of fact, they were poor producers. They have hung on to them believing them to be profitable because other farm products have paid. They knew they had a little money coming, but often failed to ascertain definitely just where the money came from..

"Now is a good time to go slow. Let's be content this year and possibly next with small margins, but let us start to build up our herds in such a manner that five years from now we will be realizing what we ought to from this business.

"Some complain of the long hours necessary in the dairy business. What of it? If we have good cows and are making money and being paid for our overtime, we're willing to put forth a little extra effort, aren't we? No one, I think, will object even to getting up at 12 o'clock at night to milk a bunch of cows if he is going to get a couple of hundred pounds more milk thereby.

"The word 'boarder' is too good for a scrub cow. The average boarder pays for his board or is denied admission to the dining room. The scrub cow often pays nothing but keeps right on eating her head off. This kind of an animal should be called a 'deadbeat' or a 'parasite' and treated accordingly.

"The bull is more than half the herd. No sane dairyman will put a grade bull at the head of his herd." R. W. F.

# MakesGoodButterNow

To the Editor: In The Farmer of January 17 S. M. P. of Rathdrum, Idaho, writes in regard to his having trouble making good butter in the winter time. As for two winters we had some of the same kind of experience of which he writes I thought I would tell you how we overcame the trouble.

We first had bad tasting, bad smelling butter when the weather got quite cold, and frequently the cream would foam in the churn and take long to churn. The room in which we set the milk had no means of being heated, so, although the cream or milk did not freeze, it became very cold. Then I tried keeping the milk in the pantry, where it was not so cold, and the quality improved very much. We then got a separator, and in cold weather kept the cream in the kitchen after it was cooled, never at any time letting the temperature get below 55 degrees F., and when souring it raising the temperature to 60 to 63 degrees. We had no more bad cream or butter except once or twice when I forgot and left the cream sitting in the window overnight and it got too cold. On very cold nights I wrap a blanket around the can, always keeping a thin cloth over the top after cream is cooled. We get nearly creamery price for the butter, and our customers say it is far superior to creamery butter.

I consider our trouble several years ago was due to the fact that the good souring bacteria are retarded in their development when much below 60 degrees, and that there are other bad bacteria which thrive at that low temperature in milk, thereby enabling the bad ones to get ahead of the good ones and to keep ahead when the cream is warmed. On the other hand, when the cream is kept near 60 degrees or above the souring bacteria work rapidly and kill or retard the bad ones.

I may be wrong in my theory, but our experience seems to bear it out. The experiment would be easy for S. M. P. of Idaho to try, and in case it does not help he could feel more certain the trouble is with the cows.

MRS CARRIE PETERSON.
Montborne, Wash.

# New University of Idaho Dairy Record

The Holstein cow, Idaho Violet Posch Ormsby, No. 337275, out of Hazelwood Posch Ormsby, No. 64222, and Cascade Violet Cornecopia, No. 108317, has established a new seven-days record for the University of Idaho in the production of milk and butter fat. As a 6-year-old this cow produced 593 pounds of milk and 22.05 pounds of butter fat, or 27.56 pounds of butter. This cow freshened Nov. 8 and her milk production for the month of December was 2432 pounds and for January 2162 pounds, and at present she continues to add from 75 to 78 pounds a day to her total for the period. It is to be regretted that it was not possible to run this cow on a semi-official test at this time.

The ration fed during the test period consisted of corn silage, alfalfa hay, cut beets and a grain mixture composed of ground barley, bran, ground oats and oil meal.

The best previous record at the university was made by Alaska Yukon Colantha, No. 126465, who as a 6-year-old produced 564.4 pounds of milk and 19.37 pounds of butter fat in seven consecutive days.

## Produces 2480 Pounds of Milk.

The report of the first Central Oregon Cow Testing association just received by County Agent Ward shows that for the second time a central Oregon cow heads the list of highest butterfat producers in the state and perhaps in the northwest. The report of Ray K. Potter, official tester, shows that the registered Holstein, Pearl, owned by Henry McCall of Prineville, during the period of 30 days ended January 16 produced 2480 pounds of milk, which yielded 96.7 pounds of butterfat.

## High Producing Cows.

The following members of the Skagit Valley (Wash.) Cow Testing association have cows that produced more than 60 pounds of butterfat during the month of January: W. W. Acheson, whose Holstein produced 62 pounds of butterfat; J. A. Folsom, whose grade Holstein produced 69.1 pounds of butterfat; F. J. Gallacher, whose grade Holstein produced 62.7 pounds of butterfat.

According to the report of R. L. Lauderdale and R. W. Ropes, official testers, there were 752 cows tested during the month. Seventy-one cows produced between 40 and 50 pounds of butterfat, and 15 cows averaged between 50 and 60 pounds. The average pounds of milk per cow was 644 pounds, the average pounds of butterfat, 26.1, and the average cost of feed per cow, $10.85.

The highest average milk herd, owned by J. A. Folsom, produced 1076 pounds of milk and 39.3 pounds of butterfat. There are 22 cows in the herd. The highest average butterfat herd was owned by F. J. Gallacher, 41.2 pounds of butterfat and 965 pounds of milk. There were 11 cows in his herd.

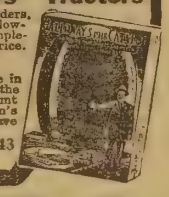
# A Well-Bred Young Jersey

"Peggy" is not a prize-winning, blue-ribbon animal, but she is a well-bred American Jersey, 3 years old, the property of Mrs. Chris Cohrs, Prineville, Ore. This young animal is an exceptionally good butter animal, and is just the kind of well-bred animal that is supplying many a family in this region with cream and butter, without the owners spending too much time looking into "bossy's" family tree. Mrs. Cohrs sells a quart of Peggy's milk each day to a lady. This lady, being economical, each day took the cream off this quart of milk and placed it in a jar for a week. This cream was then churned in a little jar into butter, and for that length of time yielded three-fourths of a pound. In this instance Peggy proves her butterfat value by returning to the lady patron who bought the milk almost the price of the milk in actual butter, besides leaving her the fairly rich skimmed milk for family use.

**Birds of Nebraska.**



Although 400 different species of birds have their home in Nebraska, it is said that no more than 200 are to be found in any one locality.

Do this first. Don't think of investing in a separator until you learn what a big separator value you can get direct from Galloway.
Sanitary Separator New 1918 Models
It's the sensation of all separators. Sensational in construction, clean skimming, sanitation, easy cleaning and durability. The features of the Galloway Sanitary Separator combine the new and best advantages of all high grade separators. Buy a Galloway and you get the best of all embodied in one perfect machine. Four big sizes at four low prices. Every size guaranteed to skim to rated capacity. Sold on 180 milking test in your own dairy before you decide to keep it.
Engines—Spreaders—Tractors
Galloway also makes Engines, Spreaders, Tractors and sells them direct, too, at lowest factory prices. Don't order any implement until you get Galloway's factory price.

# Profit in Corn

## Grows It on Wheat Stubble

**By Horace Addis.**

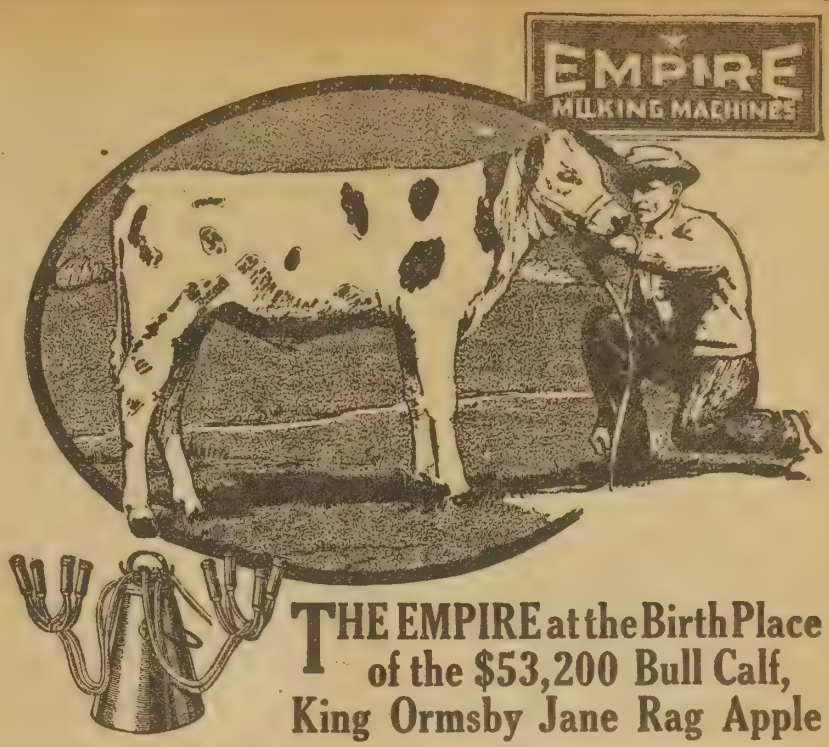
The profit in growing corn on wheat stubble is shown in a striking manner by the experience of Charles Playle of La Grande, Ore. Mr. Playle is one of the big farmers of the Grande Ronde valley. He farms 1480 acres, and his 1917 wheat crop averaged 46 bushels per acre. All his farming operations are exclusively with horses, as he considers them cheaper and more satisfactory than gas-propelled machinery, hence he has a good many horses to feed.

Last year 50 acres of Mr. Playle's summer fallow was planted to corn. Being a believer in both conserving moisture and killing weeds on summer fallow, Mr. Playle cultivates it nine times. His corn he cultivates three times, so even when planting is considered, the amount of work does not favor the summer fallow. The corn was cut with a binder and the amount is indicated by the stock it fed. Mr. Playle commenced feeding the corn December 26. He has ever since been feeding 60 horses and 75 head of cattle on corn fodder and wheat straw. The cattle are in good condition and the horses fat and ready to go to work. Mr. Playle estimates that the amount of hay necessary to keep the stock in the same condition would be 100 tons. As hay was $20 a ton most of the winter, it will be seen that a corn crop that took very little more work than would have been done anyway, was a paying investment. And the story is not all told yet. Thirty-four head of hogs followed the cattle, had no other feed, and while I did not see them, I was assured that they were fat enough for the butcher when I was in La Grande, the middle of February.

Mr. Playle keeps some brood mares and raises his own work horses.

## Urges Keeping of Records.

To the Editor of The Washington Farmer: In these trying times when every loyal citizen of the United States is studying how he can do the most to help his country win the war in the quickest way possible there will be a great temptation to drop the keeping of the record of each dairy cow. This should not be, as I have proved that it is the only way to tell a good cow from a poor one and enables one to sort out the poor cows, keeping the best.



I know there are many who think it does not pay for the bother, and to such I suggest that they try weighing the milk one day in seven. While this is not the best way it will give a comparatively correct record, and by counting up the account at the end of each month, and multiply by seven, you can determine the average amount each cow gives. This takes but little time and yet enables one to find the amount of butterfat contained in the milk.

A. D. ESTABROOK.

Pateros, Wash.

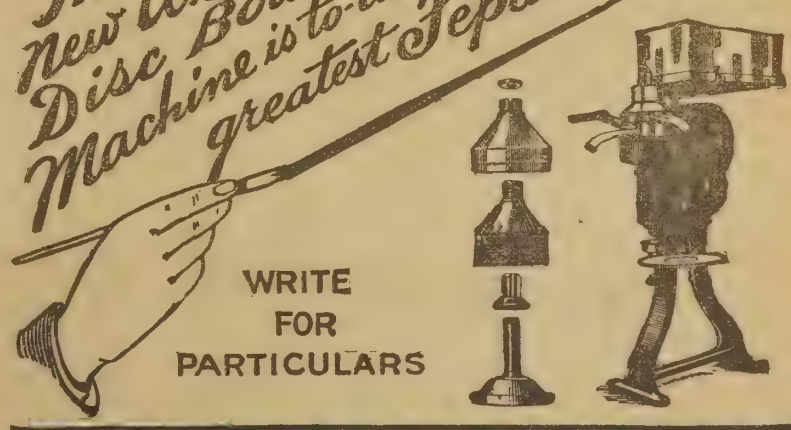
## No Fixed Wool Price.

The federal government will not fix the price of wool, according to information received from S. W. McClure, secretary of the National Woolgrowers' association, who has been in Washington. A number of reports had reached the woolmen of the west to the effect that the government, in all probability, would undertake to establish a price for the wool clip of 1918, and Secretary McClure went to Washington to investigate.

THE EMPIRE at the Birth Place of the $53,200 Bull Calf, King Ormsby Jane Rag Apple

Milk producers throughout America have watched the records made by Oliver Cabana Jr.'s herd of Holsteins at Pine Grove Farms—a herd famous for the bull-calf which brought the record price at Worcester; for the great herd bull, Rag Apple Korndyke 8th; for Segis Fayne Johanna, the champion milk cow, with her record of 50.68 lbs. of butter in 7 days. Many of you, too, know how carefully Charley Cole conditioned the latter for her test.

It is time for the *world* to know that this high-bred herd is milked with the Empire Milker. Here is a test of responsibility. Empire Milkers get the milk; they keep up the flow for the *full period of lactation* and usually they *increase the yield.* They milk more *gently* and *uniformly* than even the calf—or the most reliable of hand milkers.



Scores of prize milk herds of *all breeds* are today milked by the Empire. It is so simple that at many of these dairies a 10-year-old boy or girl with an Empire Outfit is doing *all* the milking, putting an end to the labor problem.

Every owner of eight or more milk cows will save wages by installing Empire Milkers—and usually he will increase the size of his milk check. Get in touch with the Empire dealer at once so that he can supply you.

# Colic Treatment

## Always Have Raw Oil on the Farm

When your horse shows signs of colic stop feeding him at once. Drench him with a quart of raw linseed oil into which from one to one and one-half ounces of turpentine has been mixed. If he wants water let him have it, all he wants, except do not let him gorge himself at one drinking.

This is the advice of Dr. S. B. Nelson, dean of the college of veterinary science of the state college of Washington.

Among the things that every farmer and stockman should have on hand at all times are raw linseed oil and turpentine, he says. The former is one of the best purges known, and is in no way harmful whether it serves the purpose for which it is wanted or not. In case of a colicky horse, if the animal's stomach is impacted, the oil will be utilized by him as a food and will be of benefit in that way.

**How to Drench.**

Dr. Nelson urges great care that none of the drenching liquid get into the lungs, as it may start an irritation resulting in pneumonia. Therefore it is extremely desirable that choking or strangling be avoided.

Strangling is often due to forcing the horse's head too high while drenching. It is often the case that the halter rope will be drawn up over a beam above the horse's head, and the more he struggles the higher his head is held. This tends to close the throat and make swallowing difficult if not impossible.

One man can drench a horse better than two, except that one can be of assistance in holding the bottle and other necessities. Dr. Nelson's method of drenching is about as follows:

Use a bridle with two reins and a large, straight bit. Pass the reins over a beam or through a ring somewhat higher than the horse's head. Hold the reins a few inches from the animal's nose, holding the ends and main reins in one hand. This allows the one administering the drench to watch carefully the animal's action and expression and judge the exact moment to release the hold to avoid strangling.

The drench should be given in a bottle and if the animal shows stubbornness or fear of swallowing a little tickling with the fingers just behind the front teeth will invariably cause him to move his tongue forward and swallow, says Dr. Nelson.

# Veterinary

Dr. S. B. Nelson

**Bacterial Infection**—I have an eight-months-old pig that is not doing well. About a month ago the hide all came off his back and the ends of his ears came off. It does not heal and there is matter under the scabs. He eats well, but does not grow.—E. M. R., Fernwood, Idaho.

The trouble with your pig is probably a bacterial infection. Try applying a one-half of one per cent solution of picric acid in water to the affected parts once daily.

**Too Laxative**—I have a cow fresh last October that gives three gallons of milk a day. She is fed first cutting clover hay and about 10 pounds of carrots once a day. She has plenty of clean well water and salt at hand, yet she seems entirely too laxative.—G. F. P., Twin Falls, Idaho.

Try giving your cow one tablespoonful of listerine in one quart of water morning and night for a few days.

**Lost Use of Hind Leg.**—I have a 10-weeks-old pig which was doing fine, when it began to choke while eating, would fall over, shake, squeal, recover and eat again. This went on for about two weeks when it commenced to lose the use of its hind quarters and now does not try to use them. A. M. S.

Hood River, Ore.

There may be one of two troubles affecting your pig, the first being internal parasites, and the second rheumatism. First, in either case, take the pig off feed for a day or such a matter Then give it from one to three tablespoonfuls of castor oil, depending on its size. I notice that you say it is a 10-weeks-old pig, and about two tablespoonfuls in a little feed may be all right. Then try giving it about three grains of santonin in its next feed. If it is worms, it will do very nicely on this treatment, I think. After a few days if you do not see results from this, begin giving the pig five grains of potassium iodin on its feed night and morning.

**Wants to Scratch**—I have a horse eight years old that seems to want to scratch his skin and tail and when he lies down to roll he bites his legs. I am sure it is not lice or mange. He has been doing this for about a year. F. A. W., Loma, Mont.

The trouble with your horse is one of two things. Either it is a straight case of malnutrition; or it may possibly be a case of intestinal parasites. In the first place I believe that I would give him a quart of raw linseed oil with one ounce of turpentine in it and then I would follow up with the following powder given once daily:

Artificial Carlsbad salts, one ounce.
Sulphate of Iron, one dram.
Powdered gentian, two drams.
Powdered Fenugreek seed, four drams.

I would recommend that you have about 20 to 30 of these powders made at the local drug store and give the horse one daily. When warm weather comes it might not be out of the way to give the horse a good tobacco solution wash or give him a wash of a two per cent solution of any of the coal tar disinfectants, such as cresol, creosote, or any of that type.

**Sore, Running Eye**—I have a cow that has been affected with a sore and running eye for two years. There is not much swelling, but it is raw and runs blood. It seems to get worse during cold weather. It is apparently painful. The eyeball is rough in appearance. J. R. R.

Cambridge, Idaho.

Judging from your expression in your inquiry that the eyeball is rough in appearance there may be some scum on the eyeball, and yet you do not seem to give a definite expression if that is the case. I am going to suggest to you that you drop into the cow's eye a few drops of the following solution: Three per cent solution of argyrol in water morning, noon and night for some time.

I have a cow that has been dry since November. I took her from the range a few days ago, as I expect her to calve in a few weeks. On examining her udder I find that blood comes from the teats. We have been feeding her all the alfalfa hay she will eat since taking her in. Would this be the cause?—G. E. S., Central Point, Ore.

I do not believe the feeding of the alfalfa hay had anything to do with the trouble you mention. I would suggest that you give her one teaspoonful of hyposulfite of soda in a pint of water once daily. Also that you give her one teaspoonful of fluid extract of Phytolacca in a small quantity of water once daily.

Community Tung-Lok Elevator at Hanson Station, Wash.

Handle Your Wheat in Bulk!

Wheat sack prices are prohibitive, even if you could get the sacks. Surely you will not pile your wheat on the ground, to suffer heavy damage and loss above and below. Patriotic duty and business judgment alike demand that you save ALL your crop.

Here is the answer to your problem—build a

Tung-Lok Elevator

(Home-Built, Singly or in Series.)

A Tung-Lok Elevator can be built for so little money that it will pay for itself in one year, while it provides permanent storage. Easily and quickly erected—storm-proof for a lifetime. The most economical and convenient way of building is by community cooperation, each farmer erecting one of a group of Tung-Loks, as shown in the cut herewith.

Just notify us, and one of our agents will call on you and explain the Tung-Lok method to you and your neighbors. That costs you nothing. Now is the time to act—WRITE US TODAY.

You realize, of course, that labor conditions have been extremely unsettled in all industries in the past year, and the future is uncertain. While conditions with us now are such that we can take care of all orders promptly, we ask that you act at once if you are planning to erect a Tung-Lok Elevator this year. Don't wait for the summer rush!

Dept. B. Union Mills. Makers of the Famous Tung-Lok Silo. Washington.

# War Aids Horseman

## Great Number Do Tasks of Battle

By E. L. POTTER.

That the war has had a very great influence upon the horse industry goes without saying. That the thousands and thousands of horses that were shipped to the allies before the entry of our own country into the war did not affect the horse would be an absurdity. Likewise that the purchase of some 800,000 horses for our own army has had its effect can not be denied. We hear so much of motors in connection with the war that we forget the enormous number of horses used. We also forget that there are not enough horses and horse feed in the world to supplant the motors now in use by the various armies. We also forget that in our news service a story of a caterpillar tank plowing across no man's land is sensational news, but no reporter is going to waste good cablegrams telling about six American farm horses dragging a French 75 through a foot and a half of mud. We have heard much of the famous 75s, but we hear nothing of their motive power. Why? Because their motive power is merely some common United States plow horses that a few months ago were pulling mowing machines, "somewhere in the U. S. A." There is very little motor transportation used with light artillery, because the horses are more reliable and are more easily replaced in case of injury. A well-placed shot puts a motor gun entirely out of commission, while a horse shot down is almost instantly replaced from the officers' mounts. Even if the entire team is destroyed, the gun remains intact, to be pulled by another team, or, if the gun is destroyed, the team remains to pull another gun. These are not horsemen's statements, but are common talk of artillerymen.

### Relatively Low Price.

The price of horses is, however, relatively low in spite of army demand. The facts are that along about 1914 there was an oversupply of horses in the United States. It was generally known that the demand was dull and there were plenty of horses for sale, but the real extent of the available supply was hardly dreamed of. It was assumed that the purchase of a half million horses for war purposes would put up the prices to almost prohibitive figures. No one at that time would have believed a statement to the effect that twice that many horses could be purchased without materially changing the scale of prices. We now know that the war was the only salvation of the horse market, and that horses would be unsalable today if it had not been for the war demand. What the demand will be after the war is largely a matter of speculation, but no one can question that the clearing up of this surplus will help the situation.

The buying of war horses both for the allies and for our own government has had a great educational influence upon the horse industry. Hundreds and even thousands of farmers have learned to locate the common unsoundnesses and have acquired a considerable judgment as to the value of a horse, whereas, heretofore, only here and there was there a man who was really a judge of a horse. The great majority of the horses of the country have been raised by men who know but little as to the value of the animals they produce. This change will doubtless be of great value to the industry. We could hardly expect breeders to use only good mares and to patronize good stallions when they had not yet had experience enough to know good horses from bad ones. This widespread improvement in judgment on the part of our horse producers can not help but have a marked influence on the business.

On the whole, we do not expect that the war is going to produce any boom in the horse business, but we do feel that it has already prevented a serious depression and that it is going to have a far-reaching and lasting influence on the quality of our horses.

### Seven Ages of Man.

The seven ages of man, if we may be permitted to tamper with Shakespeare's stuff, are as follows:

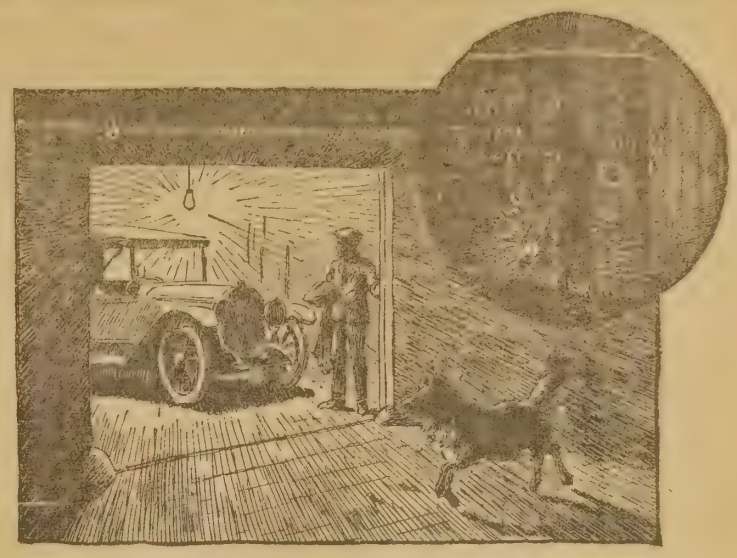
First—The age when he doesn't know anything and doesn't know it.

Second—When he doesn't know much more and yet doesn't know it.

Third—When he knows a little bit and doesn't know how little.

Fourth—When he knows he knows something and hopes to know more.

Fifth—When he knows a little and thinks he knows everything.



Sixth—When he begins to realize how little he knows.

Seventh—When he knows that he doesn't know anyting worth knowing and doesn't care a continental whether he does or not.

# LALLEY-LIGHT

ELECTRIC LIGHT AND POWER FOR EVERY FARM

*Lalley-Light Spells Convenience on Every Farm*

# Two Plants in One At the Cost of One

Lalley-Light, in effect, is two electric light plants for the price of one. For it provides two sources of light and power, both reliable and efficient. One of these is the storage battery. The other is the electric generator.

Current used direct from the generator—giving bright, steady light, without a flicker—does not pass through the battery. That is an economy, for the life of the battery is prolonged.

When only a few lights are required it is more economical to draw current from the battery, with the generator idle.

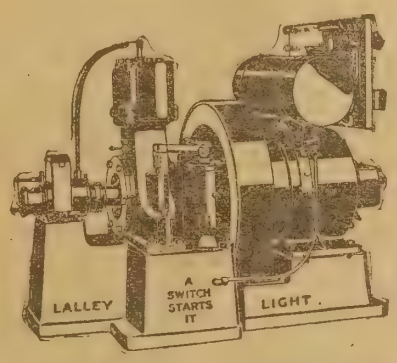
Few, if any, other plants afford this optional use of generator and battery.

Lalley-Light brings to your farm electricity in its simplest, safest, surest form. Its reliability is established by nearly eight years of successful, every-day farm use.

It is so simple that even your boy or girl can run it and give it all the care it needs.

The engine, direct-connected to the generator, starts when a button is pressed. If run to replenish the battery, it automatically stops when the battery is fully charged. If the battery needs charging, a bell rings to warn you.

These are distinct Lalley-Light advantages, over and above the great comfort and convenience—the perfect safety and the proved economy—of electric light and power.

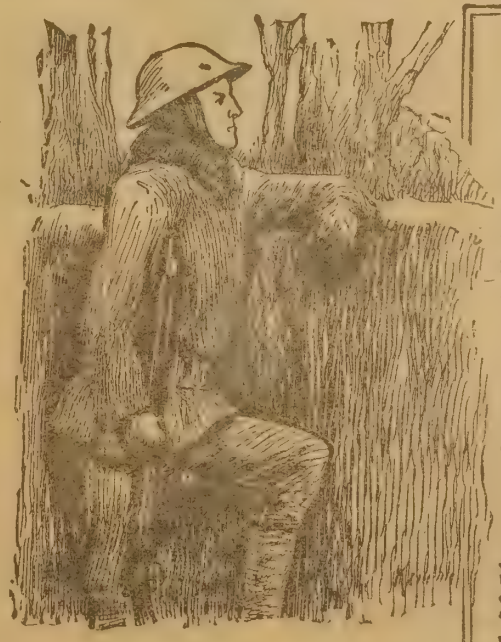


On thousands of farms Lalley-Light keeps the young folks contented; it is a boon of comfort to the old folks.

Its light is always ready—waiting, in a flood, for the turn of a switch—in house, barn and outbuildings.

Its power is ample to pump water and to run much of the smaller farm machinery — decreasing labor inside and outside the house. All at a daily cost the average farmer can well afford.

Write us at once for the illustrated free booklet which tells, in detail, what Lalley-Light is and does. We will tell you where you can see Lalley-Light in operation, and give you the cost of the complete plant, delivered to you.



Send a postal card or a letter today.

**Generating Plant is 27 inches long, 14 inches wide, 21 inches high. Storage battery is included in complete outfit.**

## Disinfection

### Keep Chicks Off Infected Ground

To the Editor: I am a subscriber to your paper and would be glad to know how to proceed to disinfect buildings and premises on which fowls suspected of being tubercular have been kept in order to have it safe to put healthy fowls in the same place. How long should the buildings remain empty?

Would also like to know what is the best feed for hens for winter eggs?

H. A. K.

Nez Perce, Idaho.

Tuberculosis is believed to spread largely through the medium of the feed. It is the digestive organs of the fowl that are usually affected. The germs of the disease pass through the infected fowl in the excreta or droppings. The droppings come in contact with the feed by the grain being thrown on the ground and falling on the droppings. It is picked up by the fowl, which may become infected by eating it. A knowledge of this fact will make plain the nature of the disinfection that will be necessary. The germs may live in the ground for several months; just how long I do not know, but in about six months the ground will probably be free from the disease if the chickens are kept away.

This is probably the safest thing to do: Keep the chickens off the infected ground for about a year. After that it would be safe to start with a new flock. The sunshine is a germ destroyer; therefore the more direct sunshine that strikes the ground the better. Cultivating and cropping the ground is also a germ destroyer.

The ground may be disinfected by covering it white with fresh air-slacked lime that has been broken into a floury powder. The house may be disinfected by a good whitewash, to which a little carbolic acid has been added, about 5 per cent. The house should first be cleaned out and all sweepings and droppings burned or destroyed. A good spray may be made by using one pint formaldehyde in 20 gallons of water. All feed troughs and drinking vessels should also be thoroughly disinfected. Cultivation and cropping of the yards with plenty of sunshine thrown in will go a long way toward preventing the disease or spread of it.

J. D.

## Egg-Laying Contest

Some wonderful egg records were made in the All-Northwest Egg Laying contest in January, as reported by Professor Helen Dow Whitaker, the director. The average production for the month was 14.77 eggs a hen. The highest record for the month was made by a pen of Barred Plymouth Rocks owned by the Oregon Agricultural college. This pen laid 124 eggs, an average of 24.8 per hen, or 80 per cent egg yield. The next highest record was 120 eggs made by a pen of Leghorns owned by the Hollywood farm, Wash., and by a pen of Rhode Island Whites, owned by H. E. Caldwell, Texas. The highest individual record for three months was made by a hen owned by C. F. Williams, Salem, Ore., which laid 84 eggs. The Williams pen has the highest record for the three months, or 345 eggs. The report in detail for the 20 best pens is as follows:

The following are the pens laying the highest number of eggs from November 1, 1917, to January 31, 1918:

White Leghorns, C. F. Williams, Salem, Ore., 345 eggs; White Leghorns, H. Otto, Greenacres, Wash., 341 eggs; Rhode Island Whites, F. W. Frederick, Phoenix, B. C., 328 eggs; Rhode Island Whites, H. J. Kingsbury, Twin Falls, Idaho, 313 eggs; White Leghorns, D. Tancred, Kent, Wash., 307 eggs; Barred Rocks, Oregon Agricultural college, Corvallis, 303 eggs; White Leghorns, Hollywood farm, Hollywood, Wash., 301 eggs; White Leghorns, Mrs. Mono Van Cise, St. Maries, Idaho, 298 eggs; White Leghorns, Paul B. Towne, Tekoa, Wash., 297 eggs; White Leghorns, C. C. Coolidge, La Grande, Ore., 293 eggs; White Leghorns, F. C. Park, Hermiston, Ore., 292 eggs; Barred Rocks, F. J. Wirtner, Mica, Wash., 292 eggs; Rhode Island Reds, Mrs. H. V. Rominger, Underwood, Wash., 283 eggs; White Minorcas, B. O. Longsdorf, Lebanan, Ore., 283 eggs; White Leghorns, L. E. Harris & Co., Missoula, Mont., 283 eggs; White Leghorns, K. Kammerbacher, Grants Pass, Ore., 280 eggs; White Rocks, F. E. Kneedler, St. Libory, Ill., 280 eggs; Barred Rocks, Bliss & Bliss, Southworth, Wash., 280 eggs; White Leghorns, Waikiki farm, Spokane, Wash., 278 eggs; White Leghorns, J. R. McRae, Milwaukie, Ore. 275 eggs.

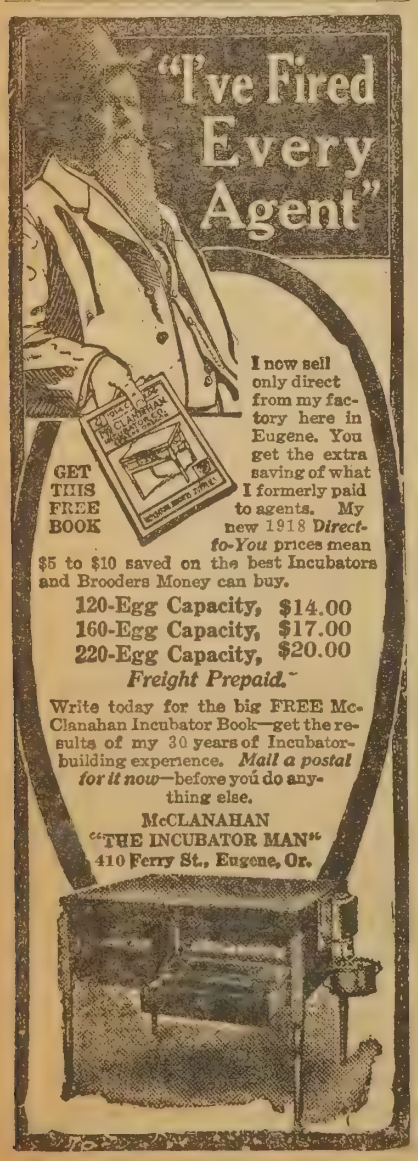
The following are the pens (five birds) laying the highest number of eggs in January, 1918:

Barred Rocks, Oregon Agricultural college, Corvallis, 124 eggs; White Leghorns, Hollywood farm, Hollywood, Wash., 120 eggs; Rhode Island Whites, H. E. Caldwell, Canutillo, Texas, 120 eggs; White Leghorns, C. F. Williams, Salem, Ore., 119 eggs; White Rocks, University of Idaho, Moscow, 117 eggs; White Leghorns, Oregon Agricultural college, 115 eggs; Rhode Island Reds, Mrs. H. V. Rominger, Underwood, Wash., 113 eggs; White Leghorns, Mrs. Monona Van Cise, St. Maries, Ida., 112 eggs; White Leghorns, F. C. Park, Hermiston, Ore., 110 eggs; Barred Rocks, Bliss & Bliss, Southworth, Wash., 108 eggs; Rhode Island Whites, H. J. Kingsbury, Twin Falls, Idaho, 107 eggs; White Rocks, F. S. Kneedler, St. Libory, Ill., 107 eggs; White Leghorns, A. Unsworth, Sardis, B. C., 107 eggs; White Leghorns, Paul B. Towne, Tekoa, Wash., 106 eggs; White Rocks, Dr. Louis Heely, St. Libory, Ill., 106 eggs; White Leghorns, H. Otto, Greenacres, Wash., 105 eggs; White Leghorns, D. Tancred, Kent, Wash., 105 eggs; Barred Rocks, F. J. Wirtner, Mica, Wash., 104 eggs; White Leghorns, Benn Olitt, Linnton, Ore., 104 eggs; Rhode Island Reds, Bliss & Bliss, Southworth, Wash., 102 eggs.

### Rice With Creamed Halibut.

An easy and attractive way of serving left-over halibut is to cream the fish and use it for stuffing a mound of rice. The rice should be steamed with salt and water for 45 minutes in a double boiler.

**Tells why chicks die**



E. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every batch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

# Food Values of Fruits

Since the war began so much has been written upon food conservation that it seems the whole subject has been pretty thoroughly canvassed. However, the tables as generally published contain so many things, such as the chemical compostions, the water, protein, nitrogen, fiber, ash, refuse, and so on, that it is difficult to hold in mind the comparative values. In presenting these figures I confine myself to the calories of energy which certain foods will produce, and while I know that this comparsion is not satisfactory from the scientific viewpoint I believe that the results will be more easily remembered than if published in the ordinary way.

It should be borne in mind that the principal value of most fruits is not so much in the amount of energy they will produce as in the fact that they furnsih a balanced ration, thus making the ordinary foods more digestible and healthful. For instance, the acids add to the food value of fats and starches. It is the experience of every one who has lived mostly on fat and starch foods that they have inordinate appetites for acids. It is not on account of these facts that I have given this estimate, but to show the food value of certain fruit when taken alone. As before stated, these values are given in calories.

Apples 290, apricots 270, avocado 512, bananas 460, blackberries 270, cactus fruit 375, cherries 365, cranberries 215, currants 265, figs 380, gooseberries 255, grapes 450, guava 315, huckleberries 345, lemons 205, loquats 395, mulberries 280, muskmelons 185, nectarines 305, olives 407, oranges 240, peaches 190, pears 163, persimmons 630, pineapples 200, plums 395, pomegranites 460, prunes 370, raspberreis (red) 255, raspberries (black) 310, rhubarb stalks 105, strawberries 180, water melons 140.

**Dried Fruits.**

Apples 1350, apricots 1290, bananas 1240, banana flour 1610, citrons 1520, dates 1615, figs 1475, pears 1635, prunes 1400, raisins 1605, raspberries 1705.

Most fruits, like other classes of food, contain more or less material such as pits, skin, etc., which is inedible. When such portions are removed a larger or smaller part of the edible material is almost always of necessity removed also, and is spoken of as "waste." Thus, of pears it constitutes on an average 10 per cent of the total fruit, peaces, 18 per cent, apples and grapes, 25 per cent, and bananas, 35 per cent, while in the case of raspberries and blackberries there is no refuse and the whole fruit can be eaten.

The analytical data quoted above show that fresh fruits are in general dilute foods—that is, the proportion of water which they contain is large, compared with the total amount of nutritive material. It has been suggested that fruits containing 80 per cent or more of water be classed as flavor fruits and those with less than 80 per cent as food fruits. Such fruits as strawberries, blackberries and raspberries would be included in the first class and fresh figs, banana, grapes, etc., in the second. In dried fruits which have been concentrated by evaporation the percentage of nutrients is very much higher than in fresh fruits. Some preserved fruits also possess a comparatively high nutritive value, owing to the evaporation of water by the heat of cooking or to the addition of sugar, or to both factors. Candied fruits, such as cherries and apricots, may be looked upon as typical examples of this class of fruit products. As regards composition, the water content is low and the carbohydrates and consequently the energy value is very high, owing to the added sugar.

Olives and the avocado are remarkable for the large percentage of fat which they contain, but in general it may be said that this constitutent is present in very small proportion in fresh fruits. In the case of the apple, pear, etc., it seems probable that the small amount of fat obtained in chemical analysis consists of the coloring matter contained in the fruit or of wax found in the skin. That the amount of wax may be considerable is evident when we recall the fact that fruit wax is collected from bay berries and other fruits in quantities sufficient for candle making and other purposes. That common fruits actually contain fat, though it is not generally associated with them, is shown by a recently published study of the fat of woods strawberries. The dried berries when extracted yielded a small amount of oil, cloudy at ordinary temperatures, but clear when heated, and much like linseed oil in its properties.

In the majority of fruits and fruit products the carbohydrates are the food constituents most abundantly represented. The proportion of nitrogen free extract varies greatly, being lowest in the fresh and highest in the dried and preserved fruits. In seeds

*A Small Size OilPull*
*An Iron-Clad Guarantee*

# "The new 14-28 sure is a *real* OilPull"

THAT'S the way a Kansas farmer who bought one the other day, put it. And he hit the nail right on the head. Just consider this—in the 14-28 you're getting more than just a small, light weight, easily handled tractor. You're getting all that *plus* the well known Rumely OilPull dependability and long life—*guaranteed* ability to burn low grade fuel oils *at all loads, under all conditions*—*automatic* speed control—oil cooling. You're getting a *real* OilPull.

Nor have strength or power been sacrificed in making the 14-28 a light weight tractor. It's a *big power* outfit—capable of handling up to 5 bottoms in plowing, and to run a 24 to 28 inch thresher with all attachments.

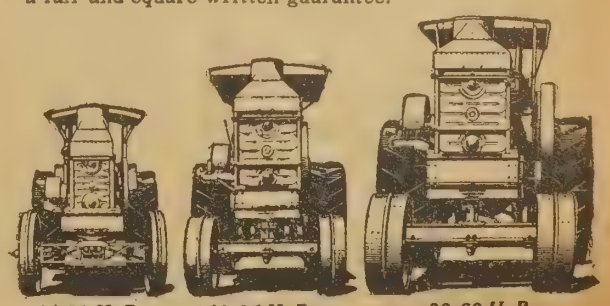
And you'll find the 14-28 extremely easy to handle. The platform is just a step from the ground—all operating levers are within easy reach and all working parts easy of access. It has an automobile steering device. It is short turning. An air starter is part of the regular equipment.

Then there's the patented shifting device that makes the 14-28 equally efficient on drawbar or belt, with no sacrifice in construction. The 14-28 catalog explains it fully—we'll just say here that it is *one of the greatest improvements that has been made in tractor construction.*

## For your protection—a *written guarantee*

A tractor's ability to burn kerosene or other oil fuels *can't* be established by claims or "near" guarantees. You are entitled to *know* what kind of an oil burning outfit you are buying, and the only way to protect yourself is to demand a *written guarantee* such as goes with every OilPull.

Remember this. A tractor either burns oil *economically—at all loads—under all conditions* that a tractor must run up against—*or it doesn't.*



Don't be misled by word of mouth claims or guarantees that "talk but say nothing." Demand what you are entitled to *—a fair and square written guarantee.*

## Get These Special Catalogs

A new OilPull catalog is just out. Besides covering every detail of the new 14-28, it describes the medium and large size OilPulls, the 18-35 and 30-60 h. p. Also you'll want the catalog of the new small Ideal thresher—the 20x36 Junior—made especially to be run by a small size tractor. Just ask our nearest branch.

# Farmers' Conference

## Benton Agricultural Council Meets

By E. H. DUNNING.

The regular annual session of the Benton County Agricultural council met in the commercial club rooms at Kennewick, Wash., on February 18 for the purpose of devising ways and means to stimulate greater crop production, unity of effort within and between all farmers' organizations, to hear the reports from the different members of the council as to what agricultural progress is being made or contemplated in their respective districts and, incidentally, to elect officers.

N. C. Bowles of Finley was elected president, R. H. Bone of Prosser vice president and W. H. Allison of Kennewick secretary.

Probably the most important of all subjects commanding attention was the now widely discussed "Farm Labor Problem."

That there will be a shortage of labor this year is apparent to all, and in view of this fact the council advises all localities where help is hired to maintain an employment agency to list the names of farmers wanting help and also of farmers who are using help for a short period, such farmers to notify the agency as to when this help will be released, so that it can be immediately shifted to another farm and avoid the waste of time spent by laborers in job hunting. It also advised that if farmers were to secure and retain competent laborers they must provide clean and comfortable sleeping quarters, because of the fact that workers will not stay where they are poorly fed or quartered when there is such an abundance of work and scarcity of help as there is now. Some members of the council rightly argued that, aside from the fact that hired help justly deserved good accommodations, it is imperative under the present national crisis to get the maximum amount of work from the hired man consistent with his ability, but that this can not be obtained from a man who has to sleep in a manger or spread his blankets under a tree.

Resolutions were adopted by the council strongly urging all farmers' organizations to install bulletin boards at their meeting places with "For Sale" and "Wanted" columns thereon, the different organizations to exchange lists wherever possible. By this method farmers who sometimes travel a great distance or send to some distant point for a cow, horse or some farm commodity could have perhaps obtained what he wanted from a near neighbor and saved time, useless transportation and probably money.

The meeting was in session practically all day, adjourning late in the afternoon with much accomplished. Much credit for the success of the meeting is due Lee M. Lampson, county agent, at whose instigation the council was organized.

C. R. Campbell of Bellevue, Wash., thinks home canned beef is not only superior to the commercial pack, but that it is actually better than the fresh cooked article usually served on the home table.

"I never knew what beef ought to taste like till I had eaten some of our own canned product," he comments. "And as to economy—well, the Bellevue school canned 125 pounds of beef some time ago, and I doubt if there was an ounce of waste when they had finished. Even the bones were cracked and steamed, the resulting liquor being poured into the cans with the meat. This use of the soluble part of the bones, together with the perfect cooking, probably accounts for the added flavor of the canned article."

When it comes to raising navy beans many a farmer in the northwest will have to take off his hat to two Bellevue, Wash., boys. Last year Charles Hamley, aged 14, and his brother, one year younger, put approximately two-thirds of an acre of upland into small navy beans (California Wonder). Western Washington isn't considered much of a navy bean country, but the boys did the square thing by their garden all summer and in the fall they pulled their vines and flailed out nearly six hundred pounds of seed. Most of the crop has been sold, much of it bringing 15 cents a pound for seed purposes. If you think any such dubious thing as "luck" entered into this achievement, just consider this sample of the careful reasoning done by the juvenile bean culturists:

"We planted our beans 18 inches apart between rows, and three or four inches apart in the rows," the older boy explains. "This made it just right for cultivation with a wheel hoe. No, we didn't want to use a horse cultivator; beans are shallow rooters, and we didn't think it would do them any good to have a horse trampling on them."

W. V. Goelzer of Puyallup is an enthusiastic convert to the canning doctrine advocated by the government. It has enabled him to solve, for instance, that annually recurring problem faced by all poultrymen—the disposal of superfluous cockerels. With the lighter breeds this is apt to be even a more serious question than with the heavier Americans and Asiastics, for the lightweight rooster is a drug on the market at those seasons of the year when poultrymen are sorting out their flocks.

Mr. Goelzer faced such a condition last year, and he solved it by canning the superfluous birds—115 of them. He and his wife followed implicitly directions given them by a member of the western Washington experiment station staff, with the result that not one can of the entire lot spoiled.

One of the most important points in connection with this matter of spoilage, according to the Puyallup man, is the use of rubbers. Here he and his wife are in perfect agreement with the teachings of the agricultural department that the use of last year's rubbers is one of the most short-sighted "economies" possible. On the Goelzer place a rubber is used once and then discarded.

To The Washington Farmer: I enclose fifty cents for renewed subscription for three years from date of expiration of last subscription. I find many valuable suggestions in your paper. We are using syrup made from sugar beets, according to your directions, which helps to win the war.

# College Education Can Be Had If You Will Pay the Price in Labor

By JEAN HENRI LE ROY.

Many farm boys and girls who feel that a college education would give them the opportunity they want hesitate to undertake it because of the expense. After dreaming this dream for a while they give it up and go to work. It never occurs to many of them that they can follow another track, namely, go to work and by means of work get a college education.

A great many farm boys and girls are doing this very thing. They have pluck and perseverance, and they go in for it, being willing to give perspiration in exchange for inspiration. If they are in earnest they always find help. This happens, fortunately, because many men in colleges in Washington hold out the helping hand to the one who is fighting for a chance. Of course, you want proof of this. Well, here it is:

Having occasion to write one of the college presidents about the college work of the present year, there came to me in reply a letter, a part of which follows:

"It is a daily problem with me to help poor farm boys and girls to find ways of helping themselves, for a very large percentage of our students must earn all or much of the money required for their college course. I have been enlisting the interest of newspapers to have our college boys carry papers. Some of them must be up at 5:30 in the morning for this purpose. I have interested, also, the gas company to employ a few of our young men, if possible, to read meters. A relatively large number of tradesmen are employing our boys and girls from the college for Saturday afternoon and evening. The restaurants require several waiters. We have three or four at work in the library, where assistance is much appreciated. A few gentlemen have given me a little money, to be used in employing our students needing help as workers in different ways for our colleges."

This letter is worth careful reading, for in it there lies the entire future of many farm boys and girls who feel that they could do better work in the world if they knew more.

What are the points of the letter?

1. The college president who wrote it is giving his time and his thought to helping poor farm boys and girls.

2. He actually goes out to get chances for them in newspaper offices, gas companies, restaurants and so forth.

3. He thinks about them, and recognizes that they have a right to a chance.

4. He knows that a boy with the right stuff in him is worth about a dollar and a half a day uneducated,—and as many thousands per year as there is brain in him, if he gets an education.

You who read this may be tempted to inquire who this college president is, and to ask that he get you a job so that you, too, may go to college.

Before you do that, think over these questions and answer them.

1. Are you willing to struggle with all your might for four years?

2. Are you willing to do two men's work for four years—the work of getting a living plus the work of a college education?

3. Is it clear to you that you really want a college education, or are you just a little dissatisfied with things as they are?

4. Do you know what you intend to do with a college education?

If the right stuff is in you these questions will show it up. If it is not there you would better keep at your job on the farm and be thankful that you have it.

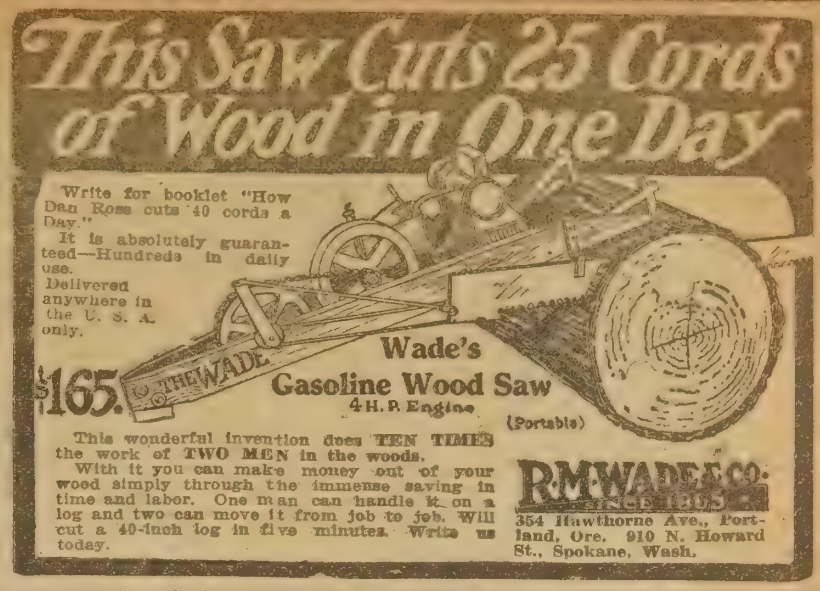
A large number of farm boys and girls are really fighting the great fight.

What does it all mean?

That you can have what you want if you will pay the price in labor.

## Aged Tree Is Dying.

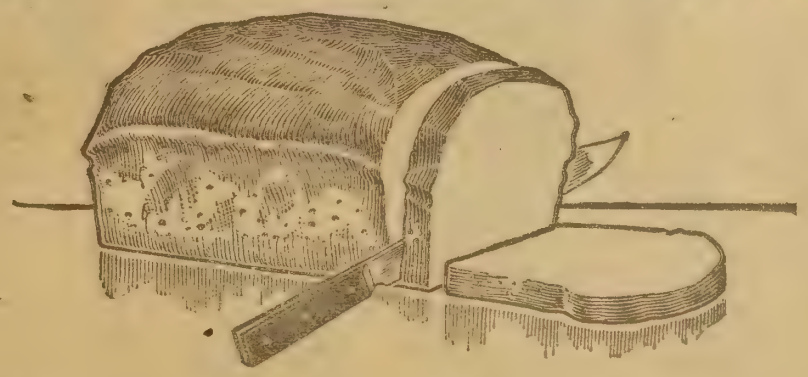
The original navel orange tree, planted 44 years ago, producer of the first navel oranges grown in the United States and parent of millions of trees now growing in California, is believed to be dying. Horticultural experts have begun efforts to diagnose the disease that threatens it in the hope of prolonging its life.



This tree, the most noted in the citrus industry of California, came originally from Bahia, Brazil. It was planted in 1873 by Mrs. C. L. Tibbetts, who obtained it from the botanical gardens in Washington, D. C.

## For Lease of Land.

Sealed proposals will be received at the office of the United States reclamation service at Yakima, Wash., until 9 a. m. March 11, 1918, and then opened, for the lease of lands withdrawn under first form of reclamation withdrawal in connection with the Palouse, Kittitas and Yakima projects. The land is suitable for grazing or dry farming purposes and the rental payment each year shall be based on the area used for each purpose. Information as to location and acreage of withdrawn land may be obtained at the Walla Walla and Yakima land office.



### Germany to Encourage Marriage.

To encourage marriage the common council of Lichtenberg, Prussia, has announced that it will provide the furniture for two rooms, a sitting room and a kitchen, for each newly-married couple. The furniture will cost about $300.

When you write to advertisers, be sure to say that you saw their advertisement in this paper.

# Help To Increase The World's Bread Ration

WITH famine creeping through Europe and every nation struggling to produce enough food to sustain life, the American farmer has a duty that he cannot shirk.

America must ship food to Europe for our soldiers. America must supply bread to starving peoples.

Bread is the staff of life. Grain for bread making must be sent abroad in enormous quantities and bread grains must be supplied for home use.

Raising food is a vitally important business and food raisers will be paid well for their efforts. It is no time to hesitate. Every acre must be made to do its duty.

Plant grain this spring, Mr. Farmer. Your country is looking to you for breadstuffs. No matter what other crops you raise, plant some of your acres to bread grains.

The wheat crop was millions of bushels short last year. Lack of seed threatens the corn acreage. Barley, oats, and rye production must be kept up and increased.

Plant grain. Plant all the wheat, corn, barley, oats and rye your farm can raise to advantage.

Begin with the best seed you can obtain. Use tested, reliable seed adapted to your soil, locality and weather conditions.

NORTHRUP, KING & CO., Seedsmen

United States Food Administration License No. G-32453

MINNEAPOLIS MINNESOTA

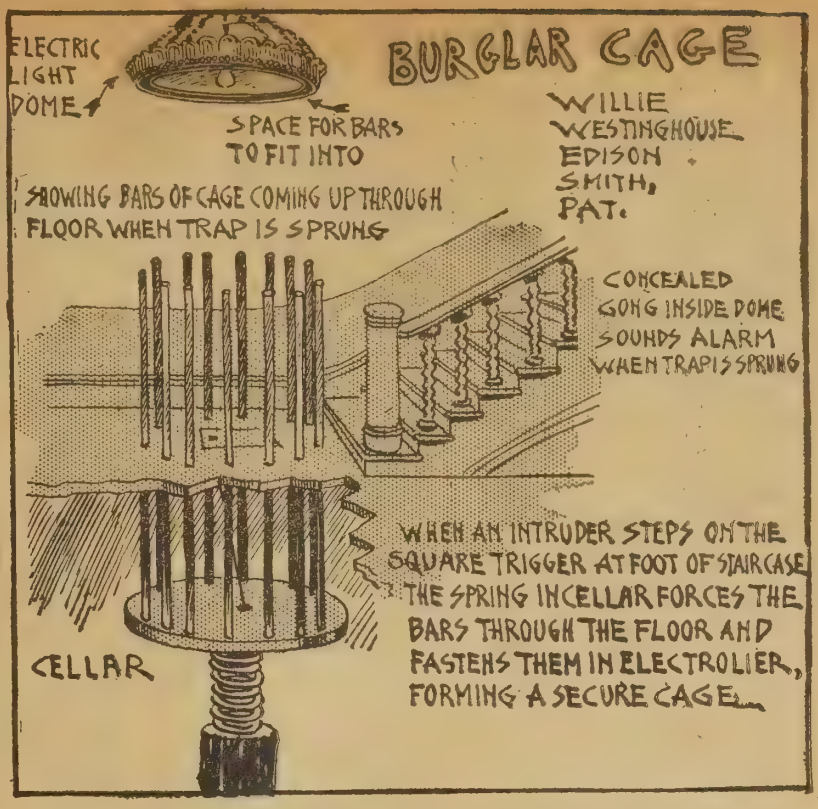
# FLORA FLIRT FINDS SOME ROUGH SLEDDING

The frosty air makes Flo Flirt thrill
As she goes to the coasting hill.

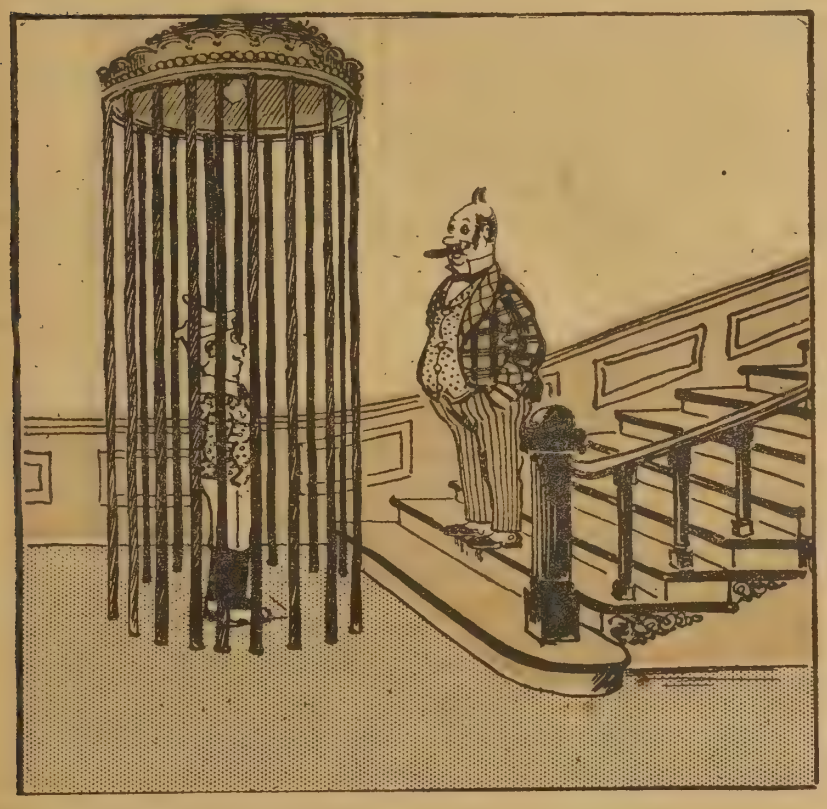
Her bright eyes flash, her cheeks turn red,
When she spies a youth with a fine big sled.

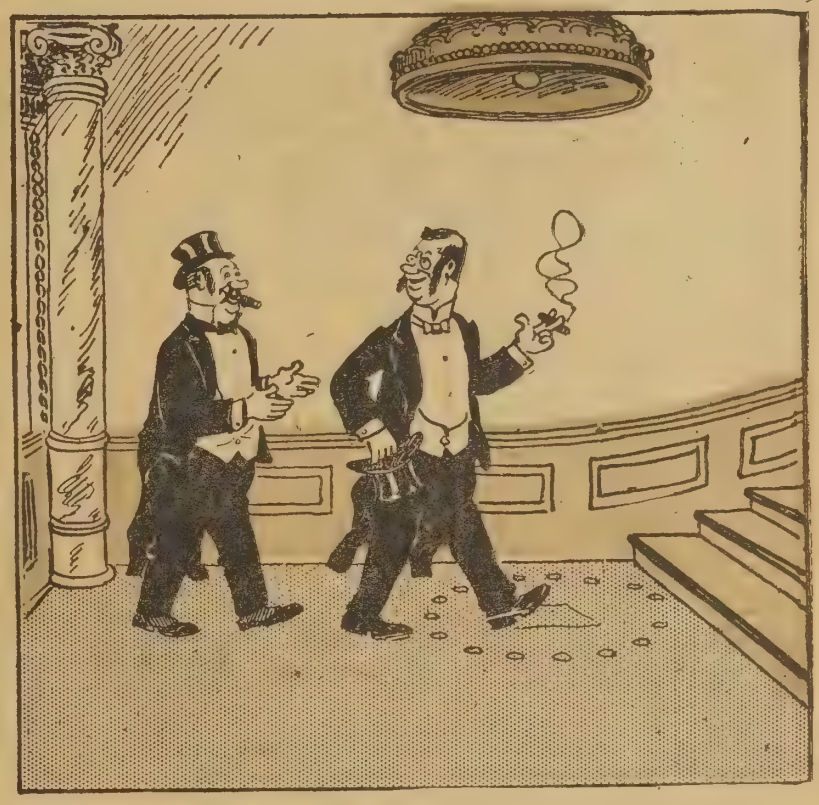
He flirts with her till she's delighted;
To coast with him she's soon invited.

Down the hill the swift sled flies—
She turns and gazes in his eyes.

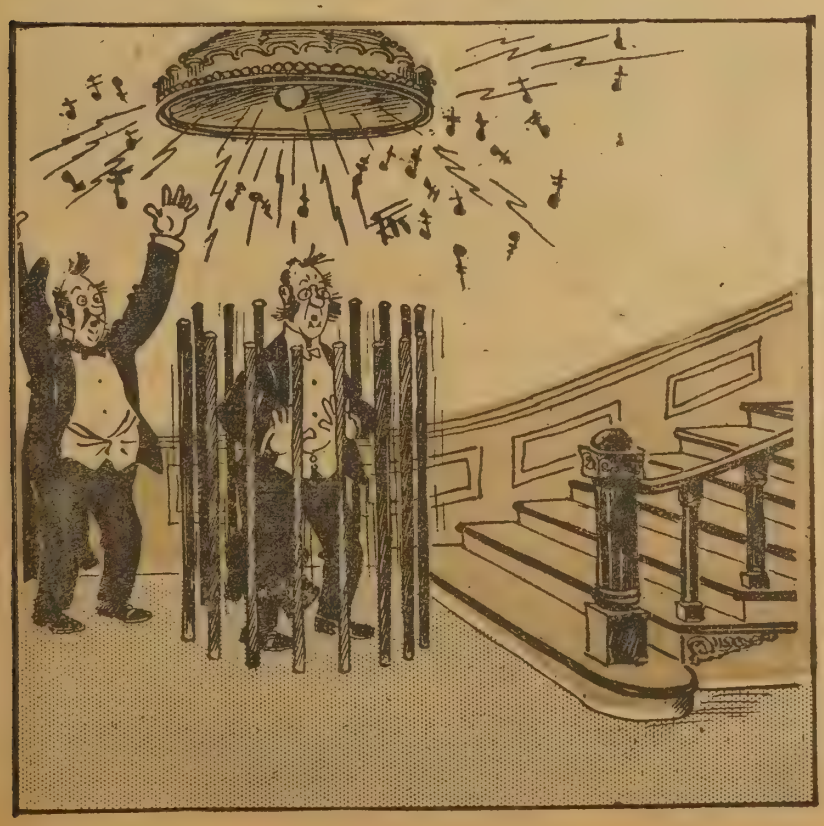


But just then, with an awful thump,
They crash into a submerged stump!

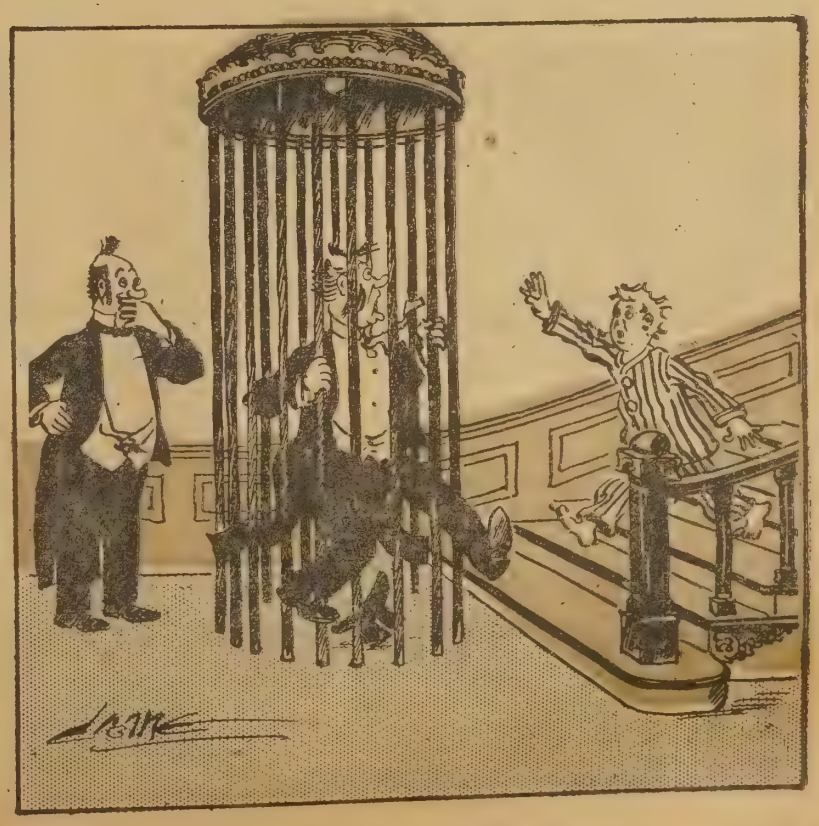




Away they fly at speed appalling,
And down the hill they both land sprawling.
**The Moral**—If in flirting you would revel,
First be sure you're "on the level."



# WILLIE CAGES THE WRONG BIRD



DEAR TOMMY: I invented this contrapti on after we had had a burglar scare at our house. The first night it was installed Papa and Uncle Jim went to a class reunion and got home late. They were so interested in talking about old times that Papa forget all about the trap until Uncle Jim got caged! Yours, etc., WILLIE.

# Japan to Take Hand

## *Will Protect Allied Interests in Siberia*

The developments of the war are about to lead to the active entrance of Japan into the conflict, notwithstanding that country's seeming isolation from the center of the struggle. Germany's advance into Russia has led to the possibility of their menacing rich stores of supplies and munitions in Siberia, and possibly gaining a control there that would greatly menace the national life of Japan. Recently Japan asked her allies—England, France and the United States—for an expression of sentiment on the proposal that she alone or assisted by these governments enter the conflict in the east for the purpose of preventing German aggression into the Siberian territory, with the ultimate possibility of a movement, through the trans-Siberian railroad, against Vladivostock, the Russian port on the Japan sea.

The situation has developed into one of the most serious diplomatic problems of the war. Suggestions have been bandied about as to whether this country and her European allies would join Japan in the protection of these interests, making the campaign in Siberia an international campaign, amounting to little less than a movement from the east to confront the German advance. At this writing it is virtually agreed that Japan shall be allowed to make the campaign alone, without being required to make any pre-campaign pledges as to what she shall do with Russian territory that she would necessarily occupy. Japan has, however, made a definite statement that she has no intention against Russia, but is acting solely for the purpose of protecting her own interests, and also those of the allies as the latter might be jeopardized by the capture by the Germans of Russian supplies in the east.

Whether or not the Russians can be made to believe Japan honest in this declaration is another problem. Should Japan make the expedition as planned, Russia might consider it the approach of another enemy from the east designing to conquer and appropriate territory in Siberia as Germany is now doing in the western part of European Russia. Suggestions have come from Russia favoring an expedition, if one must be made, by the Americans. This favoritism is likely due to the feeling that America would unquestionably evacuate any occupied territory, while Japan, who is in sore need of additional territory, might be loathe to give up what she had occupied.

It seems now however, extremely doubtful that this country or England or France will try to play an active part in the proposed expedition, owing to the difficulties of a campaign in that remote territory and the international questions that it would involve.

### Russia Signs Treaty.

As the Farmer is going to press it appears that Russia has submitted without reserve to the harsh terms of that country's Teutonic conquerors and signed the peace treaty as drawn up by Germany. The exact terms are not yet available for publication, but it is known that Russia cedes a large area of her western territory to the Germans, pays large indemnities and gives land in the southwest to extend the domain of the Turk. Whether the German advance against Russia will be stopped now or not, is, at this writing, uncertain, but it is reported that Germany has announced her intention of ceasing the forward movement. With all the stores of supplies and munitions lying further back in Russia, which supplies Germany so sorely needs, it is considered highly improbable that Germany will cease her advance unless by the peace terms Russia promises to provision the armies for their coming offensive against the French and English and Americans in the west.

### Can Eat Meat Now.

Because the production of meat has increased, and because the allies need wheat now more than meat, the national food administration has withdrawn its orders for meatless meals with one exception. It is still incumbent upon the people to observe Tuesday of every week as beefless and porkless. Otherwise, for an indefinite period, the length of which is not yet known, it will not be required that they observe a meatless meal a day, nor will it be required that they observe a porkless Saturday. In the northwest, this means that meat can be eaten at any time, except that pork must not be eaten on Tuesday. The beefless feature of Tuesday had been formerly suspended in the northwest. But the restrictions as to the use of wheat are to be made more stringent, as the need of more grain for the allies is daily becoming more serious.

### Will Deport Anarchists.

The United States department of labor has announced that it will not tolerate the presence in this country any longer of aliens who express opinions favoring the practice of sabotage. Any person not a citizen of the United States who is heard to express approval of the destruction of property as a means of gaining the supposed end of industrial betterment will be deported to their home country, says Secretary of Labor Wilson. The secretary, however, says that mere membership in the I. W. W. order will not be construed as cause for deportation under this regulation, but any alien I. W. W. member who expresses approval of sabotage will be liable to immediate dismissal from the United States.

### Americans Active.

Reports from somewhere in France indicate that the American soldiers on the battlefront are becoming equally active with their French and British allies. The reports likewise indicate that wherever they are taking part in actual warfare they are manifesting familiarity with modern war practices and showing the spirit of '76.

### New Liberty Loan Coming.

Although the amount of the third Liberty loan bond issue has not yet been determined the treasury department has announced that the campaign will be launched on April 6, which will be the first anniversary of the entrance of the United States into the war. That the issue will be a large one is indicated by the official statement that the amount will not be announced until action is taken by congress on measures to be presented by the treasury department. If the new issue were not to exceed $3,600,000,000 it seems apparent that no further congressional action would be necessary as there still remains an authorization for Liberty bonds to that amount. It is planned by Secretary McAdoo of the federal treasury to make April 6 a day of great demonstration throughout the entire country. "I know of no more fitting time for a patriotic response to the call of duty than the beginning of the second year of the war," says a statement by Secretary McAdoo.

# Bull Brings $900

## Shorthorns Sell Well at Portland

With a fair-sized crowd of buyers in attendance, the annual spring sale of Shorthorns at North Portland, February 25, resulted in fair values being paid. The high-class, well-fitted animals generally sold high. Those of indifferent quality and not in condition sold low, thereby reducing the average.

W. G. Cordiner of Walla Walla, Wash., for many years a big wheat farmer, now going into live stock, paid top price of $900 for Hercules Duke, a yearling bull consigned by Day & Rothrock of Sprague, Wash., that was made champion in the judging that preceded the sale. Mr. Cordiner also paid top price of $800 for Helen's Bride, the champion female consigned by A. D. Dunn of Wapato, Wash. J. B. Cornett's 4-year-old Clifton King sold for the bargain price of $450.

J. H. Beckley of Portland was the heaviest buyer of bulls, taking nine head for his Klamath county cattle interests for $1670. William Daughtrey, president of the Portland Union stock yards, took several and was a good bidder on others.

Mr. Miller of the Brook Nook stock ranch of Home Park, Mont., who placed the ribbons in the judging in the forenoon, purchased one of the good yearling heifers of the Dunn consignment for $500.

### North American Birds.

A recent census of North American birds shows an increase of 125 species and subspecies since 1910. But though there are really new birds in the list, many of them belong to subspecies, up to this time unrecognized.

### Control Fertilizers.

Governmental control of the fertilizer industry has been ordered by President Wilson in a proclamation requiring manufacturers and distributors to obtain licenses from the secretary of agriculture. Authority for the action is contained in a food-control law.

Dealers in some fertilizing ingredients, including ammonia and its compounds, already are under license by the food administration and they are excepted in the proclamation. Among the ingredients not already under license and now put under control are sulphuric acid, phosphate, rock, bone, sodium nitrate, potash salts, cement and blast furnace dust, wood ashes, cotton seed hull and meal, potassium nitrate and tobacco waste.

NEW WORLD LIFE

**It Pays to Get the Best**

If you had a fine car you'd employ experts, not tinkerers, to keep it in repair.

Please remember, when undecided as to where you shall place your *Life Insurance,* that each officer of this company is a *Specialist* in his line.

**New World Life**

Spokane

John J. Cadigan, President.

## New Things Are Always Advertised

The inventive genius of America is constantly at work improving the farm machinery which is playing such an important part in feeding the hungry nations of the world.

When a radical improvement is made in some implement how are the farmers of the country informed regarding it by the manufacturer? The answer is through the advertising columns of the agricultural publications.

Compare this issue of your state farm paper with some copy of a farm journal of twenty or thirty years ago and you will have a birdseye view of farm implement progress.

Perhaps some innovations have been adopted with which you are as yet unfamiliar. For news of these important matters read and reread our advertising columns. And remember that we safeguard you in your dealings with our advertisers.

**Weigh your Culverts**

**Get What You Pay For**

BE SURE that your culverts are full weight—full gauge. Weigh them. Check them up with the diameter and weight cards which your nearest "Armco" Iron Culvert Manufacturer will gladly furnish. This card tells what each size of corrugated pipe should weigh per foot—standard weight. You are only doing yourself justice in seeing that every pipe you buy conforms to these standards.

**"ARMCO" IRON CORRUGATED CULVERTS**

will be found to be always *full weight* and *full gauge,* or a little heavier, not merely on the end sections but all the way through. The standards they must meet are as definite and as rigid as those governing the quality of their material. "Armco" Iron Culverts are the 100% Culverts in weight, diameter, quality, strength and longevity. They are not affected by frosts or spring freshets. Stand up under heavy loads. Can be installed quickly and by unskilled labor.

Armco Iron Culvert & Flume Manufacturers' Association

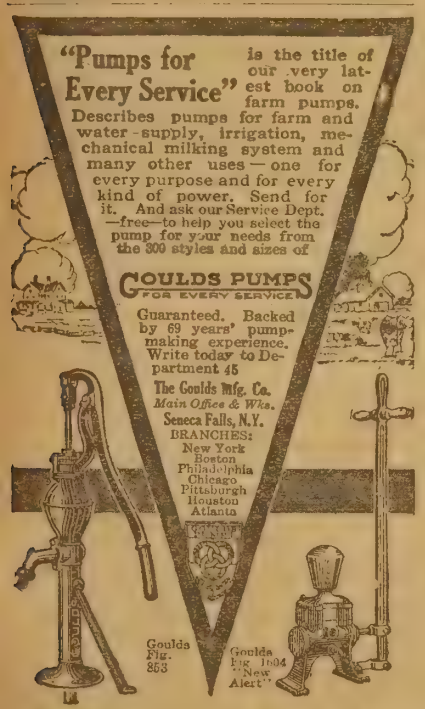
CINCINNATI, OHIO

# Easum Buys Purebreds

By J. E. Nessly.

George A. Draper of Elberton has sold 11 head of purebred registered Red Polled cattle to A. J. Easum of Oroville, Wash., for $1450. The lot included a bull which Mr. Draper brought from the east two years ago, and the other 10 head are females of various ages. Mr. Easum plans to breed Red Polled cattle and keep up the registration and expects to found a good-sized herd of this breed on his ranch in Okanogan county.

"I have been breeding Red Polled cattle for 20 years, and think they are admirably adapted to this western country," said Mr. Draper to The Farmer correspondent. "The demand is so great that I have reduced my herd to 16 head, and one or two of these is sold. I sold 10 head at the Northwest Live Stock show at Lewiston in November, and have had a number of sales since then. I plan to go back to Iowa and buy a large herd of these cattle and bring them to my ranch."



Mr. Draper combines purebred cattle, horses and hogs with his wheat farming. He is farming 400 acres of rich wheat land near Elberton, but plans to put a part of it into grasses and devote more time and attention to the live stock part of the business. Alfalfa and clover do well on his land, and a part of his wheat fields are to be plowed up and planted to these grasses. He has been raising some alfalfa for many years, but the field needed to be plowed and reseeded, and he believes that after the war, when prices drop to normal, cattle, hogs and sheep will pay better than grain farming. Mr. Draper keeps a registered draft stallion, purebred hogs and a good sized herd of grade hogs in addition to his registered cattle and other interests. He had planned to go back to Iowa for a large shipment of Red Polled cattle this month, but his mother, who is 86 years old and makes her home with him, has been in ill health, and he may not be able to go after the cattle until the spring seeding is done. Mr. Draper is one of the pioneer purebred cattlemen of this county, and has been in the business continually for more than 20 years.

"Pumps for Every Service" is the title of our very latest book on farm pumps. Describes pumps for farm and water-supply, irrigation, mechanical milking system and many other uses—one for every purpose and for every kind of power. Send for it. And ask our Service Dept.—free—to help you select the pump for your needs from the 300 styles and sizes of

GOULDS PUMPS

Men Mechanically Inclined, Your Services Are Needed.

NEVER before has the demand for Automobile, Tractor, Truck and Aeroplane motor Mechanics been so great. Your service is needed in the Army, driving and repairing Trucks and Ambulances; in the Aeroplane section repairing motors; on our farms using Tractors; besides, remember that this country has 4,000,000 Automobiles. Thousands of mechanics who formerly took care of them are in the Government service. Somebody must take their places. It is up to you to take the places in the garage, etc., of the men that must go. Realizing these conditions I have made preparation to train men to fill these important positions. The demand for men is here. I am ready to train them. If you are in the draft come here and be trained so that you can give a special service to your Country.

WRITE FOR FREE CATALOGUE.

I have written a catalogue that shows pictures of all departments and describes my school. I want you to have it. It will tell you how I teach the Automobile, Tractor business; open your eyes to the opportunities for splendid positions at good money. This Country must have trained Mechanics. Take advantage of present conditions, write for my free catalogue; it's a trip through the greatest school in the world. Today is the day of oppportunities, grasp them.

Sweeney Automobile & Tractor School,
510 Union Station Plaza, Kansas City, Mo.

# Buys Flour Mill

## Farmers' Union Pays $10,000 Cash

A deal of importance to Palouse and to the farmers of that district has been closed by which the farmers' union of Palouse becomes the owner of the electric flouring mill, for which $10,000 in cash was paid. The property is to be at once taken over by the new purchasers, the Farmers' Union Warehouse company, which already has a large grain warehouse in Palouse.

The mill had been closed for a year. The machinery, or a portion of it, is to be sold, an offer of $3000 having been made for it, and the chopping machinery will be retained. The flour mill will not be operated by the new purchasers, but the building and equipment are desired for handling bulk grain. The mill has an elevator with capacity for 40,000 bushels of bulk grain and elevator machinery to operate it.

The Palouse Farmers' Union Warehouse company is a business organization that has been in operation for a number of years and has been highly successful. Capitalized at $5000, its property and business in Palouse had increased in value before this mill was bought, until it was invoiced at $20,000, or 300 per cent increase since the company was started some 10 years ago. The capital stock was increased from $5000 to $10,000 at a recent meeting to provide funds to buy the mill, which was paid for in cash.

The farmers will continue to operate their sacked grain warehouse, but will also operate the elevator for handling bulk grain, giving them a warehouse or elevator on each of the two railroads, the Northern Pacific and the Spokane & Inland Empire electric road. The elevator stands on the Northern Pacific. The sacked grain warehouse stands on the electric.

With the mill and elevator as a nucleus it is claimed that a very little additional expense will give it capacity for 100,000 bushels of bulk grain, which will be a valuable addition to the grain handling capacity of Palouse. Farmers near Palouse are preparing to handle a large portion of their grain in bulk this year, and will cut out sacks at 25 cents each wherever it is possible to do so. J. E. N.

# To Do His Utmost

To the Editor of The Washington Farmer: During December and January your editorial department was conducting an inquiry as to intentions and plans of farmers for this year's production. "More or less" was the question in a coupon "What is your utmost?"

As a subscriber and to be farmer on an irrigated tract in Hayden Lake irrigated district, I suppose I would not be in the class of big farm farmers to whom your appeal was mainly addressed, yet we feel as though small operators are responsible in proportion to areas they control and we just want to say the 10 acres of irrigated land will not be a slacker. If I can not get up there to work it with my own hands I expect to rent it on shares and make it produce its utmost. Will use the advice of two county agricultural agents, Shinn of Spokane and Beiers of Kootenai.

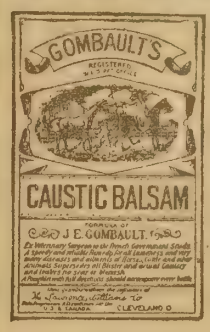
We like The Washington Farmer. Every owner even of small tracts can find in it a great deal of help and encouragement. WILLIS E. LAMB.
Spokane, Wash.

## Will Make Potato Flour.

Machinery is being installed by the Lewiston Milling company in a plant at Yakima where potato flour will be manufactured at an early date. It is planned to give the mill a capacity of 30 barrels of flour per day for the time being.

### A Cherful Thought.

Be cheerful. Mental depression checks digestion. Poor digestion wastes food. Wasted food helps the enemy. Cheerfulness is conservation.



This is the Kind of Horse the Government Wants

No horse with a Spavin, Splint, Ringbone, Curb, Bony Growth, Capped Hock, Wind Puff, Strained Tendon or Sweeny can now pass the keen-eyed Inspectors of the Government Remount Stations.

Splendid-looking horses—otherwise sound—are being turned down because of some blemish that could be quickly cured with

Gombault's Caustic Balsam

Here is your chance to make money for yourself and at the same time help in the Government's great Thrift and Production movement.

Put your horse into condition with **Gombault's Caustic Balsam.** A safe and reliable remedy.

**Gombault's Caustic Balsam** if applied immediately after burns, bruises or cuts, is a perfect ant-septic—soothing and healing. An absolutely safe external remedy for man or beast.

Every bottle of **Caustic Balsam** sold will surely give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by parcel post with full directions for its use. Send for descriptive circulars, testimonials, etc.

# Trio Ad Sells Draft Horses

Kennewick, Wash., Feb. 2, 1918.

Pacific Northwest Farm Trio,
Spokane, Washington.

Gentlemen:

Enclosed please find check No. 567, for $12.23, to pay for 3-inch ad in the Pacific Northwest Farm Trio for the month of January, as per enclosed bill.

Kindly receipt bill and return and oblige.

Our business has been very good. We have sold several horses this month. The demand for real good draft stallions is the best it has been for several years. There is no question but that we will have every stallion of serviceable age sold by the middle of May.

With best wishes for the success of the Pacific Northwest Farm Trio, I beg to remain,

Yours respectfully,
(Signed) WM. T. TRACY.

# Grain Bags Will Cost 24 Cents Each

**Twenty-five cents a bag, but plenty of them to take care of the 1918 wheat crop, is the gist of a promise made by the federal food administration to the farmers. The differential between sacked grain and grain in bulk will not exceed nine cents per bushel and will not be less than seven cents per bushel. This is a further announcement of the food administration.**

Whether or not there is existing an actual grain bag shortage is a question still debatable. The food administration assures the farmers that there are plenty of bags in Calcutta, but that the shortage of vessels in which to ship them or the material from which they are made compels the producers of this country to pay the unusually high price which has been agreed upon. The food administration points out that the freight rate from Calcutta to American ports is more than $100 per ton on the jute from which grain bags are manufactured.

From the statement issued by the administration it becomes evident that the farmer who sells his grain in bags that cost him 25 cents each will receive in return for that bag not to exceed 18 cents and possible not more than 14 cents. Whether or not an arrangement will be made to eliminate the usual dockage of three-quarters of a pound or more per sack, which is likewise a loss to the farmer, has not been announced.

At the grain conference in Spokane several weeks ago one large bag compan of the Pacific coast made an offer to furnish the farmers of the northwest with a million grain bags at a rate of 25 cents each. At that time the proposal was merely laughed at, though there were many farmers present who felt that even at that rate it were more economical to sack their grain than to equip themselves to handle it in bulk. The majority of the farmers present, however, appeared to favor the bulk system and there can be no doubt that the assurance that bags will cost a quarter of a dollar each will stimulate the bulk handling movement enormously. The following is a telegram from Food Administrator Herbert C. Hoover, announcing and explaining the agreement for the securing of grain bags for the 1918 season:

In order to assure the import of enough bags to take care of the crops in the Pacific states, and to assure the supply of bags, we have entered into the following afrangement with the bag makers:

"The bag manufacturers hereby agree with the United States food administration that they will sell all standard 22 by 36 inch, 12-ounce new Calcutta and domestic wheat bags on hand, or bought, or to be manufactured, at a price not greater than 25 cents per bag f. o. b. tidewater, provided that the food administration grain corporation within two weeks from the date hereof fixes a differential in its buying basis of wheat in bags over wheat in bulk of not less than 7 cents nor more than 9 cents per bushel, to be hereafter determined. If our importations now arranged are affected by unusual increases in cost because of variations in exchange, or freights, or for other causes, the United States food administrator will consider proper modifications of this maximum price. They further agree that they will sell these bags only in the normal channels of distribution, the intention being to try to assure producers of wheat that the bags will reach them at a price of not over 25 cents per bag f. o. b. tidewater, plus freight and distributor's normal charges."

Considering the overseas freight of over $100 per ton on jute material we consider the arrangement very satisfactory.

# Food Values of Fruits

(Continued from page twenty-one.)

which are commonly eaten, such as the cereal grains, and beans, peas, and other legumes, the nitrogen-tree extract is quite largely made up of starches. In fruits, however, sugars and the so-called pectin bodies, with very often more or less starch, make up the group. The principal sugars in fruit are cane sugar, grape sugar (glucose), and fruit sugar (levulose), the last two being usually present together in equal quantity and designated invert sugar or reducing sugar. The stage of growth and the degree of ripeness have a very marked effect on the kind and amount of sugar, and it is therefore difficult to give average figures for the quantities present which will be fairly representative. An idea of the range in the sugar content of ripe fruits may be gathered from figures quoted from a summary published several years ago. According to these data, invert sugar ranged from 2 per cent in round numbers in large early apricots to 15 per cent in grapes and a variety of sweet cherries. A number of fruits (strawberries, gooseberries, raspberries, and apples) contained about half the latter quantity. The cane sugar ranged from less than 1 per cent in lemons to 14 per cent in a variety of plums. Bananas also contained a fairly high percentage, namely, 11 per cent.

Fruit sugar rarely occurs unaccompanied by grape sugar, but has been thus reported in the mango and in amounts large in proportion to the grape sugar in sweet apples and sweet pears and a number of varieties of grapes. In the case of grape sugar large amounts—18 to 30 per cent—have been reported in juice of different sorts of grapes, while in dried fruits the values are even higher, 32 per cent having been found in prunes, 54 per cent in Zante or "English" currants, which are, of course, a small seedless grape, 61 per cent in raisins, 49 per cent in figs and 66 per cent in dates.

The acid in fruits, which in proximate analyses is not usually determined separately, varies within rather wide limits, 1 to 2 per cent being reported on an average in such fruits as apples, pear, plums, strawberries, etc., and as high as 7 per cent or more in lemon juice. It often happens that of two fruits with the same acid content one has a much sourer taste than the other because the acid is not so much masked by sugar.

Fruits contain a comparatively small amount of mineral matter—less than 1 per cent on an average—consisting quite largely of potassium salts, with a little phosphoric acid, iron, lime, etc.

As a class it is apparent that fresh fruits are directly comparable with green vegetables and root crops rather than with more concentrated foods, such as flour or meal. The dried and some of the preserved fruits, which are more concentrated than the fresh, compare favorably with bread, dried beans and similar foods on the basis of total material present. There is this difference, however, that the cereals and dried legumes contain fairly large proportions of protein, while the quantity present in fruits is always small. In other words, fruits—fresh, dried and preserved—are sources of energy rather than of tissue-forming material.

### New Railroad Map.

The state public service commission, Olympia, Wash., will be glad to furnish the latest railway map of the state, issued in 1917, giving all the railroads of the state in operation, as well as dotted lines indicating railroads projected or under consideration. The map also indicates the county boundaries and an alphabetical list of towns of the state, indicating those having a railway station, a telegraph station or a telephone station, or all three, and so arranged as to be easily found on the map.

The public service commission will be glad to send this map to any reader of The Twice-a-Week Spokesman-Review if postage is sent, as follows: Mounted wall map, 15 cents; unmounted map, 2 cents; folded map, 2 cents.

### True to His Word.

When son gets home from school he taken off his new shoes and puts on the old ones, just as he said he would. He does it one evening.

**Stop Thief!**

Gophers have stolen the automobiles, the luxuries, the home comforts, the opportunities for education, the good things of life that so many farmers have drudged for and never succeed in securing—have they stolen such things from you. Have gophers robbed your farming of profit? Or have you made a profit in spite of them? Thousands have barely broken even or have run behind. Every farmer would be hundreds of dollars ahead if he kept gophers off from his land. It might mean only a bushel of grain more per acre—that's worth getting—or it might mean five bushels or even more in extra profit. That is what using Kill-Em-Quick has meant to thousands of farmers.

The Time-Tested **Kill-Em-Quick** Guaranteed Gopher Killer

TRADE MARK REG. U.S. PAT. OFF

**Gopher Poison**

Every farmer who has tried the gopher killer knows that gophers can be destroyed—kept off his land. He knows that Kill-Em-Quick pays him hundreds of times its cost in profits. Kill-Em-Quick is a sure killer—a ready-prepared poison, the strongest on the market.

Better be safe than sorry. Get Kill-Em-Quick. 40-acre size, 50c; 100-acre size, $1.00. From your dealer, or if he can not supply you, by express postpaid upon receipt of the price.

# Poultry Losses Are Enormous

## *Hatching Season Is Critical Time in Food Production*

By JAMES DRYDEN.

The new crop of chicks will soon be coming out of the shells by the million. There will be some millions that die in the shell. Other millions will die in the first month of their life. The loss is very great. The losses in hatching and rearing the chicks have put many a poultryman out of business. The losses in eggs that are put into the incubator and under the sitting hen run into millions of dollars. It is a great wastage of eggs. Then there are the losses of chicks in the first few weeks of their life. That means as many millions more.

That has been going on year after year. Every farmer loses small chickens at times and loses eggs that are put under hens to hatch. The hen sometimes breaks the eggs and sometimes leaves the nest and the eggs do not hatch. The hen is not always a success in brooding the chicks, she may not hover them enough; she trails them through the cold, wet grass and they chill and die. Lice and mites may kill them. Rats and cats get many. Poor feed and feeding kill thousands. The farmer says little about it; it is a small affair, he thinks. In the aggregate, it is a big affair.

The losses are not confined to the general farmer with a small flock. The losses are often greater in proportion to numbers on the large poultry farms where modern methods, so-called, sometimes miscalled, prevail. Here, where artificial methods are used and where there is no trouble with sitting hens quitting the job, where lice and mites are not a factor and where there is no trailing through the tall grass, the losses are often so serious as to bring disaster to the business.

Then, again, it often happens that the incubation and brooding methods are not at fault. The incubators may be properly run, the brooders may work smoothly and the feeding may be right; the hen may sit steadily on the job, there may be no lice or mites and no tall grass or rats or cats to get them and yet the chicks may die off like flies. This is a problem that goes back to the egg itself, the egg that produced the chick. The fact that the chick gets out of the shell does not mean that it is a good chick; it may have the strength to hatch, but not the vitality to live or thrive. The trouble is in the egg. We have proved that heavy egg laying is transmitted by the hen that laid the egg and the male that fertilized it through the egg to the pullet. It is just as certain that the ability to hatch well and to live well after being hatched is transmitted in the same way through the egg from the sire and dam of the chick. So that the germ in the egg from which the chick grows may produce a weak chick that will not live, or, if it lives, will grow up without the vigor to produce well or to reproduce well. This lack of vigor is not always apparent in the breeding fowls; they may look all right, but they may not have the vigor to produce chicks that have the vigor to live and grow well and produce well.

These are the foundation problems back of the successful hatching and rearing of chicks. When the eggs do not hatch and the chicks do not live the trouble is to diagnose the case properly. It may be the fault of the incubators or the sitting hens or the breeding stock or the brooders or the feed. The poultryman is a wise man if he can properly diagnose the trouble. It is easier sometimes to state the problem than find a solution.

I want to discuss in this article the first part of the problem, that of the breeding stock. We must have good vigorous breeding stock or the incubation and brooding will be unsatisfactory. It is a question largely of vigor. The hen and male inherit vigor; there is no question about that. Weak parents will produce weak offspring. The breeding stock may sometimes exhibit signs of weakness and yet produce good chicks. Appearances are deceptive. The parents may be from a long line of ancestors with strong constitution that will influence to a great extent the vigor of the chicks. The problem here is to select breeding stock on the basis of vigor shown in the ability to lay strong fertile eggs that produce strong, physically fit chicks. By the use of the trapnests and pedigreeing the chicks the breeder can get a line on the individuals that are good reproducers of strong chicks as well as good producers of eggs. There is probably as much difference in the ability of the hen to produce vigorous chicks as in her ability to produce many eggs. So that the expert breeder will breed for vigor as well as heavy production, and the best test of vigor in breeding stock is the fertility test of the eggs and the livability of the chicks.

Another thing that affects the vigor of the breeding stock is what is popularly called environment. In that is included feeding, housing, range, etc. The feed and method of feeding have a great deal to do with the hatchability of the eggs and the vigor of the chicks. Careful attention should therefore be paid to feed. It is better, how much better is not known, that the breeding stock be in their second year or older. A hen is not fully mature until she has finished a year of laying and passed through a molt. Pullets that lay a good egg, however, and are about a year old may, and often are used successfully for breeding. The breeder often has to choose the lesser evil. A pullet of good breeding, or, for example, from a good laying strain, would better be used than a year-old hen that is not a good layer. Other things being equal, it is better to use year-old or two-year-old stock for breeders.

There should be a variety ration and it should be fed in such a way as to induce the hen to exercise as much as possible. A hen that gets little or no exercise and is heavily fed is invariably a poor breeder. They should not be fed too heavily on mashes, especially wet mashes for they will eat so much and take so little exercise that they will lay on so much fat as to render them unfit for breeding. The breeding

(Continued on page forty-two.)

# Win the War by Preparing the Land, Sowing the Seed and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone, for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

**U. S. Employment Service, Dept. of Labor**

In answering advertisements don't fail to mention this paper.

EXPERIENCE has taught agriculturists to trust standard products. A name and a brand, backed for years by good service of the goods and good faith of the maker, mean security in purchase and security in service. They safeguard against deceitful appearances.

Appearances were never more deceiving than in tires. Your surety in tires is the name and brand of Goodrich; for Goodrich, the oldest and largest rubber factory, has meant the *best* in rubber since the harvest days of the old "Buffalo Pitts" thresher.

Goodrich tires mean to-day all Goodrich rubber has ever meant. The farmer can put his trust in Goodrich whether he is buying tires for his automobile, large or small, tires for his trucks, or motor cycle, or bicycle tires. He gets the sure service of—

# Home Owning Gives Opportunity to Make Life Worth While

By PROF. P. G. HOLDEN

AMERICA has marvelous wealth. It is rich in fertile soil; in its mines; in its water power; in its forests. But, above all, America is rich in people—rich in workers on the farm and in the factory. Its largest single industry, however, is agriculture. One-third of the toilers of America are farmers; more than one-half of the people of this country live under rural conditions. The farm home has been an important factor in American history. It has been the nursery of great men and noble women. It should belong to the one who tills the soil.

The American home began when the first Indian pitched his tepee on the western continent. Its evolution has been marked by the characteristics of the people of the various ages.

The home of the pioneer was built, not as he should have preferred to have it, but as the necessities of the time required. He lived alone and placed his cabin without regard to social experience. He lived a lonely and independent life, but the beginning of the family group dated from his advent.

The pioneers established the farm home in America, and the land farmer, who followed him brought it to a high state of perfection.

The land farmer lived in a time of plenty. He reaped the first values of a virgin land. He developed personality. He perfected the family group. He built a homestead representing his idea of domestic and family comfort. He built for permanence and established the classic period of American life. The typical American home as it lives in sentiment, in literature, in idealism, was the home of the land farmer. He considered his estate as belonging to his family group, but had no idea of community prosperity.

Realizing that the home owner is the community builder, the people of every community, whether of town or country, sheuld adopt some cooperative plan which would tend to convert the tenant into the home owner.

But much depends upon the individual. Buying a house and lot or a farm is more of a philosophical conclusion than a physical or financial transaction. He who is afraid to own his own home may be a good citizen, but the best citizen is he who has the courage to own property; to pay taxes on it; to build it up and improve it; to help support the community; to be useful to himself, his children and the world. Such a man embraces the opportunity which home owning affords—the privilege and duty of merging the struggle for life into the struggle for life of others. This takes the sting from the toil for existence. It makes life worth while.

The money invested in a home is securely invested. It is not subject to the accidents and misfortunes common to capital invested in trade or manufacture. Money used for the purpose and improvement of a home is as well secured as the nature of human affairs will permit.

The beauty of the country, suburban or small-town home, the pleasures and tranquillity which it guarantees and the independence which it affords are not provided for by any other form of investment.

A community of home owners is a community of good schools and churches, of excellent social conditions, of high moral environment, of beautiful homes and general prosperity.

**Here is the one investment that can always be depended upon—the home. The home owner is the one safe asset upon which the country can rely, and the nation that can boast a large percentage of its citizens owners of their own homes is inevitably the stable nation. When a family own the house in which they live there is a personal interest that tenancy does not breed.**

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How It Feels to be Operated On—The Doctor's Own Story

Dr. Hirshberg.

"Doctor, heal thyself," and "a dose of his own medicine" stand out with more amazement than ever in my consciousness these days. For the first time since "childhood's happy hour," it has fallen to my lot to require an operation, to call upon a great surgeon, Professor Thomas Cullen, and be operated upon.

As a patient, my situation was not such an unhappy one, after all. I have ordered operations for so many others, and have heard so much wailing and gnashing of teeth, hesitation and fear, excitement and worry therefor that I was really keen to be operated upon for other reasons than the necessity of the knife.

What indeed was my astonishment to find the whole thing, including the various days in the hospital, the usual exaggerations of those possessed by the native human tendency to pose in true camouflage colors, as a martyr to be petted or pited.

Sunday night I telephoned the surgeon my diagnosis on myself. Said Dr. Cullen:

"All right. Go to the infirmary—a certain hospital—tomorrow, and I'll operate on you early Tuesday morning."

"Do you wish to examine me?"

"No. You've made the examination. That's enough."

Mrs. Hirshberg was then told, and became shocked and frightened. I reassured her as best I could, An operation even of the most serious nature nowadays, if not done by half-baked surgeons, is usually as safe as a "cold" and safer than the measles.

The day before I entered the hospital I wisely decided almost to starve myself, as well as to take a half-bottle of citrate of magnesia as in internal flush and cleanser. These precautions made the hour or more under gas and ether a pleasant and safe experience.

Monday evening I was in the hospital with a light heart and a lighter stomach. A good night's sleep until 5:30 a. m., when the house physician gave me an enema, made me feel as fit as a fiddle. At 6:30 a. m. another enema was tried, but the fast and the magnesia made it valueless.

### Under the Ether.

Then a hot tub bath, and the reply, "No, I have no false teeth," started me on the road to several new experiences. For the first time in my life I sat in a rolling chair. But I wasn't permitted to show my variegated Turkish bath robe and Sioux slippers to the pretty nurses who lined the corridors.

In the ether room my much perturbed and sleepless better-half awaited my humorous greeting with a wan smile.

Laughingly, I mounted the ether table, shook hands with the anesthetist, Dr. Griffith Davis, who asked:

"Ready?"

I said, "Shoot."

Then the various surprises, nearly all at variance with the tales of patients operated on, began.

I took two ordinary breaths, just as I breathe regularly after I say my prayers at night—I did not say my nightly or any prayer for ether—and I was in the Land of Nod, or rather the land of Ann S. Thesia.

Really, I knew nothing whatsoever for an hour and a half. Then I awoke in a hospital bed with Mrs. Hirshberg and several other beautiful nurses smiling at me.

My first words were: "Isn't ether a winderful thing? A giant operation has been performed and I feel well enough to get up."

There was no sick stomach, no nausea, no vomiting, no headache, nothing unusual, except pain in the wound. But man is made to stand pain, and this pain was no greater than that which accompanied the trouble before the operation.

### Not a Martyr.

Moreover, it could have been eased with hypodermics of codeine, but I requested rather to suffer some pain for a few days while the wound healed and the stitches came out.

For perhaps 10 minutes, as I awakened from the magic sleep of ether, incoherent, and rambling talk burst forth from my throat. It appears that I kept them all full of laughter and laughed myself like a Leon Errol jag.

However this may be, the very fact that I have never touched liquor or alcohol in any form in my life, made this ether jag—ether is close kin to alcohol—simple and quickly over with.

Patients by the score rave talked and made a fuss of the pains, agony and suffering, which are claimed to be associated with this and similar operations. The whole novel experience was in the nature of a holiday to me.

If the surgeon is well selected, if you are able to deny yourself a few things a day or so ahead of the planned operation, if you take the whole matter as a simple, unimportant affair, if you have the will to make the pleasant best of almost any situation which life and the world bring to you, perhaps the worst and most serious operation will be made an enjoyable event, to be like a political party's assertion, "pointed to with pride," not an enfeebling, absurd, pseudo martyrdom.

## The Wheat Price

### May Be Too Low, but It Is Fair

While we still think that a higher Chicago basic than $2.20 for wheat would have brought better results from a national and allied viewpoint, the government will find a ready and loyal acquiescence from the grain growers of Washington, Oregon, Idaho and Montana. With $2.20 as the Chicago basic, and a government price of $2.28 at New York, the prices fixed for the Pacific northwest markets are fair, and fair and equal treatment is all that our farmers have ever demanded.

E. T. Coman of Spokane, member of the delegation that went to Washington to urge just prices for this region, explains the adjustment briefly and clearly as follows:

"Under the price plan announced, the New York price is $2.28. The freight rate from Portland to New York has been fixed by the shipping board on the basis of $3.50 a ton or 10 cents a bushel. The Spokane rate to Portland is 10 cents a bushel, which is also the rate from the average interior point to Portland. The average interior price then, including Spokane, will be the New York price of $2.28, less 10 cents freight to Portland, less 10 cents freight Portland to New York, or $2.08.

"This will yield the northwestern wheat grower 10 to 15 cents a bushel more than he received for his wheat in 1917. The average 1917 price in the interior was $1.95. Because of abnormal crop conditions, many farmers got as low as $1.75 and the average probably was around $1.80 a bushel.

"Some of the Oregon counties will enjoy a price even higher than $2.08 a bushel this year because of their closer proximity to Portland. Mr. Hoover is standing squarely by his original promise to the delegation."

It is evident that this settlement of the question is final for 1918. Several bills for a higher basic price than $2.20 are still pending in congress, but there is no likelihood that any of them will be passed. Producers should now go forward with their plans for increased production, and the quick decision by the government will prove helpful.

For that quick and just settlement the Pacific northwest is under obligation to Mr. Hoover. He saw at a glance the reasonableness of our case for equal treatment with other regions and promptly threw the weight of his powerful influence in support of it.

Credit is also due Chairman Edward N. Hurley of the shipping board for his friendly and just aid in fixing an ocean freight rate from the northwest to New York of $3.50 a ton. That was the key to the problem.

The Farmer realized months ago the importance of ships in this connection and repeatedly urged a large program of Pacific coast ship-building. Proof of the soundness of that judgment is now visible in the better prices our farmers will receive for their 1918 wheat crop. While the Chicago basic is no higher than last year, our growers will net from $6,000,000 to $9,000,000 more for the 1918 crop than they would have received on the basis of last year's northwestern markets. If ships had not been available to move the crop to the higher New York market, they would have had to sell their wheat on the Chicago basic, less the 30 cent freight rate from this region to Chicago. Shipping facilities give them these added millions.

## English Crop Conditions.

In its January report on the condition of the crops in England and Wales the board of agriculture says:

The crop reporters of the board, in reporting on the crops and agricultural condition on January 1 state that December proved on the whole very favorable for field work. Nearly four-fifths of the area intended for wheat have already been sown whereas at the corresponding date last year only two-thirds of the wheat area had been got in; and the total area actually under wheat at the end of 1917 was fully 15 per cent greater than a year ago. The young crop everywhere looks promising, although that sown late has received some check from the frosts. Of other autumn-sown crops, the area under barley and oats is about the same as at this time last year, that under rye a little greater and the bean area smaller. All these autumn crops are generally satisfactory.

## Silos in New South Wales.

Recently the New South Wales government department of agriculture announced that funds would be provided for assisting farmers in the erection of silos and numerous inquiries have been received, especially from dairy farmers. Many of the applicants have signified their willingness to pay much larger deposits than was anticipated. Owing to the abundance of rainfall in many districts silos will greatly benefit dairy farmers by enabling them to conserve the fodder harvested druing the rainy season.

## See About That Grain Tank.

The grain tank question is an important one to the wheat farmer at this time, and the slogan, "Order early," holds good this year as it did last. Farmers should make close calculation right now as to their needs and place their orders, for it is evident that if a large proportion of orders are bunched together late in the season it may be difficult to either get the bins or get transportation for them.

# Corriedale Sheep Points

Corriedale sheep are booming in Australia, and shipments are being made from there to this country. In appearance the Corriedale at once gives the impression of a heavy sheep of remarkably hardy constitution—the rams of rare character and bold outlook. The Corriedale being a dual-purpose sheep, in judging equal regard should be given to wool and carcass, says the London Live Stock Journal.

In comparison with the size of the carcass, the head of the Corriedale is on the small side, though that of the ram of masculine appearance—wide open nostrils. A wedged or peaky nose most undesirable; dark nose preferable, denoting a hardy constitution. Black spots on face or ears allowable, but brown spots on any part of animal is considered a defect. A good top-knot of wool, but clean open face preferred, though not too bare—wool blindness being a drawback.

The breed has no horns or sign of horns. The neck is broad and particularly strong, with a good scrag.

Shoulders are wide and deep; great width between the shoulder blades.

Brisket is deep and broad, assisting to give the sheep a very square appearance.

The back is long, level and very broad—a wonderful saddle of mutton—ribs deep and particularly well sprung.

The thighs well apart and deep, giving a wonderfully large and well-shaped leg of mutton.

Legs are of moderate length and good bone, set straight and well apart. Cow or sickle hocks condemned. Good, hard, well-formed feet, dark in color preferred.

The Corriedale being the great dual-purpose sheep, must carry a heavy, even fleece of good length, dense staple and pronounced crimp or character, with an even tip. There must be no body wrinkles. Spinning quality: The object quality is a long-stapled, bulky dense 56's, but, of course, climatic conditions largely govern the quality and condition of the fleece. A peculiarity of the pure Corriedale sheep is the remarkable evenness in the length, density and quality of the fleece throughout.

This feature must be rigidly protected—straight-fibered, coarse, hairy wool on any part of the fleece being most undesirable. In the males the purse should be covered with wool, not too coarse or hairy in texture.

Stud Corriedale rams should cut from 15 to 25 pounds of wool, according to climate and condition, valuable on account of its length, soundness, character freedom from fault or excess of yolk—Corriedale wool giving a very high yield of clean scoured wool.

Stud ewes should cut from 12 to 20 pounds, similar to above, but of slightly finer quality.

Some breeders encourage wool to the toes, and a very woolly head, but wool blindness or a tendency to same must be considered a drawback.

# There's a Difference

## Plant by Hand or by Machinery?

**By Ray W. Felton.**

Lou S. Smith, assistant agriculturist for the O.-W. R. & N. company was called upon the other day to tell what he knew about the teachings of his father, the veteran agriculturist of that company. It happened at one of the sessions of the Clarke county (Wash.) farmers' institute. Potato planting was the subject under discussion. D. F. Morrow of Vancouver said he had planted an acre according to the directions of "Farmer" Smith, with the "eyes up" and with each piece of seed firmly pressed into the bed. He did all the work by hand and just as carefully as "Farmer" Smith could have done it himself, Mr. Morrow asserted. He then planted another acre with one of the common makes of potato planters in use and found at harvest time that he realized equally as good results from the acre planted with the mechanical planter as he did from the acre planted by hand and with the seed sown "eyes up."

"'Farmer' Smith Jr. is here. Let's see what he has to say for his father," remarked H. W. Sparks, smiling.

Mr. Smith declared the system recommended by his father was absolutely sound and practicable.

"If I had no other proof of it than the fact that he advocates it I would insist on its reliability," he said, as his eyes twinkled. "The longer we stay in the business of farming the more often do we find that two men can do the same thing in what appears to be absolutely the same way and yet each will experience results different from the other one."

## Best Persian Camels.

The best Persian camels are the powerful one-humped kind, which are bred in the province of Khorassan. This animal can carry a burden of 600 pounds at the rate of 20 miles a day. The ordinary Persian camel, however, will carry 400 pounds at the rate of 15 miles a day.

## Lumber in New Zealand.

Most of the better furniture and industrial lumber used in New Zealand is imported, such as oak, ash, hickory, etc., and comes largely from the United States, united kingdom and Japan.

### Carbolic Acid Factory.

The Japanese government has established a factory for the production of carbolic acid from coal tar.

# The Tomato

## Queen of the Vegetable World

The tomato is the Cinderella of the vegetable kingdom. Like Cinderella, its virtues were long unknown; its proud sisters of the garden looked on it with contempt. Then a prince came along one day and sought it out for favor and esteem, and now it is the queen of the vegetable world.

Elderly people can recall a time when the tomato was grown for ornamental display, and many of us remember our grandmothers saying that when they were little girls the tomato was called the "love apple" and people thought it poisonous.

People got over that notion long ago. More tomatoes were canned in 1917 than all other vegetables combined. A tabulation just compiled by the national food administration and the National Canners' association shows that more than 15,000,000 cases of tomatoes were packed last year—360,000,000 cans.

Maryland led, with a pack of 5,993,239 cases, enough to supply every person in the United States and France with a can. California came second, with 2,603,019 cases. Delaware was third, with 1,380,805, and the two Virginias fourth, with 1,170,504.

It is interesting to note that from the Andes mountains in South America the world received the two vegetables, hitherto unknown to Europe and Asia, that now surpass in popularity all others—the potato and the tomato.

In canned fruits the peach easily leads, with a total pack last year of nearly 4,000,000 cases. The pineapple was second choice and the apple third.

The complete statistics of vegetables and fruits as published by the national food administration, follow:

**Vegetable Pack for 1917.**

| Commodity. | Cases. | Can size No. |
|---|---|---|
| Hominy | 504,873 | 3 |
| Succotash | 134,002 | 2 |
| Spaghetti | 60,786 | 3 |
| Tomato pulp | 1,023,474 | 10 |
| Beans, green or wax | 1,892,407 | 2 |
| Red kidney | 423,135 | 2 |
| Lima, green dried | 450,807 | 2 |

**A Diplomat.**

Teacher—"Willie, what does the Monroe doctrine mean?"

Willie—"It means to shinny on your own side."—Exchange.

**Must Have Been a Colonel.**

Teacher of Scripture Class—"Yes, children, then Nero ordered his centurion to give the slave 20 stripes—"

Mabel (whose father is in camp)—"Lord, mum, that must a' made 'im a blooming colonel.—New York Herald.

**Mutual Wonder.**

Pussy—Miss Sweetly told me last night that she'd heard a lovely compliment for me. I wonder what it could have been?

Cat—So do I.—Tiger.

**A Real Financier.**

"Now, Johnnie," the teacher queried, "what would you do if you had a goose that laid golden eggs?"

"I'd set her on some of the eggs," replied the youngster, "and hatch out more geese of the same kind."

**Nice Business.**

"I think I'll go into the real estate business."

"Looks good to you, eh?"

"Yes; the real estate business seems to be one in which two men can swap property and both make money."—Louisville Courier-Journal.

**A Clew.**

Jinks—"Have you ever seen a chicken with four legs?"

Binks—"I've never actually seen them! But that must be the variety that is scratching up my garden."—Chicago Daily News.

**Why a Wife?**

"Say, Johnsing," commented Rastus, looking up from his paper, "It says heah dat in Sumatra a man kin buy a wife foh foah dollars."

"Foah dollars!" gasped Johnsing, "Ef a man's got foah dollars he don't need a wife."—Exchange.

**Growing.**

Friend—I understand that your practice is getting larger.

Young Doctor — That's true. My patient has gained nearly 10 pounds in the last few weeks.—Boston Evening Transcript.

**War Yarns.**

"Have you any war yarns?" asked the lady entering the department store.

"Surely, madam," replied the floorwalker.

"In which direction will I find the proper department?"

"Do you want them for reading or knitting, madam?"—Yonkers Statesman.

**Appropriate Title.**

"Edgar?"

"Yes, mother."

"What are you children doing?"

"Playing royalty. I am a Knight of the Garter and Edwin is Saturday."

"That is an odd name for royalty."

"Oh, it is just a nickname on account of his title."

"What is his title?"

"Night of the Bath."—Youngstown Telegram.

**Unnecessary Fears.**

Of course the eloping couple's rollerskate of a car had no chance against the old man's high-powered roadster. He soon came up with them.

"Do not take her back," pleaded the young man with tears in his eyes.

"Take her back?" echoed the stern parent. "Why, I have come to bring her knitting outfit and chewing gum so she would never have an excuse to come back."—Boston Transcript.

**Playing Safe.**

Even the war has its bright side. Two negro porters were discussing it as they waited for a train to pull into the station.

"Man," said the first, "dem Germany submaroons is sho'ly gwine to sink de British navy. Yas, sir'ree, dey's sho'ly gwine to 'splode dem naval boats dat's waitin' out yonda."

"Sho!" said Porter No. 2. "An' what's gwine to happen den?"

"Why, dem Germany submaroons 'll come right on 'cross de ocean an' 'splode de rest of de naval boats ob de world. Dhat's what'll happen den, Sambo!"

"Well, looky heah, George. Aint yo' an' me better decla' ouahselves a couple o' noot-notral-nootralities?"

"Man," said Gawge, "yo all kin be a notrality if yo' wants. Ah'm a German!"

# Trappers of the Ozarks

**The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.**

**By LEWIS B. MILLER**

Copyright, 1914, 1915, by Lewis B. Miller.

## CHAPTER III.

### In the Heart of the Ozarks.

EARLY next morning they were tramping again. And so they kept on, day after day. The country was now much broken, and there was not a little climbing. But the scenery was fine and the weather delightful, and they enjoyed every minute of their journey.

Finally they came to where the Indian trail bent too far to the north. There, with many regrets, they had to abandon it. After that their progress was slower and harder. And it soon grew worse; for they were entering a wilder, more broken country than any they had yet traveled over.

"We must be nearing the Big Niangua," Ben remarked one night, while they were sitting by their campfire in a wild, picturesque mountain glen.

"How far do you think we are from it?"

"That I don't exactly know. When Boucher and I made our trapping trip into this country last winter from our camp on the Piney Fork I tried to notice every conspicuous object. As yet, though, I haven't recognized any landmarks. But of course a wooded country looks very different in winter than the way it looks when the woods are in full leaf."

Next morning, when the time came to start, Spunky was still without saddle or pack, and still grazing at the end of his lariat. But Ben, leaving Jodo to look after the camp, shouldered his gun and set off over the hills alone. And it was noon when he returned.

"Yes, I found the Big Niangua," he reported. 'I didn't visit the place where I'm expecting our camp to be, but I was at the mouth of the same creek about two miles below."

"No end of creeks in this country. Sure you found the right one?"

"Very sure. I found some trees that I'd blazed when my Frenchman and I were here. And I even found one that I'd whittled my initials on."

"That ought to be reliable evidence."

"It's rather farther away than I thought it was when I started out this morning. But we can get

**It is doubtful if any other human beings, even the red men of the wilderness themselves, had ever ventured to sail the underground sea of the Ozarks until Ben and Jodo ventured to navigate it. The younger lad made no effort to conceal the nervousness which he felt as they paddled the canoe rod after rod into the dark cavern, not knowing at what moment their craft might strike a snag and they and their dogs and guns be plunged into the icy waters far from daylight and where no outside help would be possible.**

there by camping time, I'm pretty sure. We shall have to be cautious, though, or Spunky and his pack will go rolling and tumbling down some of those steep hillsides. Instead of urging him on now you may have to grab a tail hold and pull back."

"Not any tail holds on Spunky for Jodo Henderson, thank you! If there's back-pulling to do I'll fasten the lariat to his breech strap or his tail."

They did not have to use any such device; but they did have to pick their way carefully as they went down several steep hillsides. One of Spunky's not too numerous good traits was his sure-footedness. He could scramble up and slide down steep places where most horses would have gone rolling.

At length, when the sun was only an hour or two high, the travelers stood at the foot of a steep, wooded hill and on the bank of a clear, picturesque river.

"Yes, this is that stream you've been hearing so much about—this is the Big Niangua," Ben informed his younger companion.

After gazing at the scenery for a few minutes they followed the bank downstream till they came to where a good-sized creek joined the river. There they turned and traveled up the creek.

This smaller stream flowed between two rows of limestone cliffs. One row made the north bank of the creek and the other rose not far back from the south bank. It was along the foot of this latter cliff that the travelers were making their way.

Two miles up the creek they came to where the cliff bent back from the north bank, leaving a little semicircular valley about four hundred yards wide at the widest part between the cliff and the creek. The creek's own banks were so steep and there was so much water that the travelers made no attempt to cross here. They followed up the south bank until above the valley, then forded the creek and went down between the cliff and the north bank. Here there was barely room for them to pass. And in that narrow space ran a well-beaten game path.

As the travelers came to where they could look into the valley several elks took to flight and soon disappeared in the woods along the creek at the far side. The animals had been drinking at a little spring that issued from the foot of the cliff.

Ben pointed. "That's the salt spring—the spring we brought our pots for," he informed Jodo.

The sun had already set, and they did not stop, but moved on across the valley to the west side. About midway of the valley they came to a good-sized running stream, which, they could see, issued from a big-mouthed cave under the cliff. But that was farther over to the east. After crossing the stream Ben and Jodo proceeded up the west bank and stopped under an overhanging cliff not far from the big cave. Ben began to unfasten the girths of the pack-saddle.

"Well, this is the place at last—the place where we're to spend the winter," he remarked.

"It's certainly a picturesque, well-sheltered spot," answered Jodo, with a glance upward and around at the great frowning cliffs more than a hundred feet tall, which shut in the valley.

After Spunky's pack had been laid off Jodo proceeded to kindle a fire, while Ben led the mule out in the valley and tethered him to a bush. With the exception of some timber along the creek bank and a few trees scattered up and down the cave stream the whole valley was meadow, and thickly covered with green grass a yard deep. The mule fell to grazing greedily.

Returning to the camp under the cliff, Ben unpacked their things, and the two set about preparing supper. And scarcely was the cooking started when they began to hear a faint roar.

At first the noise sounded far away; but it seemed to be coming nearer. Both listened intently, but failed to make out what it was or where it came from. The dogs heard it, and seemed as much puzzled as were their masters. Tinker barked and Bose kept listening and gazing around.

The roar was growing louder, and presently all could make out that it came from far back in the big cave.

That discovery only increased the mystery. Ben and Jodo stood staring into the blackness of the cave's mouth. Neither of them had ever heard such a strange noise before.

## CHAPTER IV.

### The Cabin Under the Cliff.

"What under the sun can it be?" Jodo finally burst out. Both he and Ben had instinctively caught up their rifles. Ben did not answer, but approached a few yards nearer the big cavern. Tinker ran into the cave a short distance and barked loudly. Soon the explanation appeared.

Forth from the mouth of the cave fluttered a great swarm of dark-winged things, which promptly scattered and set all the air in motion round about.

"Bats," cried Jodo, in no small relief at finding the explanation so simple. "But did anybody ever see such a swarm?"

"I certainly never did. But we shall be likely to see many times as many pretty soon, I'm guessing."

And they did. Bats kept swarming out of the big-mouthed cavern like bees swarming out of a hive, till it seemed that millions of them must have flown out. The dogs barked at them, especially Tinker; and the two young men stood and watched them till the roar began to die away and the dark, fluttering cloud to grow thinner.

"Don't you s'pose we'd better move our camp?" Jodo finally inquired.

"No necessity of that, unless you object to the noise. And the noise will soon cease. So far as human beings are concerned, there's nothing more harmless than a bat."

The young travelers were glad to be at their long journey's end. Naturally they could not help feeling a little lonely, away out here so far from home and civilization and in the very heart of the wilds. They were also well aware that they were now in more or less danger from Indians, and would be as long as they remained here.

"So this little cove is to be our headquarters for the winter, eh?" Jodo remarked, while they were eating their supper.

"So far as I know, yes. That is, if the Osages don't discover us and make this place too hot."

When the time came to make their bed the two went out from under the cliff and cut some grass—they had a reap-hook in their pack—to put under their blankets. The hard ground under the cliff was not the most comfortable to sleep on. And they preferred not to get out of the cliff's shelter, because there were indications of rain.

Some rain fell late in the night; and after that the sky cleared, the wind shifted to the north and the weather became almost cold. More than once during the later hours of the night either Ben or Jodo had to get up and put more wood on the fire. For bedding they had but two blankets apiece. Additional bedding would have to be provided for winter weather.

Weary though the travelers were from their nearly two weeks' tramp, they were up before daylight next morning and were eating their breakfast while day was breaking. And scarcely had the morning begun to brighten when a whirring and fluttering of wings set up again, and all those swarms of bats—all that the cold had not yet driven to shelter—began to make

**When the young hunters approached the mouth of the great cave at the foot of the mountain they saw more winged creatures than they had supposed the whole earth contained. Thousands of them, millions of them, in fact, were fluttering out for their night's work and the roar of their wings echoed and re-echoed away into the heart of the mountainous cavern, adding to the chills which the young fellows felt chasing each other up and down their spines. Had they not known that the bats, which the creatures proved to be, were totally harmless, they would have been frightened indeed.**

their way back into the cave. The partners watched them with much interest.

Breakfast over and broad daylight at hand, the two walked around a little. First they watered Spunky and moved him to fresh grass. Then, crossing the Cave branch, as they called the little stream that flowed across the valley, they went on to the salt spring at the east edge of the valley. They found it trickling out of a crevice in the cliff at a point where the cliff approached the creek. It was only a tiny stream, and ran not far before disappearing into the ground.

"Where shall we locate our salt camp? If we run fires over here they'll scare all the game away from this lick."

"We had better do our boiling at our own campfire, I'm thinking. And when we set up some kind of winter quarters we'd better arrange to have our pots inside. It'll be some work to carry the salt water there. But pots boil more easily indoors in cold weather, and it'll save fuel and save work in the end."

"Then we shall have to lug the pots over here every time we want to fill them. We can't carry the salt water in our little camp pot."

"As to that part, I think we'd better dig out a trough—a trough that will hold just about as much salt water as we can carry. That spring is higher than the ground down here. We can make a spout and spout the water right into our trough. Then we'll pick up the trough, carry it over to camp and fill our pots."

"When shall we do that?"

"The sooner the better. We might dig a hole now to teach water till we can make a trough. We shall have to bring our pots over here to fill them for the present."

Jodo agreed, and they went to work at once. Ben said:

"Instead of dulling our tommy-hatchets in this gravelly ground, let's make us some wooden paddles to dig with."

That was what they did. And when their hole in the ground was large enough they went and brought their pots over, and also their tincup to dip with. Having filled one pot with the brine, they carried it back and set it on their campfire to boil. Then they returned for the other pot and soon had it on the same fire.

"Behold!" exclaimed Jodo. "The Armstrong and Henderson saltworks are already in operation!"

"The Armstrong and Henderson saltworks don't show up very well. But I believe they'll boil us down some money if we keep them cooking till spring."

A little while later, with their ax and an adz they had brought for digging out their canoes, they went up the creek till they found a big, suitable tree. That they cut down, and then they chopped off its top. From the smaller end they chopped off a piece four or five feet long on which they promptly fell to work with ax and adze and tomahawks. Both had done similar work before. In a comparatively short time they had hollowed out the piece of log till they had something similar to a box, with two short handles at each end to carry it by.

Next they cut down a small tree, split it open, and with their adze and tomahawks hollowed half of it into a long spout.

"The rest of our log will make a good canoe to ship our salt to market in," Jodo observed, as, with their trough and spout, they were starting back to their cliff-walled valley. "And when shall be begin to dig it out?"

"The first minute we can get a little time. The log will be easier digging while it's green. And we might need a canoe for some purpose—to cross the river if for nothing else."

On coming to the spring they fixed one end of their spout under the place where the water came out. The other end they rested in a fork. Now they put the trough under the spout's lower end, to catch the water.

"So far so good!" exclaimed Ben. "We've got no end of things to do here, but we must keep our salt-boiling under way every minute. Now for something else!"

"What first? Shall we put up some kind of shelter to live in? Or shall we set our traps?"

"The shelter first, by all means. Our trapping can wait as well as not—better than not. All furs will be sorry till cold weather makes them good. It's wasting valuable animals to trap them now."

"What kind of a shelter shall we make? A half-faced lean-to?"

Ben shook his head. "A lazy man's makeshift, that. I don't know anything better than an ordinary log cabin."

"How covered?"

"Well, I had thought of covering it with grass. That's one reason we brought that reaphook with us. But grass makes a sorry roof at the best. Too much danger of fire. We should never go away from home without half expecting to find our house in ashes when we came back; and we could never fall asleep without some fear of being waked by fire raining on us."

"Then what's to be done? Could we cave?"

"Caves do well enough for bats, but they make sorry dwelling places for human beings. The parts of them that are light and dry are always cold in cold weather. That is, if they have any such parts. And farther back they're damp and dark and chilly. This big cave here, with a stream flowing out of its mouth, is bound to be very damp. And you have to camp right at the cave's mouth so as to have your fire inside. Otherwise you'll fill the cave with smoke."

"Then how are we to live? In an outdoor camp, with the cliff to shed off the rain and snow?"

"No. Too hard to keep warm in an open-air cabin. My present plan is to build us a cabin under the cliff somewhere to the west yonder, where the cliff overhangs farther. It's just the right height, and the rock will make a fireproof, water-tight roof."

Three days were now spent in putting up their cabin. They had been careful to cut slim logs, so that two could lay them up in the wall. They notched deeply, so as to fit the logs closely together. In the outer end of the cabin they left a large opening for a fireplace, and a small opening in the same end, and rather higher up, for a window. The opening for the door was at one side of the cabin, and well back under the cliff. The cabin had, of necessity, been placed with its outer end almost even with the outer wall of the cliff, so that their chimney could start the smoke up the face of the cliff.

When the cabin had been completed, the two workers agreed that they were as comfortable as trappers in a wilderness could reasonably expect to be. So, the weather being still not cold enough to make furs valuable, they pushed their salt-making, and at the same time turned their attention to other matters. Important among these was the laying in of a winter's supply of meat.

Also, knowing that there was constant danger, they were all the time keeping a cautious lookout for Indians.

## CHAPTER V.

### Sailing an Underground Sea.

Game was plentiful in all the surrounding country, as well as very fat, and providing a winter's supply of meat was no big undertaking. To get as great a variety as possible, the young hunters killed several deer, two elk and a half-grown bear. Usually Spunky was taken along when they went hunting, to carry the meat back to camp, as they called their cabin under the cliff. There, after being salted, it was hung up on sticks in a back corner. They soon got the idea of taking home with them a few hundred pounds of cured meat, to sell.

"One thing we must do, and that very soon," Ben told Jodo one day. "We must either turn little Spunky loose and start him home while the grass is still good, or we must decide to keep him here all winter, and till grass starts up in the spring. Mean as the little rascal is, we can't turn him out to starve. And if we're to keep him here all winter, we must cut a lot of hay—enough to feed him during cold weather."

Their haymaking began next morning. Having only a reap-hook to cut with their task proved not a very easy or a very rapid one. But the grass was thick and waist deep all over the valley. And as it grew close up to the cliff, they had not far to carry it. In a few days a good-sized mound of cured hay was piled back under the cliff, and fenced around with poles and brush. The fence was to keep Spunky from eating it before the time.

The mule was kept at the end of his hair lariat at night, but in daylight he was hobbled and belled and turned loose to graze where he would. He seemed to like the valley here, with its abundance of grass, water and salt, and its great cliff to shelter him when bad weather came. Indeed, he showed himself so well satisfied that, later, he was allowed to run loose both day and night, with only his bell on.

Though their trapping had not yet begun, the two young men were always busy at something. Their haymaking finished, they went to work on their big log, first shaping it and then hollowing it out. When completed it was a light and well formed canoe. After using it for carrying purposes, they expected to be able to dispose of it at a fair price in St. Louis. They slid it into the creek, and then brought it down stream to the point nearest their cabin. There they concealed it under the creek bank, and under some overhanging brush and vines.

By this time rather cold weather had set, in, and the two young fellows lost no time in putting out their traps. They had only a few steeltraps, and those they set out up and down the creek. But Ben knew how to make deadfalls, and they soon had a large number of them scattered over the surrounding country. Both liked those better than steeltraps for most animals, because they killed the game outright instead of merely seizing it and holding it.

After two weeks of trapping, they had the outer walls of their cabin almost covered with 'coon skins, mink skins, otter skins and beaver skins, all stretched and tacked up there to dry.

In addition to their fur catching and their salt boiling, they were also saving their venison hams and the best parts of their other game. There was a fair market for wild meat in St. Louis. And both disliked the idea of slaying animals for their skins and then letting the flesh go to waste.

"We can add $50 to our winter's profits by saving the best pieces of our game," Ben told his partner.

"If we can, let's," answered Jodo.

The Cave of the Bats, as they had named the big cave with a stream issuing from its mouth, had from the first been an object of curiosity to the trappers. But both had been so busy that they had never ventured more than 50 or 75 yards into it—as far as daylight shone in. However, they fully expected to explore it further, some time when they were not so busy. One day, while out hunting, they came upon a rotten pine log and carried nearly a dozen of the knots to camp. Pine knots seem never to rot.

"Now we can explore our cave whenever we feel like it," Jodo remarked, as they threw down the knots by the cabin door.

"I have some curiosity to know what's in there besides bats, and how big and how long the hole is.'

"So have I, Benoni. And why not take a little peep in there tonight?"

"After supper tonight will suit me as well as any time."

Having tacked up the day's catch of furs against the outer wall, and carried over a trough full of salt water to fill their pots, they cooked their supper and ate it. A little later they were ready for their exploring trip. Not knowing what wild animals might have dens in the cave, they took all their weapons, and allowed the dogs to follow.

The stream that flowed out of the cave's mouth was perhaps a foot deep at the deepest part. But it had worn itself a channel, and there was plenty of room to walk in at one side without stepping in the water—a few yards of room, in fact. And the dry space widened as the explorers advanced. For the cave began to enlarge a hundred yards back from its mouth. Soon, as they held aloft their blazzing torches, the roof seemed 30 or 40 feet above their heads; and the walls had widened accordingly.

Many of the bats were now out; for the weather had grown rather mild again. But there were still thousands of them in the cave, clinging to the limestone roof. Disturbed by the torches, great flocks of them could be seen fluttering about overhead.

The first thing noticed by the explorers was a very perceptible and almost chilly breeze blowing out of the cave. It was strong enough to fan their torches. Also, there was a dull but very distinct roar inside. The stream, flowing over its rocky bed, made some noise, which the confinement of the walls magnified many times.

The two explorers advanced cautiously, not knowing at what minute they might happen upon a bear or a panther. Each carried his rifle in one hand and a blazing pine-knot in the other. The dogs, plainly somewhat bewildered, kept near their masters, looking and sniffing the air, but seemingly in doubt as to what to make of such strange surroundings.

After following along the edge of the stream for 200 or 300 yards, the two explorers came to where they could advance no farther. The whole floor of the cave was covered with water from black wall to black wall.

"An underground sea!" exclaimed Jodo, as they held their torches high to gaze as far as they could into the dark, watery cavern beyond.

Soon the little exploring party turned and made their way slowly back to the cave's mouth, gazing about them curiously as they went.

During the next few days, as they busied themselves with visiting their traps and deadfalls, boiling down salt water and hunting, they talked much of the big cave and its strange, underground lake. Finally they decided to make an effort to get their canoe into the cave.

After paddling the canoe up to the mouth of Cave Branch, they fastened a second rope to it. Then, one on either bank, they began to tow the light craft up the smaller stream. The water was deep enough in most places to float the canoe; but a few times they had to drag it over shoals—gravel-beds. But at last they got it to the cave and inside. There they pulled it well up on dry ground and left it. Just now they had more important things on hand than exploring caves—things that must be done in daylight. Their exploring would have to be done, and could just as well be done, after dark.

"There's one thing we must keep an eye out for while this wild weather lasts," Ben remarked, after they had returned to their cabin. "That's a bee-tree. I'm very fond of sweets, and especially of honey; and I'd like a good supply for the winter. We ought to be able to find a tree or two."

Next morning the two visited their traps early, then came back and busied themselves near camp till noon. After that they ate their dinner, then armed themselves and started out honey-hunting. They tramped as long as they could see, and did not reach their cabin till a good while after dark. No bee-tree had they discovered; but they had noticed a few bees flying about.

The partners did no honey-hunting the next afternoon; nor did they go hunting. They busied themselves with stirring off some salt, and with packing away a number of dry pelts. But after supper they agreed to explore the Cave of the Bats.

So, with rifles and lighted torches, and followed by Bose and Tinker, they entered the big cavern. The canoe was where they had left it. With an auger they had brought, and with their hunting knives and tomahawks, they gouged out in each end a hole large enough and deep enough for a torch to stand in. Then, with the torches in place, they towed the canoe along the shallow, noisy stream till they got it into the lake. They now drew it up to a block of stone, and after putting their guns in, they themselves stepped in.

When both dogs were in the canoe, the young trappers took up a paddle apiece, dropped to their knees, and fell to paddling. Both had had plenty of experience with canoes, and felt very much at home in this one.

On glided the canoe into the blackness, which parted a few yards ahead to let them enter, and shut together a few yards behind.

Sometimes, as the canoe glided through the dark, gloomy water, the walls widened till they appeared to be at least a hundred feet apart, and the arching roof rose till it looked to be 50 or 75 feet high. Jodo took a torch from its socket and, standing erect, held it aloft while they gazed about them.

"Strangest place I ever got into," he soon declared, in awed tones. "Wonder how deep this water is."

Ben thrust down his paddle full length. "Deeper than this paddle's long," he answered.

"Uncanny sort of a place to be in!" Jodo shivered a little, partly at the chill and dampness, and partly at their

(Continued on the following page.)

# "Baby Bonds" Will Down the Kaiser

Whenever a person helps his country he helps himself, but it is not always true that when a man helps himself he is helping his country. This is true, however, when he helps himself to a thrift stamp or a war savings stamp. When he purchases either he is making a gilt-edge investment and at the same time is aiding materially in the conduct of his country's war. It costs nothing to purchase stamps of either variety through this paper. Simply use the coupon herewith, and order some of these little kaiser killers by return mail.

## Clip This Convenient Order Blank

Address all communications concerning thrift or war savings stamps to The Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Remittances may be in any form desired, including personal check.

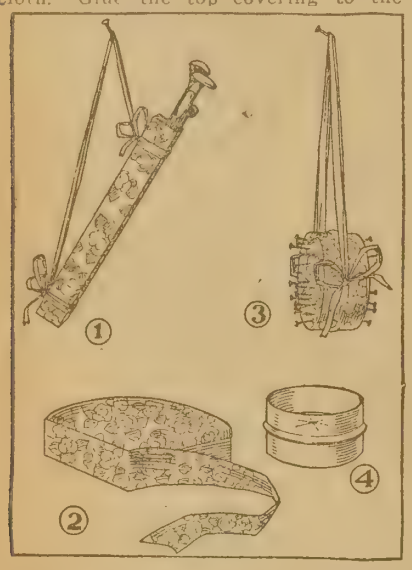
# Handicraft For Girls

By Dorothy Perkins



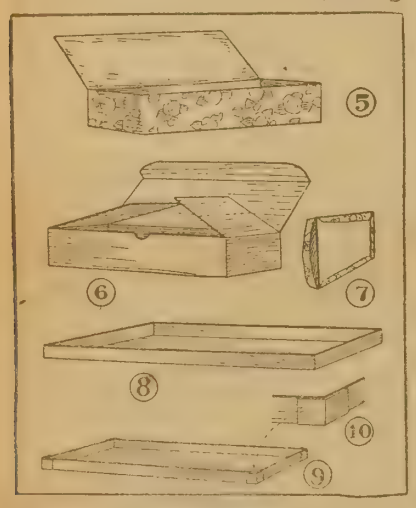
(Copyright by A. Neely Hall.)

## A Dresser Set in Cretonne.

A dresser set of cardboard boxes covered with cretonne of a small pattern, in colors that will harmonize with the furnishings of the bedroom is something every girl will be proud to own. The illustrations show a few of the cretonne covered articles, and you can fashion a handkerchief box and other pieces in the same way.

The hatpin receptacle in Fig. 1 requires a long, slender box such as hatpins are sold in. Sew or glue the cover on the box, cut off the end so the box will be several inches shorter than the hatpins and cover with cretonne, pulling the cloth tight over the sides and closed end, lapping the edges and sewing. Then tie a loop of ribbon near the ends of the holder by which to hang it up.

Figures 2 and 3 show two dainty pincushions. The square one is made of a small box cover, filled with sawdust, with a covering of cheesecloth fastened over the top to hold this filling in, and a second covering of cretonne fastened over the cheesecloth. Glue the top covering to the

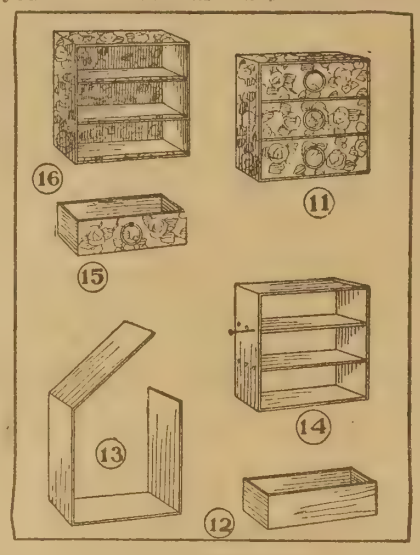


edges of the cover. Finish by sewing a band of cretonne around the edge.

The hanging pincushion (Fig. 3) requires two round pill boxes. Glue these together bottom to bottom, as shown in Fig. 4, then fill one at a time with sawdust, cover and finish by sewing a band of cretonne about the edge of the boxes, and attaching a loop of ribbon to hang it by.

## Glove Box and Brush Tray.

The glove box in Fig. 5 is made of a cracker box of the form shown in Fig. 6. First cut off the end flaps so they will be just long enough to turn down and fasten to the inside of the ends (see dotted lines in Fig. 6), and remove the flap on the lid. Cover the outside of the box and lid with cretonne first; then cut pieces of cardboard to fit the inside, bottom, ends and side; cover these with padding



and then with silk (Fig. 7) and glue in place.

Get the cover to a shoe box for the brush and comb tray shown in Fig. 8. Reenforce the corners with pieces of cardboard folded and glued to them, as shown in Figs. 9 and 10. Then put on the cretonne covering. Cut one piece of the right size to fit the bottom of the cover and lap over the rim and on to the inside, then, after stitching this in place, cut a piece of cardboard to fit the bottom inside, cover it with cretonne (Fig. 7), and glue this covered piece to the inside of the cover. This completes the tray.

## Trinket Chest.

Figure 11 shows a dainty trinket chest with three drawers. After seeing how to construct it you can make yours to contain as many drawers as

you wish. Small cardboard boxes form the drawers (Fig. 12). You can get empty spool boxes at a dry goods store. Pile one upon another and figure out the dimensions for the chest. Then fold a piece of cardboard as shown in Fig. 13 to make a case of the right size, and after bringing the folded ends together, bind them with a strip of paper (Fig. 14). Next cut strips of cardboard for shelves, and fasten these between the ends of the case by running pins through into their ends, as shown in Fig. 14. When the shelves have been adjusted properly, cover the back, ends, top and bottom of the case with cretonne (Fig. 16), also the front of the drawer boxes (Fig. 15), and sew a fancywork ring to the center of the front of each drawer (Fig. 11) by which to open them.

# Trappers of the Ozarks

(Continued from the preceding page.)

strange surroundings. "And just look at that branch cave making off!"

"Yes. I've noticed several of those."

"Do you s'pose there's any danger of our getting lost in one?"

"Not while we've got our lights and keep our heads. People who lose themselves in caves commonly lose their heads first. IIf we did get lost, though, no telling when we could find our way out. But let's paddle on and try to reach the other end of this place."

For a good while they kept advancing, gazing about them in awe and wonder. The blackness and gloom that shut them in, all but one little spot of light, seemed to oppress them. Even the dogs must have felt the gloom, for they could be heard whining shiveringly from time to time.

"How far would you say we've come, Ben?" inquired Jodo at length.

"A mile at least. A mile and a quarter would be my guess."

"That's a long, long way to bury yourself in the earth." The young fellow shivered a little. "What if we upset our canoe and put out our pineknots! Do you think we should ever see daylight again?"

"Hard telling, that, Jodo boy. We should certainly have a time of it. And we should stand a fine chance never to see any kind of a light again. But we mustn't upset our canoe."

"Plenty of canoes have been upset. There's always some risk. Hadn't we better turn round and paddle back?"

"But we haven't finished exploring this subterranean sea. We don't know how long it is."

"What matters it, after all, how long the sea happens to be? And if we found the other end, it would just be something like the end we've already seen. This chilly, soggy, gloomy place gets onto my nerves. I've never made any trips to the center of the earth till now."

"Neither have II. All right! Back we go, whenever you say the word! This is certainly a depressing sort of a place."

"Well, I say the word now, if you leave it to me."

Just then Tinker, resting his paws on the edge of the canoe, pointed his nose straight toward the rock-roof and proceeded to emit a long-drawn-out, dismal howl. When the howl was ended, Jodo reached back and patted him.

"Little dog, 'them's my sentiments'! That's exactly the way this black hole makes me feel. We'll get out of here!"

They did not turn the canoe, but the paddlers merely faced about and began to paddle with the other end first.

"Well, when we go home, we can tell that we've sailed an underground sea," Jodo remarked.

"Yes—or navigated it. That would be a more accurate word, I suppose."

"But we could sail it. Just feel that wind, and watch how it ripples the water! And it's blowing our way too. Lend me your paddle, Benoni. We will sail it yet."

Jodo took off his buckskin coat and knotted one sleeve around the handle of his own paddle, and the other around the handle of Ben's paddle. Then he held the paddles up, one in each hand, with the coat spread between them. The coat caught the breeze, and the light craft was soon moving before the wind. And it sailed still faster after getting under way.

(To be continued.)

## Will Get Fruit Cars.

Announcement has been made that Director General McAdoo, in charge of the railroads for the government, has promised the fruit and potato growers of central Washington that they shall have approximately 60 cars a day delivered to them during the next few weeks for the purpose of shipping their products. Similar action is being taken, it is understood, in regard to the shipping conditions in other states of the northwest. National Food Administrator Hoover is cooperating with northwestern leaders to secure adequate shipping facilities.

### Curved Headstones.

In the old Erie Street cemetery, Cleveland, Ohio, is to be seen an interesting scientific phenomenon which, as yet, has not been explained. Not even the United States geological survey has an explanation to offer. In this cemetery are 55 curved stones, 50 of them curving west and five to the east. These stones are marble and about two inches thick.

# COST OF READING MATTER CUT

*"Cooperation" has been a rallying cry with farmers and farmers' organizations for many years. How to eliminate the middlemen has been the question.*

*The Washington Farmer put the principle of cooperation to a test when the announcement was printed that an effort would be made to dispense with the middleman, or agent, in subscription matters. We said to our friends: "Send your subscription order direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription. Moreover, many men will be released to serve in many lines where needed."*

*If you believe in cooperation---if you believe in eliminating the middleman---help us make our experiment a success. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.*

## High Quality Is Maintained

The low price of your state farm paper does not mean lowered quality. We are endeavoring to give you a better and better publication.

One of the means adopted to improve the paper was finer facilities for printing it. This paper is now printed on a high-speed magazine press with every modern facility and appliance. This press has an hourly capacity for printing, folding and stapling 30,000 twenty-four page papers. Think how this cuts down the time between the occurrence of something important and the hour you hear about it in your state farm paper!

Tell your neighbors how much you like your state farm paper, and at what a low price they can secure it.

**25c** PAYS FOR THE WASHINGTON FARMER FOR ONE YEAR

**50c** PAYS FOR THE WASHINGTON FARMER FOR THREE YEARS

**$1** PAYS FOR THE WASHINGTON FARMER FOR FIVE YEARS

*Your Remittance May Be in Any Form Most Convenient--Silver, Stamps, Personal Check, Postal Money Order, Express Money Order or Bank Draft*

March 7.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Cheaper Than Meats

These are cheaper than meats and good. They should be used, but eat some milk or cheese besides, says a circular of the United States food administration.

**Kidney Bean Stew.**

One and one-half cups dried kidney or other beans, two cups canned tomatoes, half a cup of rice, two tablespoons flour, one onion, one tablespoon salt.

Wash the beans, put in covered kettle, and soak over night in two quarts of cold water. Cook the beans slowly in the water in which they soaked. If necessary, add more water to cover and continue the cooking until they are nearly tender, usually about two hours. Wash the rice, cut up the onion and add with the tomatoes to the beans. Cook until rice is tender—about 30 minutes. Mix the flour with a little cold water and stir in carefully to thicken. A small piece of salt pork cut up in cubes and added to the beans at the beginning of the cooking gives a pleasant flavor to the dish.

This stew will make a whole meal in itself, with bread and butter and fruit for dessert, to serve five or six people.

**Pea Souffle.**

Four tablespoons flour, four tablespoons fat, one cup skim milk, one cup mashed cooked peas, (any kind), three eggs, one teaspoon salt, one-fourth teaspoon pepper, few drops of onion juice.

Make a white sauce from flour, fat and milk, as in preceding recipe. Mash the cooked peas to a pulp. Beat white and yolks of eggs separately. Mix vegetable pulp, seasonings, sauce and well-beaten yolks. Fold in stiffly-beaten whites, put in greased baking dish and bake in slow oven until firm. Lima beans, split peas, cowpeas, or fresh or canned green peas may be used.

## MAKE A BIRD BATH

### See the Birds Enjoy Themselves

It is still winter. The birds are still, most of them, taking their baths in the sunny southland. But "the day is always coming when the birds go north again." Within a few weeks they will be here. Within a few months the hot days of summer will be here and the pools and streamlets will be dried up in many instances.

Make a bird bath. It need not cost you a dollar, yet every day of the summer you can see your little feathered friends of all the colors of the rainbow fluttering about in it with unconcealed joy and thankfulness.

Any boy or girl or man or woman with a little ingenuity can make a bird bath. A basin of any kind will do if there is some source of supply of clean, cool water. If you can have a little fountain in the center of it so the birds can take a shower bath you'll have just that much more fun watching them, but it is not absolutely essential. Clean water, not too deep, is the first and only absolute essential, and water is the cheapest thing on earth in most places. Try it this season. Try it right away—at the same time that you build your bird house. Everybody's going to build a bird house this year.

# Hoover Recipes

**Potato Bread.—One-Pound Loaf or Rolls.**

1 and two-thirds cup mashed potatoes.
1 teaspoon salt.
1-4 cake yeast, dry or compressed.
2 tablespoonfuls lukewarm water.
3 cups flour.

Method: Clean potatoes, boil with skins on, pare, and mash thoroughly, add salt, let cool, then add yeast, part of flour and let rise till light. Add remainder of flour, knead thoroughly, making very stiff dough. Let rise till treble in bulk, shape into loaves, let rise in pans till double in bulk. Bake 45 or 50 minutes.

**Corn Meal Bread.**

One egg beaten light, add to this 1 pint of buttermilk or sour milk (not too sour), 1 teaspoonful soda, add 2 1-4 to 2 1-2 cups of corn meal (preferably white, if yellow is used add 1-4 cup of white flour), 1 tablespoon fat melted in pan for baking. Pour mixture into pan with melted fat, being careful not to have the pan too hot. Bake 15 minutes in a quick oven. Sugar may be added if desired. The batter is thin, and should be baked in a thin loaf.

**Oatmeal Bread—a One-Pound Loaf.**

1 cup liquid.
1 teaspoon salt.
1 cup rolled oats.
1-4 yeast cake, dry or compressed.
1-4 cup lukewarm water.
2 1-2 cups white flour.

Method: Scald the liquid, add salt and pour over rolled oats; cool slowly, letting stand one-half hour. Add yeast and sifted flour, knead and let rise until double its bulk. Knead again, put into loaf, let rise in pan until light. Bake in moderate oven 50 or 60 minutes.

---

These recipes, taken from a pamphlet issued by the U. S. food administration, are good for children and grown-ups, too. The recipes provide enough for a family of five.

**Milk-Vegetables Soups:** One quart milk (skim milk may be used), 2½ tablespoons flour, 2 tablespoons butter or margarine or other fat, 1 teaspoon salt, 2 cups thoroughly cooked vegetable finely chopped, mashed or put through a sieve. Spinach, peas, beans, potatoes, celery or asparagus make good soups. Stir flour into melted fat and mix with the cold milk. Add the cooked vegetable and stir over the fire until thickened. If soup is too thick, add a little water or milk.

**Rice Pudding:** One quart milk, 1-3 cup rice, 1-3 cup sugar, 1-2 cup raisins or chopped dates, 1-2 teaspoon salt, 1-8 teaspoon ground nutmeg or cinnamon. Wash the rice, mix all together, and bake three hours in a very slow oven, stirring now and then at first. This may be made on top of the stove in a double boiler, or in a fireless cooker. Any coarse cereal may be used in place of rice.

**Saves Peanut Butter.**

To the Editor: An economy worth while is, when using peanut butter on the table, to dilute half with water and mix thoroughly, add a little salt. Do not mix a very large amount at a time, as it will sour easily if kept too warm. Most everybody likes it prepared this way as it does not stick to the teeth as when used clear.

Othello, Wash. MRS. S. T.

**An Attractive Speaker.**

"Well, did you enjoy the lecture?"

"Immensely. The lecturer had the loveliest wavy hair I ever saw."—Browning's Magazine.

# It Costs Nothing and You Should Have It

The Farmer information bureau at Washington, D. C., is ready to supply all of its farm families with the Hoover cookbook previously announced in this paper. This book is prepared with the special purpose in view of aiding the housewives of the nation in their food conservation program. The recipes in it may be relied upon to be "Hoover" recipes. It solves the problems of the kitchen and at the same time aids greatly in solving the world problem of how to down the kaiser. Write direct to Washington, D. C., for it.

The Washington Farmer Information Bureau, Washington, D. C.:

Please find enclosed a two-cent stamp, for which you will send me, entirely free, "The War Cook Book."

## Household Hints.

To the Editor: I notice in The Farmer your invitation ot write to the editor. I am sending two very good Hoover recipes which you might use in your columns, also a couple suggestions.

**Brown Bread I.**

Two cups sour milk, one teaspoon soda, two and one-half cups graham flour, one tablespoon molasses, salt. Mix and bake for 35 or 40 minutes.

**Brown Bread II.**

One even cup corn meal, two heaping cups graham flour, one cup molasses, one teaspoon soda, one teaspoon salt, one pint hot water. Mix water and molasses, add to other ingredients. Stir well and cook in greased cans. Steam for three hours. Dry off in oven.

**When Canning Beef.**

In canning beef I manage it so as to can roast and steak at the same time. I add a good deal of finely cut suet to the roast and water as for ordinary roast. To save using so much fat in filling the cans of steak I use the liquid obtained from the roast, as there is more than enough to fill the cans of roast.

**Removes Fish Smell.**

To remove the smell of fish from your frying pans rinse with vinegar before washing. MRS. L. L. R.
Buckeye, Wash.

## Scalloped Potatoes and Cheese.

Arrange a layer of sliced raw or boiled potatoes in greased baking dish and sprinkle with grated cheese and a little flour. Repeat until dish is nearly full. Pour milk over the whole, about one-half cup to every three potatoes. Skim milk is good. Bake in a moderate oven until done. The length of time required depends upon whether the potatoes are raw or boiled and whether the baking dish used is deep or shallow. Boiled potatoes baked in a shallow dish will take only 20 minutes. Raw potatoes in a deep dish may take as much as 1½ hours.

**A Shepherd's Pie.**

Grease a baking dish; cover the bottom with mashed potatoes. Add a layer of cooked mince meat or fish, seasoned well and mixed with meat stock or gravy. Cover with mashed potatoes. Bake long enough to heat through—20 to 30 minutes.

**Good Mashed Potatoes.**

Peel the boiled potatoes, mash and beat until very light, adding salt, butter or oleomargarine and hot milk, a half cup of milk to six potatoes. If dinner is not ready to serve pile lightly in a pan and set in the oven to brown.

# War Admonitions

The following may be found on posters in some sections of the country: "The meatless days, the wheatless days, the sweetless days and heatless days, which the nation is observing, in order to win the war, should cause some of our men to take notice of the treatless days and smokeless days."

"Do not waste, while your wife saves. Do not smoke while your family observes wheatless, meatless and sweetless days. When the railroad companies are unable to furnish transportation for food and travelers do not require them to haul smoking cars on every train in order to accommodate the smokers, but if you do require it, then you should pay the extra cost yourselves and not require the traveling public to pay it."

**Soap for Wounds.**

Common yellow soap, the kind used by housewives in washing clothes and dishes, has been found to be a wonderful cure for wounds in French hospitals and its use has spread to the British medical stations. A solution is made from a cake and injected into soldiers' wounds even in the latest instances into the deepest bullet holes, where it has proved itself to be a superior antiseptic to hydrogen peroxide and most other germ killers, and in addition a strangely effective healer of torn tissues

Wounds treated with soap need fewer dressings and lessen pain far more than do wounds treated with other antiseptics. These facts greatly expedite the work of the surgeons, who can handle more men than when using other solutions.

# Prosperity Hits Western Canada

Big crops with war-time prices have put western Canada farmers on a prosperity footing that was undreamed of in pre-war days.

54 bushels of wheat and 90 bushels of oats to the acre were not uncommon yields last year; the average being 30 bushels of wheat and 53 1-3 bushels of oats. With wheat at $2.20, government set price, it is scarcely to be wondered that probably more western Canada farmers are wintering in California than ever before.

As another evidence of their prosperity more than sixteen thousand motor cars were bought in Saskatchewan during the year, which was a greater number than the total number of cars in Saskatchewan up to 1917. Over-subscription to the Victory Loans and large contributions to various war relief organizations also point vividly to the wealth of the country.

Many of our neighbors' richest farmers acquired their land free, while still others bought their land from the Canadian Northern railway at $15 to $25 per acre.

Canada still has 128,000 (160-acre) farms to give free to settlers, and countless other farms for sale at low prices. Detailed information and FREE BOOK may be had by writing P. P. Brostedt, D. F. & P. A., 805 Hastings st., Vancouver, B. C.—Adv.

## Designs Her Own Clothes

The young lady in the picture is Miss Mary Goody, daughter of Mr. and Mrs. J. A. Goody, 2322 Monroe street, Spokane. She is now a student in the department of elementry science of the Washington State college at Pullman, Wash. The hat she is wearing was designed and made by her as a part of her class work. It is made of velvet, buckram, "wiring," lining, beads and other smaller items, the total cost of which was less than $4—the cost of the hat to her. The hat, duplicated in quality and workmanship, in the trade would command not less than $18.

The dress she is wearing was likewise designed and made by her in her class work. Five yards of crepe poplin are in the dress, along with silk thread, buttons of best quality, and other items, the total of which cost $8.50. A. L. Rogers, the pioneer merchant of Waterville, Wash., who saw the dress on exhibit during Housekeepers' week at the state college, stated that a dress of its quality and workmanship would command, in the trade, not less than $18.

Miss Goody made her hat and dress in the one-year millinery and dressmaking course which she is taking at W. S. C.

**New Burglar Alarm.**

Partly mechanical and partly electrical is a Chicago inventor's alarm that fires five blank cartridges in succession if a burglar enters or tries to wander around a building.

**Silk from Italy.**

In 1916 the total value of silk of all classes exported to the United States from Milan, the chief center of the trade in Italy, was $10,372,813, against $14,276,474 in 1915.

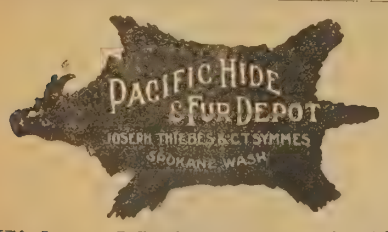
THE SELF-OILING WINDMILL



has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

# Making Over the Partly Worn Shirt

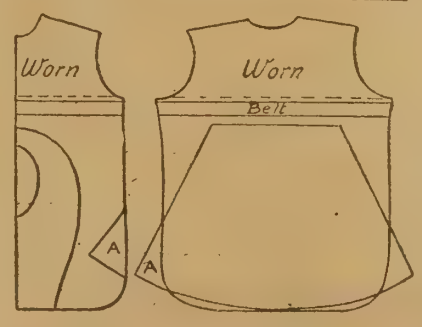
**By using white material for the collar and cuffs, a waist can be made from a partly worn shirt.**

Men's clothing may be cut over into smaller garments, says Hazel Manning in a bulletin of the Wisconsin College of Agriculture. Overcoats make good top coats for both the small boy or girl or even a whole suit for a boy. Under garments, especially woolen ones, may be easily made over for children. The lower part of a good woolen shirt will make a warm petticoat for a child.

**"The Tale of a Shirt."**

The story of the things that can be done with a partly worn shirt is a long one. In this day of gay striped madras the lower part may be used to make a dress for a little girl or a blouse for a small boy. Even mother can make a shirtwaist for herself by using plain white material for the collar and cuffs. It will be necessary to finish the lower part with a belt or peplum since there will not be enough material to extend below the waist line. The sleeves may also have to be shortened.

**The Little Touches.**



Bias bands for trimming plain colors can be cut to very good advantage from shirts. Pretty collars and cuffs for plain dresses or suits may also be cut from these partly worn garments. A small round apron for mother or a little sleeveless apron for sister, to be worn after school and at meals, may be cut from the tail of this useful garment—the partly worn shirt—with very little trouble.

**Using the Silk Skirt.**

Striped silk always makes pretty collars, cuffs and belts as well as bias folds and facings for plain materials. A silk shirt lends itself well to these uses.

**An old shirt made new—A shirt may be cut into a serviceable blouse for a little boy.**

**A shirt-apron—The skirt of the apron may be cut from the back of the shirt and the upper part from the front.**

The HOOVER DRESS

A practical and attractive house dress approved by the U. S. Food administration, as a cooperation war-time conservation.

In answering advertisements don't fail to mention this paper,

The Veteran: "Yes, by all means, learn about our past wars in your school books; but don't fail to read the history of the present world war in The Twice-a-Week Spokesman-Review."

# Twice-a-Week Spokesman Review 1 Year and The Washington Farmer Three Years, Both for $1.00

## War News

The present war is the greatest, most far reaching and stupendous conflict in the history of the world. You and your family will want to keep in touch with every move in this tremendous drama of the nations. You can do so at low cost by accepting our clubbing offer. The Twice-a-Week Spokesman-Review presents a reliable, condensed review of all current events.

Being a member of the Associated Press, the important happenings are flashed to it without delay from every capital and village, and from every far flung battle line, where the history of our day is being recorded. It pays particular attention to the war news of special interest to the people of the Pacific Northwest. It reports the progress of the draft; and from its pages you will learn who among your friends and neighbors have joined the colors.

If any of the young men you know are killed, injured, or taken prisoner on any of the battle fronts, you will be given the information in The Twice-a-Week Spokesman-Review as soon as it is issued by the military officials.

In addition to this intensely interesting and important war news, the Twice-a-Week brings you an accurate summary of local, state, national and international events. It is published every Tuesday and Friday. Purchased in any other way it costs $1 per year. Certainly an offer so liberal should appeal to every one of our readers. Every issue contains important news. If you have not acted already send in your dollar now.

*In case you are already a subscriber, your subscription will be extended if payment is sent now.*

If your neighbors don't know about this offer please tell them what they can get for $1.00.

**The Washington Farmer**
SPOKANE, WASH.

# Horse Ailments Are Genuine Scourge

(Continued from page four.)

that react should, of course, be destroyed and the disease should be handled by those in authority of the sanitary police measures of the state in which the animals are owned. Frequently indemnities are paid for animals destroyed on account of their being affected with glanders and in many respects this greatly assists in the control of the malady. Owners should be particularly careful in purchasing horses where glanders is known to exist. It would be well to demand an ophthalmic mallein test before purchase because this precaution will generally be the means of protecting the entire band of horses in which the newly purchased animals are placed.

Glanders, apparently, is not as easily contracted as is often supposed.

Dark, badly ventilated and dirty stables are the principle means whereby the infection is spread. Watering troughs doubtless play some little role in the spread of this disease.

Abortion in mares is not a disease of great importance of the Pacific northwest. Apparently certain districts have been troubled with what might be termed an infectious abortion of equines. Generally speaking, these troubles can be largely traced to errors in watering and diet. Frequently trouble has been reported in districts where an unusually cold period has been experienced. The ice naturally prevents horses ranging outside from drinking at will. For this reason horses are frequently caused to go a considerable time without water and, when permitted to drink, gorge themselves so completely that a chilling is brought about and abortion results. Probably the feeding of moldly food or rye hay which contains much smut or clover on which ergot has formed has been responsible for reported loses.

**Navel Disease in Colts.**

Navel ill in colts is another source of great loss to breeders. This could be largely avoided if owners would make the necessary arrangements for their mares at foaling time. Clean stalls are absolutely essential. The infection that produces this disease is, generally speaking, taken into the colt's system through the naval cord or possibly frequently through the digestive tract. A precaution could hence be had by washing off the navel cord soon after birth with a solution of formaldehyde. Also, it would be well to bathe the mother's breast with this solution because frequently the colt is thought to take the infection into its system while nursing. For those animals which show the infection, there has been developed a bacterin or treatment which will in most cases, cure a considerable proportion of those showing infection.

This treatment must be given early in the onset of the disease and can be administered only by qualified veterinarians.

During the winter months probably no disease is so prevalent as food and forage poisoning. In many districts this trouble has taken on the name of stack bottom poisoning and in other sections it has been termed straw stack poisoning. Frequently the name forage poisoning is used. All of these troubles are found to be closely associated with the formation of certain poisonous molds. Aside from avoiding straw stack bottoms during the spring months little can be suggested in a precautionary line other than carefully watching the animals that show symptoms of the infection and immediately placing them under treatment. The onset of the disease is so sudden that occasionally little can be hoped for by medical intervention. During the last year there has been perfected a certain vaccine which has been largely used in the state of Illinois. It is reported that it has been possible to immunize horses against this nature of food poisoning. Very frequently foods that are poisonous for horses are not poisonous for cattle, and valuable foods can hence be made use of by utilizing them for cattle or sheep feed.

**Pasture Poisoning.**

Poisonous plants doubtless play a considerable importance in maladies that are experienced by range breeders in the northwest. Lupine is known to be poisonous under certain conditions. The same may be said of loco weed, and, to a limited extent, death camas, fern or braken and horsetail weed or rush. These poisonings are always seen during the fall or winter months of the year and are largely brought about by a shortage of foods. As a rule a majority of these poisonous plants may be guarded against by the early administration of antidotes to horses which are showing symptoms of plant poisoning. No antidote seems to be so good as potassium permanganate given in half drachm doses, together with a small amount of aluminum sulphate. For the bowel paralysis which frequently results from some of these plants good results have been had by resorting to the use of drachm doses of formin.

As a rule all of the maladies of horses may be largely guarded against by proper care and handling. A practical system of personal hygiene for the horse makes him doubly able to successfully resist disease. With good food and the proper counsel and use of your local veterinarian your equine losses may be brought to a minimum.

# Poultry Losses Are Enormous

(Continued from page twenty-nine.)

stock, if possible, should have wide range and not too much feed during the fore part of the day. In the evening a good feed should be given. The fowls that rustle on the farm for a large part of their living usually lay eggs that hatch well. This is not probably all because of the rustling but partly because they find in the fields some feed that is necessary and not always supplied by the poultryman. A well balanced ration, however, and plenty of exercise make for vigor, especially reproductive vigor.

Another thing, the stock must have good housing. That does not mean expensive houses. It means rather open fresh air houses. Nothing is more conducive to vigor in the fowls than fresh air. Crowding them into small ill-ventilated houses will produce a loss of vigor quicker than anything. Better let them roost in the trees than in close houses. Poor housing, therefore, by affecting the vigor will affect the hatching quality of the eggs.

The importance of the male is often overlooked. The hen makes the egg, but the chick is not made from the egg; it is made from the fertilized germ in the egg, and the chick comes from this germ which is the combined product of male and female. It is true that the chick as it develops in the shell feeds upon the egg, but the egg does not make the chick any more than the feed that the poultryman gives to the chicks in the brooder makes the chicks. The care and feeding of the male is as important as that of the hen. The male must be good, otherwise all the eggs from the breeding pen will not be good for hatching. The male should be tested before the regular season for hatching. That is a few of the eggs from the hens to which he is mated should be incubated to see whether he is fertilizing them or not. It sometimes happens that a male will not fertilize the eggs, and it should be known in time so that another male may be substituted.

An egg laid two days after the male has mated with the hen will be fertile, but he may not mate with all the hens when first put in the pen, and it will not be safe to use the eggs before a week after mating if a good per cent fertility is desired.

One good male will serve 15 to 20 hens. I have had three males with 80 hens and got good fertility. For the heavy and slower breeds, however, there should be fewer hens to the male.

There are two reasons why more pains should be taken this year than ever before in hatching and rearing chicks; first, a patriotic duty to conserve all possible food supplies. Food is wasted when eggs that are not fertile are set and when chicks are hatched from eggs that come from breeding stock of low vitality. The second reason for greater efficiency is that eggs are higher in price this season than ever before, and the poultryman can not well afford to incubate eggs that are low in fertility and that do not produce livable chicks. The eggs may be just as good for eating even though the germ from which the chick comes will not produce a good chick.

## Set Aside a Steer.

When the stockmen met in conference in Spangle recently, Frank T. McCullough, representing the war savings stamp movement suggested to them that when they prepared the next shipment of stock to market they set aside one animal of the shipment, the sale price of which should be used in the purchase of thrift stamps or war savings stamps. He declared that the purchase of such stamps was an excellent investment as well as a patriotic act.

THERE'S WORK EVERY DAY ON ANY FARM for the

MOLINE UNIVERSAL TRACTOR

"It Solves the Farm Help Problem"

YOU can't make more money with the Moline-Universal than with any other tractor because it can be kept at work more days a year—no matter how large or small your farm or what crops you grow. The Moline-Universal is built to fit the farm and every operation on the farm. You can find work for it every day in the year.

If for no other reason than the fact that the Moline-Universal can be kept busier on any farm than any other tractor it is your "best buy."

But the greatest advantage of the Moline-Universal is that one man controls both tractor and implement in all operations. You control the entire outfit from the seat of the implement, where you must sit in order to do good work.

The wonderful versatility and one-man control of the Moline-Universal are due to its two-wheel construction. It attaches direct to the implement and forms one compact unit. All weight is placed on the two big drive wheels—all of it goes into the pull. There is no dead weight to carry around. That's why the Moline-Universal, weighing only 2850 pounds, can pull as much as tractors weighing from 1500 to 2000 pounds more; does not pack the soil; requires the least amount of fuel for operation; turns in a 16-ft. circle and backs as readily as it goes forward.

The Moline-Universal Tractor is the crowning achievement in a half century of manufacturing experience and is built by a company of unquestioned integrity and a world wide reputation as makers of quality farm implements.

Why not let the Moline-Universal help you this spring? Write for free illustrated booklet and name of your nearest Moline dealer.

Special rates for one month or more in our classified columns. Write us for particulars.

**Pacific Northwest Farm Trio** 36 Review Building Spokane, Wash.

My dears, a lot of you have done some good work in the contest during these weeks, and I know you are anxious to know who has won. I was going to tell you this week, but I did not get quite ready. But watch for next week's corner and the winners will be announced.—Aunt Nellie.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

**Some Curious Pets.**

Dear Aunt Nellie: One beautiful spring morning I heard a peculiar noise, just outside the back door of our little kitchen. I went quietly to the door, opened it, and looked out. There, perched on some carrot tops, and trying to eat bits of carrots, was a curious little bird. It had a yellowish-green back, bright green tail, and dark brown wings. Its head was small and round, and its beak, which was sharp and black, was decidedly crossed. This curious little cross beak finch was surprisingly tame. It would pick at the carrots, then turn its head and look me over. It surely decided that I would not harm it, because it was not at all afraid of me. When I took a saucer of fruit out to cool, the little finch flew up, perched on the edge of the saucer and began to eat the fruit. Then I went inside the house and the little bird flew away. After a while I walked around the house looking for it. Soon the pretty finch came from a nearby tree, lit on my hand, and looked through an open window into the sitting room of our little home. After a while I had to go to work in the kitchen and our old gray cat caught and killed my precious little cross beak finch. One evening about four weeks after this my father was walking in our orchard when he saw a very large brown bird perched up in an apple tree and eating the fruit. He came to the house, got a large rifle and went back to the orchard. He stood behind a tree and shot at the strange bird. It fell to the ground as if it had been killed, and father brought it to the house. By this time the bird, which proved to be a great horned owl, was recovering, for it had only been stunned. It stood up, opened its large round eyes and stared at us. We saw its sharp curved beak, and sharper claws, and mother wanted to have it killed. But my sister and I thought it so pretty, with its smooth brown feathers, its large yellow catlike eyes, its feathered legs, and its tufts of feathers on its head that looked like horns, that we wanted to keep it for a pet. Mother said we might at least for a while, so we put our new pet in the coal shed and closed the door. After supper my older brother wanted to feed it, so he put a cooked bean on a long, pointed stick and went to the coal shed where the owl was kept. He was afraid of the owl, but he pointed his stick at it, and put the bean in its mouth. Mr. Great Horned Owl did not like this way of being fed, so after a few days I fed him with a teaspoon because he would not eat unless the food was put in his mouth. He seemed to like me more than any other one of our family. I think it was because I fed him more, and didn't poke him with a stick. When he saw me coming with a spoon and tomato he would open his mouth and wait to be fed. But after being kept in this manner about eight days, Mr. Owl thought he would like to go back to his mate and little ones, which were somewhere far away. So he escaped one night and flew far, far away to his nest. Now these two curious pets are both gone, but there is another still. This is Mistress Spider Grey. She has her home, which is a large silver web, on the outside of a kitchen window. There she lives, catching flies and bugs in her web. She now lives in a little tight bedroom at the top of the window in the daytime and at night, when we have the lamps lighted, she comes down in her silver web to see the bright light.—Alice Clinesmith, age 13, Lantz, Wash.

**Mother Knits for the Red Cross.**

Dear Aunt Nellie: I am writing to you for the first time. I am 14 years old and will be 15 the 25th of May. I am in the seventh grade. There are two other girls in my grade. My teacher's name is Miss Short. I like her fine. I like to go to school. There are 12 children going to our school now. I have about one-half of a mile to go to school. We have two horses. Their names are Frank and Ned. Papa wants to sell them or trade them for a good Ford car and $150. They are very large horses, one is black with a white face and white feet and the other is black with a little white place in his forehead. We have two cows and one calf. Our cows' names are Red Wing and Cherry. The calf's name is Biddy. Mama is making six pounds of butter a week. Mama is knitting socks for the Red Cross now. I can knit. I will start on some socks as soon as I get the yarn. I am knitting quilt blocks now. I have two cousins in the army, but no brothers. Both of them are too young. One is 12 and the other is 7. The oldest is Oscar and the other is Virgil. Oscar is in the fourth grade and Virgil is in the second. I have three sisters. Their names are Lillian, 21; Rosa, 17; Dorothy, 4. My sister Lillian is married and she has two little children. Their names are Charles, age 3, and La Vinia, age 2, and they are so sweet.—Lydia Lowery, box 51, Benge, Wash.

**Rides Horseback a Great Deal.**

Dear Aunt Nellie: I have been reading the other cousins letters in the Farmer for a long time. I think all of the cousins write nice letters. I am going to school now. Our school began September 17. There are 19 pupils enrolled. Our schoolhouse burned about a year ago and we have a new modern building now. It has a basement with a furnace in it. We have a good time playing games at intermissions. I live in the country and I don't like to live in town. I like to ride horseback and I do ride a great deal. I had a little black pony named Midget, but she died suddenly about three weeks ago. We don't know what caused her death. I felt very badly about it. I have a pretty little black horse that will be three years old in March. My papa gave it to me when it was just a tiny colt and I named it Monte Claude. My brother is going to break it for me to ride next spring. I have one brother, 19 years old. His name is John. I am 13 years old. My birthday is the 17th of December. Have I a twin? If I have I wish she would write to me. One of my best friends is writing to you. Her name is Mildred Riley. She goes to the same school I do and we both are in the eighth grade. I send my love to Aunt Nellie and to all the cousins.—Ellen Christine Elsensohn, R. F. D. 2, Pomeroy, Wash.

**Wants the Corner to Grow.**

Dear Aunt Nellie: I love to read the children's letters. We take the Farmer and I believe I like to read the children's letters better than any other department. May I become a cousin? I am 13 years old. My birthday is January 17. Have I a twin. I am sending you two riddles. (1) Father, mother, sister, brother, run all day and can't catch each other. (2) A man rode over the London bridge, and yet he walked. I live on a cattle ranch near Skootnia lake, but I am going to school about 12 miles from there. I have two sisters and we have two dogs and one kitten. I have a light complexion and I am in the seventh grade. I certainly hope the Children's Corner will grow larger. My sister is writing too. I think it would be nice for the cousins to correspond through the Corner.—Pearl Utter, Othello, Wash.

**Olive Will Keep on Writing.**

Dear Aunt Nellie: I enjoy reading your letters very much. We live on a 40-acre farm. Thirty acres are under cultivation. We have two horses, one cow and three calves. We have about 24 Plymouth Rock chickens and three rabbits. I have two brothers. Their names are Elsworth and Orville. I have four sisters. Their names are Stella, Marie, Brica and Ida. I go to school every day. Our teacher's name is Miss Ruth Oslund. I like her fine. I would like to join your Corner. I am 12 years old and in the seventh grade. My birthday is November 29. Have I a twin? If so write to me. I would like for the consins to write to me. This is not the last time I am going to write to you.—Olive Ervin, R. F. D. 2, Mead, Wash.

## The Giraffe of Africa

The giraffe is found wild only in Africa. The first one ever seen in Europe was shown by Julius Caesar in the circus in Rome. Others were afterwards exhibited by emperors. After the fall of Rome no live giraffe was ever taken to Europe until 1872 when the pasha gave one to the English. Many giraffes have since been brought from Africa and shown in menageries both in Europe and in this country. A full grown giraffe is 16 or 17 feet high or nearly three times as tall as a man. Its long neck enables it to eat from the tops of trees, the leaves of which make a large part of its food. Its tongue is long and slender and can be run far out to draw leaves and branches towards its mouth. Between its ears are two short horns, not like those of an ox, but only bones covered with a hairy skin. Its body is short and is higher in front than behind so that the backbone slants downward. Its legs are slender and the feet have cloven hoofs like those of an ox. Giraffes live usually in families of about a dozen, generally on the edge of a desert where they can see all around. Their chief enemies are the lion and panther from which they can run away in the open country. The giraffe can see very far and it has also a very strong scent and can smell a man a great distance off if the wind happens to be blowing toward it. On this account hunters find it very hard to get near enough to one to shoot it, and can do so only by creeping up against the wind behind grass and bushes.

**Skate at School Noons.**

Dear Aunt Nellie: I suppose you have heard about Skagit's flood. We had a seepage in front of our place. We had three nights of hard frost, so when I go to school I ride on the ice on my bicycle. At noon about 40 of us girls and boys skate. I enjoy it very much. I wrote about a year ago to the Children's Corner about our trip back east. We have 20 acres of land, two horses named Bob and Ginger. We are milking 12 cows. Their names are Beulah, Rose, Dutchess, Blackie, Queen, Dolly, Molly, Daisy, May, Gypsy, Bessie and Spot. We have about 40 chickens and one dog named Prince and one cat named Paul. I am 12 years old and in the sixth grade.—Inez Gagen, Mt. Vernon, Wash.

**Brothers Have All Enlisted.**

Dear Aunt Nellie: Have I a twin? If so I would like to hear from her. I am 9 years of age. I will be 10 February 15. I am in the third grade. My teacher's name is Miss Jennie Bullock. I like her very much. I go to school in town. There are three schools in our town and I go to the grammar school. I like the town very much. I have a kitty and his name is Dick. I have three brothers and one sister. Their names are Chester, Valdie, Henry and Zelda. My brothers all enlisted in the army. Chester is in California and Henry and Valdie are in Georgia. My sister goes to high school.—Civilla Allyn, Goldendale, Wash.

**School Children Work for Red Cross.**

Dear Aunt Nellie: I enjoy reading the other children's letters. May I be a cousin? I am in the fifth grade at school. I have eight studies. All the children in my room have been working for the Red Cross. My teacher's name is Miss Williams. She has been my teacher two years. I walk a mile and a half to school. Have I a twin? I would like to have them write to me. I am 10 years old. My birthday is the 19th of June.—Alva S. Yeager, Grand Mound, Wash. (We are glad to welcome you as a cousin, Alva, and hope that you will write to us as often as you can. Aunt Nellie.)

**War Saving Stamps.**

Dear Aunt Nellie: It has been an awful long time since I wrote. It seems like ages to me. My subject is "War Saving Stamps." For my birthday I got $7. I am going to put it all in war saving stamps. Our hired man bought $100 worth of them tonight, or 20 stamps. I am 11 years old now. Have I a twin? If so I wish she would write to me. I got a letter tonight just as I was writing, so I stopped and read it. I got a birthday present in it. Well, I think I'd better go to roost or the other chickens won't let me on when I do get started.—Edna Light, Pomeroy, Wash.

**Live on a Big Fruit Ranch.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters very much. I hope this will not be the last one. I am going to school and am in the fourth grade. I was nine years old last October 21. I have two brothers. Their names are Daniel and Otto. I have one sister. Her name is Ruth. I am the oldest. We live on a big fruit ranch. We have four horses and three cows and about 60 chickens. I do love to go coasting down the hill. My teacher's name is Miss Welch.—Esther Hellena Reimann, Dryden, Wash.

**The Boys and Girls at School.**

Dear Aunt Nellie: I have seven brothers and their names are Fred, Bee, Sam, Joe, Frank and Tony. I haven't any sisters. Have I any twin? If so I wish she would write to me. There are five girls at school. Their names are Alice, Gertrude, Ella and Frances. Frances did not come to school for a long time, but I wish she would come. There were seven girls, but two do not come now. There are six boys. Their names are Edwin, Arthur, Paul, Vern, Rocky and Tony. That is all I have to say this time.—Tracy Germont, R. F. D. 1, Greenacres, Wash.

**Totem Helps Hunt the Cows.**

Dear Aunt Nellie: I am 13 years old and live on a 27 1-2-acre farm, about three miles from Darrington. We have a dog, a cat and a horse, also five cows and three calves. Our dog's name is Totem. Dad said that when the Boy Scouts went cow hunting, they would take a Totem along to help. The Boy Scouts meant my brothers and me. Have I a twin? My birthday is on the 11th of July. I hope my letter will be in print.—Charlie Atkins, Darrington, Wash.

**Zenia Knows How to Knit.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am going to school. I like my teacher fine. Her name is Miss Stirewalt. There are 24 pupils in our school. I am in the third grade in language and spelling and fourth in arithmetic reading and geography. I have joined the Red Cross. I know how to knit.—Zenia Light, Davenport, Wash.

**Skate on the Meadow Pond.**

Dear Aunt Nellie: I like to read the cousins' letters. There is a hill beside our barn and we slide down it on our sleds. We have a bobsled. There is a pond on our meadow where we skate. We have 67 chickens. They are White Leghorns. We get 25 and 30 eggs a day. I finished the sixth grade and am now in the seventh.—Margaret King, Matlock, Wash.

**A Thrift Stamp Campaign.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old. I am in the third grade and I have two brothers and four sisters. My two brothers' names are Alvin and Kenneth. We have two cows, one named Blossom, the other Buttercup. We have nine horses and two colts, one named Jean and the other Queen. We live in town in the winter and in the summer we live on a 320-acre farm. We have 40 chickens. I have a cat. Its name is Snookums and my dog is called Shep. I have learned to knit and I am making squares for the Red Cross. Our Red Cross has a service flag with 62 stars in it. My birthday is the 7th of October. Have I a twin? We had a colonial program on Washington's birthday. My teacher's name is Miss Morris. We are having a thrift stamp campaign in our school. We have raised about $75 already and we are also going to organize a Junior Red Cross in our school soon.—Jean MacDonald, Medical Lake, Wash.

**Party for the Soldier Boys.**

Dear Aunt Nellie: I have written to the Children's Corner once before. I like to read the Children's Corner. I know how to crochet and tat. Some of our friends gave a party last night. We were invited, so we went. We came home at one o'clock. It was for the boys who are going to Camp Lewis soon. I have a dog and a cat. My dog's name is Spotty, and my cat's name is Tommie. School started Tuesday. I go to school every day. My birthday is December 14. We have a river three miles away. Its name is Dungeness. It took the bridge away this winter. I shall write again.—Elsie Gronka, R. 2, Box 31, Sequim, Wash.

**Wants the Cousins to Write.**

Dear Aunt Nellie: I enjoy reading the children's letters. I have two brothers. Their names are Lee, aged 11 years, and Raymond, age 7. I have one little sister. Her name is Edith. She is 2 1-2 years old. I am 10 years old and in the third grade. I would like to see my letter in print. I was 10 years old December 18. Have I a twin? If I have I would like to hear from him or her. We have no stock. We sold all our cattle and are going to move away. I have blue eyes and light hair. I would like very much if some of the cousins would write to me.—Viola Barbley, Mossy Rock, Wash.

**A Ranch by Skootnia Lake.**

Dear Aunt Nellie: I enjoy reading the letters and the stories also. I hope to see this letter in the Corner. I am 11 years old. My birthday is the 5th of February. If I have a twin I wish they would write to me. I live on a ranch by Skootnia lake. We have a few cattle. I have two cows of my own and their names are Mary and Lory. I have two calves of my own and one colt. I write a few poems. Do you publish poetry?—Opal Utter, Othello, Wash.

**All Busy Doing Their Best.**

Dear Aunt Nellie: I have one sister. Her name is Roberta. I was 12 years old the 28th of January. I am in the sixth grade at school. We are all busy helping Uncle Sam win the war. We must all do our bit. I have 10 Thrift stamps and soon will have a War Saving stamp. I have knitted seven squares and when the Red Cross gets some yarn I am going to knit a sweater. I almost forgot to tell you what our teachers' name is. It is Mrs. Collier. I like her very much.—Evelyn Moore, Newport, Wash.

**Walks a Mile to School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am seven years old and I am in the fourth grade. I have three sisters and three brothers. My sisters' names are Ellen, Laura and Mable, and my brothers' names are Frank, Joe and Manuel. We live on a 61 1-4-acre farm. We have nine cows and three horses and four pigs. We have 14 chickens. I walk one mile to school. We have a Ford.—Lucile Almaden, Box 15, Sequim, Wash.

**Aunt and Cousins Staying With Them.**

Dear Aunt Nellie: This is the second time I have written to the Corner. My aunt and cousins are staying with us. Arthur is 5 and Florence is 3 years old. My sister's names are Inez and Ione. My brother's name is Donald. Inez is 17 and Ione is 12 and Donald was 9 the 26th of February. Papa takes the Farmer and I enjoy the letters very much.—Erma Aldrich, R. F. D. 2, box 140, Selah, Wash.

**Katherine's Second Corner Letter.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I enjoy reading the paper very much. I am 11 years of age and my birthday is October 22. I live one and one-fourth miles from school. There are 13 children in my school. There are four boys and nine girls. We have three cows, one calf, two colts, two horses, one cat and one dog.—Katherine A. Briner, Winthrop, Wash.

**Ralph Lives 16 Miles from Town.**

Dear Aunt Nellie: I enjoy reading the letters in the Farmer. We live 16 miles from town. We have four horses and one colt. We have two cows, one calf, one pig, five ducks, 40 chickens, one dog and one cat. I hope to see my letter in print.—Ralph Emerson, R. F. D. 6, Spokane, Wash.

# News for Breeders

G. O. Swales of Johnson, Wash., has recently strengthened his already strong Duroc Jersey herd by the purchase at a long price, at the Leisy sale in Nebraska of a fine March gilt, a granddaughter of Illustrator. The gilt is bred to King of Orions, the pig for which Leisy paid $1300 at the McAndrews sale, a sale at which 20 boars averaged over $520, and 30 sows $437.

Writing of King of Orions, Fred DeVore, who made the purchase for Mr. Swales, says: "This is really a wonderful boar, very heavy bone, splendid feet, great length and depth and a real boar."

It will be remembered that Mr. Swales purchased the grand champion Duroc sow at the Spokane Interstate fair last fall and two of her gilts, one a blue ribbon winner. He reports being practically sold out and says the demand for breeding hogs is very strong.

H. A.

## This Pork Comes High.

Recently a Berkshire boar pig sired by Epochal, the imported Berkshire boar owned by H. W. Gossard of the Gossard breeding estates, Martinsville, Ind., was sold to Thomas Stanton, Wheaton, Ill., for the reported sum of $10,000, which is said to be a new record price for the breed, as well as the highest price on record for a boar of any breed.

There are more owners of Purebred HOLSTEINS Than there are members of

ALL THE OTHER PUREBRED COWS IN THE U. S. COMBINED

**Why?** The purebred Holstein holds all records for production of milk and butter fat. They have been definitely proven the most profitable breed. Write for free information.

THE HOLSTEIN-FRIESIAN ASSN. OF AMERICA, Box 205, Brattleboro, Vt.

CONSERVE YOUR STOCK

USE PERFECT EAR TAGS

The Perfect Ear Tag is being adopted by stockmen all over the United States, because it is so very light in weight—made of aluminum. It is non-corrosive and non-poisonous. There is liberal space for name and address of owner and number of animal. Attached instantly with one operation. Offers perfect identification. We own the patent and are sole manufacturers.

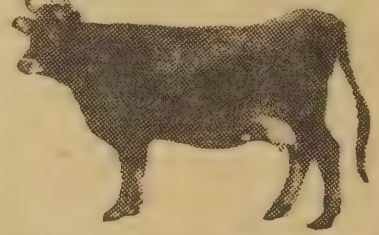
Jersey Home Dairy

Young bulls, winners at Washington State Fair, make good herd sires. Attractive prices for quick sale.

Erickson Bros. Prop.

North Yakima, Wash.



## Epidemic of Bull Calves.

"There may not be such a thing as luck," remarks C. T. Bracken, farm manager on Dr. Willis' Guernsey farm at Redmond, Wash., "but it sometimes looks as if there were such a thing as bad luck. When we were getting started in the Guernsey business we had a regular epidemic of bull calves. They were out of all proportion to what they should have been. We brought in a bull from another part of the state, famous in his neighborhood as a getter of heifer calves—and the bull calves continued. Of course a pure-bred bull calf is worth something, but you can't sell him and buy a heifer of the same breeding with the money. What did we do about it? Why, what could we do? We just stayed in the game till our luck—if there is such a thing—changed. We're getting our share of heifer calves now, although of course we would be glad to get even more."

Before Mr. Bracken came to King county and began raising Guernseys for Dr. Willis he had farmed in Colorado and in Nebraska.

"In the parts of those states in which I lived," he comments, "there was not much dairy farming. There were plenty of beef cattle, particularly in western Nebraska, back in the days before the homesteaders began to come in. Homesteading was not an unmixed blessing for that part of the country, I can assure you; it broke up the range for the cattle men, and on the other hand it worked a hardship on many of the settlers by setting them the task of farming where it could not be done successfully. Many of those homesteads have seen a series of settlers come and go, as one after another starved out. As a range country, it was as fine as any I know of. The buffalo grass on which the cattle fed during the winter was really nature-cured hay, and when they had been feeding on that they could be shipped to market without anything else."

## Blue Bell's Princess.

The photo herewith shows the Jersey heifer, Blue Bell's Princess of M. L. P., a few days before her first freshening in January. She is owned by Robert L. Burkhart, owner of Maple Lawn place, Albany, Ore. Her dam is a daughter of Gov. Marigold, is sired by Mr. Burkhart's bull, Karnak Noble, and her calf is by Moose o'Fernwood, that is a double grandson of the great Spermfield's Owl. Her dam will soon finish a year's test, with over 600 pounds of butter. Mr. Burkhart now has 13 Jerseys on official test and will soon have two more. His cows are making a number of big records.

Mr. Burkhart has put a concrete water trough in his cow sleeping shed, where his cows run loose every night and on cold or rainy days. The shed has drop windows, allowing ventilation without draft. It has six box stalls, in which cows about to calve or those indisposed from any cause can be kept. It is kept deeply bedded with straw all winter, providing a comfortable place for the cows and conserving manure.

H. A.

## Community Breeding.

A new venture in community breeding and selling of purebred live stock was launched in the Rogue river valley recently by the formation of the Rogue Valley Holstein association. River Banks farm, owner by the Leonard Estate company; Winona ranch and Homewood farms, all of Grants Pass, Ore., are cooperating in this movement. Other members will be added later as further registered Holstein herds are established in the Rogue river valley. An attractive cooperative catalogue listing all the registered sires and reserve cows owned by members of the association, together with their breeding and A. R. O. records, has been published, and an advertising campaign has been started, which will be greatly widened as the herds of the association are enlarged. F. R. Steel of Winona ranch, Grants Pass, Ore., is the sales manager of the new association.

**Increase Exports to Italy.**

Since the war began the United States has furnished to Italy from four to five times, in value, its pre-war proportion of imports.

# Jerseys Win Economy Test

In a recent test at the Ohio State University, 157 Jerseys and 131 members of another dairy breed were entered. The Jerseys required only 75.3 per cent as much digestible nutrients per lb. of fat produced as did the other breed. Further, they produced 1.2 per cent more milk, 25.6 per cent more solids and 59.3 per cent more fat per 1000 lbs. live weight. Jerseys produce the largest *net profits* from every pound of feed. Build a Jersey herd. Write to breeders for prices.

*Send today for free book, "The Jersey Cow in America."*

The American Jersey Cattle Club, 314 West 23rd Street, New York City

## Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG, Buhl, Idaho.

BREEDER OF GOLDEN GLOW'S CHIEF 61460.

35 daughters average 533.9 lbs. fat. Sire of world record Junior three-year-old. Two of his sons heading our herd. Some choice bull calves out of cows with records up to 856 pounds for sale. Sold out of bulls over six months old.

LADD FARM, Oswego, Ore.

## 914 Pounds of Butter

This is the official record for a year of the dam of a choice bull calf by Rosaire Olga Lad, sire of 29 tested daughters. He and others priced according to quality.

ED CARY, P. O., Carlton, Ore.
Station, LaFayette, Ore.

## Ashwood Farm Jerseys

FOR SALE—BULL CALVES sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.

McARTHUR & STAUFF, Rickreall, Ore.

## Bull Calf For Sale

WOODLAWN FARM, Vega, Wash.

## A Bit of Courtesy

When writing to any of the Jersey breeders advertising in these columns, you will confer a favor to the breeder and to the American Jersey Cattle club by mentioning this paper, as they want to be able to trace the exact source of their inquiries. Will you do this, please?

## 763 Pounds Butter

and 11,501 lbs. milk is the average of the Register of Merit records of the three nearest dams of this handsome bull dropped Aug. 28, 1917. Dam Stockwells Dahlia, 619 lbs. butter and grand champion Oregon State Fair twice. Sire Dominus, who is out of an 817-lb. cow and a son of an 853 lb. cow. Price $150.

J. B. STUMP & SON, Monmouth, Ore.

## ASHBURN FARM

Register of Merit Jerseys

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

J. M. DICKSON & SON, Shedd, Ore.

## Waikiki Farm

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.

ROUTE 7, SPOKANE, WASH.

## Jersey Bull for Sale

dropped Oct. 14, 1917. Sired by Prosser Pogis 136859, a son of Hood Farms' great bull, Pogis, 99th of Hood Farm 94502, and full brother of Sophie's Agnes—record, 14149.7 lbs. milk, 982.3 lbs. butter.

E. O. RICE, Prosser, Wash.

GOLDEN GLOW HERD

Winner of 1st and 2d prize in butter test, Oregon State Fair, 1917, (all breeds, 20 entries); breeder and owner of grand champion cow in show ring, 1916; breeder of grand champion cow, 1917. Breeder and owner of world's champion 3-year-old, with 1115 lbs. butter, 80 per cent fat. Every female a daughter, granddaughter or great granddaughter of Golden Glow's Chief, sire of 34; 14 over 700 lbs.; 32 over 600 lbs.

PICKARD BROS., Marion, Ore.

OAK RIDGE JERSEY FARM.

Thirty years breeding Jersey cattle. Young bulls from Register of Merit dams. Also a few choice females.

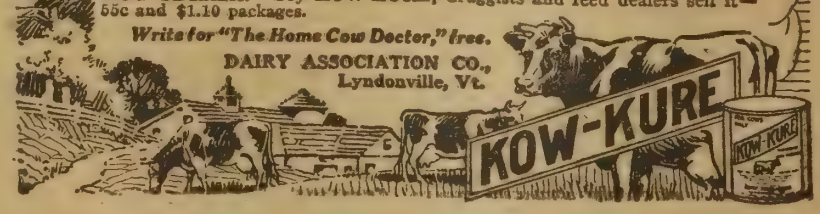
RILEY E. HULBURT. Albany, Ore.

## La Creole Farm Register of Merit A. J. C. C. Jerseys

under U. S. government control for health. No. T. B. or abortion ever in herd. A breeder for 15 years; high-class stock, for high production.

We offer you a bull that is O. K., guaranteed; sired by Oxford You'll Do Jr.; daughters producing over 2 pounds B. f. per day. His dam, Morrow's Select 828 lbs., is the first tested daughter of Golden Glow's Chief. She was 5 weeks on fair circuit while on test and only dairyman's care when at home, otherwise she would have produced close to 1100 lbs. This bull is 2½ years old and solid color. We have a bull calf from this cow, otherwise would not sell. Priced right.

W. O. MORROW, Independence, Ore.



## The Cow's Health - First of All

To think of the milk yield first and the cow's health afterward is putting the cart before the horse. Many "poor milkers" only need to have their systems working properly to become good producers.

KOW-KURE, the great cow medicine, makes cows healthy and *keeps* them healthy. Working on the digestive and genital organs, it is a prompt, sure remedy for Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches. Try KOW-KURE; druggists and feed dealers sell it—55c and $1.10 packages.

THE HERD WITH YEARLY RECORDS.
WESTERNWOLD RANCH, Prineville, Ore.

### LaConnor Flats Stock Farm

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams; butter, 1 year, 1030.82 lbs.; milk, 24,380.3.
J. H. HULBERT, Mt. Vernon, Wash.

### Record Holsteins

Young bulls, some of them ready for service, by a sire whose 5 nearest dams average 26.17 pounds butter, or another with 29.67-pound dam, and out of high-record A. R. O. dams. Priced to sell.
ERNEST WERNER, AURORA, ORE.

### Bargains in Bull Calves

Sired by Segis Riverside Pontiac, that sold in Pacific international sale, 1914, for $1025, and whose dam has A. R. O. record of 31.47 lbs. butter in 7 days; 113.89 in 30 days, and big records all through his pedigree.
ERNEST JOHNSON, Scappoose, Ore.

REGISTERED HOLSTEINS.
One 30-lb. bull with grand champion sire and dam; also young bull calves. Here is production and type we hear so much about.
H. R. BOOMER, New Plymouth, Idaho.

### HOLSTEINS

Well bred young bulls for sale.
THOS. CARMICHAEL. Gaston, Ore.

REGISTERED HOLSTEINS.
Bull calves for sale with good A. R. O. backing.
BEEBE BROS., R. F. D. 2, Rupert, Idaho.

## BROWN SWISS CATTLE

### Brown Swiss Stock Farm

Breeders of Brown Swiss Cattle, the Farmer's Dairy Cow. Young stock for sale.
THEO. BRUGGER, Route 3, Gresham, Ore.

In writing advertisers, be sure to say that you saw their advertisement in this paper.

## SHORTHORNS

A few young stock for sale by such noted sires as Precious Goods, a son of the great Golden Goods, and Scottish Sunrise 2d.

R. E. BOYCE, Baker, Ore.

WEST SIDE AUGUSTUS (514271).
heads my herd of registered Shorthorns and D. S. Poll Durhams. West Side Augustus by Count Augustus was first prize winner at Intermountain Stock show, Salt Lake, 1917. Stock for sale. Correspondence solicited.
R. A. PARSONS. Blackfoot, Idaho.

### LELAND BROTHERS

Breeders of top registered Shorthorn cattle. Correspondence solicited.
WENDELL, Idaho.

### H. H. Schildman

breeder of registered Shorthorn cattle, Hampshire sheep and big-type Poland China hogs.
Filer, Idaho.

REGISTERED SHORTHORN COWS,
Young bulls and heifers, sired by Scotch bulls; liberal terms.
CALDWELL CATTLE CO., Caldwell, Idaho.

## GUERNSEY CATTLE

### Orchard Hill Farm

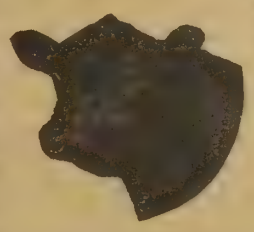
"Home of High-Class Guernseys."
Dr. Park Weed Willis, Owner.
Redmond, Wash.

### FAIRVIEW FARM

Breeders of high class registered and grade Guernseys.
A. J. SINNES.
Route 5. Mt. Vernon, Wash.

MIDDLEDALE FARMS GUERNSEYS.
Herd founded in 1904, May Rose breeding. Most all granddaughters of Jethro Bass (11366), son of Imp. King of the May. Have a few heifers, calves for sale. Goshen, Ore.

## ABERDEEN ANGUS



### ANGUS CATTLE

In the famous valley of the Yakima there is located one of the best herds of Aberdeen Angus in America. Proof of this is evident by the many prizes won by this herd at all of the greatest shows of the northwest and central states, including the Chicago International.
Fifty extra good range bulls are now offered for sale. Also fancy herd headers and show cattle of both male and female. All prices very reasonable.
CONGDON & BATTLES.
OTTO V. BATTLES, Manager.
Yakima, Washington.

### Aberdeen Angus Cattle

A. H. EAGLESON & SONS.
Boise, Idaho.

### When Breed Meets Breed

The world's greatest live stock show, the International Live Stock Exposition, held annually at Chicago, has given the following honors over all breeds to Aberdeen-Angus cattle:
Grand Championship over all breeds 10 out of 16 times for single steer.
Grand Championship over all breeds 13 out of 16 times for Fat Carlot.
Grand Championship over all breeds 15 out of 16 times for Fat Carcass.
Write for literature to
Western Field Representative E. T. Davis,
Iowa City, Iowa.
Union Stock Yards, Chicago.

### MORE BULL PER DOLLAR

Because we sell ours cooperatively and save advertising cost. Bull calves all ages. Good individuals. A. R. O. sires and dams. Satisfaction guaranteed. Write for catalogue.

ROGUE VALLEY HOLSTEIN ASSN.,
F. R. Steel, Sales Mgr. Winona Ranch, Grants Pass, Ore.

## TAMWORTH SWINE

ROUND KNOLL RANCH NO. 3.
Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.
Bliss, Idaho.

## CHESTER WHITE SWINE

### COVE STOCK FARM

Unrelated fall and spring Chester White pigs from prize winning stock.
ARCHIE CONLEY, Cove, Ore.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, March 4.—Corn prices hardened today, influenced largely by scarcity of good grades and by reports that the number of cars available was inadequate to meet rural needs. Futures closed firm at the same as Saturday's finish to 1-8c higher, with March $1.27 3-4 and May $1.27 1-8. Oats gained 3-8@1-2 to 1-2@5-8. The outcome in provisions varied from 15c decline to 7c advance.

Despite big receipts demand for corn showed urgency for the better qualities and displayed some improvement as to the less desirable kinds. One of the leading industries which has been out of the markets 10 days became a purchaser again. Complaints of car shortage were chiefly from Illinois and Iowa.

Persistent buying of oats took place throughout the session. Gossip was current that a better outlet east was likely.

Packers rallied provisions from an early decline. The initial weakness was ascribed to a setback in the value of hogs.

Chicago Futures.

## Seattle Wheat.

SEATTLE, March 2.—Unless prices of barley are regulated much of the acreage planted to wheat last year will go into barley this spring in Washington, according to advices received by Seattle millers from country station managers. The high price and comparatively double yield per acre is the reason for the barley talk.

Grain men here received the facts about wheat prices for 1918 with mixed emotions. Millers almost unanimously complained of the so-called injustice that would follow, while farmers and grain buyers were pleased. It is taken to mean that prices at Seattle will be the same as at Chicago, and it was thought that one of the reasons for making the price the same as in 1917 was to prevent a carry over. The government is in great need of wheat and expects, it is believed, to remove any inducement to farmers for holding.

It is the impression among dealers here that the Coast terminal price will be $2.15, but Mr. Hoover's later announcement of his intention, in response to the request of the grain committee from Spokane, to permit of another adjustment of prices may change the entire face of the situation.

Grain buyers here take it that prices fixed by the proclamation are on the basis of No. 1 hard wheat, 60 pounds to the bushel. As little of the wheat raised in this territory comes up to that weight, values will settle down to the 58-pound basis and not all of the crop will bring $2.05 to the farmer, as happened last year.

The prices of wheat substitutes are higher proportionately than those of wheat, and the result will be a greater acreage of barley and oats and less of wheat for the spring crop. Government regulation would, of course, check this tendency if action is taken in time, as urged by the grain and feed committee of the merchants' exchange by telegraph to President Wilson and Mr. Hoover.

## Portland Market.

PORTLAND, Ore., March 2.—Trading in the egg market was at a standstill at the close of the week. With the market declining daily, local retailers are buying only from hand to mouth. Outside business has ceased for the time being and stocks are beginning to accumulate on the street. The generally quoted case count price was 33@34 cents.

Butter was firm with 50 cents obtainable on country creamery extras.

Dressed meats and poultry were unchanged with light receipts and a good demand.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $69.50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $32.

Barley—No. 1 feed, $69; brewing, $72 rolled, $67@69.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24.50; grain, $22.

Eggs—Oregon ranch, case count, 33@34c per dozen; candled, 36c.

Poultry — Ducks, 32@35c; turkeys, live, 26@27c; geese, 20@22c.

Butter—City creamery, prints, 52@53c per pound; cubes, extras, 48 1-2@48 2c.

Cheese — Tillamook triplets, 25c; Young Americas, 26c.

Dressed meats—Veal, 20@20 1-2c; pork, 21@21 1-2c.

Hops—1916, nominal; 1917 crop, 16@17c.

Potatoes—Oregon, buying price, 85c@$1 per hundred.

Wool—Eastern Oregon, 44@65c; valley, 50@55c.

Beans—Buying prices: Oregon white, 9 1-2@10c; colored, 8 1-2c.

## Butter and Eggs.

PORTLAND, Ore., March 4.—Butter—Firm. City creamery prints, 52c; cartons, 53c; buying price butter fat, 56c, Portland; cube extras, 50c; prime firsts, 49½c; dairy, 32c.

SAN FRANCISCO, March 4.—Butter—Extras, 50½@52c. Eggs—Fresh extras, 36c; firsts, 34c; fresh extra pullets, 34½c. Cheese—Young Americas, fancy, 28c.

CHICAGO, March 4.—Butter—Creamery, 42½@45c. Eggs—Steady; receipts, 557 cases; firsts, 34c; ordinary firsts, 32@33c; at mark, cases included, 32@32c.

## Spokane Market.

Turpentine—Bulk, 65c gal; cases, 85c gal.

White Lead—Strictly pure white lead in oil, ton lots, 11¾c lb; 500-lb lots, 12½c lb.

## Seattle Market.

SEATTLE, March 2.—The Washington apple has reached a dominating position on Western avenue, from which jobbers are moving the fruit, which now has no competition, on a strong to higher market. Wholesalers regard it as singular that 90 days ago apples out of which they could scarcely get the cost price were dull, and all stimulants applied failed of their purpose. Today it is a wholesalers' market, and buyers are compelled to pay stiff prices, which are buoyant and upward.

Potatoes are holding barely steady. Growers of both eastern and western Washington are going through a period of fright, and federal grades of Yakima Gems are being quoted freely at $21. There have been offers to jobbers here this week down to $18 for this class of stock. Puget Sound locals are $15@16 f. o. b., and the market is a little stronger.

The onion market is steady. All Yakimas have been cleaned up, and Oregons are moving at $2.50 per hundred. Imported Australian browns have begun to arrive, but few have gone on the market. Quotations are 4@4½ cents. Holdings of locals of all descriptions are very light and the season will be closed within 30 days.

Protests of producers and feed dealers against any more depressions of the fresh ranch egg market have had one marked effect, that of changing the views of wholesalers as to the probable storage level for this season. A month ago all were agreed that eggs must go into storage this spring at not to exceed 30@33c. Today it is not believed that jobbers will be able to buy eggs under 35c.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Poultry—Springs, 25c lb; 4 lbs and under, 25c; old roosters, 16c lb; squabs, large, $3.50 dozen; geese, fat, live, 18c lb.

Butterfat, 58c lb; dairy butter, 35@36c.

Beef—Buying prices: Prime beef steers, 11@12c lb; cows, fat, 9@11c lb; heifers, 10@11c lb.

Hogs—Light, 18@20c lb; heavy, 17@18c lb.

Veal—Fancy light, 17@18c lb; heavy, 9@16c lb.

Hides—Salted, 14c lb; flint-dry hides, 29c lb; salt kip, 16c lb; green hides, 11c lb; green calf, 23c lb; dry calf (under six pounds), 29c lb; bulls and dry salts, 4c lb less; green bulls, 9c lb; dry salts, 4c lb. less; green bulls, 9c lb. Clean long wool, western Washington flint dry pelts, 39c per lb.; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

HOPS, HIDES, WOOL.

NEW YORK, March 2.—Hops, hides and wool unchanged.

HIDES
WOOL, PELTS, MOHAIR, CASCARA BARK

WILL EXCHANGE THE BEST 25-ACRE 9-year commercial apple orchard in Spokane valley; 1½ mi. from station; fruit warehouse across road; want well-watered stock ranch. Write, giving full particulars, to A. J. West, 901 First ave., Spokane, Wash.

**When you write to advertisers be sure to state that you saw their advertisement in this paper.**

# My K Hand Stump Puller

## Gives Your Hand 96,000 Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

# K Stump Puller

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

### How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

### A Mechanical Wonder

Made of Krupp steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not go.*

### Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

**Special Offer** I am making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write me today for full information and for free book on Land Clearing.

**Walter J. Fitzpatrick**

Box 538 182 Fifth St. San Francisco, Cal.

# Sheep Increase in Both Number and Value

—Photo by Frank Palmer, Spokane.

There are more sheep in the states of Washington, Oregon and Idaho now than there were one year ago. They are worth more money than the sheep in these states a year ago were worth. The percentage of increase in value is much greater than the percentage of increase in number. These are statements of the United States department of agriculture, the figures being based on data on hand January 1.

The State of Washington on that date had approximately 661,000, as again 585,000 one year before. The value of the sheep in Washington on January 1 was approximately $7,535,000, as against a value of $4,154,000 a year before.

Idaho leads the northwest with 3,202,000 head, as against 3,170,000 head a year ago, the values in that state now and then being estimated at $42,587,000 and $25,994,000. Oregon estimates show 2,448,000 sheep this year, as against 2,400,000 a year ago. The estimated value of this year's number is $29,621,000, as against $19,440,000 a year ago.

For the State of Washington the figures show a gain in the number of sheep of about 13 per cent, while the enormous increase in value of more than 80 per cent is shown. The department estimates the value of lambs in Washington on January 1, this year, at an average of $9 per head; the value of ewes one year old and over, an average of $12 per head, and the value of wethers one year and over, an average of $11.50 a head.

The estimates of the department of agriculture give the total number of sheep in the United States at the beginning of this year as 48,900,000, an increase of 2.7 per cent. over one year ago. It likewise gives the total value of sheep this year as $577,867,000, an increase of about 70 per cent in value.

CHEVROLET

*The Product of Experience*

# *ACHIEVEMENT!*

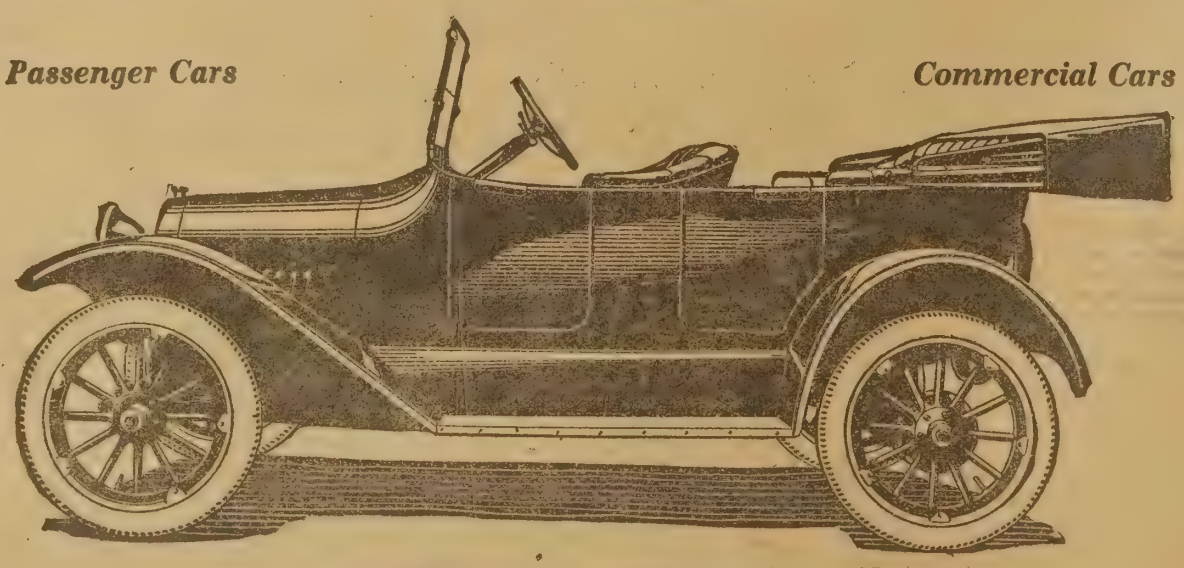
Putting within reach of the public a necessary article it has never before been able to secure is what makes a success of any business.

Offering the public a completely equipped automobile at a price never before possible is what made the Chevrolet a success.

Low price and high quailty were made possible by the erection of large and modern factories at strategical distributing points throughout the country—guaranteeing volume production and efficient delivery—the two main factors in building an exceptionally high-grade car at an exceptionally low price.

That Chevrolet has jumped from a production of 5000 cars in 1914 to 125,000 in 1917—a record never equaled—is proof that it is a GOOD car, for no automobile ever attained universal popularity without having true merit.

People are buying more Chevrolets today in the Pacific Northwest than any other electrically equipped car, for this car combines Appearance, Comfort, Performance, Service and Economy of Operation with low first cost to a greater degree than does any other car. Everybody knows "Chevrolet" means the highest point in motor efficiency.



Possession of a Chevrolet will open up to you unbounded possibilities for pleasure and profit, and its price places it within the reach of all.

See your Chevrolet dealer or write to

## May Face Penalty

### Income Tax Statements Mandatory

As indicated in these columns the government has extended to April 1 the time within which income tax statements may be made without penalty. Reasons for this extension were the greatly increased volume of work laid upon officials by the new law, inability to get sufficient blanks in time for the old limit date of March 1, and a realization that a great many people had not yet become conversant with the law.

**The law requires that every individual whose net income in 1917 was $1000 or more, if the person is unmarried, or $2000 or more if married, must make a sworn statement on blanks supplied by the internal revenue collector in his district.**

**Where an individual refuses or neglects to file his return within the required time the amount of the tax is increased by a penalty of 50 per cent, and there is a further penalty of not less than $20 nor more than $1000.**

The 50 per cent will not be added where the return is later filed voluntarily and before notice from the collector, and it appears that the delay was not wilful but was due to a reasonable cause.

If a return is falsely or fraudulently made with intent to defeat or evade the tax the person making such return is guilty of a misdemeanor, and is subject to a fine of not exceeding $2000, or imprisonment for one year, or both.

Where a false or fraudulent return is wilfully made the tax is to be increased by 100 per cent of its amount.

Where a corporation renders a false or fraudulent return, whether wilfully or not, it is subject to a penalty of not to exceed $10,000.

A Washington dispatch of March 8 says that income tax regulations for farmers, issued that day by Internal Revenue Commissioner Roper, provide that all gains, profits or income received in 1917 from sale or exchange of farm products, whether raised on the farm or purchased and resold, must be included in the return. The rules apply to all persons or corporations operating ordinary farms, ranches, plantations, stock, dairy, fruit or truck farms.

Deductions from gross income may be claimed only for expenses connected directly with farming operations for last year and made during the year, even though crops on which the expenditures were made were not sold within the year. A former ruling that the cost of stock purchased for resale is an allowable deduction under the item of expense is annulled, and these expenditures now are regarded as capital investments. Consequently, when the live stock is sold the original cost may be deducted from the sale price to ascertain the profit, which is taxable.

Under the same procedure, if the cost of stock or farm products purchased in any year previous to 1917 were deducted in returns of those years and the stock sold last year, the entire proceeds are to be included in the taxable income. This applies only to farmers who have made income tax returns heretofore. If this deduction had not been claimed it may be taken from the selling price of stock last year to determine the taxable profit.

Farmers who keep books according to some approved method of accounting which clearly shows net income, and who take annual inventories may prepare their returns in accordance with their inventory record. Live stock purchased for draft, breeding or dairy purposes may be included in the inventory for each year at a figure which will reflect the reduction in value estimated on the basis of increased age of the animals.

These regulations relate only to farm operating income and not to profit which may have resulted from sale of a farm. Neither is a farmer required to include in his taxable income the value of farm produce consumed by himself and family. If produce is exchanged for merchandise the market value of the material received is to be considered as income.

**Alaska Minerals.**

In 1917 Alaska produced minerals valued at $41,760,000.

## What Lies Back of Silverdale Eggs

### *Cooperative Spirit Rules and Standard Product Is Result*

Down on Western avenue, in Seattle, "Silverdales" are a staple in the produce trade, much as is sugar on the general market. "Silverdales," it may be well to explain at this point, are eggs; eggs produced at Silverdale, Wash. They owe their reputation to the fact that they are dependable in quality, and are put out under a trade name which is a guarantee of this dependableness. Back of "Silverdales" lies Silverdale, premier cooperative community of western Washington.

**A good bird belonging to D. Tancred of the Silverdale association.**

Cooperation is always a mental condition before it becomes a physical fact, and so it happens that for a time the progressive farmers of Silverdale thought cooperation and talked cooperation, but were forced to buy their chicken feed and their groceries at one of the privately owned stores in Silverdale. But the cooperative virus was in the very air, and these poultry farmers wanted to patronize themselves when they bought provisions. In due course of time they purchased one of the local private stores and the cooperative store of the Silverdale Poultry association came into being.

Under the old competitive methods operating expenses came to 12.7 per cent; now they amount to about 6.3 per cent, and because of this big saving in running expenses it may be said that the business is paying for itself.

The Silverdale Poultry association, Inc., is practically a stock company, with each member's holding of stock limited to one share and with dividends paid not on stock, but on patronage. There are about 250 members at present, and the great majority of these are loyally and whole-heartedly with the cooperative enterprise. The store building which it now occupies with its general merchandise business forms the center of the community, economically. These officers are: Thomas Hagener, president; Olaf Nyberg, secretary; directors, Thomas Hagener, J. P. Johnson, J. M. Smail, W. A. Somers, J. L. Neil.

## What Are Your Regular War Savings?

All over this nation there is now being taken a census of men and women over 16 years of age and under 60 years. All manner of questions are being asked, so that the government will be able to know just the man power and the woman power of the country. Here is one of the questions: "What are your monthly war savings?"

That's one of the most vital questions on the card. It is one of the most important things right now before the American people, this thing of saving. We have been careless and wasteful long enough. Now is the time to stop it and fall into line with the great, world-wide sentiment of economy and industry.

The government wants to know exactly what each one of us is doing about the war savings and thrift stamps that it is offering us, and every one of us should be able to say definitely in answer to that question: "I am buying so many war savings stamps each day or each week." We must answer that question. Good business and good patriotism demand that we be able to give the right kind of answer. Let every one of us save systematically. If you want to be able to make the right kind of answer to that question, the Farmer will help you. Decide how many stamps you want and use the coupon herewith.

## Clip This Convenient Order Blank

Address all communications concerning thrift or war savings stamps to the Washington Farmer, War Savings Department, Room 26, Review Building, Spokane, Wash.

Remittances may be in any form desired, including personal check.

## Sheep Show Increase

(Continued from page one.)

The sheep industry of the entire United States has been stimulated not only by the increase in mutton value, but by the great increase in wool prices, which, during the last year, have reached the highest mark on record. Illustrating the increase in wool values the department shows that one year ago on the Boston market wool classed as "Ohio fine unwashed" was quoted at 40 to 44 cents per pound, while on the same date this year the same class of wool is quoted at from 65 to 67 cents per pound. Likewise a year ago "best tub washed" wool on the St. Louis market was quoted at 48 to 49 cents a pound, while this year it is quoted at 83 to 85 cents per pound.

In the northwest as in many other sections of the country the sheep raising industry has been marked during the last year by a tendency to increase the number of small farm flocks. Agricultural leaders everywhere have urged the advisability of a few sheep on the farm to utilize waste feeds and at the same time bring a very considerable profit to the raiser.

**Trappers of the Ozarks.**

Are you reading the "Trappers of the Ozarks?" If so tell your neighbor what a good story it is. If you are a new subscriber or if you have not begun it before just turn to page 28 and see what you think of it.

**The Garden Contest.**

On page 4 of this issue is given the first instalment of letters received in competition for the prizes offered by the Farmer. Owing to the large number of plans submitted the decision has not been made yet as to the winners. Letters will be published from time to time, and the announcement of winners made within a short time. Don't fail to read the plans on page 4 and in subsequent issues.

# "Out of Our Garden Comes Most of Our Living"

## *Dozens of Gardeners Enter Prize Contest and Tell How to Produce Food to Win the War*

"Out of our garden comes the most of our living," writes Mrs. E. C. Ford of Fairfield, Idaho, in the letter that she submitted in the war garden contest announced some time ago by The Farmer.

To those that do not know the value of a garden that declaration should be an inspiration. To those who do know the value of a plentiful supply of fresh and winter vegetables it should be a stimulus to redoubled effort this season.

That sentence indicates the possibility of a farm garden in helping to solve the food problem of this strenuous war time. Not only can the gardener produce wholesome food for the home family, thus greatly decreasing the consumption of other foods that should be conserved, but he can also supply the needs of others less fortunately situated and aid them in conserving those things for which the allied armies are pleading.

On this page are a number of letters or extracts from letters received in the garden contest. When reading them remember that they do not all refer to the same soil and climatic conditions. Use good judgment in adopting their suggestions, or parts of them, but raise a garden. It is one of the easiest ways of doing your bit. It is your patriotic duty.

"Fortunate indeed," says Mrs. La Verne Gahley of Parma, Idaho, "especially during our nation's need, is the housewife who takes a pride in preparing various dishes which may be prepared from the many garden vegetables; for she it is who has it in her power to respond to the call for economy in foodstuffs.

"One can hardly realize what a great part of the living may be prepared from vegetables of a well-kept garden unless one has tried it. Go into the garden business with the idea of seeing how much you can save on the grocery bill, and you will accomplish things that will surprise you.

"Raise enough in your war garden to do some canning and drying for winter. The simple process of canning the smaller vegetables by filling the cans with the vegetables salted a little, and then boiling them three hours in boiling water in the cans, has wonderful results. The secret of success lies in boiling them long enough and getting them sealed perfectly tight while very hot. Corn and peas both are very fine dried."

Letters and plans from other follow:

### Study the Season.

In my opinion one acre of garden and early potatoes would not be too much to use on a farm tract. Less, of course, would be used on city lots, but always use the longest rows possible to simplify cultivation. An acre about 20 rods long and 8 rods wide makes a nice shaped garden plot and should be as near the house as possible and it should have a southern or eastern exposure or slope, and the soil should be well tilled and fertilized. Lay off a strip full length of garden nearest house for small and early vegetables so wife and children can do their bit easily. The first spring seeds sown should be such hardy plants as radishes, lettuce, spinach, beets, carrots, parsnips, seed onions, peas, etc. These can be planted in rows as soon as ground can be worked. Seeds soaked 24 hours in water germinate much more quickly than dry. A few rows of early potatoes should be planted about the same time; if treated with formalin and allowed to sprout will come through the ground with a few warm days. Of course one should have such plants as cabbage, tomatoes, celery, etc., planted in boxes in the house if not in a hotbed. Early tomatoes such as the Earliana, also early Wakefield, cabage could be used very early in summer by care. The plants should be transplanted in damp weather as soon as danger of frost is past. Later kinds can be planted in rows and thinned out. Sweet corn, cucumbers, squash, pumpkins and the like must be reserved to plant later than the hardier seed or when field corn and potatoes and beans are planted. Long ago I learned a little lesson on the time to plant each kind of seed and do not plant by calendar, as we do not always have the same kind of spring. If one watches the fruit trees as they bloom they can make good by planting the hardier kinds when peaches, plums and cherries blossom. These include the first named varieties. When apple trees are in full bloom plant the more tender sorts, such as late peas, string beans, sweet corn, sweet potatoes and also vines, and when blossoms are all gone and fruit set, it will be safe to transplant and sow such things as cabbage, tomatoes and that sort of stuff. Cauliflower and pepper are along the same line. I have found one can have a nice double crop by planting field or navy beans, also string beans with the sweet corn or even field corn, also pumpkins and squash. It does not seem to hurt the amount of corn raised. Get good seed from a reliable firm and get it early on account of scarcity. Test it same as corn so as not to make any mistake. There are many other good things that could be raised easily. I like some perennials such as rhubarb, horse radish, winter onions, garlic, asparagus and some of the herbs such as sage, thyme, etc. These can be planted along a fence, so as not to bother "the man with the plow" but, of course, do not make a full crop the first year.

Another little scheme I have learned on a small place is, when one has not a strawberry plot, to make one by building a mound, say 6 to 10 feet at base, or whatever size is convenient, slanting to 2x4 at top, about 3 1-2 feet high. Set a row of bricks or stones around it with spaces say two inches. Keep on with the rows and break joints until all is covered. The spaces must be full of good ground, and in that space plant strawberry plants. Progressive I found best and then one can have berries from June to November, as one can cover such a strawberry patch. The brick or stone hold moisture and the runners can be kept cut off. The berries are large and clean and make a wonderful help in the menu.

The best method I find for cultivating a garden is by horse cultivator or wheel cultivator as it saves time and strength. Of course one has to do some hand-picking and thinning, but that is easier than the hoe method. Small wheeled drill cultivator and hoe can be bought reasonably, and by the way right here I will say that a few Belgian hares would use all the weeds and plants thinned out of rows, as well as every unsightly weed around the place and without any material cost, and is a great help in the meat question as they are very prolific and easy to care for, but must be kept inside of wire netting or they will help themselves to garden too frequently.

The harvesting of a garden is usually the most dreaded, but as it is generally done by piece work, while canning, cooking, drying, etc., it does not leave such a harvest at one time. A plow or cultivator can be used to dig the potatoes if a digger is not at hand. The dry beans pulled by hand, the root crop by use of a garden fork, and so on along the line.

For cutworms, which is the first pest, use bran sweetened, and use orange juice as a decoy, mixed with water and paris green or some commercial poison, as advertised in all our seed catalogues. Sprinkle around where you intend to transplant, and cover with paper over night, and the worms come up, eat it and die. Keep the poultry out of the garden when using this poison. Paper rolled around the stalks and plants, with bottom open, is a help too. The garden mole is easier to trap than to poison. Potato bugs and all that kind of pests can be kept in check by spraying with paris green in water. The cabbage worm can be kept out of commission by spraying with a solution of formalin when the white butterflies appear.

A good plan to make use of the garden stuff is to use all we can while green, to save other things. Then can all that is possible, especially tomatoes, corn, beans and such like. Dried corn is very good, and string beans made as sweet pickles also can be put down in salt and freshened when wanted. Cucumbers are also good pickled this way. Sauerkraut is a treat to many, even if it a German dish. Whatever is not made up into food of this sort ought to be carefully put into a dry, well ventilated cellar or root house. All our staple vegetables can be kept almost as long as potatoes this way.

When planning your garden leave plenty of room for transplanting cabbage, tomatoes and such things, and with the field potatoes, beans and such useful things we will help win the war, each and every one of us.

MRS. J. M. FOYE.
Valleyford, Wash.

## Prepares Table to Illustrate Method

I have used as a model the standard garden, 75x150 feet, for a family of five, and have used the main crop vegetables that we grow in western Washington. I place the different varieties so that each may receive the most sunshine. With endive I've put flowers; most of us have so little time for flowers that we would welcome a row or two among our vegetables. In one of the smaller European countries now at war, the gardeners always plant some flowers among the vegetables.

We do not have many garden pests. The mole or mountain beaver is the worst. Some trap the mole, others put red pepper with seeds as they plant them, and others have used poisoned raisins. Potato blight may easily be prevented by treating the seed in a solution of formaldehyde. The worms that bother cabbages and cauliflowers will stay away if the plant has been watered at planting time with a very weak solution of carbolenum.

Harvesting and preserving vegetables often requires as much time as planting them. In this climate, cabbage, broccoli, celery, turnips, rutabagas, beets, carrots and parsnips may be left in the ground. Potatoes should be stored in a cool, dark, dry place after they are dug. Good shell beans can be grown here and if not quite ripe when frost comes, the drying process can be finished by artificial heat. Cucumbers are best pickled. Squash and pumpkins can be stored. Cabbage is best used in sauerkraut; and green beans may be preserved in a similar way. In a jar thoroughly sterilized place a layer of beans, then one of salt and alternate until filled, on top place a weight or a saucer. When using the beans, they should be soaked in several waters. Beans, peas, cauliflower, corn and root crops are, as we all know, delicious when canned in the cold pack way; peas and corn should be canned within 24 hours of the picking to prevent flat sour. Corn is better dried for the fine lavor is then retained. Onion sets will bring more satisfactory results than the seeds, for they mature six weeks sooner. After the bulb has grown the tops should be tramped down, the bulb left to ripen before digging.

Never in the history of our country has the raising of our food been as needful as it is at present. We can raise almost our entire supply and by having an "all year 'round" garden, and using and preserving the products, we will eat less meat, wheat, fats and sugar and thus do our best instead of our bit and help win the war, for win we must. It is our privilege to produce.

MRS. WINIFRED BUCKINGHAM.
South Bend, Wash.

Here is Mrs. Buckingham's table showing time and method:

| Kind of vegetable | Seeds required | Time of planting | Fertilizer | Cultivation. |
|---|---|---|---|---|
| Beans | Bush, 2½ qts. Pole, ½ pt. | Apr. or May | Cow stable manure | Shallow cultivation |
| Cabbage, Cauliflower and broccoli | 75 cabbage 18 cauliflower 18 broccoli | April and May July | Cow stable manure | Frequent hoeing, a little carbolenum mixed with water keeps worms away. |
| Celery | 75 plants | June | Any fertilizer that contains potash | Water often |
| Corn | 1¼ qts. | May | Liquid manure | Hoe often |
| Cucumbers | 1 pkt. | June | Cow stable manure | Plant around a perforated tin can sunk in the ground and water often |
| Lettuce | 1 pkt. | April | Liquid manure or nitrate of soda | Hand cultivation, water |
| Onions | ¾ qt. of sets | April | Old manure | Hoe and keep entirely free from weeds |
| Peas | 3 pts. | March | Chicken house manure | Hoe |
| Potatoes | 532 seeds | March | Wood ashes and good manure | Frequent hoeing |
| Squash and Pumpkin | 1 pkt. each | May | Lots of cow stable manure | Keep soil loose around roots |
| Radishes | 1 pkt. | March or April | Commercial fertilizer | Spread cheesecloth frame over to keep off flies that lay eggs; water |
| Turnips, bagas beets, carrots and parsnips | 1 pkt. each | July April | Well rotted manure rich soil | Keep loose soil, free from weeds |

### Begins With Onions.

Just received a seed catalogue, and oh my! what a lot of good things they do picture out. How nice if we only could grow such garden "sass." Well we set to planning at once what we shall have in our farm garden. We must all have berries, strawberries, dewberries, raspberries, blackberries. We must have rhubarb and horse radish, multiplying onions and herbs of all kinds, also asparagus.

Now for garden seeds. Let us order early and have variety, for out of our gardens comes the most of our living. We must have our rows as long as possible and as straight as we can make them, although a few crooks and curves look more natural and take the measured, too mucth planned effect away.

Onions are always my starting point of feeding. White bunch and Australian Browns are the favorites. When we seed our onions, carrots, parsnips, parsley and oyster plants we put in a few radish seeds to guide us in hoeing, as the radishes come up quickly and if seeded with these other vegetables eight or 10 inches apart we have our radishes for the table and a row marker for slower vegetables. We want ox heart carrots, plenty of them, as our fowls will eat all the surplus ones not needed for the table. We want three kinds of peas, the dwarf, Notts Excelsior for intermediate and the telephone for late peas. We want Early Jersey Wakefield cabbages for early use and they can be started in the rows with onions or carrots, also the old-fashioned flat Dutch cabbage for late. We want tomatoes of the early kind, also the husk tomato for we think they make finer preserves than anything we can grow. We would not do without bush squash, as they are either fruit or vegetable, according to the way they are cooked. We must have Hubbard squashes and in our corn patch we will grow Japanese pumpkins. If we are to have help to cultivate our garden we will have both watermelons and muskmelons. Of beans, let us have a plenty, both string beans and the kind to use dry.

We salt our beans instead of canning them for winter. Place a layer of beans and a layer of salt, etc., till your beans are all used up. You may add to them any time, put a weight over them, and they will form their own brine. We like them better than the canned beans. We dry peas when they are green and just fit for the table. Both peas and beans must be soaked before cooking.

We want a few beets, lettuce, turnips and rutabagas, and it is nice to have a few more of all vegetables than we need, for we can always find a sale for them at our nearest town. We never forget to grow cucumbers, kale and cauliflowers. The cucumbers we plant in rows about six inches apart in the rows and the rows about four feet apart. When seeded this way the first flowers seem to be pollinized easier, as they are closer together than in the hills, and the first blossoms do not blight.

We use plenty of well-rotted manure for fertilizer, and find that we can not cultivate our ground too often. A hand cultivator is useful, and a black-handled three-tined fork does splendid work with us in the rows of young plants. We start our tomato plants in the house in the month of March. We love flowers, and sometimes scatter old-fashioned poppy seeds in the rows of vegetables, and they help to brighten the garden. Our happiest summer hours are spent in the garden.

MRS. E. C. FORD.
Fairfield, Idaho.

# Why We Must Save Our Wheatstuffs

## *Allies Must Have Hundreds of Millions of Bushels This Year or Lose Battle*

Lord Rhondda, British food controller, recently cabled Mr. Hoover: "Unless you can send us 75,000,000 bushels (meaning immediately and from last year's crop) we can not hold out until your army is ready to strike."

That is why the government is begging the American people to save wheat and urging American farmers to make extraordinary efforts to increase this year's production.

The Wall Street Journal, a painstaking statistical authority, finds that our European allies and the small neutral countries of Europe will need imports the coming year of about 650,000,000 bushels of wheat. Where can this wheat be found?

A high official of Australia said recently that his country had nearly 300,000,000 bushels of surplus, the accumulations of three harvests. But Australia is on the other side of the world from Europe, and with ships lacking for that long voyage and the German U-boats cutting steadily into ocean tonnage there is no prospect of getting the Australian wheat to Europe. Since the first of January Australia has shipped only 3,380,000 bushels, Argentina 2,680,000, and India 800,000. "Almost enough to set the tables two days shipped in six weeks."

Increasing dependence, therefore, must be placed on America, and the Journal finds that on the basis of prewar consumption and reserves 250,000,000 bushels would represent the limit of what North America could supply. But Europe needs 650,000,000 bushels.

David Lubin, delegate of the United States to the international institute of agriculture at Rome, said the other day that there is a continued shortage of foods and three methods of overcoming it suggested themselves to his mind: Payment of bounties by the government, the guaranteeing of high prices, or irrigation. Mr. Lubin thinks that the third plan, for more extensive irrigation of arid lands, would be likely to prove the most effective. On that point he said:

"There are, no doubt, vast tracts of land in Idaho, in Montana, in New Mexico, in Wyoming, in Utah, in California, in Arizona, in Colorado, in Nevada, in Texas and other states which, when supplied with the necessary water, could be made available for cattle and sheep ranges. These vast tracts of land, when irrigated, would afford a means for largely increasing the area of livestock production.

"But would not the construction of extensive irrigation systems be likely to take more time than the needs of the case would permit?

"Well, as the time required for construction would depend largely upon the number of laborers employed, it would follow that by increasing their number the time could be shortened.

"But even then, is it not likely that by the time such systems were gotten into working order the war would be over?

"Supposing the war were to be over, there would still be the shortage of needed livestock, for cattle, sheep and hogs can not be multiplied as rapidly as other productions of the farm. There is, therefore, bound to be a shortage of livestock for several years to come, whether the war be ended or not.

"Assuming, however, that this irrigation proposal be taken up, under whose auspices should it be carried out?"

"The construction of the extensive irrigation systems should largely, if not altogether, be done by the government, for this would, in the first place, expedite the work, and secondly, it would place the whole matter under government control.

"But would not such action be unprecedented?

"It certainly would, but then, are we not at present living under conditions which are unprecedented?

"The marvelous dexterity with which the momentous political situation has been handled is such that on the surface all seems normal and quiet. Hardly a ripple seems to ruffle the calm of the financial and industrial life of the American people.

"But below the surface what is to be seen? A raging, ravaging, devouring war; a great war; the greatest war in history; a war which consumes on a scale in geometric ratio to that of other wars—where former wars killed by the thousand this war kills by the hundred thousand. Where the sufferers could formerly be counted by the million, they can now be counted by the hundred million. Where former wars consumed money by millions, this war consumed it by billions.

"And the war still goes on.

"We are called upon to exert all our power; to leave no stone unturned; to sift, weigh, measure, adopt and carry out all honorable means that may lead toward victory. And in so doing we should not overlook the importance of the question of augmenting the livestock resources of the nation.

"It, therefore, follows that if there be the vacant land and the water available for the plan proposed it is incumbent on the government to carry it out. More than this; the government should exert its influence toward having similar measures taken up in Argentina, Brazil, Mexico and in other Central and South American countries. Thus by augmenting the livestock resources of the United States and those of our neighbor countries we would strengthen an important and essential factor toward victory for ourselves and for our allies."

Mr. Lubin is a high authority, but we question the practicability of a plan so vast and difficult when the nation is at war. Not only for the objections which he himself has pointed out and answered, but on account of the stupendous difficulty of putting settlers on the reclaimed tracts. Eastern farmers do not understand irrigation methods, and even in peace times are slow to move west and settle on reclamation projects already constructed. It takes a lot of education to make a successful irrigation farmer.

We do believe, however, that the government should make extraordinary efforts to put under cultivation all the lands now under irrigation. When that has been done it will be time to engage in yet moe ambitious projects.

The sure remedy will be found in better prices for food products. Prices that will justify the cultivation of enormous areas, in the aggregate, of second-class land.

We do not like the prospect of laying yet higher costs of living on the masses of the American people, but there is a graver evil than high cost of living—a pinching food shortage, and if the authorities are well advised, that is what is confronting the United States and its allies.

# Farmers Bid Against Each Other

## *Lack of Uniform Wage Aggravates Farm Labor Trouble*

That many farmers throughout the northwest are adding to their own and to their neighbors' labor troubles is indicated by reports from many localities that some of them are bidding against each other, and community against community, for farm hands. There is, however, throughout the northwest a strong tendency for statewide agreement between farmers on wage scales to be paid during the present season, and in many localities agreements are being reached and fairly well lived up to, according to reports. Especially is this believed to be true in the state of Idaho where the state farm bureau has taken the matter up and agreed upon a wage scale.

The wage scale in Idaho as agreed upon provides for $60 per month with board for the regular farm hand, with $80 per month for those who are so situated as to board themselves. For harvest help it is agreed in Idaho that common harvest labor shall receive not more than 30 cents per hour or $3 per day of 10 hours, with not more than 45 cents an hour for time put in in excess of 10 hours a day. This is in cases where the employer boards his men. One dollar additional would be allowed per day where the laborer boards himself.

A tendency for similar agreements for this is noted in the other states of the northwest and considerable success appears to be resulting. Where agreements have been reached, $60 a month with board is the wage usually agreed upon. Farm organizations county agents and others in Oregon, Montana and Washington are working on the problem.

However, it is evident that individual farmers, fearful that they will be unable to secure the needed assistance in putting in their crops, are making concessions in wages that will greatly handicap the agricultural industry, not only of their communities, but of the entire district.

J. C. Scott, federal farm help specialist for the state of Washington, reports that instances have been called to his attention where farmers have agreed to pay as high as $110 a month with board and room. Oother instances are on record of $75 and $100 a month. Mr. Scott is conducting a campaign in the state of Washington for the establishment of a comprehensive system of farm labor bureaus under which practially every farm community shall have a local bureau to assist the farmers in securing the help they need and likewise to assist the laboring man to secure the employment they seek. Mr. Scott believes that there is an abundance of farm labor available, but that much of it is holding back waiting for increased wages.

## Study Grain Grades

For the purpose of ascertaining the views of the wheat growers of the Inland Empire on the proposed grain grades for 1918, the grain market bureau of the United States department of agriculture has called a public conference for Spokane on March 18. Wheat growers are urged as largely as possible to attend in order to give the federal authorities the greatest amount of information possible upon which to fix the details of the grain grades.

**A Knitting Shop.**

Philadelphia has opened a knitting shop where soldiers and sailors are given instructions in using needles.

**Third Instalment.**

You have missed something worth while if you have failed to read the first two instalments of "Trappers of the Ozarks" in the last two issues of the Farmer, but you can begin now if you did miss them. Turn to page 28, read the synopsis of past chapters and then read about that buffalo chase and the adventure with a bear.

## Nine Cents for Sacks

R. A. Lewis, vice president for the federal grain buying corporation, has announced that farmers who sack their grain this year will be allowed nine cents a bushel for their sacks. That is, the price of sacked grain will be nine cents a bushel more than that of bulk grain. This will amount to a return of about 20 cents a sack for the sacks used, depending upon how the sacks are filled by the threshing crew.

There has been agitation over the high prices being asked for bags for the new crop. A full investigation was held last week in Washington, before the war trade board and the evidence went to show the present high prices are due to the high prices demanded for bags in Calcutta, and not to any speculation on the part of the bag men here. While no definite allowance is set for barley, it is known that the value of the second-hand bags is added to the bulk value of the barley, and indirectly the farmer will get back just about the same proportion of the cost of his bags when he sells his barley.

The assurance of the new price, so far as the grain corporation is concerned, is contingent upon the fact that the end of the war or other causes might be such that the grain corporation would not handle the wheat crop this year as they have in the past, and the allowance of 9 cents a bushel is based on the present bag market and would only be revised if conditions radically changed.

**FORM GARDEN ARMY.**

**Government Organizes Children.**

The United States department of the interior and the department of agriculture have announced a movement designed to enlist 500,000 children into a great garden-producing army for the coming season. The organization of the children in the cities, towns and villages will be under the direction of the department of the interior, while the organization in the country will be under the department of agriculture. In order to stimulate the work of the youngsters there will be special honors in the form of prizes, badges and the like. To give it a sort of military status the members will be entitled to display in one form or another the insignia of the new service, U. S. G. A., meaning United States garden army. It is understood that the parochial schools of the Catholic church will participate the same as the common schools of the country, the movement being pushed largely by the school authorities. Cardinal Gibbons has announced his approval of the plans for parochial schools to participate.

# It Takes a Lot of Food to Feed the Army

Uncle Sam must draw heavily on the farms, orchards, gardens and ranges to feed his army of 1,500,000 men now in service or in training. It takes a lot of food to satisfy the hunger of all those huskies. They will eat in a single day 3000 beeves, 750 tons of potatoes, 225,000 pounds of bacon and 40,000 pounds of prunes.

Canned goods are consumed in enormous quantities. The army takes 275,000 cans of condensed milk daily. Its vegetable diet includes 130,000 cans of tomatoes daily, 36,000 cans of corn, 24,000 cans of green peas, 2500 cans of green beans, 1800 cans of cabbage.

In fruits the army consumes every day 7500 cans of peaches, 3000 cans of pineapple and 225,000 cans of jam, supplemented by other cans of strawberry and raspberry preserves.

Some food, that! As the daily army ration weighs about four and a half pounds, it will take 6,750,000 pounds of food daily. Loaded on cars, that would mean three long trains of 33 cars, or 1095 such trains to transport a year's supplies. If all these trains were put in a continuous line it would extend from Montana to Puget sound.

These interesting facts we have compiled from a recent address by Colonel William R. Grove, quartermaster, U. S. A., before the National Canners' association. Colonel Grove went on to say that before the war there were four authorized schools for cooks and bakers in the army. These were promptly expanded into 20, with a new school in each national army cantonment. There were 10 regular bakery companies, with a personnel of 10 officers and about 800 men. This force was enlarged to 200 officers and more than 10,000 men. These men were successfully recruited and trained in two months. A bakery company now trundles along with each division, and provides sufficient fresh bread for that division. It is good bread, too.

Rolling kitchens will follow every company in France to insure hot meals when most needed. These kitchens cook while in motion, and the hot meal is ready to serve when a halt is made. It is the intention to feed the army well; to feed it liberally; to provide it freely with all those food elements necessary to keep its physique, its power of effort and endurance at the highest point of efficiency. But it is not the intention to be in the least liberal with that great enemy of the wasteful American people, the garbage barrel.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## The Cost Outruns the Price

G. F. Warren, professor of farm management at Cornell university, warned the senate agricultural committee at Washington recently that food production in the United States this year, from present indications, would be less than three-fourths of normal.

Many other authorities also dissent sharply from Secretary Houston's serenely confident belief that all is rosy and that the United States will easily supply home needs and the requirements of our allies.

The weight of expert opinion is against Secretary Houston. They find that many obstacles are to be overcome, such as light winter seeding in some districts, shortage of seed in others, high price of farm labor and all kinds of supplies, discouragement in the hearts of many grain growers in Dakota, Montana and other dry regions of the west, shortage of capital, and inability to get tractors and other farm machinery except at almost prohibitive prices.

Unfortunately a false impression lies in the minds of millions of city people that the farmers are making excessive profits and that high prices of food products are going to stimulate extraordinary production this year. It seems impossible to drive into their minds the fact that increased cost of production has outrun the increase in prices, and that $2 wheat this year is less enticing than $1 wheat would have been a few years ago.

Potatoes have been a losing crop with thousands of farmers this year. Dairy products cost the farmers more than ever before. And many other products of the soil have been marketed the past winter at a positive loss.

It costs more to produce, and it costs more to market. National Food Administrator Hoover said recently that, taking farm products in general, the spread between the prices the farmers receive and the prices the producers pay has actually increased and in many instances is the greatest in modern times.

This false idea that the farmers are rolling in wealth is largely responsible for the dangerous over-confidence in many minds that food will be abundant the coming year. But Secretary Houston should know better. He is in a position to command the facts.

## Lords and Ladies of Creation

We have always heard of the lords of creation, but now the ladies of creation are becoming the determining factor in the world's civilization. Woman has generally been regarded as the queen of the home, but those who so regarded her generally believed that the home was her sphere, a boundary out of which she could not pass, but now it is not in the home alone that her influence is felt, but in the schools, in the social circles, the literary clubs, as producers of the world's literature, the industries and in politics.

It may be considered a small matter that during the present war women take the places formerly occupied by men as telegraphers, ticket agents, street car conductors, bookkeepers, sales agents, employes in the shops and on the farms. In the struggle to utilize all the available human power to win the war every patriot will be glad that these women can fill so many important places, but the war will end some time and there will be a readjustment of economic conditions.

Then will we think it good that so many women have taken the places of men who were employed as manufacturers of war materials, or who were volunteers in the army. Personally, I believe that permanent good must result from this new order of things, and that we will in time be glad that every one is trying to be something to earn a living.

The old idea that the lady or the gentleman should not be required to perform any kind of useful labor, while some one else did the work for them, is being exploded. From birth to death every one costs something. Some one, or some group of persons must pay the cost, whatever it is, to support every individual in the world. To permit others to pay for what I must have in order to live is for me to become a parasite.

The time when women could be regarded as dolls has passed away, and they are assuming their individuality, their God-given independence, and are feeling that no one has so good a right to pay what they cost society as they themselves. They feel, too, that there is no justice in requiring that others shall keep them without they themselves rendering an equivalent to society for what they cost. G. L.

## Eat Home-Grown Foods

The Farmer is glad to note that Food Administrator Hebberd of Washington is planning a state-wide campaign to urge consumers in the towns and cities to eat more potatoes. This campaign has a double purpose: the conservation of wheat and other foods needed in Europe, and the encouragement of many farmers who, finding no market for their potatoes, feel with reason and justice that the public is not cooperating as it should with their efforts to increase production.

This subject is engaging the attention of many thoughtful editors. The New York Commercial reminds the government that enormous supplies of potatoes in the northwest will either rot in cellars or be fed to stock unless something is done to increase consumption and provide a market. That paper makes a good point—that, while practically everybody knows how to boil or bake potatoes, not one woman in 10 in the cities can make good bread from the various substitutes approved by the food administration.

With increased use of potatoes should go fuller consumption of apples. Washington, Oregon, Montana and Idaho have several million boxes of this fruit that are not high grade enough to ship to distant eastern markets, but yet are plenty good enough for home baking or conversion into apple sauce and apple butter.

These facts ought to be hammered into the minds of consumers in Seattle, Tacoma, Portland, Spokane, Butte and other northwestern cities. They should be urged to quit the economic waste of buying bananas from the tropics, grapefruit from Florida and oranges from California. That practice is doubly one of evil. It burdens the railroads unnecessarily and discourages our own home producers, to say nothing of the extravagance of paying high prices for imported products while letting our own good and cheap products go to waste.

A. D. Dunn of Wapato, the well-known Shorthorn breeder, and a regent of the State College of Washington, is a profound believer in cooperative live stock shipping associations. "I believe we will come to that mode of handling our live stock transportation problems," said Mr. Dunn. "Especially would it be advantageous here in the west, where we frequently have to ship our stuff a long distance."

Once more we must ask those who write communications to us for publication to give their names and addresses. They will not be printed if the writer does not wish it, but we need to know where queries come from. Sometimes this knowledge will save a vast deal of time and help the one who asks the question or writes to us for help or information.

## Washington Gleanings

The Pashastin Fruit Growers' association of Wenatchee, by unanimous vote, has authorized the building of a new packing plant to cost $30,000.

The Educational club last fall gathered flower and vegetable seeds in Walla Walla park and home gardens, and will sell them for the benefit of the Red Cross.

Agriculturist C. F. Monroe of Grays Harbor county has accepted a position as assistant state leader of county agricultural agents under State Leader R. B. Coglan.

The Chehalis Potato Growers' association has been recently organized. The association will encourage growing of farm products and will engage in a general marketing business.

Grain sacks distributed from the state penitentiary jute mill at Walla Walla in June this year will cost Washington farmers 19 cents apiece, and the supply is limited to a total of 850,000.

State Land Commissioner Savidge reports that there is a demand for good wheat lands in the state. Some renters are willing to pay as high as $4 an acre, the rent to be paid in cash, and for five years.

The Oregon Packing company of Vancouver is seeking large tracts planted to corn, beans and pumpkins. It is urging the farmers of its vicinity to consult with the cannery before planting their spring garden crops.

In order to stimulate the pig and calf clubbing among the boys and girls of Clarke county the National bank at Vancouver has offered to loan the money to buy the pig or calf, give instructions and some supervision in raising the stock.

The second rural life conference, one of whose aims is the more effective application of education to the practical needs of life, will open at the state normal school at Bellingham on the night of March 20, and will continue throughout March 21 and 22.

Labor Commissioner White of Seattle, in a message to Immigration Inspector Fairs, says that everything possible will be done to relieve the farm labor shortage near Walla Walla. Efforts will be made to turn the surplus labor seeking employment in shipyards back to the wheat farms.

Individual farmers of Columbia county and the Whetstone-Turner Warehouse company of Dayton will erect grain elevators this season for the storing of 200,000 bushels of grain. This addition will make Columbia county capable of handling a half million bushels of grain in bulk, saving the farmers $50,000, which would otherwise go for sacks.

## What Others Say

American Poultry Advocate: The hen that lays is the hen that pays.

Farm and Home: The farmer gets it going out and coming in! He sells at wholesale, buys at retail, and is "regulated" besides.

Successful Farming: The farmer does not want to meddle with national affairs of which he knows nothing, but he does want recognition in all that pertains to his business—that of production of food and clothing stuffs.

National Stockman and Farmer: Horses which show "a bit of blood," either trotting or running blood, are conspicuously superior for army work to other horses, and officers always pick them out first for mounts or for any other service to which they are adapted.

Country Gentleman: Organize to survey the local labor needs, count every available hand on farms, in village and town, and make plans to see that the farms of the locality do not fail. Pool the labor and capital resources of the farmers and tradesmen to the end of getting the farm work done.

DU PONT AMERICAN INDUSTRIES

# The Modern Labor Saver

Why work for weeks when the job can be finished in hours? Why employ many men when few can do the work? Farm work is hard work—farm labor is scarce—man power is hard to get, yet you can easily solve the problem. Use Du Pont Red Cross Farm Powder—the quick, easy, inexpensive way.

Have you stumps and boulders to remove, ditches or post holes to be dug, trees to be planted, or swampy spots to drain? Do it with

DU PONT

## Red Cross Farm Powder

Don't break your back grubbing or digging—just bore a hole, light a fuse and watch the hard work do itself.

Stumps removed with Red Cross Farm Powder come out broken up, free and clean of soil and leave the ground in better condition.

Trees planted in blasted holes excel trees planted in spade-dug holes. They grow faster, keep healthier and bear earlier.

Speed up your work. Save yourself both hard work and money. Save coal. Burn stump wood for fuel and pay for the powder out of the money saved.

The whole world needs food. There's a big market and an eager one. It is every farmer's golden opportunity. There's a short cut to it.

# Sell No Scrubs

## Shorthorn Men State Attitude

On the evening of February 25, following the Shorthorn sale in Portland the Northwest Shorthorn Breeders' association held a meeting at the Imperial hotel, which was largely attended and at which a number of important matters were discussed.

Among other things the question of a committee to pass on animals before allowing them in the sale ring was taken up. While no final action was taken it was the concensus of opinion that allowing any except high class animals of serviceable age to be sold tends to discredit the breed, is unfair to the buyer and should be discouraged.

The question of allowing any but pure bred bulls to run on the range, in violation of the Oregon law, was also discussed. It was by motion referred to the Oregon Cattle and Horse Raisers' association, with this association favoring enforcement of the law.

Professor E. L. Potter of Oregon Agriculture college suggested a Shorthorn congress which should be in the nature of a school for young breeders, at Farmers Week at the college. After considerable discussion the association went on record as favoring and asking for such a congress.

Frank Brown, after paying a tribute to W. O. Minor, as one of the most constructive Shorthorn breeders, and most unselfish advocate of the breed, as well as a man of sterling integrity and true friendship, announced that this sale closed Mr. Minor's breeding operations and moved a vote of thanks for what he has done for the breed. After several others paid tributes to Mr. Minor, the motion was enthusiastically passed.

The following officers were all reelected: President, A. D. Dunn, Wapato, Wash.; vice president, F. M. Rothrock, Sprague, Wash.; secretary-treasurer, E. L. Potter, Corvallis, Ore. The directors were also all reelected.

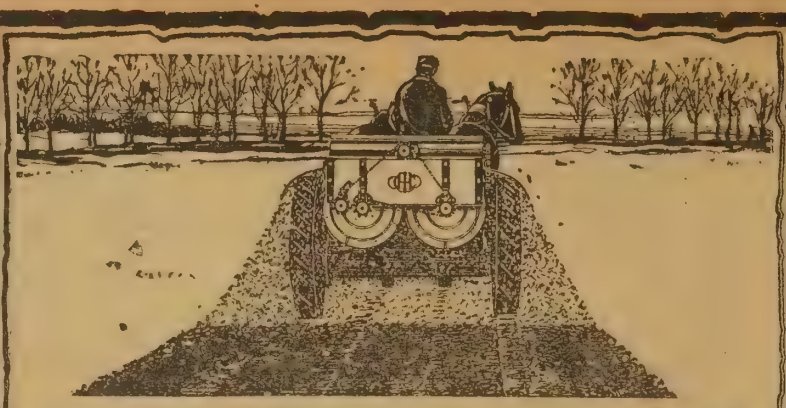
# Planning Sabotage

## I. W. W. Are Preparing Campaign

Indications from all over the northwest point to a renewal of activities of the I. W. W. this spring with their usual purpose of destroying property wherever possible and preventing the production of foodstuffs and other staple articles. It is evident that instead of cooperating for a solution of the labor shortage problem, leaders of this organization are doing all in their power to handicap the industries of the northwest. This is true not only in the farming industry, but in the lumbering industry as well.

It is reported from some of the lumbering districts that members of I. W. W. order are following out a unique method of destroying foodstuffs. Instead of cooperating with their employers in the conservation of food supplies, they are reported to be deliberately spoiling foods that are placed on the table, such as bread, butter, sugar, so that they will be of no further use as food.

From some of the I. W. W. headquarters throughout the northwest messages have been sent to their representatives in many districts clearly indicating the line of procedure to be followed in the campaign to handicap industry as much as possible.



## Personality Counts.

R. A. Blanchard, formerly an Oregon county agent, but now field representative of the Live Stock State Bank of North Portland, told the stockmen at the recent Spokane conference that the first two considerations of a banker in making a loan were the security offered and the personality of the man asking the loan. He laid emphasis on the fact that a man with a sound business record could always get money if he could make any reasonable showing of security at all. He pointed out that the average income on farms in America was comparatively low, not exceeding $318 a year.

## Better Loading Saves Cars.

More than 11,500 freight cars were made available for public use through better loading on the Pacific system of the Southern Pacific company during January, according to figures compiled by the company.

More than 1,500,000 tons of freight were handled in 59,257 cars, and if each car had been loaded with the same tonnage as in January of last year, the traffic would have required 70,809 cars, the company officials said.

**The Spreader Question—Settled**

USE a **Low Cloverleaf, Corn King, or 20th Century Manure Spreader** these days and you will make more money. That is agreed by all owners. Your land increases in value when regularly fertilized. Your crops grow better in quality and larger in yield when supplied with available plant food. The machines sold under the above names come nearest to doing this work as it should be done.

It is a long jump from the ordinary machine to the modern low spreader with its double beater and wide-spread. Every farmer who knows the value of good spreading is buying the modern machine. No farmer can afford to buy any other kind because the saving of time and labor and the better job of spreading done by the **Low Cloverleaf, Corn King** and **20th Century** makes them worth more.

All the best-liked sizes, all narrow, easy-handling, light-draft—disk wide-spread regular, spiral wide-spread on special order. Write us for catalogues and see the local dealer for one of these thoroughly satisfactory spreaders—**Low Corn King, Cloverleaf, or 20th Century.**

**Moline-Monitor Double Disc Grain Drill**

**Produces bigger crops with less seed**

With a Moline-Monitor Double Disc Drill you can produce bigger crops with less seed. Thousands of farmers are doing this every year and many of them have made enough money from the seed saved and the extra wheat produced to pay for the drill the first year.

Moline-Monitor Double Disc Furrow Openers deposit the seed at a uniform depth in a wide, compact furrow. Less seed is required because it has plenty of room to stool and every seed germinates, grows and ripens uniformly, resulting in a bigger and better crop. The double discs are long wearing, light in draft and cannot be clogged in mud or stalky ground.

In case you prefer a single disc, shoe or hoe furrow opener, any of these can be obtained with the Moline-Monitor Drill. All Moline-Monitor furrow openers are interchangeable and are unequaled for good work and light draft.

The Moline-Monitor fluted feed gives an even discharge in any desired quantity of any and all kinds of seeds without bunching or skipping.

Pipe frame made of one piece. Lighter weight but stiffer and stronger than angle iron. Angle iron bed rail, cross bar and steel spreader prevent all possibility of the frame sagging or springing backwards.

Straight line of draft direct from furrow openers to horses' hames makes the Moline-Monitor very light indraft.

See your Moline dealer or write for illustrated catalog. Address Dept. 50

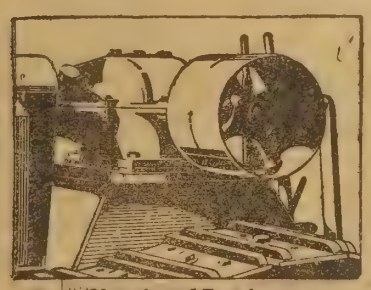
*With a tread surface of 2160 square inches on the ground, hillside slipping and soil packing are eliminated*

*The Trundaar Tread and driver with hardened steel contact rollers*

# Do you judge a tractor by its tread?



***Business farmers know that no tractor can be a success in farm work unless it has a practical tread—Why the Trundaar is so successful***

No tractor is any better than its tread. This is the decision of experienced business farmers—men who know what they are talking about. And there is sound common sense behind it.

The simplicity and scientific construction of the patented Trundaar Tread make it one of the big features of the Trundaar Tractor.

This tread is of the endless belt type and is built on the log-chain principle.

It requires no lubrication

*Mounting of Trundaar practical belt pulley*

and every link and grouser plate is easily and quickly detachable. The connecting links of the chains are made short so that movement is minimized and consequently wear is practically eliminated.

## Wet ground not a barrier

Skilful farmers are careful not to allow their soil to become packed. With its great area of 2160 square inches on the ground, the Trundaar Tread has not the slightest tendency to pack the soil over which it travels, since the weight of the tractor is so widely distributed.

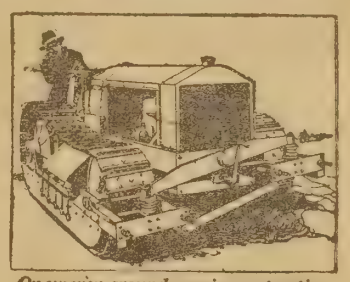
Rough, uneven and hilly ground is easy going for the powerful Trundaar Tractor, as its power plant, fuel tank, etc., are carried on a flexible double three-point suspension which absorbs all shocks and strains.

Traction is absolutely positive with the ground-gripping Trundaar Tread under any conditions of the soil.

## Practical engineering develops ideal tractor

All the accumulated knowledge and experience of 23 years in the tractor industry have been built into the Trundaar Tractor.

Dust has always been one of the tractor's greatest enemies. Every vital part of the Trundaar Tractor runs in oil and is perfectly protected from dust. Even the air intake of the carburetor is provided with an air cleaner to prevent particles of dust from getting into the cylinders.



One of the exclusive features of the Trundaar Tractor is the Buckeye-Deppé Integrator, which makes low-grade fuel operate like high-grade gasoline.

Quick and easy belt connection characterizes the Trundaar belt pulley.

The Buckeye-Waukesha special tractor engine develops ample power for all kinds of field and stationary work and is remarkably free from mechanical troubles.

Each tread is controlled by a powerful multiple disc clutch running in oil—a new idea in tractor construction.

The massive two-speed-and-reverse transmission requires

*On uneven ground maximum traction is obtained by the Trundaar three-point suspension*

no differential and is built for years of wear.

These are only a few of the exclusive features of the Trundaar Tractor. Our advance catalog illustrates and describes the Trundaar Tractor in detail. Write today to our nearest distributor for your copy.

# Farmers Are Showing Results

## *Hoover Says They Are Making Good in Food Producion*

National Food Administrator Herbert C. Hoover has issued a statement to the effect that the farmers of the United States had answered the call for increased production, especially in the production of hogs. Partially for this reason but more especially for the reason that the allies are in dire need of more foodstuffs, the food administration has withdrawn its previous meatless meal regulation and is now asking the people to observe only one meatless day a week and that only beefless and porkless. In the northwest for the time being that merely means porkless, for the beefless regulation had previously been withdrawn in the northwest. For some time, probably a few months, it will be incumbent upon the people of the northwest therefore to abstain from the use of pork on Tuesday.

"Experience shows, says Mr. Hoover, that the consumption of breadstuffs is intimately associated with the consumption of meat. Our supplies of meat for the next two or three months are considerably enlarged and we can supply the allies with all of the meat products which transportation facilities render possible and at the same time somewhat increase our own consumption In these circumstances the food administration considers it wise to relax the voluntary restrictions on meat consumption to some extent with a view to further decreasing bread consumption."

Concerning the pork production situation, Mr. Hoover's statement reads as follows:

"The farmers of the United States are responding to the national call to increase hog production. Their increase, to all appearances, is being attained more rapidly. Of more immediate importance, however, are several complex factors which have effected an immediate increase in meat supplies.

"The transportation schedule, before the government took over the railroads, the bad weather in January and early in February, the large percentage of immature corn in the last harvest and the necessity of feeding this corn as rapidly as possible to save it from decay, have not only resulted in backing up the animals—particularly hogs—on the farms for a longer period of feeding, but have resulted in a great increase in their average weight and will result, with improved transportation conditions, which already appear, in larger than normal arrivals at market for the next two or three months.

"The weight of hogs coming to the market for the last two weeks indicates an increase in weight of from an average of 203 pounds last year to the almost unprecedented average of 232 pounds, or a net increase in their meat value of over 15 per cent.

"The response of the public to our requests for reduced consumption of meat during the last months has been most gratifying, and this service alone has enabled the government during this period to provide such supplies as transportation to the allies permitted. The enlarged supplies are likely to last for two or three months, after which there will be the usual seasonal decrease in the amount of animals coming to market."

## Tractor and the War

The United States department of agriculture estimates, as the result of a thorough survey, that there were were 34,371 tractors at work on American farms in 1917. Great numbers of tractors have also been exported to our allies since the beginning of the war. The total export of tractors, according to United States government figures for the first eight months of 1915 was 380. During 1916 we exported 2019 tractors, while the figures for 1917 are 7339.

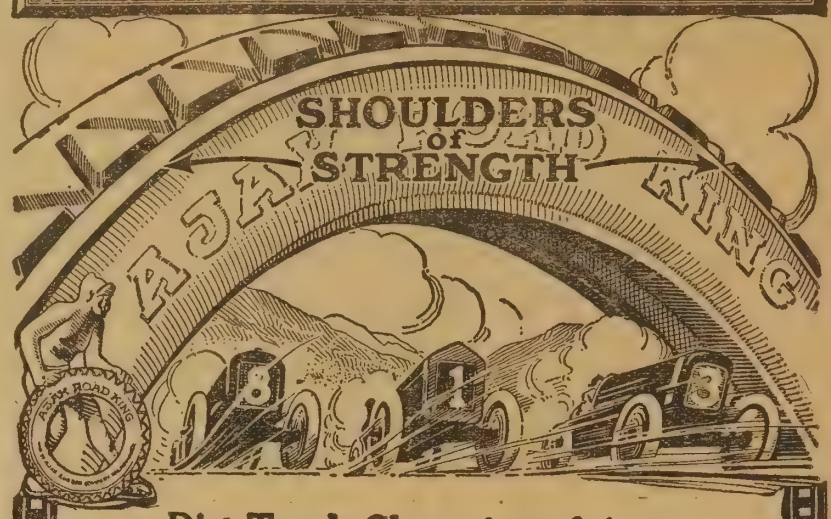
In Canada the Ontario department of agriculture has 135 tractors at work on farms, operating under reasonable rental fees. One American tractor manufacturer, in addition to shipping 700 of his tractors to England last month, also turned over his patents to the British government.

The French, it is said, with their wonderful mechanical talent, began to manufacture tractors very shortly after the war began. But the output was insufficient to meet the grave needs of the people. France turned, therefore, to the United States and has been receiving large numbers of American tractors.

The Italian minister of agriculture issued a decree early in 1917, offering to all companies or societies who should purchase farm tractors for plowing a premium of 30 per cent of the value of the tractors and accessories purchased. There was also offered a 20 per cent premium to individual farmers purchasing tractors and accessories. Many American tractor manufacturers are exporting modern farm tractors to Italy.

From all this it would appear that the farm tractor, as well as its giant brother, the British tank, is helping the world over to win the war.

### Fond of Army Life.



Pete, an army mule at a camp near Portland, Me., was left on an island in Casco Bay. The soldiers built a shed for him and left food and water, but Pete got homseick, He kicked off the top of the shed, gnawed his halter until he was free, plunged into the sea and swam back to the camp.

### Most Northerly Railway.

The world's most northerly railway, in Norway and Sweden, runs to a point 130 miles above the Arctic circle.

# AJAX TIRES

GUARANTEED IN WRITING 5000 MILES

## Dirt Track Champion of America

Dirt tracks are the same "going" you meet driving to town, to the elevator, the creamery, your neighbors. An Ajax victory on the track is an Ajax victory for you on the road. In 1917 Ajax Tires swept the field in 237 gruelling dirt track contests—winning the title, Dirt Track Champion of America. On performance Ajax Tires are the natural selection—the money-saving tires for the farmer. Ajax Tires have the special patented feature—

**SHOULDERS of STRENGTH**

These supports ars built into Ajax Tires, giving them "more tread on the road"—more rubber where it should be. These shoulders make Ajax the long lasting, easy riding tire for all roads. "Shoulders of Strength" mean longer wear because road friction does not come in one spot to wear through to the fabric.

**AJAX ROAD KING**
*"More Tread on the Road"*

*Ajax Road King* proves its superiority *on all roads.* Guaranteed to uphold Ajax reputation for service. Ajax Road King gives proved surety under wheel. Truly, a monarch in quality, a democrat in service. Note the triangle barb tread—an added safety factor.

**97% Owners' Choice**

Of the total output of Ajax Tires, 97% are singled out by car owners to take the place of other tires that came on their cars. This is an unequalled endorsement of Ajax quality.

*Write for booklet on "Ajax Shoulders of Strength." Mailed free.*

# WILL *YOU* TRY THIS GENUINE EDISON INVENTION IN YOUR HOME?

With the permission of Thomas A. Edison we are enabled to make an extraordinary offer to the readers of this paper. It is only because of Mr. Edison's desire to see his great invention in every American home that we are enabled to make this offer. It takes a lot to make Mr. Edison enthusiastic over any invention, especially one of his own, but he was so pleased with his

*Model 50, Edison Diamond Amberola*

# NEW DIAMOND AMBEROLA

that he expressed the wish that there might be one in every American home, because he knows that nothing can give so much entertainment for so small an investment. His wish is rapidly becoming fulfilled. The American people appreciate the wonderful life-like, almost human music which the Diamond Amberola brings into the home. They realize that the new Edison Diamond Amberola is as nearly human as any invention can be. You know what the great name of EDISON means on a product. It is like STERLING on silver. It means that nothing better can be made or Mr. Edison would make it. A blind man could pick out an Edison product with absolute confidence that he was getting all that he paid for, and perhaps a little more than he expected.

## SPECIAL FREE TRIAL OFFER

*You* can have this genuine Edison invention on trial right in your home. You can have your favorite music sung or played by the greatest artists, in a way that perhaps you never heard before, *without a cent of cost to you.* Just say, "send me your booklet,

**'A Master Product of a Master Mind'"**

*Beautifully Illustrated in Natural Colors*

Then, pick out the model Amberola you want to try, and a dozen of your favorite records. You will hardly believe your ears when you hear the Amberola for the first time. After the first record you will determine never to let the Amberola go out of your home and your life. Every word of that is true. Try it and see, try the Edison Diamond Amberola three days in your home and if you don't keep it there will be some *exceptionally* good reason why.

Just fill out the coupon at the bottom of this page and send it to the dealer in the list below nearest you. That's all. *No obligation of any kind.*

A. B. NYSTROM, Editorial Contributor

# The Sire Is More Than Half the Herd

Two men met at a farmer's institute. One was Mr. (A), the other Mr. (B). These two men began to converse about things in general until finally it developed that one, Mr. A, was a thrifty dairyman who had a splendid herd of pure bred Holsteins and doing remarkably well with them, and the other was Mr. B, a "retired dairyman," who was now going into raising apples as a business.

"I used to be interested in the same line of work that you are in," said Mr. B.

"That so," said Mr. A. "Were you once in the dairy business?"

"Yes, I was in the business for nearly 20 years. I used to keep from 20 to 25 cows and run a retail milk route in a small town in Ohio. I know what it is to get up at 4 o'clock every morning in the year, work 16 hours a day, and get no pay for it. I barely made a living out of it."

"Well," said Mr. A, "I'm sorry to hear that you were so unfortunate. Did you have any bad luck with disease such as abortion?"

"No," answered Mr. B. "Taking one month with another and one year with another, I had about as good luck one time as another, only I seemed to make less and less year after year, until finally I was forced to sell out. Now I have come out west to go into the fruit business. I think it will pay better than dairying."

"What breed of cows did you have back there in Ohio?"

"O, no particular breed—they were mixed to some extent, but there were some good milkers among them."

"I suppose you had a pure-bred bull of some particular breed."

"No, I used whatever bull I could get in the neighborhood. Sometimes it was a Holstein, sometimes a Jersey, and one or two years I used a Shorthorn. But it didn't make much difference to me for I didn't raise any calves."

"Didn't you even raise the heifers?"

"No, how could I afford to feed the milk to the calves when I could sell it for 20 cents a gallon?"

"If you didn't raise your heifers, how did you replace the cows that died or those you sold?"

"I bought my neighbors' heifers. I let them feed expensive milk to the calves and then I bought the heifers at a low figure."

"Isn't it likely that your neighbors sold you the culls, for weren't they in the dairy business, too?"

"I hadn't thought of it in that light. But how else could I do? Would you advise feeding 20 cent milk to calves?"

"Yes. Calves need whole milk only a couple of weeks. Then skim milk will do just as well provided you make the change gradually. You should have bought a pure-bred sire from a high producing cow and stuck to one breed. Then if you had kept every heifer calf you could well have afforded to spare some of the 20 cent milk in raising them, for every one would have developed into a better cow than her mother."

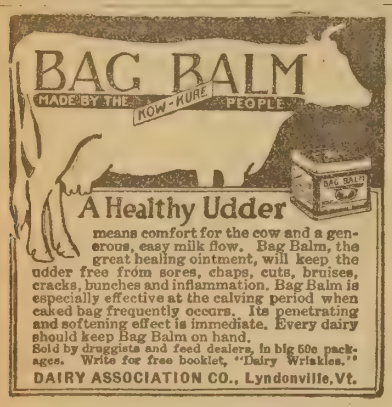
The foregoing conversation shows how some "would be" dairymen fail to look ahead. If this man had realized the value of a good sire and had raised his heifers as suggested, he would not have been forced out of the dairy business.

Too much emphasis can not be placed on the matter of selecting a sire to head the herd. Any old sire may do to have the cows freshen once a year, but the time has passed when the dairyman had no more foresight than to the end of the month when he would get his milk check. He must look five to 10 years in advance. He must make sure he is building up a herd that will be better in a few years than the one he now has.

Let us all look back 10 years. Are the cows we now have any better than those we had then? If they are not we have not practiced proper methods. More than likely the blame can be placed on the sire, or rather, we must take the blame ourselves for not having provided the proper sire.

The old statement that "the bull is half the herd" is not quite strong enough these days. For if we have a grade herd and a good prepotent sire the bull will be more than half the herd. The offspring will inherit more of the characters from the sire than from the dam.

It is not possible to ascertain exactly the probabilities of the results of breeding in dollars and cents, and still if we accept the first law of breeding that "like produces like," without taking into account other laws, we can illustrate the value of a sire by figures. Assume that the cow is worth $100 in each case. Assume also that the dam of the bull is worth from $100 to $500 as a milk producer, and that the bull will transmit these characters to his offspring, then we have:



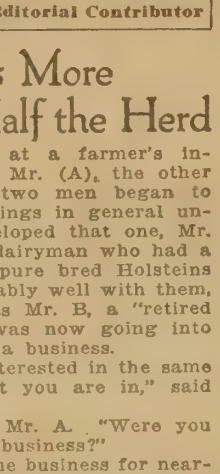
| Producing Value of cow..... | Producing Value of Bull..... | Producing Value of Offspring | Gain on One Calf..... | Gain on 10 Calves..... | Gain on 35 Calves..... |
|---|---|---|---|---|---|
| $100 | $100 | $100 | | | |
| $100 | $200 | $150 | $ 50 | $ 500 | $1750 |
| $100 | $500 | $300 | $200 | $2000 | $7000 |

The last column shows to what extent a community can benefit by getting an extra good sire.

**For Electric Welders.**

For electric welders a helmet made of fiber has been developed that is both cooler and lighter than the metal ones heretofore used and also protects its wearer against stray currents.

BAG BALM
MADE BY THE COW-KURE PEOPLE



A Healthy Udder

means comfort for the cow and a generous, easy milk flow. Bag Balm, the great healing ointment, will keep the udder free from sores, chaps, cuts, bruises, cracks, bunches and inflammation. Bag Balm is especially effective at the calving period when caked bag frequently occurs. Its penetrating and softening effect is immediate. Every dairy should keep Bag Balm on hand.
Sold by druggists and feed dealers, in big 50c packages. Write for free booklet, "Dairy Wrinkles."

Save Butter-Fat, Time and Labor for Yourself and for Uncle Sam with a

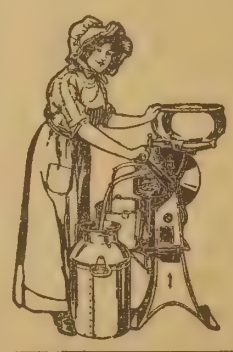
NEW DE LAVAL
CREAM SEPARATOR

**Save for Yourself**

Butter-fat right now is selling at the highest price in many years, and you can't afford to waste an ounce of it.

Whether you are trying to get along without any cream separator or using an inferior or half-worn-out machine, you are losing valuable butter-fat that would soon pay for a New De Laval.

The De Laval is not only a cream saver but a time and labor saver, and with the present shortage of farm help every farmer needs to utilize time and labor saving machinery wherever it is possible to do so.



**Save for Uncle Sam**

It is the patriotic duty of every cow owner to save butter-fat. We are a nation at war, and not a particle of fat should be wasted. When all European countries are encouraging the use of the best cream separator, can we do less?

**Buy Your De Laval Now**

Railway delays are so serious that deliveries can't be depended upon, and if you don't order your De Laval early there is no telling when you can get it. Then, too, labor and material conditions may compel higher prices. The sooner you get a De Laval, saving butter-fat and labor for yourself and Uncle Sam, the sooner it will pay for itself.

If you haven't the spare cash right now, that need not stand in the way of your getting a New De Laval at once. We have an arrangement with De Laval agents which makes it possible for any reputable farmer to secure a De Laval on the partial payment plan—a small payment at the time of purchase and the balance in several instalments—so that your De Laval will actually pay for itself while you are using it and getting the benefit from it.

**Why not see the nearest DeLaval agent at once? If you do not know him, write to the nearest office for new catalog or any desired information.**

# Crops for Feed

## Prof. Severance Talks to Stockmen

Professor George Severance of the agricultural department of the Washington State college presented in concise form at the recent Spokane live stock conference the question of the crops they should grow for feed. Cheap feeds, he declared, were the prime necessity of success in the stock business at the present time. These, he said, could most nearly be secured through pasture, silage or quick growing hay crops.

While local conditions influence crop production largely, Professor Severance said that in general alfalfa and orchard grass are the best adapted for pasture purposes. They will do well in ordinary localities that have 18 inches or more of rain annually. Both grow early and late, an essential characteristic in good pasture. Orchard grass and alfalfa grown together, he said, were less likely to bloat cattle than either clover or alfalfa grown alone.

Speaking of sweet clover, while not enthusiastic over it, he said that in alkali or acid soils it was sometimes quite successful, probably more so than many other forage crops.

He said that rye was not fully appreciated as either a forage or hay crop and recommended the planting of it by many on the semi-arid lands having perhaps seven to 12 inches of rain. One virtue of rye, he pointed out, is that it begins to grow again quickly after being eaten off, which is not so true of wheat or oats.

He emphasized the necessity of giving pastures good care and urged the stockmen not to begin to pasture it too early and not to pasture it too closely at the beginning of winter. He recommended also the dividing of pasture lands so that one plot could be making strong growth while another was being pastured down.

He stamped corn as the king of silage crops wherever it can be grown and recommended growing it on summer fallow lands in many cases. He said one should grow as large and as late growing a variety of corn as would mature well in his locality. Ordinarily seven tons per acre of silage in the wheat belt is all that can be expected of a corn crop. In some cases wheat and rye make good silage, but it is hard to beat peas and oats.

He said there was a general tendency among farmers to cut their silage too green. Silage is richer in food value if the crop is allowed to crowd maturity a little bit rather than if cut a little too green. In ordinary crops it is probably advisable, he thinks, to let it almost reach the dough stage of the grain.

On the point of hay crops, Professor Severance favors peas and oats. The pea seed this year for the next crop of this kind would cost probably 8 cents per pound, he said, and should be sowed at the rate of about a bushel per acre with the oats.

Sweet clover as hay, he said, differed from the other legume crops in that it should be cut before it comes into blossom rather than just after.

Whatever you do, says Professor Severance, don't experiment with undemonstrated crops now. Experiments are constantly being made with the newer variety of forage crops, such as Sudan grass, feterita, etc., but Professor Severance is not yet ready to recommend any of them for general production.

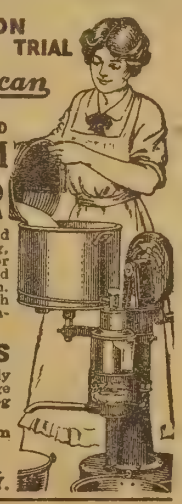
**Lice on Cattle**—Please give me a simple remedy for lice on cattle.—J. H. T., Glenwood, Wash.

One of the good simple remedies for lice on cattle is to rub a piece of blue ointment of mercury about as large as a pea or a bean over the area where the lice are the thickest. Do this once daily. The reason that you can not use a much larger quantity than this is because the mercury absorbs and is hot. This has been used by many stockmen as a simple remedy to overcome lice on cattle.

**Mares Have Worms**—I have some mares that are heavy with foal. They have worms. The worms are about three or four inches long tapering at both ends. They are white and sometimes reddish in color—W. E. C., Wauconda, Wash.

It is better not to give very much treatment while the mares are heavy with foal. Try giving one teaspoonful of copperas on the feed night and morning for a week. After the mares have foaled, then you can give them a complete treatment of 10 grains of Santonin and 15 grains of calomel. Follow this the following day with one quart of raw linseed oil with one ounce of turpentine well shaken up with the oil.



**Horse's Legs Swell**—I have a 3-year-old mare that has a swelling in her hind legs something like a spavin, but there is a small swelling on both inside and outside of the legs. At times they seem to go away so it is hardly noticeable, then come back. I have been riding her for a couple of months, but that is all the work she has done. She never gets lame.—J. G. F., Glenwood, Wash.

The trouble with your mare is either that she has a bog spavin which goes through the leg, that is, if the swelling is below the hock joint. If it is above and behind the hock joint it is a thoroughpin. Complete rest is the very best treatment, but of course this is most difficult to give. If it is a thoroughpin lowering the toe and raising the heel by means of a thick shoe is of very great value. If it is a spavin you will need the services of a veterinarian without doubt. In the meantime a liniment composed of soap liniment, four parts; tincture of iodine, three parts, and oil of origanum, one part, may be of value.

**To Open Coal Lands.**

More than 44,000,000 acres of coal lands in 14 states of the United States are to be opened in 1918.

# Eggs for Hatching

## Exercise Care in the Selection

Care should be exercised in selecting the eggs to be used for setting. Some eggs are perfectly good for eating, but not for hatching, and at the present price of eggs it pays to examine them and use for eating all that are not suitable for hatching, but good for eating.

1. Select eggs of good size. The size of egg laid is a matter of heredity. Eggs laid by hens that lay large eggs will usually produce pullets that lay large eggs. It might be, however, that the male mated to the hen that laid the egg was from a hen that laid small eggs, and in that case it would be a question whether the pullet would take after one side of the house or the other, and in the size of egg she lays, or whether the pullet would compromise and lay a medium-size egg. I know, however, that the size of the egg laid is frequently due to the influence of the dam regardless of the sire's dam. The better plan is to select not only the large eggs, but to make sure that they were fertilized by a male whose dam laid a large egg. That means, selecting the male as well as the egg.

The eggs, however, should not be abnormally large. The two-ounce egg is the standard, or one and one-half pounds to the dozen. Eggs weighing 27 to 28 ounces a dozen are desirable, but there is no advantage in larger eggs. The large eggs of course cost more to produce. Eggs are made from the feed and the more feed the hen puts into them the more they cost, and the chances are the hen that lays very large eggs will not lay as many as the hen that lays medium-size eggs.

2. Cull out those that are ill-shaped. They will not hatch well, but will eat well. Sometimes they are flattened at one side and sometimes ridgy or corrugated and in other ways are not normal in shape. These should not be set.

3. Checked or cracked eggs should not be used. Sometimes they have cracks or checks that can not be seen without close examination. A good plan is to tap the eggs together, and it is easy to tell from the sound whether the egg is cracked or not.

4. Fresh eggs should be used for hatching, the fresher the better. If eggs are kept in a cool, dry place they will keep two or three weeks and sometimes longer and hatch, but the longer they are kept the smaller the percentage of them that will hatch. If the eggs are very valuable it will pay to take a chance on them hatching, even at a month old. For best results in keeping they should be kept at a low temperature, not lower than 35 nor higher than 60. An even temperature or 40 to 50 degrees is about right. At that temperature they may be kept satisfactorily for two weeks. At a higher temperature they will not keep so long. The practice is to turn the eggs about once a day. If they are packed in a basket or box carefully, with lid on, the turning is easily done without having to handle the eggs each time. Care should be taken not to handle the eggs with dirty hands. To smear them with oil or grease will spoil them for hatching. J. D.

# Feeding for Eggs

A subscriber asks: "What is the best feed for hens for winter eggs?" The problem is not so much as to what is the best feed as what is the most profitable feed. The best single feed might be porterhouse steak, but it would not pay to feed it at the price.

The hen will produce eggs cheaper if fed the scraps of meat that the butcher can not sell to the human, than if they are fed porterhouse steaks. There is more profit in feeding the scraps of meat at 2 to 5 cents a pound than the best cuts at 25 cents. It is not a question of the best feed altogether; it is a question of the most available feed, or the feed that will produce eggs the cheapest.

We have at the present time, however, the anamalous situation that what is probably the best grain feed for poultry is at the present time about the cheapest we have, but it is not available; we can not use it for patriotic reasons. It may be that some farmers have wheat that is not suitable for milling into flour that they can use for feeding. If they have they are fortunate and can continue using it. The government allows him to use in any event 10 per cent wheat in the ration. If he has oats or barley he can use wheat with it to the extent of 10 pounds of every 100 pounds of grain fed. That is so small that it will have little effect on production of eggs. There has been no maximum price set for other grains, and the result is that while wheat is two dollars a bushel, oats, barley and corn have increased in price until they are as high or higher than wheat in this territory. The poultryman, however, must make his selection of whole grain feed from corn, oats and barley, but as to which he uses or the proportions of each that he uses he must be governed by the prices at the time he purchases. The prices are changing so often that he must adjust his ration frequently to the changed prices.

The question that troubles us is to know just what the hen-feeding value is of one grain compared with another. If corn, for example, is selling at $70 a ton what can we afford to pay for oats to replace it? Oats are not worth as much, pound for pound, as corn. The latter at $70 would be as cheap as oats at about $60 a ton. Then the oats of last year's crop are not worth as much as in average years, not being as plump and meaty.

The cheapest foods we have now are bran and shorts, and it will pay to feed a larger amount of these than ordinarily. The more bran and shorts the fowls eat the less whole grain they will eat. The oil meals, such as linseed, cocoanut and cottonseed oil meal are also relatively cheap, but on account of their richness these can not be fed in large amounts.

The following is a suggested ration without wheat, the amounts given in pounds for one hen for a year:

Corn, 25 pounds; oats, 15 pounds; bran 10 pounds; shorts, eight pounds; ground oats or barley, five pounds; linseed oil meal, five pounds; ground corn, five pounds; meat scrap, five pounds.

The next thing is how to feed this. Two things should be remembered here: First, feed in such a way as to induce the largest amount of exercise possible; second, feed two to three, that is two of the ground grain to three of whole grain. Preferably feed the mash in the evening; then gave them a feed of corn in the morning as soon as the fowls are ready to eat. Cover this in a deep litter of straw so as to force them to scratch. At noon give a feed of oats, as much as they will clean up in about an hour. Then in the evening half an hour before roosting time give them all the mash they will eat. Mix the mash preferably with skim milk or buttermilk, using about the same weight as of the dry mash. Salt it a little and mix thoroughly. Keep the meat scrap in a hopper by itself all the time where the fowls can help themselves at will, and never let the hopped get empty. If cocoanut meal can be obtained cheaper than linseed, use it instead of linseed meal. If ground corn can be obtained at a reasonable price, add one part of it to the mash.

Give them all they will eat without having feed left over.

Green food must be supplied regularly. This is very important. Don't feed high priced feed to fowls that have no green food. It is a waste to feed high-priced cereals and neglect the cheaper food of greenstuff. Without the green food the fowls will not give a profit on the grain. Also without the meat scrap they will not lay eggs enough to pay for the feed. If they have all the milk or buttermilk they will drink, with no water to drink, they will not need meat scrap. Grit and oyster shell should also be kept before them in boxes where they can help themselves.

It frequently happens that a good ration is fed and the feeding is properly done and yet enough eggs are not produced to pay for the feed. It may be because the fowls are not properly housed. We will discuss this subject in a later article. J. D.

**Tells why chicks die**

E. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease every time and usually raises 98 per cent of every hatch. All poultry users should certainly write Mr. Reefer for a copy of this valuable book. It is free.

## Points on Grafting

During the last year or two I have been gathering information on certain methods of grafting and budding of fruit trees. I am not ready at present to give a complete account of my work because the results are not yet completed, but I can with reasonable certainty say that in selecting grafts or buds it makes a great difference whether they are from trees that bear heavily or lightly. Every one who has observed knows that there are great differences in the bearing quality of trees of the same varieties, and in the same orchard. There are the same differences in the values of animals, for instance, in the milking of cows of the same stock, and the laying qualities of chickens of the same breeds. These differences are observed, not only in different trees of the same varieties of apples, peaches, or pears, but in different limbs on the same trees.

In southern California I find the citrus fruit growers awake to this subject. I visited one nurseryman who is growing orange and lemon stock and who has been giving special attention to this subject for a number of years. This man has carefully selected buds from the best bearing trees and from the best branches of the best trees for the growing of his nursery stock. He told me that he was not able to supply the demand for stock grown in this way, and several men told me that orchards of the old type were being dug up in order to plant trees produced in this manner. They have tested it out and find that it pays to plant the new trees and wait for them to grow, rather than to continue the old stock.

**Individuality in Apples.**

Records are kept of the yields from each individual tree in the orchard at the central experimental farm, Ottawa, Can., hence it is known what each tree produces. It has been found that there is a marked variation in trees of the same age planted at the same time and growing under very similar conditions. It is now recognized by some of the best authorities that each bud of a tree has individual characteristics which separate it from all other buds and, although the differences in buds are, in most cases, so slight that it is impossible to detect them, yet in some instances they may be quite marked. Fruitgrowers have noticed that one tree or bush is more productive than another or bears larger, more highly colored or better flavored fuit than other trees of the same variety, but few persons have recorded the yields from different trees, and little definite information has been published on the subject. From the records kept at the Ottawa experimental farm it is known that some trees have yielded from two to four times as much as others.

I speak from experience and observation when I say that in the selection of grafts we have not thought much about tree variation or bud variation, but have only been careful about varieties and not always accurate in that particular, so that sometimes we thought we were grafting to one variety and when the tree came into bearing we had something else.

G. L.

## Feed Prune Trees

"The secret of building up a prune orchard lies largely in feeding the trees the right plant food," says Frank Russell of Washougal, president of the Clarke County (Wash.) Prune Growers' association. "After years of experimenting I have found nothing so good as sheep manure. I have gone into sheep feeding in order to get enough of it and have at the present time from 9000 to 10,000 head of sheep and am able to sell much of the fertilizer. I use about five tons to the acre.

"Sheep manure acts slowly and it takes time to bring an impoverished orchard back into good condition. I once took an orchard which had borne well and was in bad shape. I pruned, sprayed, cultivated and manured it heavily. The orchard did nothing the first two years and very little the third, but the fourth season it bore well and for seven years afterward it brought in approximately $850 per acre gross. I would promise nothing for three years and would use much sheep manure.

"I have absolute faith in the sheep manure as fertilizer for prune orchards, but thorough cultivation is needed, too. I cultivate a mature orchard 20 times in a season.

**Brown Rot Is Enemy.**

"Brown rot is the worst enemy I know of, and no spray I have ever tried has done away with this disease. I believe Bordeau mixture is the best, but the high price for blue vitriol makes this spray almost out of the question. Spraying is not a cure of disease, but a preventive.

"I believe too much heading back and pruning has been done. When I first started in, I headed back my trees the first year, and each head produced two branches; heading them back I got four, and so on till the tops of my trees were full of wood. Keep this up and you get 75 tons of wood from your orchard, but no prunes. I never top a tree after the first time. I seek three branches from the center of the tree. Where there is a shoot in the center I keep it. Under no circumstances would I top back more than two years, and the second year I would top very high up."

Mr. Russell believes also in the use of ground limestone.

## Root Maggot Pest.

J. W. Wolfe, R. 3, Vancouver, Wash., says he keeps his garden free from the root maggot pest by the use of common mosquito netting. After he has carefully prepared his seed bed Mr. Wolfe sows the seed and then covers it with the mosquito netting. This prevents the fly from depositing the egg near the seed bed and the plant later develops without the root maggot pest to retard it. Mr. Wolfe says the mosquito netting also serves to keep the seed bed warm in the early spring and later gives some shade to the tender plants at a time when they need it.

R. W. F.

**Use for Coffee Grounds.**

The question of what to do with the coffee grounds has at last been satisfactorily answered. Just dump them into the garden. They contain some valuable fertilizing properties, including a large percentage of nitrogen and a fair amount of potassium and phosphorus.—Popular Scientic Monthly.

# Anything Goes as Good Hay Now

## Wild or Tame, It Is Hay in the Colville District, and Sells Readily at Top Price, Which Usually Is About $30 Per Ton.

COLVILLE, Stevens County, Wash., March 2.—The market conditions in this section are somewhat unusual this winter, owing to the failure or partial failure of some of the crops usually depended on by farmers for cash income.

The summer frost that affected many parts of the northwest last year caught the oats and late wheat at a critical period and most of these crops were finally cut for hay. The winter wheat made a fair yield, as did the timothy hay, but the serious drouth of the late summer put the finishing touches on profits for most of the later maturing crops.

There has hardly been a sufficient supply of hay to meet the local demand, as several carloads of alfalfa have been needed to meet the needs of dairymen and others. A curious feature of the hay market is the wiping out of grades and a corresponding scale of prices. Everything from wild grass to timothy is simply sold as hay and brings the top price without regard to quality. This price runs close to $30 per ton and is retailed at a usual advance of $2.

There has been a sufficient supply of wheat to meet the running capacity of the local mills, the top price being $1.90, with considerable lower ranges in price, due to poor quality offerings. Chicken feed demand is readily met by these lower grades and a large quantity of grain is fed in this way. The buyers aim to make an average profit of 10 cents per bushel on all stuff handled below milling grade.

There is a decided difference in the prices paid for produce by the cash buying produce houses and the stores which handle it on a trade basis. The latter presumably aim to break even on such buying and consequently take in produce at somewhat higher prices. Many farmers who need the money prefer to take lower prices for what they have to sell.

The potato market is sluggish at from 90 cents to $1 per 100. The buyers tell me that they handle them on a margin of 20 cents per 100, which would not seem exorbitant. Eggs are 38 cents per dozen and are handled on a close margin. Veals range from 11 to 14 cents per pound, according to weight, the limit being 135 pounds. Much of it is reshipped to Spokane.

From a study of prices it would not appear that the profits of the buyers are greatly out of range and are probably lower than those received for the usual merchandise sold at the stores.

It has been a delightful winter so far and the prospects for a good season are cheering. The snow is being all absorbed as it melts and the moisture conditions should prove much better than last year. Much interest is being taken in increased crop production and it will doubtless show up far better than last season. Even the handling of pigs is gaining headway and this can hardly be considered a top notch pig country. Many sheep and some goats are to be found on the farms.

Farm sale prices appear to hold up well. E. E. ELLIOTT.

### Horse Market Stiffens.

GARFIELD, Whitman County, Wash., Feb 25.—Market conditions are variable. Buyers, especially at country points, are inclined to beat the price down to producer, but hold it up to the retail trade. To illustrate my point I will just give one incident which happened in our immediate vicinity about six weeks ago:

A farmer wished to market some hens. In one local town he was offered 12 cents per pound, in another 14 cents. Believing the price was unjustifiably low, he decided to do his own shipping, eliminating the middle man. As a result, after paying express on gross weight and return express on coops, he received net 20 3-4 cents per pound for his hens.

Hay is very scarce in this vicinity and jobbing locally at about $25 per ton. Oats also scarce at about $60 per ton. Fat hogs about 15 cents, common beef stock about 6 cents, not-

"It's Time To Mend Your Ways"

MORSE'S Onion Seeds

yield best when planted in the early spring. They will do well even if planted later, for they are field-grown and soil-tested—strong and hardy—full of germinating power.

Onion seeds are no good if more than a year old. When you buy Morse's Onion Seeds you are sure of getting fresh ones grown on the Morse farms. The same high quality found in these onions is found in Morse's other seeds for field and garden—from every day kinds to the choicest—by the dime packet or carload lot.

This year of all years, when prices for your farm products will be so high, you can't afford to gamble with poor seed. Buy Morse's and be sure of the best. Write now for quotations on onions, alfalfa, and other field crops.

The *Morse 1918 Garden Guide* is ready—accurate information about seeds, planting, culture and vegetables. Your copy will be mailed *free* upon request.

C. C. MORSE & CO.
739 Front Street San Francisco

AT the recent San Francisco Land Show Everett Holliday of Ukiah, California, won the first prize for onions grown from Morse's Seeds.

We must fill that basket!

And when that basket is full, when your crops are in, what a mighty satisfaction to you to know that YOU have done YOUR duty to your Country and the World in the greatest crisis which it has ever faced. "Plant!" is the cry, and we repeat it, and repeat it again and again. Let us "Fill that basket!"—and win the war!

Spokane.
JOHN J. CADIGAN, Prest.

withstanding the consumer pays from 25 cents to 50 cents for his meat. Potatoes are 75 to 85 cents per hundred and plentiful. Consumers are inclined to complain that while wheat prices are held low compared with other grains and they are requested not to use it even at the price, all the substitute cereals are permitted to soar to unheard of prices. In order to save $1 worth of wheat we have to buy $2 of substitute. The horse market is stiffening as spring approaches. What fall wheat was sown, although late and not very promising at best, is wintering very satisfactorily. At the relative prices of meat and grain there is being very little interest manifested in the production of hogs or poultry and I believe that unless the price of wheat is advanced the spring wheat acreage will be materially reduced in favor of other grain, especially if the spring should be late.

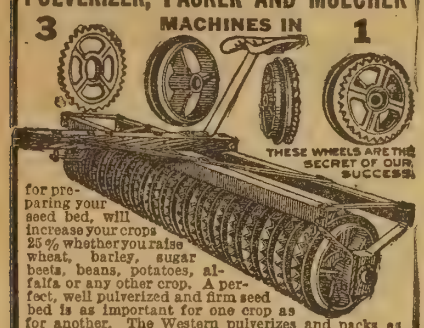
MRS. MARILLA KIDWELL.

### Feel Labor Shortage.

CHIMACUM, Jefferson County, Wash., March 2.—As spring is rapidly approaching the labor shortage is being felt considerably. There are plenty of work horses and may be a few for sale around this part of the country. Small horses are a drug on the market. Tractors have not been tried out to any extent, as we have too much bottom lands or peat that is full of roots or logs which I think would not be very good land for a tractor to work in. There seems to be an ample supply of farm machinery here and the old ones will have to be repaired.

There is no meat or rather beef on the market or to be put on this spring, as all of the surplus stock had been disposed of in the fall or before the feeding period started in. The farmers raise or feed most of their stock on pasture, which is abundant during the growing season. Most of the bottom land pasture is composed of a native grass mixed with red top, blue grass and timothy.

JOHN VAN TROJEN JR.



### Will Feel Labor Shortage.

CASTLE ROCK, Cowlitz County, Wash., March 4.—The labor shortage in this section will be felt as the spring advances. At the present time there has not been very much call among the farmers for help on the farm. The work horses seem to be in abundance for the man help to manage them, and the good machinery on the farm has been repaired and replenished so that there will not be any lack for this. As to the outlook for seeding and planting the new crop, the farmers are up in the air as to the acreage. Many who have potatoes on hand have only themselves to blame, for a fair price was offered them when they were digging and they stored them waiting for a better price. Now the order has gone forth that they must be graded for selling, which cuts into the pile about half in some cases, others less, besides about one-third in price compared to the fall market. The cattle, sheep and pig market has made all strain themselves to increase the output, but it is also seen that some are selling off the young stock to be fed on the lower Columbia river flats, which does not necessarily decrease the market value, and will leave the home lands for pasturage for milch cows and young stock too young to be taken away. The most valuable pasturage is where running water and rich grasses of the jointed type grow on a sandy loam soil, which does not have that flashy rank growth, which, used in moderate amount, gives a rich, nutritive substance, and with some roots or potatoes will increase the flow of milk materially. The best results obtained from mill feeds has been in mixing the bran and middlings together, about fifty-fifty; for hog feed, more middlings than bran. A farmer who has been experimenting with hogs feeds a light bran mash in the morning, with plenty of skimmed milk in troughs that are clean, and gives them a yard to exercise in. For the noon meal skimmed milk and cooked oats, with a feed of artichokes for them to pick on during the afternoon; evenings, cooked potatoes and middlings. Hogs fed in this way will gain one and one-half pounds per day until they reach 250 pounds, when the gain is less, and it does not pay to try to make them much heavier than this. It has been proved that clean, healthy food will do better than slops, and mud knee deep in the pen. Conditions are bringing about and into use the best methods for housing the stock and the silo has done a great deal, and the cream separator, rightly used, is a godsend to the farmer, but if allowed to clog and fill up it is a detriment.

C. C. BROWN.

**USE THE WESTERN PULVERIZER, PACKER AND MULCHER**

3 MACHINES IN 1

for preparing your seed bed, will increase your crops 25% whether you raise wheat, barley, sugar beets, beans, potatoes, alfalfa or any other crop. A perfect, well pulverized and firm seed bed is as important for one crop as for another. The Western pulverizes and packs as deep as plowed and leaves a loose mulch on top to protect the moisture; saves 1-3 of expensive seed and time, labor and horse power in preparing a seed bed. It is especially adapted for breaking crust and cultivating winter wheat in the spring, or for breaking crust on sugar beets or beans either before or after they are up without injury to the plants.

MADE IN 12 SIZES, FOR HORSES OR TRACTOR USE, IN 1 AND 3 SECTIONS

1918 crop will bring war prices; make it a record breaker in size by using the Western. Send for our free illustrated catalog, giving full description of the machine and its work, also dealer's name and much other valuable information.

**Works on Kerosene Without Smoke or Carbon**

The La Crosse Happy Farmer Tractor is a regular kerosene tractor. It's not just adapted to work on kerosene—nor just equipped with a kerosene carburetor, but is built with every unit of the motor designed to operate on kerosene and do it well. That's why Happy Farmer owners have no carbon trouble—nor smoke nuisance. Patented short intake with hot exhaust passing through it completely vaporizes fuel charge. Positively prevents waste of fuel and guarantees full power all the time. Water jacketed twin cylinders—automatic control of spark—easy accessibility to working parts—sturdy construction—simple design. Economy of operation and ease in handling make the Happy Farmer the tractor *you* want for all around farm work. Write for full description. We have a distributor near you for prompt service.

# Another Revolution

## *Bolshevik Regime in Russia Totters*

Another revolution, this time directed against the previous revolution leaders, the bolsheviki, appears to be under way in Russia with the view on the part of its promoters of overthrowing the bolshevik authorities and setting up a government that will again oppose the German horde that is overrunning that country. This element is reported to be organizing an army of considerable strength, originating largely in Siberia. There is even talk of accepting assistance from Japan in overthrowing the bolshevik government, which is looked upon in many quarters as little if any short of a German government in Russia. Conditions remain in such a state of chaos in Russia that it is impossible to estimate the result of the present government, but it is evident that a strong anti-German feeling is manifesting itself and that the hope is high in the hearts of the great mass of the Russian people that a solid front can yet be presented against Prussianism.

Nikolai Lenine, the bolshevik premier of Russia, is conducting a movement designed by the element that he represents to effect the ratification of the peace treaty with the central powers at a meeting that is called for March 14.

It is evident that the bolshevik strength is rapidly waning from the number of its prominent men who have withdrawn from it, among them being Leon Trotzky, its commissioner of foreign affairs.

In the meantime there appears no certainty as to the German attitude toward Russia. Promises of cessation of hostilities appear to have been totally disregarded by the German authorities, who have continued to advance into the various sections of Russia, capturing stores of supplies, guns and munitions and much territory. The Russian government has withdrawn from Petrograd and reports indicate that large numbers of the residents of that city have likewise fled farther into the interior.

### Japan's Action Uncertain.

The plans of Japan regarding the entrance into Siberia to protect stores of supplies and also to protect her own political interests have not been made clear at this writing. The allied governments have virtually agreed to allow Japan a free hand to do as she likes in that connection, though the United States has not joined formally in any agreement on the matter. Miscellaneous reports indicate that the bolshevik faction in Russia is strongly opposed to the entrance of Japan into the fray. Reports have been received of the destruction of portions of the Siberian railway by the bolsheviki with a view to preventing the entrance of Japan's troops.

### Curtail War Reports.

For the purpose of withholding from the enemy information considered to be of value to him the American military authorities have announced that they will no longer give out for publication the addresses of American soldiers killed on the battle front. The committee on public information will give out the names when desired, withholding all identification, but it appears generally agreed among newspapers and press associations that reports of this kind would be valueless and it is doubtful if they will ever be published. However, the war department will notify relatives, those nearest of kin, immediately in all cases of casualties.

### Hold Eight Miles of Front.

Reports from the battle front in Europe indicate that the American troops now on the field are covering a stretch of eight miles of the battle front in northern France. The length of this line will be increased as additional troops are enabled to be placed in service. Reports to the war department say that the movement of American soldiers, supplies and munitions is being kept on schedule time and that the preparation for participation in the spring campaign is being carried forward successfully and exactly as had been planned. Reports continue to come of small engagements between German and American military parties with some casualties on each side.

### Wait for Offensive.

When the promised German offensive against the allies in northern France will begin is a matter causing much speculation at the present time. In the past years of the war the spring activities have been launched in the month of April, but the records are said to show points of failure in these offensives due to it being too early. Some military authorities, therefore, feel that the Germans will probably not launch their offensive until the first of May and probably not until up into the month. No information comes from the war authorities as to whether or not the allies may be planning an offensive of their own or whether they are merely planning a defensive war until such time as the American forces may be strengthened so as to warrant an attempt to break through the German lines.

### Baker to Europe.

Announcement has been made that Secretary of War Newton D. Baker has gone to Europe on a purely military, and not diplomatic mission. His arrival in a French port has been announced.

PAIGE

*The Most Beautiful Car in America*

# Make The Minutes Count

In these war days you must realize that it becomes a *patriotic duty* to own a motor car.

The business of the nation must move forward on high gear. There must be no "let ups"—no wasted effort—no inefficiency. Every true American is expected to quicken his stride and make each minute a *productive* minute.

On the farm, especially—where distances are great—a dependable motor car is quite as necessary as the telephone. It is the most efficient form of transportation that has ever been developed—and transportation is the key to our entire national problem.

So, by all means, get a motor car—for yourself and Uncle Sam. *Any* car is better than a slow, plodding, horse-drawn vehicle, but common sense will dictate the wisdom of buying a good one while you are about it.

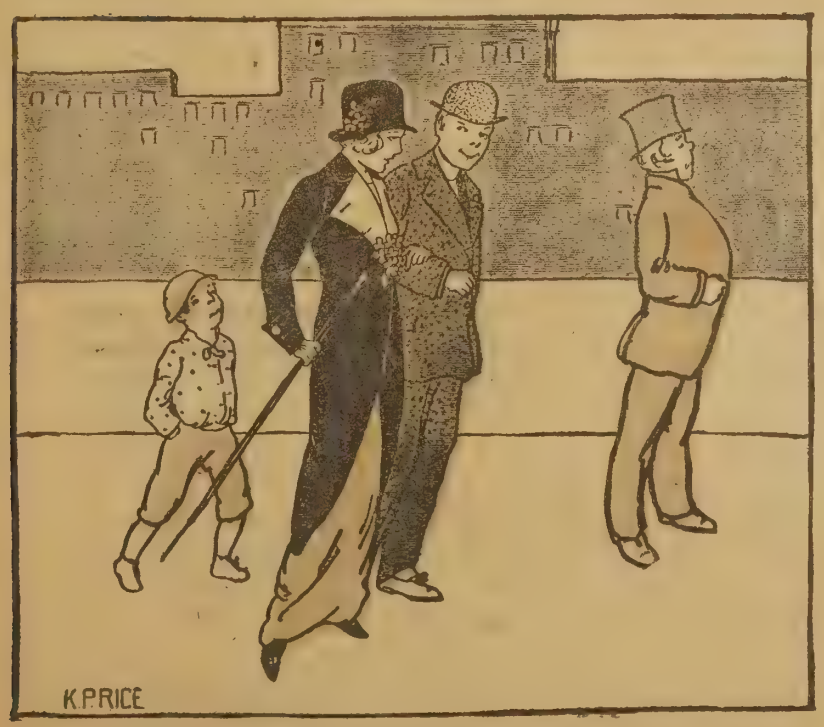
Take up the matter in the same careful way that you select agricultural machinery. Look for enduring *quality* rather than mere price. Buy a manufacturer's reputation rather than four wheels and a painted body.

If you make your selection on this basis, we are quite content to abide by the result. If you search for motor car quality you *must* find the Paige.

PAIGE DETROIT MOTOR CAR COMPANY, 247 McKINSTRY AVENUE, DETROIT

# FLORA FLIRT—SHE MEETS AN IRISH LAD

Flora Flirt thinks she s a queen—
You see she's wearing of the green.



On an Irish laddie Flo's eyes light.
She smiles and flirts with all her might.

He winks his eye. "Acushla," says he,
"I wish my sweet colleen you'd be."

He says she's fair as Lake Killarney.
Flora swallows all his blarney.

Flo saunters home—not unattended.
For her St. Patrick's day has ended.

Flora nearly faints away
When she sees that lad next day.

*The Moral*—To flirt with men 'twill never do—
Unless you're sure they're in "Who's
Who."

# A Patriotic Challenge to the Stockmen of Washington

STOCKMEN and Farmers, the War Savings plan is a challenge to our thrift and patriotism; a challenge which we must all meet if these brave men who are fighting in defense of American honor and freedom are to be BACKED UP in their struggle, with the millions and billions needed to make them effective warriors.

This is our country's call for the surplus earnings of every man, woman and child in the United States. Our country needs our quarters and dollars NOW, and promises to pay them back in five years, with four per cent interest.

A Country Worth FIGHTING FOR Is Worth SAVING FOR!

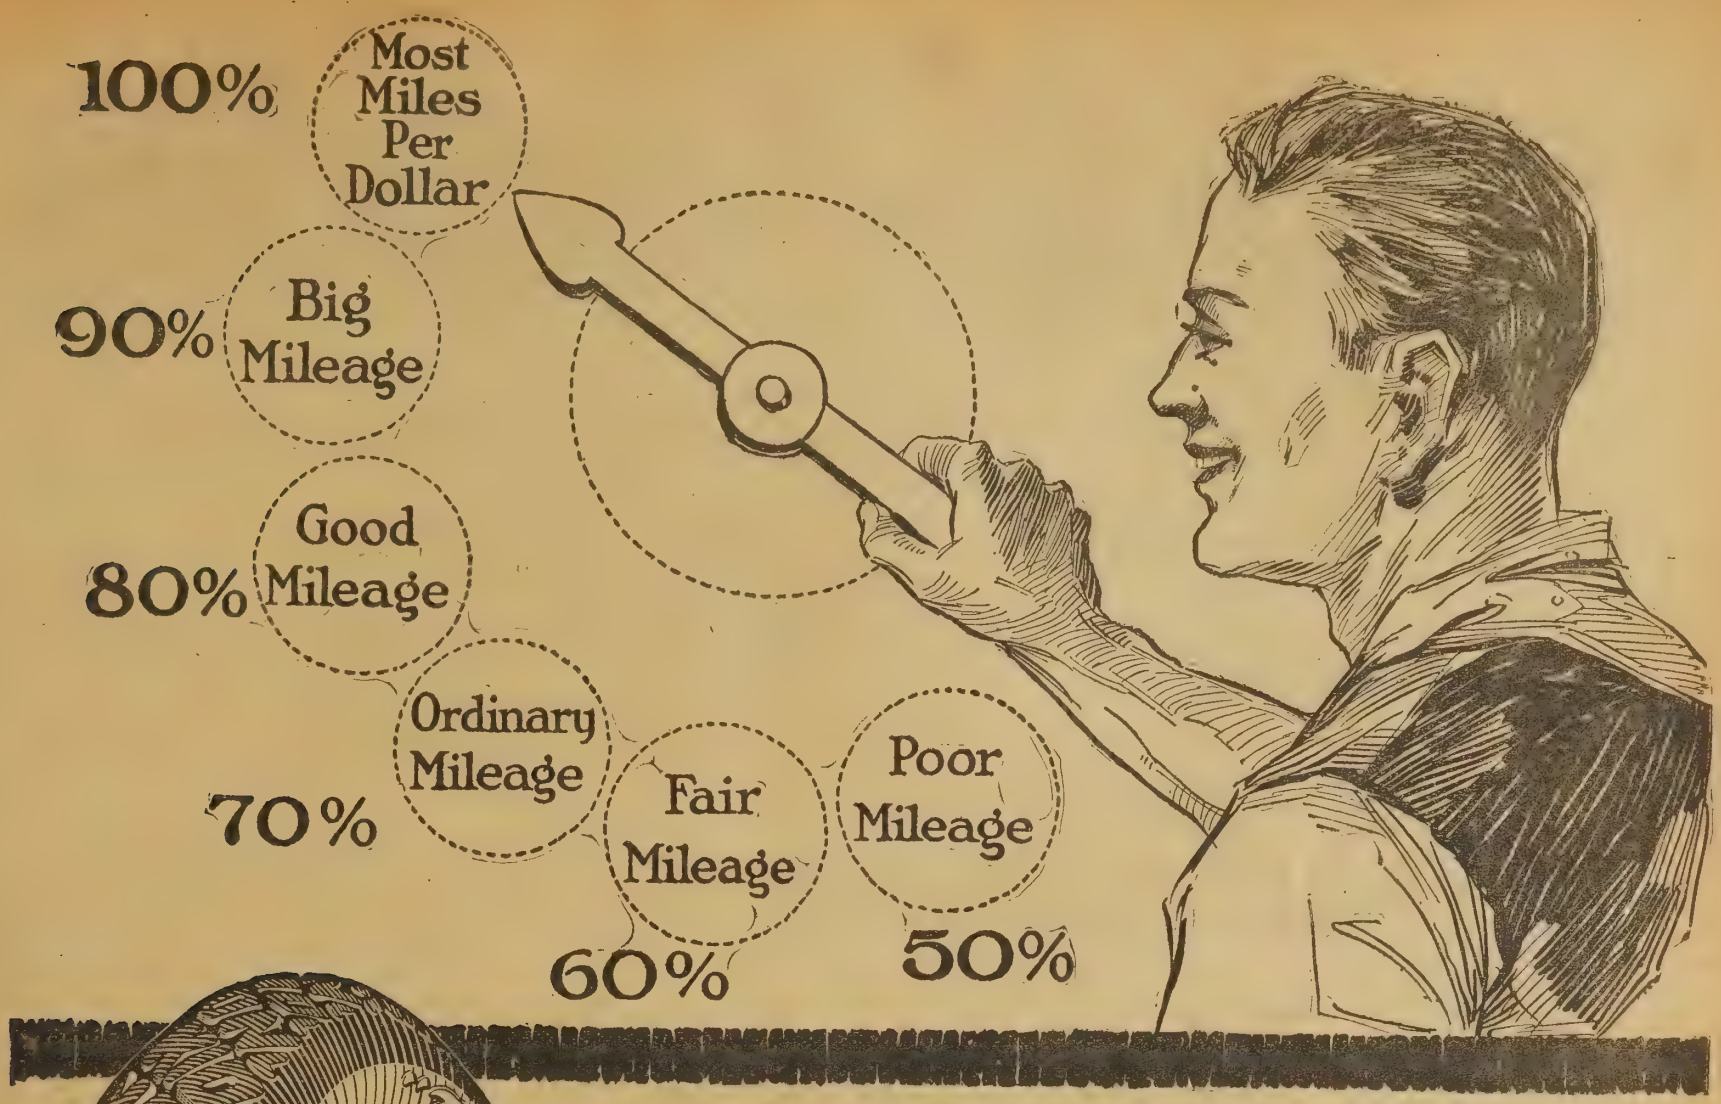
**W.S.S.**
**WAR SAVINGS STAMPS**
**ISSUED BY THE UNITED STATES GOVERNMENT**

Are Your QUARTERS Enlisted in Freedom's Cause?

War Savings Stamps are the answer of a great democracy to the demand for a democratic form of government security. They are "little baby bonds." Like Liberty Bonds they have behind them the entire resources of the government and people of the United States. They have the additional advantage that they steadily increase in value from the date of purchase until the date of maturity, and this increase is guaranteed by the government. These stamps are issued in two denominations, the 25-cent stamp and the $5 stamp.

By buying Thrift Stamps you can save 25 cents at a time to invest in War Savings Stamps.

War Savings Stamps will be cashed by the United States Government on January 1, 1923, five years from now.



Each War Savings Stamp will cost you $4.14 to $4.23, according to the month in which you buy it—they can be purchased up until the end of 1918. On January 1, 1923, the government will pay $5 for each War Savings Stamp. This is return of the purchase price with interest at four per cent compounded quarterly.

## Buy at Least a Quarter's Worth of W.S.S. "Baby Bonds" Every Day. Have everyone in your family do the same. Your bank or mail carrier sells them!

# Poultry Will Help Feed the World

## *No Northwest Farm This Year Should Fail to Produce a Chicken Flock*

While the campaigns are on for a brood sow on every farm, a lamb on every lawn, a garden on every vacant city lot, and in fact something of a food-producing nature everywhere, the farmers of the northwest should not forget that there lies before them a great opportunity for food production by means of the poultry flock. Every farm, large or small, should produce a few chickens this season. Those chickens in the majority of cases should be of the meat varieties or of a dual purpose variety. This rule of course would not apply to the poultry specialist whose industry is built up for egg production. His problem is different from that of the average farmer.

Although there is a clear tendency on the part of farmers and stockmen to increase the production of pork to supply the needs of the allies, it is equally evident that it will be with great difficulty that the absolute needs can be supplied. Therefore, the production of any meats that can reduce the consumption of pork and pork products in this country is greatly to be desired.

With the poultry specialist and with any one who raises poultry on a large scale, the feed problem is a troubling one, especially in view of the increased prices of the substitutes for wheat which the government is urging poultrymen to use.

It would be extremely foolish to advocate the production of hogs on a large scale on the average farm, and in like manner it would be foolish to advocate the production of poultry on a large scale, but there are on every farm materials constantly going to waste which could be readily converted into war-winning foodstuffs by way of the poultry flock. There are few farms in the northwest that could not produce from a dozen to 50 chickens without any material decrease in the other productions of the farm, and the situation in which America now finds itself makes it little less than a patriotic duty for the farmers to add this bit to the food supplies of the world.

Owing to the difficulties of the poultry feed situation there is now being started a movement to urge upon congress the regulation of prices of poultry feed. The dealers and the consumers of these feedstuffs propose to ask that some definite price be set on such feeds as barley, oats and corn so that not only the dealers may know what they may charge and therefore what profit they may make, but so that the poultryman may also know exactly what his feed will cost him for a given period.

Comparatively few farmers are familiar enough with the production of turkeys and ducks and geese to warrant any widespread movement for the production of these birds, but there are many opportunities for increase in these lines that would be beneficial not only to the producer but to those who must have meats.

Here's a flock of little folks that will add to the food supply when they grow up.

### Goes East for Shorthorns.

Joe Turner of Meyers Falls has gone east for the purpose of securing about two carloads of purebred Shorthorn cattle to add to his already large herd of that breed. He is attending the sales at Des Moines and at Sioux City, at which places a total of about 350 head of Shorthorns are being offered. If Mr. Turner finds the kind of stock he desires he will bring back with him probably 30 or 40 head, which would add some $10,000 to the value of his holdings at Meyers Falls. He says he doesn't want to bring back anything that is not around the $300 or more class in value. He now has about 50 head of purebreds on his farm.

## Must Back Promises

Senator E. L. French of Vancouver, Wash., when addressling the prune conference there recently, emphasized the necessity of standing behind advertising and fine displays with the very best prunes that can be produced. When the growers will understand that they must stand together and not allow unfit fruit to be dried, then the marketing problem will be comparatively easy, he said. "The time is coming," he declared, "when the growers will have to sell their own product. Just how this is going to work out I do not know, but I am satisfied that it will come, sooner perhaps than we expect."

Mr. French also paid his respects to brown rot. "I have tried to produce it and make it grow," said he, "for the sake of studying the process, and I have failed. I have tried to eliminate it and I have failed. I have sprayed for it and sometimes it disappears, and sometimes the trees I spray have it and the unsprayed trees do not. The more I study it, the less I seem to know about it."

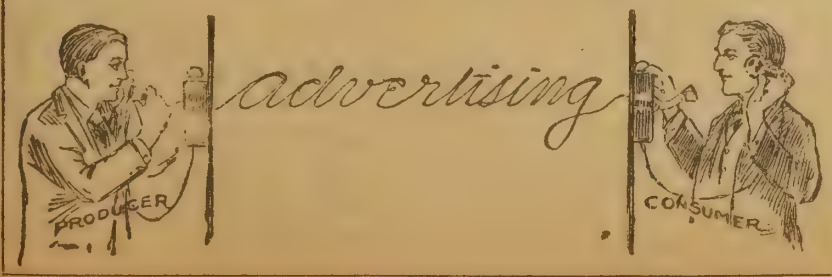
This opinion seemed generally that of all the prune growers.

**Are You Reading It?**

The third instalment of the serial story, "Trappers of the Ozarks," begins this week on page 28. Are you reading it?

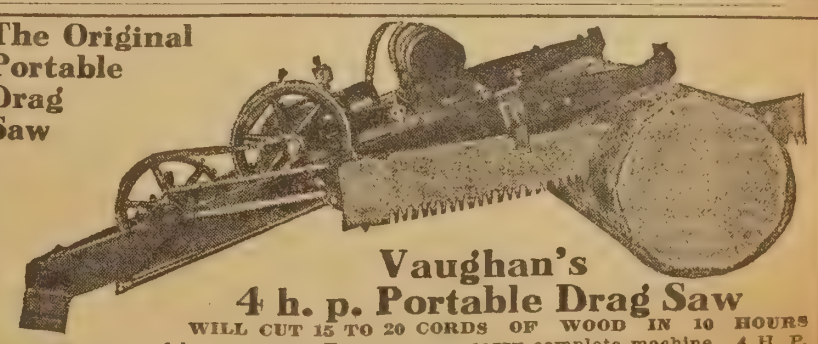
### Would Purchase Seed.

The agricultural committee of the house of representatives has recommended to congress that it pass a bill that has been presented appropriating $5,000,000 with which to purchase seed for farmers in the semi-arid sections of the country. The bill also appropriates $2,500,000 to aid the secretary of agriculture in the work of aiding in the solution of the farm labor problem.



## ADVERTISING BRINGS PRODUCER IN TOUCH WITH THE CONSUMER

The following remarks are from a letter addressed to the New York Times by the watch manufacturer, William H. Ingersoll, and emphasize some of the reasons why it pays to buy advertised goods:



"The consumer of any article always bears two distinct items of cost when he buys it. The first of these is the cost of production. The second is the cost of getting it from the producer to the consumer. Advertising has taken the large place that it has in the second of these two costs because it reduces the cost of distributing goods and therefore reduces the total cost to the consumer.

"Advertising frequently lessens the cost of goods very materially by providing a market, allowing production on a greatly magnified scale, thereby permitting economies which smaller production would not allow. A large enough market to make the dollar watch a possibility would not have been attainable except through advertising, yet this article has saved money to millions of those who have purchased."

In the advertising columns of this paper you will find many articles described which are noteworthy for their low price, high quality, and improved design.

**The Original Portable Drag Saw**

**Vaughan's 4 h. p. Portable Drag Saw**

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 4 H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 3 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $160 f. o. b. Spokane and common points. FOR SALE BY

# CALICO

BY

JOE L. ASHLOCK

**Flight From Indians and Rescue of Baby Girl Make a Better Man of Bill Jamison.**

Bill Jamison, cowboy, Indian-fighter, broncho-buster, the best man of his class that ever rode the Lazy B hills, was in the tapering-off stage of a regular old-fashioned cowboy drunk. Forth from the howling wilderness Bill had come thirsting for the joys of civilization. Cow Creek had welcomed him. Dutch Jake had immediately put the Fountain and its stock of Mountain Dew at Bill's disposal, and Bill, summoning the other cowboys to his side, had slaked his thirst copiously and treated till his friends could no longer be treated. After two weeks of bacchanal hilarity Bill proclaimed himself satisfied, swore off, vowed he would never drink another drop, shot a few holes in the already riddled ceiling of the barroom by way of emphasis, and mounting Calico, shoved the wind for the Lazy B. Thus we find him: Cow Creek 20 miles in the rear, the Lazy B ranch 30 miles ahead, and Calico to jog the 50 without a stop.

Again and again the far distant ridge that reared against the brassy horizon had been reached, then another in view, farther away, dimmer in the leaden haze than ever. Doubtless Calico sighed in his patient cayuse way as he sized up the expanse of plain before him and felt the sodden weight on his back, sunfished through the air a couple of times, then galloped away, leaving Bill to the questionable resources of his own legs. But not Calico! He jogged along patiently, sometimes of his own accord quickening his pace to a gallop; then, if Bill reeled too much, slowing down to his perpetual jog, his steadily pattering hoofs stirring up puffs of alkali dust that rose like white smoke about him and his rider.

Suddenly Calico halted and threw up his head. An instant later, with ears pointed sharply forward and eyes glancing to the left, he uttered the keen, ripping snort characteristic of the western broncho when alarmed. With a startled grunt Bill straightened up, and, surprisingly alert, tipped his sombrero to shield the sun from his eyes and took a careful survey of his surroundings. On all sides, far away till lost in the haze of Indian summer, the prairie stretched away, its curling, brown bunchgrass and straggling clumps of sagebrush and cactus only heightening the general lifelessness. But Bill's eyes were keen. He recognized in what to an untrained eye would have seemed but a distant group of motionless sagebrush a group of horsemen. Immediately after discovery the horsemen wheeled, and at a gallop disappeared behind a knoll, showing as they went a twinkle of red and yellow blankets. Bill swore at the knoll as if it, instead of the Indians, was the offending object.

Sobered and alert, Bill urged Calico forward at a gallop, but before proceeding a hundred yards the horse again stopped, scooted backward, uttering snort after snort. Following the glance of the panic-stricken horse, Bill could at first see nothing, but a keener glance revealed what seemed to be a bundle of rags lying near a large sagebrush which partly overhung the path a couple of rods ahead. In the instant of its discovery the bundle moved and unmistakably a human voice came from it. Wondering and puzzled, Bill dismounted and approached the object, Calico prancing and snorting as far behind his master as the full length of the hacamore rope would permit.

At his first touch another human cry came from the bundle and Bill uttered a loud exclamation of astonishment. It was a baby. Amazed and concerned Bill stood helplessly staring at the baby with confused recollections of ghost stories crowding through his mind, any of which were feasible in comparison with this discovery. Moved at length by a desire to do something he gathered the baby up in his arms, and with awkwardness that would have been ludicrous under any other circumstances, strove to comfort it. Mechanically he drew a flask of whisky from his pocket, but as he was in the act of administering some of the liquor it occurred to him that whisky might not be a proper restorative for so small a child. Debating mentally he noticed the baby's pretty brown eyes that blinked hard and were covered with the tiny hands to keep out the glare of the sun. The innocent baby mouth and the soft, pure flesh, though dirty and sun-blistered, seemed of an element that excluded whisky and rough words. Thinking thus Bill tossed the flask aside, and forbearing to swear, became speechless. Tightening his hold on the baby he mounted Calico, whose astonishment had now rendered him incapable of else than obedience, and took the path at a swift gallop. He felt that other things would be found shortly. Storks do not leave year-old babies lying unprotected on the desert.

A short distance ahead, as the path sank suddenly into an arroya, Bill's expectations were realized. A wagon was turned lengthwise across the path, and the horses which had drawn it had been shot dead while in the harness. One of them lay across the broken tongue of the wagon, and the other in his struggles had apparently almost freed himself before receiving the death wound. He lay facing the wagon with head and neck across the body of the horse that lay on the broken tongue. There was a man, a woman and three children—seasoned and tough though he was, not unused to Indian horrors, Bill, with face dusty white covered the bodies with the wagon-canvas, and then, in half-paralysis, glared hither and thither in the surrounding haze, vainly seeking a glimpse of the redskin murderers whom he knew were not far distant. But all was blank and motionless as the end of creation.

The baby was crying lustily, and Bill, in a dazed fashion began rummaging through the camp belongings in search of something to "feed the kid," as he mentally expressed it. He knew very little about babies, but realized that this one must be hungry and thirsty, and that in some way it must be fed. What or how he had not the slightest idea, but simply searched for an inspiration. He wondered by what sort of an accident the baby had been spared to his care. Perhaps in the last moment, realizing the end that was to come, the mother had hidden it in the great clump of sage. Or, compassion (this Bill greatly doubted) in some savage breast may have stayed the tomahawk, leaving the work to be done by the less merciful things of the desert. But Bill, as his search progressed, became more greatly concerned with the present necessity than with the how or why of his situation.

He presently came upon a flask of whisky, which he tossed aside with a growl of impatience. A moment later he discovered a can of condensed milk, and instinct told him that this was what he needed. Feverish with haste, he poured some of the thick cream into a cup which he had found; then weakened the sugary stuff to what he thought to be the right consistency with water, a meager supply of which he had found in a camp keg. This he offered to the baby, humble in attitude and fearful lest his offer should be refused as if he were serving the mightiest monarch on earth. But his fears were needless. The baby eagerly seized the cup and guzzled and drank till Bill was terrified lest it should be strangled. Bearing in mind that cattle, when crazed by thirst will drink themselves to death, Bill removed the cup when he thought that the baby had taken enough. Whereupon baby raised such a clamor of indignation that Bill half feared that the spirits of the desert would be aroused against him.

Calico's increasing uneasiness warned Bill. He again and again scanned the surrounding plain, and saw naught but the same expressionless expanse. But he was not deceived. He knew that from somewhere in the death-silent waste fierce eyes were glaring at him, and that if he tarried long, hideous, painted bodies would be bellying nearer to him, stealthily, invisibly, from sage to sage, to make surer the quest of a rifle bullet. With these thoughts in mind, Bill deliberately heaped the scattered belongings over the bodies, added some dry sage brush which he found near, then touched the match. As the blaze rose and crackled dryly he mounted Calico, and, holding the baby in his arms, galloped away. He felt that he had no time to bury the bodies, so took this means to save them from vultures and animals.

Bill surmised that the Indians that he had seen by the knoll were the miscreants, and in this he was probably correct. He doubted not that they were watching him all the time, and that as soon as he seemed in a fair way to make his escape they would appear in pursuit. In this he was also right. A score or more warriors came suddenly in view, mysteriously as if they had risen from the ground. As they appeared from the direction of the knoll where first they were seen and flanking him on the right and left Bill judged that they had been attempting to surround him while he had been engaged at the scene of the murder, and that he had taken the trail just in time to keep them from closing in front of him. As it was they were all in the rear. He therefore resolved to make straight for the Lazy B ranch, and if Calico fell dead before the 30 miles were run, there would certainly be Indian ponies just as dead if they followed till he did drop.

At a word from Bill Calico's hoofbeats came quicker, and his stride lengthened. He shot ahead, every movement watch-like in precision, and in a few moments had visibly widened the distance back to his pursuers. Then Bill reined him in, wishing to save the horse's strength as much as possible. With even chances he knew that Calico was a better horse than any of the ones in pursuit, but he also knew that during the two weeks duration of his "spree" in Cow Creek Calico had had his share of the fun, standing tied to a post the greater part of the time, unfed and unnoticed, save by an occasional kick from his drunken master. These were hardships even for a bronco, and now the strain would tell.

However, as the first miles sped by Calico, as if joyous in his iron muscles

(Continued on page thirty.)

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## How to Care for Your Feet---Exercises Strengthen Them

Dr. Hirsberg.

If you have read a few of the reasons why men are turned away from service in the army by the medical examiners, you probably have noticed that one of the prevalent causes of rejection is "bad feet."

It may suprise you to know that if women were put to the same kind of physical examination as are the young men, they would most likely be turned down in greater numbers for the very same reason.

Women's feet are too frequently deformed, either by neglect or ignorance of hygiene which have to do with the care of the feet.

Perhaps to safeguard permanent disability of your feet, and the feet of those who come under your care, you must do your utmost to guard against aches, callouses, colds, weak ankles and weak arches.

If your feet are sensitive and tender, give them a cold spray both morning and evening. The pressure of the cold water from the faucet upon your feet drives the blood flow from the skin into the inner muscles, makes it flow faster, and the result is somewhat like a tonic for the weary extremities. A feeling of lightness and restfulness is the reward of this simple exercise, and you are often justified in the remark, "Gee, I feel as if I could run a mile!"

**Follow These Suggestions.**

See to it that no moisture is allowed to remain between the toes, for it may cause irritation of the skin, and at times might result in colds, a condition often due either to the too rapid evaporation of water, or to a too thorough chilling of the blood exposed there. The vigorous use of a dry Turkish towel may ward off trouble.

Boric acid—a white powder—is a good application for tender feet. A rub with this refreshes the feet. It is very beneficial to change your hose and shoes every day. If you can, it is wise to have two pairs of shoes, and wear each pair on alternate days, so that the same hose and shoes are not worn successively.

Cold feet are made warm by the cold spray. High shoes are appropriate for winter wear, but low ones are just as good for those who are accustomed to them. Shoes that are too tight or too loose, are uncomfortable and injurious. Tight shoes may cause callous spots to appear on the toes, and loose ones may rub blisters on your feet.

It is preferable never to cut the callous, because you are apt to irritate the skin and perhaps inflame it. Rub callouses with pumice stone and use vaseline and cold cream to make them soft.

Apply splits of camphor on a piece of cheese cloth to relieve light blisters. If the blisters are large and inflamed in appearance, paint them with collodion to prevent friction from the hose and shoes.

Ingrown toenails are the natural results of tight shoes. Sometimes a V-shaped incision in the upper middle part of the nail gives relief. If the ingrowth is not "too far gone," the nail may grow toward the center V-cut, and as it closes in the nail under the skin is apt to withdraw toward the center. If the nail, however, looks red and sore, infection is present and a specialist should be consulted.

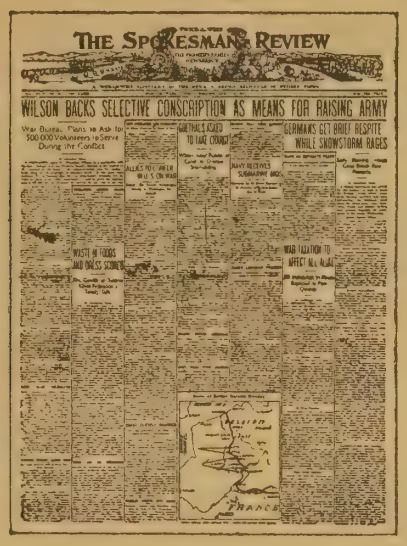
**Correct Faulty Posture.**

A correct posture prevents some of the ailments common to the feet. If you stand so that your toes are only a few inches apart, and parallel to each other, and hold your knees stiff, you throw your weight upon the stronger part of your feet. If you stand with a toe-outward position, however, you throw your weight on the weaker, inner side of each foot and thereby tend to impair the strength of the arches.

Among the many symptoms of weakened arches are a feeling of shakiness on the inside of the foot and ankle, a slight pain in the back of the leg between the knee and the ankle, a severe pain in the knee or the hip, painful, sensitive heels, or stiff muscles. The assumption of a proper standing position will cause these aches and pains to disappear sometimes.

If you have used the incorrect poise for years, however, you will probably need special maneuvers to get quick relief from the bad effects of that posture. Heels neither too high nor too low are really essential.

The following exercise, taken in the morning and before bedtime, will help:



Sit on a chair and cross your feet, right knee over left. Stretch the right foot downward so that your toes point toward the floor. Bend that food inward so that your toes point this time toward the left leg, and the inner side of the right foot is raised. Then bend the foot outward so that the toes point away from the left leg and the inner side of the foot is raised. Continue the rotative movement inward, upward, outward, particularly emphasizing the inner side of the foot in each position. Do the same with the left foot. Under no condition, however, jerk the feet, but make the movements slowly and thus avoid the displacement of bone or muscle.

If you know and prefer the bow-legged walk, club-foot walk, or can walk on your toes or on the outer edge of each foot, you may indulge in any of these movements with perhaps equal profit as is possible to be derived from the exercise outlined.

**Just What You Want**

# FOLLOW THE WAR

THE SPOKESMAN-REVIEW

WILSON BACKS SELECTIVE CONSCRIPTION AS MEANS FOR RAISING ARMY

War Duties Plans to Ask for 500,000 Volunteers to Serve During the Conflict

GERMANS GET BRIEF RESPITE WHILE SNOWSTORM RAGES

WAR TAXATION TO AFFECT ALL ALIKE

Twice-a-Week Spokesman-Review brings you a complete, accurate survey of current events the world over---gives you the facts about the history of our day as fast as it happens. It's a paper your family should surely have.

Twice-a-Week Spokesman-Review 1 Year
The Washington Farmer 3 Years--Both for **$1**

THIS liberal offer puts within your reach a paper which you and your family will surely want in these stirring war times.

We recommend The Twice-a-Week Spokesman-Review to our readers because its news is complete and reliable. Its semi-weekly summary of the war will keep you up-to-date without your having to wade through a great deal of reading matter. The Twice-a-Week pays particular attention to the events of special interest to the people of the Pacific Northwest; covering the progress of the draft, troop movements, and all other details in which you are particularly interested. Names of killed, injured and missing will always be given as soon as issued by the military authorities. In addition the Twice-a-Week brings you a reliable summary of the general news of the day.

Purchased in any other way The Twice-a-Week will cost you $1.00. For that $1.00 you can now get The Twice-a-Week for a year and your state farm paper for three years as well. It is a remarkable offer at any time; especially so in these war times.

## Information Bureau Can Help You

A great many of the readers of the Farmer are availing themselves of the opportunity to secure valuable information and instruction along many lines from the Farmer's free information bureau at Washington, D. C. This bureau is maintained for the purpose of aiding this paper's readers, and those in charge are always glad to receive inquiries and there is practically no question to which the answer does not exist in the national capital.

Right now, in addition to the Hoover cook book, which has been previously announced, the information bureau is ready to send any reader a copy of the knitting instruction book. This book explains exactly what the Red Cross wants in the line of knitting and will be a great aid to those securing it in furnishing knit goods not only to the soldiers but to members of their own families where this is desirable. Either of these books can be had for the asking. Merely enclose one 2-cent stamp each to cover postage when you write.

It makes no difference what your particular problem might be, write to the information bureau about it. For instance, if you want to put up eggs during the coming season for use next winter, when they will be probably twice the price of the summer months, you can find out from this bureau how to put them up. If you want to know exactly how to address letters to American soldiers in Europe, ask the information bureau. If you want to know something about the income tax law and your liability to pay income tax, you have only to ask. These are merely suggestions and there are thousands of questions, any one of which you may be vitally interested in, that can be answered by this department.

Do not address your letters to the state office of this paper, but write directly to The Washington Farmer Information Bureau, Washington, D. C.

# Sidelights

**No Thought for the Morrow.**

"Another ha'penny, please, my boy. Bread's gone up a ha'penny today."

"Then I'll take one o' yesterday's, please."

**Sixes and Sevens.**

Mexicans threaten to shell our motor trucks. Gently, Carranza, gently! You may shed our blood, but dare you spill our gasoline?—Life.

**Something Just as Good.**

Traveler in country store—What have you in the shape of automobile tires?

Clerk—Fresh doughnuts.

**Actions Speak.**

Bertha Mae—So you told Paul of your love?

Sister Clara—Well—a—not just exactly that—we just went through the motions.—Awgwan.

**A Logical Reason.**

Guest—"Why do you give your daughter such an awful nickname as 'Misery'?"

Host—"Because she loves company."—Judge.

**Flax in Ireland.**

The British government soon will launch a $50,000,000 scheme for increasing the cultivation of flax in Ireland, owing to the importance of flax for the manufacture of airplane wings.

**Proper Appreciation.**

Husband (half cracked with joy)—"Mary, stop the pianola! Great Scott, woman, where is your appreciation? Don't you hear our half ton of coal rattling down the chute?"—Boston Transcript.

**Misses Don't Count.**

Two Irishmen arranged to fight a duel with pistols. One of them was distinctly stout, and when he saw his lean adversary facing him he raised an objection.

"Bedad," he said, "I'm twice as big a target as he is, so I ought to stand twice as far away from him as he is from me."

"Be aisy now," replied his second. "I'll soon put that right."

Taking a piece of chalk from his pocket he drew two lines down the stout man's coat, leaving a space between them the width of his lean opponent.

"Now," he said, turning to the other man, "fire away, ye spalpeen, and remember that any hits outside those chalk lines don't count."

# The Miracle of the Marne

The battle of the Marne halted the rush of the Germans towards Paris. It aroused the French to superhuman bravery. They fought as if led by the spirit of the Maid of Orleans herself.

The Marne was a demonstration of the power of patriotism with its back against the wall. The same sacrifice of self, the same love of country and unity of purpose that inspired the French people must inspire us, and we must win the war.

We are sending our best manhood to fight for us. They must be armed, fed and clothed, cared for through sickness and wounds. This is the work of every individual as well as the Government.

It is the proud duty of the Bell System to coordinate its purpose and equipment to the other factors in our national industrial fabric, so that the manufacture and movement of supplies to our boys abroad be given right of way.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY
AND ASSOCIATED COMPANIES

*One Policy One System Universal Service*

# Win the War by Preparing the Land, Sowing the Seed and Producing Bigger Crops

**Work in Joint Effort the Soil of the U. S. and Canada—Cooperative Farming in Man Power Necessary to Win the Battle for Liberty.**

The Food Controllers of United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat can be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rest the burden of supply.

**Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist.**

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operations.

**Canada's Wheat Production Last Year Was 225,000,000 Bushels; the Demand From Canada Alone for 1918, is 400,000,000 Bushels.**

To secure this she must have assistance. She has the land, but needs the men. The Government of the United States wants every man who can effectively help to do farm work this year. It wants the land in the United States developed first, of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there. Apply to our Employment service, and we will tell where you can best serve the combined interests.

**Western Canada's help will be required not later than April 5. Wages to competent help, $50 a month and up, board and lodging.**

Those who respond to this appeal will get a warm welcome, good wages, good board, and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had, apply to

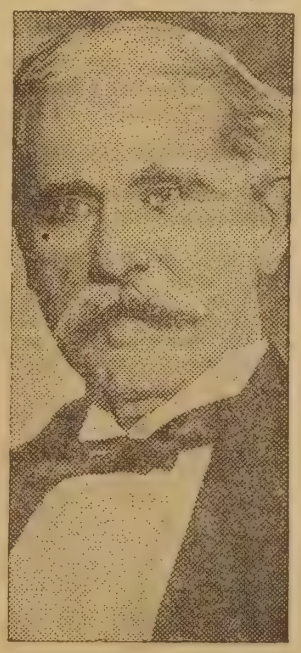
**U. S. Employment Service, Dept. of Labor**

# All the World's a Stage, and All the Men and Women Merely Players

## American Nurses Do Great Work

A group of American nurses and some of the convalescent British officers at the American Red Cross hospital at St. Catherine's lodge, Regent Park, London, are shown. The wonderful work of the American nurses in England and France has been greatly appreciated by both governments.

## British Girl Helpers Cheery



These pretty misses are members of the English Women's Auxiliary Army corps. They are resting between the halves of a hotly contested hockey game between girls of the different barracks.

## Takes Bride Home Through Clouds

Lieutenant Lawrence Sperry, naval aviator, and his bride, formerly Miss Winifred Allen of New York, were married at Governors Island following their trip in an airplane. They left the island by the same route after the ceremony.

## The Adventures of Two Young Pioneers in the Wilds of Upper Louisiana, Now the State of Missouri.

By LEWIS B. MILLER

Copyright, 1914, 1915, by Lewis B. Miller.

### SYNOPSIS.

In September, 1811, two young men who lived near St. Louis—Ben Armstrong and Jodo Henderson—taking with them their two dogs and donkey, Spunky, started on an all winter's hunt in what was at that time an unsettled region, where Indians held full sway, in the wilds of upper Louisiana, now the state of Missouri. After a perilous trip over old Indian trails and dangerous streams, they reached their destination—a salt spring, close to the river Big Niangua, which Ben had visited before and from which they expected to secure salt for sale with their furs when they returned to civilization the following spring. Here they erected a rough cabin for their winter quarters close to the mouth of a large cave that was full of water and bats, and started their salt making and hunting.

If you haven't read the previous chapters, begin with this instalment. You will readily pick up the thread, and once picked up, you'll follow it to the end.

### CHAPTER VI.

#### When the Buffalo Bull Turned.

FOR several minutes the canoe glided through the subterranean sea, pushed by the wind, while the two explorers gazed about them. Much of their progress was attended by the fluttering of wings overhead. But sailing was slower than paddling; and Jodo presently began to grow chilly without his coat. Then he lowered their improvised sail, and, after putting it on, he, as well as Ben, went to paddling again.

"If we had the right kind of a sail, and a mast to carry it, we could sail all the way out of here without lifting a hand," he remarked.

"We certainly could, Jodo. This is a lovely breeze for sailing."

They moved faster going out than they had moved going in. Once their light craft ran aground, perhaps upon a pile of something that had fallen from the roof. But there was plenty of deep water close by, and they soon had the canoe floating clear and were paddling on again. At length they began to hear a dull roar, which they knew was made by the stream that flowed out of the cave.

At last the canoe touched ground, they were at the end of the lake. There both men and dogs sprang out, and the canoe's rope was made fast around a bouldler. Then Ben and Jodo took up their rifles and torches and, following the edge of the noisy stream, soon emerged from the cave's mouth. The hour, as indicated by the stars, was now near midnight.

"It's a relief to escape from that big, gloomy hole," Jodo remarked, as they were moving toward their cabin.

"Yes, it is, in a way. But I would have liked to reach the farthest shore of our underground sea. It's bound to stop somewhere. One of these days, when we don't happen to have anything that needs doing outside, we may make another voyage on that sea. Then we'll keep going as long as there's water enough to float our canoe."

One afternoon, only a day or two later, Ben and Jodo crossed Cave Branch, on a bridge of poles they had made, and went on toward the little salt spring, for a trough of salt water to fill their pots. The day was mild and the sun shining brightly. Jodo happened to glance upward, at the mouth of the little cave in the face of the cliff. Suddenly he stopped and stood gazing.

Ben walked on several yards, then looked back. "What in the world are you staring at, Jodo?" he demanded.

The other made no reply, but kept gazing upward, For a minute or two he gazed, without lowering his eyes. Ben glanced at the face of the cliff, but failed to see anything.

"Jodo, boy, do you often take such spells as that?"

"Only once in ever so long," the other replied, without for a moment lowering his eyes.

But presently the gazer started and cried out: "There he goes! I saw 'im fly in!"

"Saw what fly in where?" demanded Bed.

"Why, I saw a bee fly into that little cave up there. The first time I glanced up I noticed something fly out. The thing was out of sight, though, before I could make sure what it was. But the one that went in flew just like a bee, and I'm pretty sure it was a bee."

"Interesting news if it's true, that is," Ben said. "If a swarm of bees are keeping house in that cave, that will explain why we failed to discover a bee-tree. But I don't know that it's good news. The cave's a long way up. We may not be able to get to it.

"No chance to climb the face of the cliff. But we've got rope enough. Couldn't we go up to the top, and one let the other down?"

"It would be a long let-down. And we should be risking our necks. Must be at least 75 feet from that cave to the top of the cliff. I'd rather try to get up from below. Only about 35 or 40 feet from here."

"Yes. And there ought to be some way to get up. But we'd better watch a while and make sure that the flying things I saw are bees. No need for us to climb up there if they're not."

They did watch again, and both had soon convinced themselves that bees were flying in and out.

"Now if we can only get up there, Ben, we ought to find all the honey we need, and maybe several times as much."

They soon went on for their trough of salt water. During the rest of the day, and for several days following, both busied their brains with trying to devise some way to reach the little cave; but without any success.

"Maybe when we get hungry enough for something sweet, that hunger will stimulate us mentally till we can think of some plan," Ben remarked.

One afternoon a steady rain began to fall, rather warm at first, but turned cold as the wind veered to the north, and soon changed to sleet. When morning came, the world was white with snow, and winter seemed to have set in in earnest. The young trappers welcomed it, for cold weather would soon improve the furs they were catching.

Early every morning, usually by the time they could see, Ben and Jodo started out to visit their traps and deadfalls. On returning to camp, they tacked up the morning's catch of furs, and took down those that were dry and packed them away inside, in a bundle. That done, they emptied out their pots, if there was salt enough to boil off, and refilled the pots with salt water. Then, after eating their dinner, they usually went hunting.

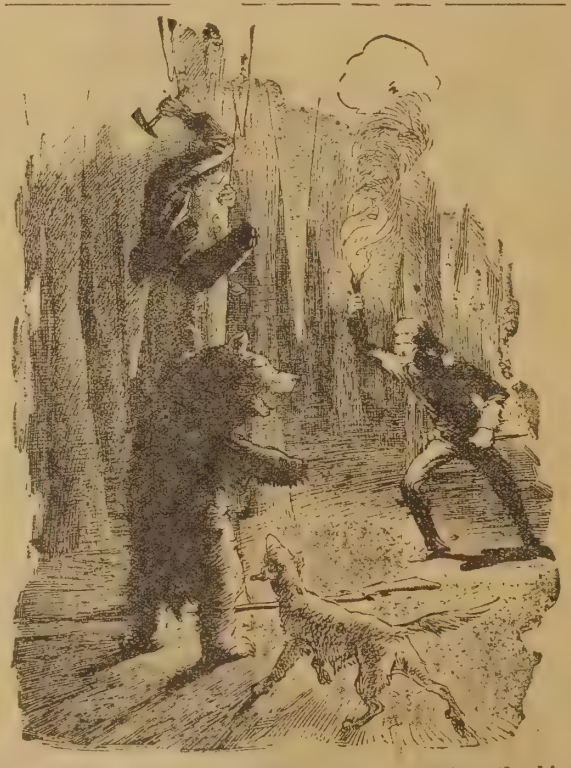
Deer elks and bears were numerous and not very hard to kill. But as yet the hunters had not so much as caught sight of a buffalo. With the coming of the first severe winter weather they found themselves longing for at least two buffalo-robes to sleep between.

A few mornings after the snow-fall while returning to camp from a visit to their traps they came upon a very noticeable trail in the snow.

"Looks like somebody's cattle had passed—" Jodo began to remark.

"Not cattle, buffaloes!" exclaimed Ben.

The younger man became excited at once. "Wouldn t I like to see 'em? And wouldn't I like to knock over at least one?" he cried.



"No reason you shouldn't do both. "Let's follow their trail."

"What shall we do with these pelts?" Jodo meant those from the animals their traps had caught during the night.

"Let's hang them up." Ben wound a sapling, bent it down, and after tying the pelts in a fork, let it fly back.

Now the hunters, after examining the priming of their rifles, set out on the buffaloes' trail.

Doubtless the big game had passed several hours before. Mile after mile the two hunters tramped, without catching sigh of them. Often, in spots of prairie, they came to where the buffaloes had pawed away and nosed away the snow to get to the grass.

**If either Ben or Jodo had been alone when the big bear attacked them he probably would have lost the battle. But two boys and two dogs were too much for him. The tomahawk fell upon him with deadly effect.**

The farther the young hunters followed the trail, and the fresher the signs became, the more excited Jodo grew. At last they stood on the top of a hill, and looking across a valley below, they discovered nearly 20 buffaloes browsing on the opposite slope. But the buffaloes discovered the hunters, and the whole drove fled. Soon they were lost to sight.

The hunters followed. But by the time they could cross the valley and climb the hill beyond, the drove was far away. Almost at a trot the pursuers were now going. After a good while they again came in sight of the game; and again the buffaloes, being out in the open, discovered the hunters in good time and took to awkward flight.

Twice more the same thing happened. It seemed impossible to surprise the wary animals.

By this time the short winter day was drawing to a close. Ben and Jodo were already miles from their cabin, and must return to it for the night. So, reluctant as they were to give up the chase, they got their bearings and started back by the shortest route. It was an hour after dark when they entered the cabing under the cliff.

But by the middle of the next forenoon they had attended to their traps and were ready to go buffalo-hunting again. This time, so confident did they feel of getting at least one animal, that they were taking Spunky along, with his pack-saddle, to carry back the hide and such parts of the meat as they would care to save.

"You can ride Spunky if you want to, Jodo. A pack-saddle may not make the easiest seat in the world, but maybe it will beat walking."

Jodo glanced at the mule. "I doubt that, Ben. You ride yourself if you care to. I prefer to foot it."

"So do I. And I'm rather heavy for such a little mule anyhow. If I tried it, I'd feel that I ought to take turn about with him—carry him as much as he carried me. But he could carry me all right."

"Then we'll lead and drive, as usual, and let him be rested for the load he's to bring back—if he comes back loaded."

"Oh, he must! Sorry hunters we should have to be to let all those buffaloes escape us."

Straight across the country they set out, toward where they dropped the trail the night before. Jodo was leading the mule and his partner driving. When at length they came upon the trail again, they followed it as fast they they could.

The buffaloes, as the trail indicated, had lain down during the night; but not till the hunters had tramped several winding miles did the come in sight of the drove again. Bose and Tinker saw the buffaloes promptly, and were eager to be off in pursuit. They were ordered to the rear. But the big game, now in a half-prairie country, saw or scented the hunters and were in full flight.

"They're unusually wild. Somebody must have been hunting them. Osages, maybe. We're likely to have a time getting within rifle-shot."

"Can't we drive 'em into the woods, Ben?"

"They seem to have an instinct that warns them to keep in the open when danger is nigh. They won't stop in the woods."

Three or four times more the hunters came in sight of the game. And just as many times the game took to flight before anybody could get close enough to fire a shot. Ever time the buffaloes fled, it took the hunters a good while to overtake them.

"At this rate they'll wear us out before we can run them down, I'm afraid."

"Ben, I'm just bound to have a buffalo—to be able to say when I go back home that I've killed a buffalo. Can Spunky out run one of those shaggy fellows, do you think?"

"I rather believe he could."

"Then I'll tell you what. The Indians commonly hunt buffaloes on horseback, I've been told; and they don't shoot till theyre almost again the beast. That's what I'm going to try. Next time, we come in sight of that bunch, I'll jump on Spunky and take after 'em just as hard as I can clatter. And I'm going to keep after 'em till I overtake 'em and bring one down—or find out that I can't."

"Think you can manage Spunky and your rifle at the same time?"

"I'm not going to try. I'll let you keep my gun and I'll wear your pistol and mine. I can shoot a pistol with one hand all right."

"The whole business will be pretty awkward. For one thing, you have no bridle. And I'm sure a pack-saddle must be an inconvenient thing to ride, though I've never yet straddled one."

"Oh, it's little I care for the awkward part, or the inconvenient part, if I can only get a buffalo. And as for a bridle, I'll just take a loop around the mule's nose with his rope."

"All right, Jodo! If you want to try hunting buffaloes after the manner of the plains red men, sail into it! I'll give you all the help I can."

It was half an hour later when the hunters caught sight of the game again. Ben and Jodo were behind a screen of bushes, but, as usual, the buffaloes were out in the open, and too far away for a bullet to reach them.

"Now Jodo, here's the very chance you're longing for," Ben said, after ordering the dogs to be quiet.

Hastily, nervously, Jodo began his preparations. After leaning his rifle against a bush, he thrust Ben's pistol into his belt with his own. Then, having made a loop around the mule's nose, he climbed into the stirrupless saddle. There was some uncertainty as to what Spunky would do, though he had been ridden often before. But, as a matter of fact, he did nothing.

Now Ben drew his hunting-knife and cut three switches. One he gave to Jodo. "Whenever you're ready, say the word."

Jodo adjusted himself in the saddle, and raised his switch. "Ready!" he exclaimed, and brought the switch down sharply against Spunky's flank. At the same moment Ben rapped the mule with his switches, one on each hip.

Thus encouraged, Spunky bounded forward, and dashed away at the top of his mulish speed. Ben followed and tried to strike a second time, but his blows fell short. Jodo guided his mount straight toward the buffaloes, and kept plying his switch.

Oddly enough, the buffaloes did not run as quickly as heretofore. They threw up their heads and all stood gazing at the mule and rider bearing down upon them. When presently they did turn and take to flight, they were less than a hundred yards ahead of their furiously riding pursuer.

Now followed an exciting chase. Plying switch and heels vigorously, Jodo was soon only about 25 yards behind the hindmost buffalo—a big, ungainly bull. But by this time the buffalo, fully aware of his peril, was running with all his ponderous might. Jodo urged the mule to better speed; but Spunky, too, seemed to be doing his best. And in spite of that the distance between him and the fleeing buffalo remained about the same. At length the chase led into a tract of scattering woods.

Seeing that it was probably impossible for the little, short-legged mule to overtake the buffalo, and fearing that the game would escape altogether, Jodo drew one of his pistols, took as good aim as he could at the big beast's hinder parts, and fired. He hoped to cripple the bull and thus check his speed.

But after the shot the buffalo kept running at the same headlong gait. Seemingly, the hastily fired bullet had not touched him.

Thrusting the empty pistol back into his belt, Jodo drew the loaded one. This time he took a more careful aim. Scarcely had the pistol cracked when the buffalo, wounded in the ham, began to limp. And after limping a short distance he stopped, turned suddenly and faced his enemy, angrily, defiantly. A frightful-looking picture the great bull, with fury in his eyes and murder in his heart!

One glance showed Ben the situation. Had the danger been less serious he would doubtless have laughed. But, as it was, he only ran to one side, hoping to get a shot at the shaggy fellow. And at the same time the two dogs, excited beyond endurance, dashed away from Ben and made for the buffalo.

Before Ben could get a chance to shoot, something unexpected happened. Spunky put his fore feet into a hole, and as his head went down his hind parts flew up!

## CHAPTER VII.

### Moccasin-Tracks in the Snow.

Spunky's heels kept rising till he turned a complete somersault, coming down on his back. Jodo had the presence of mind to throw himself to one side, thus escaping being mashed between the pack saddle and the ground.

What might have happened had nobody been near to divert the bull's attention is uncertain. But as the little mule took his tumble, the dogs dashed forward and began barking fiercely at the big buffalo. Seeing Ben approaching, the beast turned to face him and the dogs. But as both Jodo and the mule leaped to their feet, but a few yards away, the shaggy fellow started for them again.

This was Ben's chance. One rifle was quickly laid down, and the other went to his shoulder. When the gun cracked sharply, the bull stood in his tracks for a few moments. Then his legs seemed to stiffen under him, and he dropped heavily to the ground. The bullet had passed through his heart, and he was dead when he fell.

By this time Spunky, having struggled to his feet, was making off again, braying loudly as he ran.

"Are you hurt, Jodo?"

The young fellow addressed, after making sure that the bull was past pursuing farther, felt himself over carefully before replying.

"Just jarred up a little is all, I guess. But Spunky may have crippled himself."

"Not past running, certainly!" Ben laughed as he watched the fleeing mule.

After fleeing 200 or 300 yards, Spunky stopped and stood gazing back at his prostrate enemy. Plainly he half expected the bull to bound up and start after him again.

"Well, you got 'im, didn't you, Ben? For a little while I thought he was bound to get me."

"How did he come to turn on you?" And when Jodo had explained, Ben said: "He certainly did look frightful as he came charging after you! Yes, we brought him down—both together. But if you hadn't wounded him and fetched him back, I never could have got in shooting distance of him."

Both felt the big beast's shaggy coat. "This ought to be good to cover with on a bitter-cold night," Jodo remarked.

"It will be—not a doubt of that. But his meat will be too tough for anything but dog feed."

After catching the mule and tying him close by, and assuring themselves that the pack-saddle was not broken, the two hunters went to work on the buffalo with their knives. When the big hide was off, they spread it out on the snow, hairy side up, and gazed at it admiringly. Later they rolled up the hide and fastened it and some of the meat on Spunky. Then they started for camp.

"Shall we try for another of that bunch tomorrow?" Jodo inquired, as they were tramping along.

"Well, not necessarily tomorrow. But if they stay anywhere in this vicinity, I'm hoping we can land a few more of them."

"We must get at least one more, so as to have two robes to sleep between."

The partners did not go buffalo-hunting next day. But a few days later they started out again with Spunky. More snow had fallen, and the weather was pretty cold. For miles the hunters wandered over the hill-country, without discovering either the drove of buffaloes or their trail. Finally they abandoned the search and started back toward camp.

But before going a mile in that direction they heard Bose utter a quick excited bark. Looking off through the woods, they caught a glimpse of the two dogs eagerly following a trail.

Hurrying in that direction the hunters learned that their dogs were nosing the trail of a bear. And the tracks in the snow indicated that the bear was of unusual size.

"Big enough to rip a dog wide open with one rake of his paw!" Ben said. "We must follow as fast as we can."

Away they went on the trail. Both the hunters and Spunky were soon going at a trot. After a few hundred yards they began to hear fierce barking somewhere in the woods ahead. Now they put Spunky to a gallop. Soon they could make out the cause of the commotion.

The dogs had overtaken the bear and brought him to bay. Reared up on his haunghes, the fierce-looking beast was striking at his assailants, first with one paw and then with the other. Bose had had experience with bears, and was too cautious to let those claw-armed paws get near him. But Tinker, more foolhardy, rushed in again and again to snap at the shaggy brute. Fortunately the little dog's alertness and quickness compensated for his rashness. The paw that reached for him was always just the fraction of a second too late.

Before the hunters could approach to within shooting-distance, the bear dropped to his all-fours and was off at a surprisingly rapid gait. The dogs followed promptly, and the hunters started after the dogs. Soon both bear and dogs were lost to sight among the trees and brush.

Fast as the hunters hurried, they failed to catch even a glimpse of the bear till the noisy barking of the dogs indicated that they had brought him to bay again. But a second time, as the hurrying hunters drew near, the bear dropped down and took to flight.

(Continued on the following page.)

**To be chased by an enraged bull buffalo was a new experience for Jodo, but he made good at the venture.**

the big fellow made as he stood with his great, shaggy head lowered till his nose almost touched the ground.

As the bull turned to confront him, Spunky stopped suddenly—so suddenly that Jodo had to clutch the pack-saddle to keep from plunging over the mule's head. Never had Spunky beheld such a frightful monster before. The little fellow snorted loudly with terror, his long ears pointed straight ahead, and he seemed on the point of turning and taking to flight.

For a minute or so Jodo himself was too much astonished at the unexpected situation to know what to do. Then he began to reload one of his pistols. He was very nervous, but at length had the powder and bullet in the barrel and the priming in the pan.

"Now, my big fellow, if you'll just hold still a few seconds longer, that shaggy coat of yours will be mine to sleep under!" he was thinking.

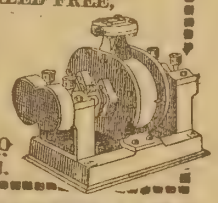
After trying in vain to quiet Spunky, he cocked the pistol, took a careful aim, and pulled the trigger.

Had he been more experienced in hunting buffaloes, Jodo would have known that a buffalo bull's skull would turn a rifle bullet, and that a pistol bullet had no chance at all to penetrate it.

The shot was not without effect, however. As he felt the bullet sting where it pierced his hide, the angry beast, feeling that this second wound was too much to be borne, charged his enemy furiously!

The bull and Spunky were scarcely a dozen yards apart. By the time the terrified mule could turn, the enraged buffalo was almost upon him. Now began another wild race, in the opposite direction, with Spunky leading the way for life, and the bull making furious efforts to overtake him.

Scarcely had Jodo started in pursuit of the buffaloes when Ben, catching up both rifles, started in pursuit of Jodo. He followed as fast as he could, but lost sight of the chase when the bull and Jodo plunged into the woods. He kept on, however, and was little more than a hundred yards from the nearest trees, when he saw Spunky and Jodo burst from the woods, coming out even faster than they had gone in. Both fugitives seemed half-wild with terror. And just behind them charged



PUMPS FOR THE FARM!

National pumps are built for all farm uses—your water supply, for irrigation purposes and for drainage or anywhere a real pump is needed.

FOLDER MAILED FREE, which completely describes our line. We have a pump for every farm use. Buy from the manufacturer and save money.

# Trappers of the Ozarks

(Continued from the preceding page.)

Again and again that was repeated. At last the retreating beast was seen to make straight toward the side of a hill and disappear into it.

"There! He's taken refuge in his den!" exclaimed Jodo. "Chances are we shall have a time rousting him out—if we ever can."

After t ying Spunky to a bush, and leaving the dogs to watch the bear's den, the partners hurried here and there in search of a dead pine-tree. Finally a shout from Jodo brought the two together at the cave. Jodo came carrying a piece of wood that had just been pulled out of the ground.

"Rich old pine-root," he told Ben. "I know it's got plenty of rosin in it, because it's the only part of the pine-tree that hadn't rotted."

On the little fire kindled to light the grass they now laid the root, till it began to blaze freely. Then Ben took it up.

"Now, Jodo boy, if you feel bold enough, we might crawl in and tackle his bearship. But you don't want to try it unless your nerves are steady. For you're likely to have to shoot quick and shoot for your life. It's the bear's life or yours when you venture into his lair. I'll carry the torch, and you can keep just a yard or two ahead of me. That way the light won't be in your eyes. I'll hold the torch high enough to throw the light over your head and as far beyond you as possible."

"Shall we let Bose and Tinker go in, or leave 'em out here to keep Spunky company?"

"We'll take them with us. They can discover the bear before we can."

"I know. But they're likely to get in the way when I want to shoot."

"Then we'll make them stay behind us. Or at least I can make Bose stay back. When Tinker gets excited he's likely to dash out in spite of orders."

So the two hunters started to crawl under the ledge, Jodo with his rifle cocked. The dogs followed at their heels. The men advanced very cautiously till they came to where they could stand erect. Then they felt safer. The dogs sniffed and growled, but it seemed to be because the bear had been here recently rather than because he was here now.

Slowly, alertly the two hunters moved forward. The cave was not large as yet, and they searched every inch of it with their eyes as they advanced. The bear was not to be seen.

"He's retreated to the back end," Ben remarked, after they had penetrated a good many yards.

"Maybe there isn't any back end. Maybe there's just another outlet, and the bear has gone on through."

At length, as the hunters advanced, they came to a place where the cave grew smaller, the roof being so low that they had to stoop a little to pass under it. But soon it began to open out, the roof rising and the walls spreading apart, till they were in a huge cavern, 20 feet high, 50 feet across, and longer than their torch would throw light.

And a very peculiar-looking cavern it appeared to the hunters. Numerous white columns, seemingly set there for support, reached from the floor to the roof. Some were as large as a good-sized tree-trunk, and others as slim as a sapling. Also a few, though they reached up a yard or more from the floor and down a yard or more from the roof, failed to come together. All

# Calico

(Continued from page twenty-four.)

and bellows-like lungs, held his own. The blue, misty ridge that rose in the distance ahead grew higher, nearer, then swept by and another breasted the horizon in the same leaden distance. No tougher horse than Calico ever set a hoof on the Lazy B range. From sunup till evening he had put 100 miles behind him, and in the morning was ready for another hundred. His neck was short and thick like a bull's—the bronco neck—his legs were short, but slender and graceful, and at times it was hard to tell whether the twinkle in his brown eyes was wickedness or merriment. He loved the race, and now, whenever an exasperated whoop from one of the pursuing Indians reached his ears he would glance back, seemingly measuring the strength of the broncos that were pitted against him.

More miles sped by and Bill saw a look of anxiety steal into the intelligent brown eyes. Then the horse no longer looked back and Bill began to finger his rifle nervously. Specks of white foam spattered Bill's red shirt, and finally, in a mighty heave for breath the horse's stride shortened. Instantly the spurs jingled, and, with head up and eyes fierce with insulted pride, the horse leaped forward.

The baby, lulled by the cradle-like motion of the horse had fallen asleep immediately after the race began. Bill was glad it slept. Somehow the peaceful, baby face seemed to make the danger less fearful, and, in spite of Calico's shortening breath, he felt that in some way the race would not be in vain. Inwardly he railed at himself for having mistreated Calico so badly during the last fortnight. Otherwise the bronco could have fled in front of his pursuers till they dropped, and then had strength enough left to resume his perpetual jog on to the Lazy B. Rather astonished, Bill presently began to blame whisky for it all and wondered if some of the slanderous things Salvation Army Jack had said about whisky and drunkenness were not partly true. He vowed that if he lived through this scrape, while he might again go back to "life" in the settlement, yet he would henceforth see that what he did to himself would be such as would not bring suffering to others. What he meant by the resolve he hardly knew, but he knew that if the baby was brained with a tomahawk, and he shot and scalped it would be because he had been drunk in Cow Creek and neglected to feed his horse.

Calico stumbled. Then he staggered, and, with a great, heart-broken groan, sank to the ground and rolled over on his side. With his rifle in one hand and holding the baby lightly as a flower in the other, Bill freed himself from the saddle. A bullet cut a furrow through his thick, red hair as he stooped to lay the baby on the ground, and, dodging quickly, he flattened himself behind the body of the prostrate horse and glanced along the barrel of his rifle, seeking a victim, and sprang to his feet with a yell of astonishment. The Indians were fleeing. Whirling about, Bill saw galloping over a ridge ahead, all of them not yet in view, a company of soldiers. In the same moment the blue-coated fellows swept by him, diverging from right to left to avoid the fallen horse, each man striving to be first. As Bill afterward expressed it, "the hull bunch of Siwashes wuz rounded up like a bunch of beeves." The warriors saw that they were outnumbered and that resistance was useless, so, stoically, serenely indifferent of everything, animate or inanimate, they lay down their arms and awaited the order to march to Fort Wright, where the military authorities would hang a couple of them if sufficient evidence could be collected (which was doubtful), and turn the rest of them loose.

After the Indians were safely under guard those of the soldiers not on duty gathered about Bill with many questions, which for a time were unanswered. Bill had Calico's head on his lap and was trying to force the contents of a large, black flask down the horse's unwilling throat. With assistance from one of the soldiers he was finally successful, then life came back to the big brown eyes, but clearly, no expression of thanks for the treatment. Under the stimulation of the whisky—bad though it was—Calico was soon able to snort feebly at the soldiers, and, a moment later, staggered to his feet.

After Calico had been thus cared for the situation was discussed. In as few words as possible Bill told his recent experience, and learned in turn that the soldiers had been ordered out from the fort at daybreak, reports of a general uprising among Bad Dog's braves having been brought in. When thus informed Bill vaguely remembered having heard some such talk while he was on his "tear" in Cow creek; how the news had filled him with wrath, and with drawn six-shooter he had vowed to shoot full of holes every siwash within a hundred miles of the Fountain. He was for beginning his onslaught immediately, but Dutch Jake, scenting trouble, had contrived to exchange a quart flask of mountain dew for the flourishing revolver, and Bill, with the less deadly weapon in his hand, had soon allowed his predatory design to vaporize.

After the order had been given to march the captain approached Bill, complimented him ceremoniously for his bravery in rescuing the baby, further stating that he knew of a family at the fort with whom the child could probably be placed; whereupon Bill tightened his arms around the baby, and replied laconically that he guessed "the kid would be tended to all right."

The reader may think this happened a long time ago, or not at all, but in either case he will be mistaken, for it did happen only a few years ago, comparatively speaking. But in these few years the Indian teepees have gone and the homes of white men built in their place; the cattle are gone, the cowboys are gone, and the desert plain across which Bill Jamison raced for his life and that of a year-old baby girl is likewise gone. What was a desert only seemed so, for with the touch of the plow the soil became fertile, and when the plains were plowed the rains came, and the wheat grew, and the wild cowboy days were gone forever.

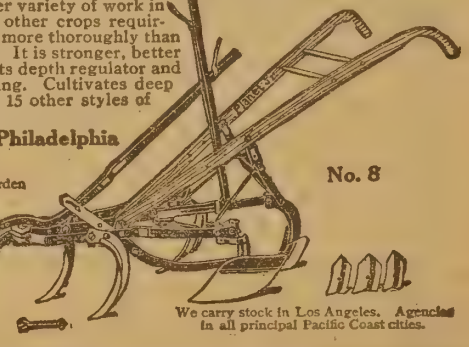
There is one of the wheat-kings of this region who numbers his acres by thousands. When the settlers came to plow up the cattle ranges he did not join in the general opposition of the stockmen to the newcomers, but was among the first to bid farewell to the old regime. They say the stand he took in this respect was due to the influence of his daughter—not his, but an adopted one—who had been placed in an eastern college when a child, but during the years that she was there had never failed to write Bill from one to two letters each week. In these letters she had discussed the new turn of affairs with him, and had made him understand that they were inevitable.

When the young lady had graduated (or "post-graduated" as Bill says), the finished product of the greatest masters in the world, she came back to Bill and the Lazy B; not the Lazy B, however, but the new country that the farmers had made of the Lazy B. With her she brought a young man, a former classmate, whom she introduced to Bill as her husband. This being Bill's first information of the marriage he was naturally astonished, but gulping down his emotions he swore softly and straightaway appointed the young man as his overseer. Later he caused him to use his engineering skill in the construction of an immense irrigation ditch, which is now reputed to be one of the greatest feats of its kind in the Pacific northwest.

I visited them a short time ago and was introduced to another little baby girl who snubs her papa and mama a dozen times a day for a place in Bill's hungry arms. She is just big enough to ask questions about the scar on Bill's head, and I chanced to be present when the story was told. She, of course, is too small to understand all of the tale, but she knows that Calico was a brave and noble horse, and that he is buried under the big box-elder tree out in the pasture. Bill often takes her out to play under this tree and as he watches her flit about in her childish amusements often he will exhale a giant puff of tobacco smoke, swear softly and mutter, "It's queer how things do come about."

Raise bigger crops with Planet Jr. tools

You can't meet the urgent need of cultivating increased acreage this year with old-style out-of-date tools and methods. Get Planet Jr Seeders, Wheel-Hoes and Cultivators, and double your acreage. They are strong, yet so light they can be readily used by a woman or boy. Fully guaranteed.



**No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow** sows all garden seeds (in drills or hills), plows, opens furrows and covers them, hoes and cultivates all through the season. A hand-machine that does the work so easily, quickly and thoroughly that it pays for itself in a single season.

**No. 8 Horse Hoe** does a greater variety of work in corn, potatoes, tobacco, cotton, and other crops requiring similar cultivation, and does it more thoroughly than any other one-horse cultivator made. It is stronger, better made and finished. Lasts longer. Its depth regulator and extra-long frame make it steady-running. Cultivates deep or shallow and different width rows. 15 other styles of one-horse cultivators—various prices.

**S L ALLEN & CO Box 1107P Philadelphia**

**New 72-page Catalog, free!**

Illustrates Planet Jrs doing actual farm and garden work, and describes over 55 different tools, including Seeders, Wheel-Hoes, Horse-Hoes, Harrows, Orchard-, Beet-, and Pivot-Wheel Riding Cultivators. *Write postal for it today!*

No. 8

We carry stock in Los Angeles. Agencies in all principal Pacific Coast cities.

Pasture Mixture

*for* Logged-Off Land

**$15.00 per 100 pounds**

*"Keep the Nation's Food Basket Full"*

¶This mixture, consisting of alsike, red clover, timothy, rye grass, orchard grass and red top, contains the correct proportions of these early, medium and late grasses necessary to supply pasture continuously through the long season.

LILLY'S SEEDS

*Established 1885*

*"Best for the West"*

LILLY'S Pasture Mixture also contains deep rooting and creeping grasses to form long and lasting turf.

¶Send your orders early to LILLY'S Seattle, Wash.

# PLEASE TELL YOUR NEIGHBORS ABOUT THIS BARGAIN

**His Neighbor: "Here's One Place Where You Get More for Your Money."**

When we introduced the "direct-to-the-consumer" idea in our subscription business we hoped to have hearty cooperation from our readers and we are not disappointed. The new system is working splendidly. Already thousands of our friends have taken advantage of the big saving which our offer makes possible.

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those whom they feel will be interested in a high-grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

Your state farm paper deals with all phases of farming in your state, but it does much more. It brings helpful facts and clean entertainment to young and old. It is a home paper in the best sense of the word.

## A Real Saving

**Following Rates Now in Effect for Subscriptions to The Washington Farmer**

**25c FOR ONE YEAR**

**50c FOR THREE YEARS**

**$1 FOR FIVE YEARS**

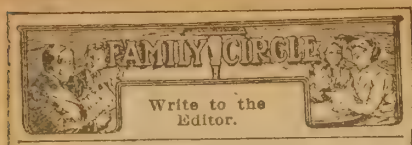
YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

Mar. 14.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $ ..... for ..... years subscription. In Canada add 1 cent per copy for extra postage.



If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Must Organize

## Nation Calls Women to Service

To the Women of the Family Circle: I happen to be in very close touch with the war work for women, which has been planned by the national council of defense at Washington. It is the purpose of that council to have this whole country from ocean to ocean, organized into various committees with chairmen to oversee the work along different lines, which are of vital interest to this country. A very large factor in this organization is the women's committee. The special duty of this women's committee is to give effectiveness and unity of purpose to the work of women in food conservation. Americanization, education in patriotism, Liberty loan and thrift campaigns, the Red Cross and a number of other lines of work.

Do you realize that if we are ever going to do anything worth while to help win this war we must have organization. Nothing of any account has ever been done without organization. Perhaps I should state that this national council of defense is a special war-service body to conduct all necessary war activities and consists of the United States' secretaries of war, navy, interior, agriculture, labor and commerce, and advisory commissions. The above council appointed a women's committee to take the guidance of all war activities for women and to work with and through all women's organizations along lines that the government recognizes as most serviceable. This women's committee is to be a mouth-piece of the government to all women's societies of the country.

This is a very wonderful plan for united effort on the part of women. Let me tell you the system. The national council of men, consisting of the various secretaries, selected a central committee of 10 women with headquarters at Washington. These in turn appointed a chairman in each state, whose duty it is to organize her state. With this state chairman is a council composed of the presidents of the organizations that have a statewide organization. This state council appoints a chairman for each county and she in turn appoints vice chairmen or helpers in number sufficient to cover the entire territory of her county.

There are several more lines of work than I mentioned, eight all told. It is comparatively easy for the county chairman to get the helpers in the towns, but in the farming districts it is very much harder. It is so hard to get in touch with the women. Now this is what I am asking of you: When you are approached by some county chairman to be a helper among your neighbors, line right up and don't refuse.

I venture to say that there is not one woman who is reading this article but can do something to aid in this work. There are no paid workers. The county chairmen all work for nothing and, unless the county is very large, pay their own traveling expenses. There is so much selfishness and indifference in the matter of food conservation, which is a big word for food saving! Are you making war bread? Are you using less and less sugar? Are you cutting out your doughnuts and all other things that require fat to fry? I just had a long talk with a man who, for the last seven years, was living in Germany and had only returned ast September. He told me that a pound of sugar could not be purchased in Germany for any sum, no matter how large. During the last two years that he was in Germany his family, made up of himself, wife and two children, were permitted to buy just one and one-half pounds of beef a week. They were allowed two small slices of rye bread to each person a day. The bread was weighed, but I have forgotten the number of drachms, and was procured by presenting a card. That is organization. He also told me that if Germany had taken Paris when she hoped to do so, she would have had 50,000 soldiers in London within 24 hours. Organization again.

We Americans have lived such a happy-go-as-you-please life it is very hard to realize that some one is standing ready to snatch our wonderful liberty away from us. We must wake up to the seriousness of the war situation. Some of us are so much awake that we can't sleep as we used to, but there are others, and many of them, too many, who seem to do no particular thinking about the subject.

It is because these conditions exist that the lines of Americanization and education in patriotism are included with the others as being necessary subjects to bring before the people.

Let us remember all the time that our work is just as important as any and that it is our work, and no one else can do it.

You will be sure to hear of this council if you have not already. Be ready to do your bit. Yours for victory,

ALICE W. BARLAND.

# Women Can Help Win

A lot is heard these days about women taking the place of men in the field to help in crop production. Some people have gone so far as to recommend that the housewife and her daughters don the overalls and run a team, pitch hay, plow, haul wheat and do the other regular work of a man on the farm.

Now, that is good. There are thousands of women in the country that can do just that. They are as good "hands" as the average man, and in some cases much better. Many of them like to work outdoors; like to do the rougher sorts of work, and grow strong and rugged as a result of it.

But the mistake must not be made of believing that country women are an idle reserve of labor to be called upon to relieve a labor shortage. Be it known right now and for an undeniable certainty that the women on the farms of this country are as hard working a class of people as can be found anywhere. They work as hard and as long hours as do the men on the farm; they are not idle, waiting merely to be called into the field.

The usual work of the farm woman, revised according to the special needs of this critical period in the world's history, is of the war-winning variety. Hers is the work of food conservation; hers is the work of stimulating of production; hers is the work of spreading the sentiment of patriotism and applying it to the practical tests that make for victory over the enemy.

Let the woman who wishes to and who is so situated that she can, go into the field and toil, but banish forever the thought that the woman whose hands never touch the plow handle or the pitchfork, but are employed hour after hour, day after day and week after week, cooking, canning, gardening, mending, and in a thousand other ways indoors, is not serving her country. This war is to be largely won in the kitchen and there should be a gold medal set aside for every farm woman who stays loyally by her household duties this summer, making palatable and wholesome foods out of what she might waste, making war breads where she might make something that she and her family like better, canning and preserving fruits and vegetables and saving what American soldiers and their allies must have if they are to be kept efficient.

### Oyster Farms.

One of the large salt water farm of Japan consists of 50 square miles covered with 5 to 15 fathoms of water. Here the pearl farmer plants rocks and stones which are soon covered with oyster spat. The oysters are then left in special beds until the third year. When they grow large enough a tiny speck of irritating substance is introduced in to the bodies of these oysters and three or five years more are necessary for the foreign substance to become hidden in the layers of nacre which make up the pearls.

### Greek Restaurants.

Greek restaurants are now divided into five classes: Luxury restaurants, first class, second class, third class and fourth class restaurants. Saloons are ranked with the second class places. Prices of the various dishes are fixed in accordance with the class of each place, and must not be exceeded. The quantity of each portion is specified by law.

### Cause of Army Rejections.

The records of 10,000 Americans passed for military service and then rejected by camp surgeons show that nearly 22 per cent of the final rejectionss resulted from defective eyes. Teeth were responsible for 8.50 per cent; hernia, 7.47 per cent; ear, 5.94 per cent; heart disease, 5.87 per cent; tuberculosis, 5.37 per cent.

### An Appetizing Corn Dish.

Canned corn is very good when turned into a baking dish, milk and seasoning added, and the whole heated through in the oven and allowed to brown on top. Outside stalks of celery cut up, a green pepper, or both, added before baking, make the dish more appetizing.

# A Piano House of High Ideals

In the last quarter of a century Sherman, Clay & Co. have occupied a position on the Pacific coast second to none, building carefully from day to day a reputation for selling only goods of merit, of true musical worth and asking only fair and consistent prices.

Our customers and friends are legion. We are most careful what we recommend and when we do recommend, it is with the desire to **serve** the customer and serve him well. We study his needs with the desire to place in his home the instrument that best suits his purpose without it being an undue strain upon his pocket book.

We have only one price—the price tag on every instrument is in plain figures—there is positively no deviation from that price.

We offer no "special" inducements, no insurance, no "club" prices, no free music or scarf (bench or stool of course are considered part of the piano.) We do not have "sales" on one pretext or another. Our prices are fair. We aim to be consistent—to sell good reliable instruments at a reasonable price.

We pay the freight anywhere in our territory. We gladly arrange convenient payment terms on any instrument.

If you are in the market for a Piano or a Player Piano, it is to your interest to call upon us or write us for information—to see what we have to offer.

**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**

*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Etc.*

**Sherman, Clay & Co.**

**Sixth and Morrison Streets, Portland.**
**Third Avenue at Pine Street, Seattle.**
**928-30 Broadway, Tacoma.**
**808-10 Sprague Avenue, Spokane.**
Stores also at San Francisco, Oakland, Sacramento, Stockton, Fresno, San Jose, Santa Rosa, Vallejo.

# Immediate Deliveries On the

# Universal Tractor Attachment

## War Apple Cobbler.

To the Editor: I have a very good recipe for war apple cobbler, which I would like to see in your paper:

Two cups middlings, ½ cup flour, 1 teaspoon baking powder, pinch of salt, 1 large baking spoon lard or fryings, milk enough to make batter. Grease pan well and cover with batter; slice thin, good cooking apples and cover batter real thick with apples, spice and sugar. Cover with batter and bake in slow oven. Serve with cream.

MRS. C. W. ANDERSON.
Colby, Wash.

### Communal Kitchens.

The latest proposal for the elimination of waste in food and the supply of meals at minimum cost in England, includes, what for a better term is called, communal feeding. The communal kitchen has been proposed on several occasions but, save for a few spasmodic experiments, it has not been given a thorough trial. Lord Rhondda is interested in the new proposal and acting with a committee of social workers he is devising plans to give the scheme a real test. With so many women doing war work and with consequent neglect of household duties, some such plan as is proposed will have to be carried out if the rising generation is not to suffer seriously in health.

# Unlike Most Others

which die out after one effort, Crescent Baking Powder stays on the job till the dough is raised. Ask your grocer. Send 4c stamps, for Crescent Cook Book, to Dept. PN., Crescent Mfg. Co., Seattle, Wash.

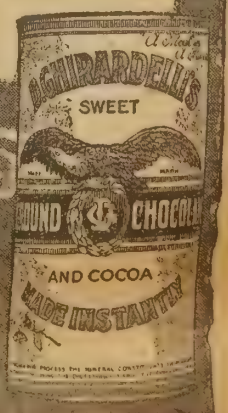
**CRESCENT** Double Acting Baking Powder. **25c Lb.**

## "The store where I do my trading"

THROUGHOUT the West—go where you may—big town, small town, cross-roads store—there you will find Ghirardelli's.

This West-wide distribution has been made necessary *by demand*—a demand for a delicious, sustaining food-beverage; a demand that is met by Ghirardelli's, and by this alone.

Result? Today Ghirardelli's Ground Chocolate is in daily use in more homes in the West than all other brands combined.



As a beverage it is beneficial; as an aid in baking and cooking it is invaluable.

Be sure to ask for it —at "the store where you do your trading."

*In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.*

D. GHIRARDELLI CO.
Since 1852 San Francisco

Ghirardelli's Ground Chocolate

Dear Nephews and Nieces: I have just spent a whole day judging your letters and such a time as I had! And yet I wish there were more of them—more letters and more dear nephews and nieces. The saddest thing comes when I have graded them all and decided which are the best—there are so many splendid letters that do not win prizes. There are only three prizes and there are so many good letters. Many of the cousins have asked just what they must do to win a prize. Your letter must be interesting; it must be written well and written by yourself; words spelled correctly; punctuated properly, neatly written and only on one side of the paper. I know that you are saying, how can I expect a little one of 8 or 9 to write as well as a boy or girl of 14 or 15. Shall I tell you that this is all taken into consideration and for that one reason I have asked you all to always put your age at the last of your letter, just after your name.

You will notice that I always try to guide you in your writing a letter of interest, by suggesting a subject; they are always subjects that the cousins should know of and learn to express their opinion on.

However, there is one prize that every cousin gets if he or she tried to write a good, interesting letter. Every one who takes pains and really tries, gives a prize to himself or herself. Trying to do something better brings a real reward worth having.

One thing I have noticed in the past contests. The children are always glad to hear of the winners and often they speak about their good letters. That is a fine spirit, worth more than winning prizes.

One little girl has asked what a "Twin" is. Finding "twins" is a game that the cousins started more than a year ago, and it is very interesting to find somebody else whose birthday comes on the same day as yours. Aunt Nellie has found several "twins" of her own.

Yes, you may write to cousins through the Corner if you wish. A few have done so and it was nice for the one written to as well as the rest who all read the letters.

One little cousin has asked about making paper beads. I haven't room in this issue to tell you, but it shall be in the next issue.

You don't know how much I love you all, dears. There isn't one of you who does not have a corner in my heart, and I wish I could know you all and see you and talk with you. How thankful I am I have such a big family of nephews and nieces, fine happy boys and girls who are all trying their best to do something worth while and are growing up to be fine men and women.

I almost forgot to tell you what the Roll of Honor was: There are so many good letters, not quite good enough for the prize winners, but too good not to receive anything, so I started this Roll of Honor. If your name appears in the Roll of Honor three consecutive times, a special prize is given. You will notice that we have an Honor Roll of 15 at the close of each contest. Let us all try for the prize. Your loving AUNT NELLIE.

The new contest will conclude May 1, and the suggested subjects are:

**Hooverizing.**
**Your War Garden.**
**Sunshine.**

The prize winners for the contest just closed are:

**Greta Dietz, Ione, Wash.**

**Leland Griffin, Warden, Wash.**

**Alice Clinesmith, Lantz, Wash.**

**Special—Sallie Salina Garry, Miles, Wash.**

**Roll of Honor.**

Lillian Lehman, Paha; Elva Green, Penawawa; Gordon Keiser, Waitsburg; Goldie Yohnka, Ritzville; Ellen Elensohn, Pomeroy; Ruth Jones, Newport; Virginia Gibson, Eastsound; Anna Larson, Montesano; Walborg Brandt, Mt. Vernon; Jerome Gottwals, Govan; Helen Schoenburg, Prosser; Evelyn Moose, Newport; Stella Davis, Fruitland; Alice Case, Tokeland; Agnes Sunnell, Mt. Vernon; Esther Dale, E. Stanwood; Glyness Simonson, Corfu.

**Birthday Comes on Easter This Year.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I hope it will not be the last time. I enjoy reading the letters very much and I hope to see this in print. I am 12 years old. I have two sisters and two brothers. Their names are Arthur, Oliver, Ethel and Maude. Maude is my youngest sister. She and I go to school every day. She graduated this January and I hope to in May. I will be 13 the last day of March. My brithday comes on Easter this year. Have I a twin? I have two little pet bantams and a nice playhouse and a little gray cat. My teacher's name is Miss Polk. I have just a short way to go to school. I come home for dinner every day.—Ada Meek, R. F. D. 6, Box 65, Spokane, Wash.

**A Joke on Brother.**

Dear Aunt Nellie: This is the second time I have written to The Farmer. I have been reading the letters and like them very much. I do not know the answers to the riddles in The Farmer the last time. I wrote to one of the cousins, but she never answered it. I surely had a good time Christmas vacation. My brother was down home the other day and asked me why I didn't write to Aunt Nellie and tell her all I knew about him like the other girls do about their brothers. He reads the letters in The Farmer and just to play a joke on him I am going to write some about him. My brother is about five or six feet tall and he is red-headed and has brown eyes, and likes the girls pretty well. He has one girl and he thinks lots of her. He only gets about a dozen letters a week and always looks for more, as if that isn't enough. My brother is full of fun. I think he will be an old bachelor because he will wait till he gets so old no one will have him. Well, I think that is all the good I know about him, so I will write about something else. My brother and I were up to see my sister last night and stayed there till this morning. Well, I will ask the cousins a few riddles. What has eyes and can't see? What has ears and can't hear? What has tongue and can't talk? What never stops running? Within a marble dome confined, whose milk white walls with silk are lined, a golden apple doth appear, steeped in a bath of crystal clear, no doors, no windows to behold, yet thieves break in and steal the gold? I will stop for this time, hoping my brother will read this.—Elva Green, Penawawa, Wash.

**Knits and Buys Bonds.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I love to read the letters of the boys and girls in the Farmer: I was 11 years old November 24. I am in the fourth grade. My teacher's name is Miss Michaels. The studies I like best are geography and spelling. We keep here in town two cows and a calf. We have 35 chickens; one is mine, but I wouldn't know which one it is, they are so much alike. I have no pets, but I have a bicycle that I got for a birthday present and a Buffalo Racer sled I got for Christmas. I haven't got to use my sled much because there isn't much snow. I have a pair of skates that I got at Long Beach, Cal., three years ago. Have I a twin? If I have, I wish he or she to write to me. I have four sisters and three brothers. Their names are Mabel, Hazel, Velma, Helen, Chester, Verl and Donald. Verl is a sergeant in the army in France. We have three farms. Chester lives on Valley View farm and Mr. Howell lives on Summit Hill farm. The other farm is near Winona. We have just bought a new Premier Sedan car. It is the fourth car we have had. I am knitting on my second Belgian square and it is red, white and blue. I have a Liberty bond and I belong to the Red Cross and have a few war savings stamps. I think I have done my bit to end the war. Donald took our new car and the Waitsburg girls' ball team to Dayton, about 11 miles from here, this evening to play Dayton. I hope our team wins, as Velma and Helen are in the team. Papa just got us a new electric washing machine last week and we like it very much. I got nine valentines this year and I wonder how many the little boys and girls writing to the Children's Corner got. I would be very much pleased to see my first letter in print.—Gordon Keiser, Box 324, Waitsburg, Wash.

## The Flying Fish.

Fishes swim chiefly with the tail, which acts like an oar in sculling. Like the fins, it is made of a skin stretched over a bone frame work. Most fishes have four kinds of fins which may be seen in the acmopanying picture, one or more on the back called dorsal fins, a pair of side fins called pectoral, a pair beneath called ventral fins and one or more anal fins between the belly and the tail. The pectoral fins answer to the forelegs and the ventral to the hind legs of land animals. In the flying fish the pectoral fins are so large that they are almost equal to wings. With their aid the fish can spring out of the water and fly through the air several hundred feet before it drops back again. Moost fishes can swim very fast. The salmon can go 20 to 25 miles an hour.

**Sallie Is in the Best of Health.**

Dear Aunt Nellie: This is my fifth letter to the Children's Corner. I am in the healthiest condition. I got over my T. B., the doctor cured me so I came home already. I am 14 years of age. I'll soon be 15. My birthday comes March 24. I am five feet and four inches tall and I weigh 127 pounds. I am sure some of you will think I must be a coyote to weigh that light. One thing that makes me glad and happy is because there is not very much snow here and fine weather. The cattle and cayuses are getting along fine. I lost some of my property. My cat German died, but I still have two ugly dogs, Topsey and House. I haven't gone to school for over a year. I wanted to learn more but I can't find a place to go to. I came as fourth grade. I don't know where I'll go. We have three day schools on this Spokane Indian reservation, one by McCoy and one at Wellpinit, another at Walker's Prairie. We also have four churches out here, two Protestant and two Catholic. We have two Indian sawmills, one here at McCoy Lake and one at Wellpinit right close by the agency. We had a superintendent. He is very good-natured and brave. His name is Mr. O. A. Upchurch. He has a little girl and she is the prettiest little girl you ever saw. If I got a good chance I'd like to steal her from him, but I'll think it over. His wife is real nice lady. We live on a 100-acre farm. It is my own allotment. It has two springs on it. I stayed at the hospital from July 23, 1917, until February 13, 1918. Now I'll tell some silly, crazy riddles and see if any one will guess them. Something that walks all day and all night. It will never stop walking, but it will never reach the door. Something that has two legs, two eyes, but can't see or walk. I was sitting down on a chair. I saw something, some of them has two eyes, some have four eyes. They won't see. Something that is happy, happy all the time, singing, singing all day, all night. It will never stop singing until the end of the world. Something that has four legs and a long, long neck that eats and eats, but it never gets full. Patch upon patch, patch upon patch, but still there is a hole on the top. Something that is waving, waving all the time. It will never get tired waving. I guess I had better close my mouth for a moment and think what to say. Oh! Yes! Daddy has just finished some arrows and I hope he is getting ready to go and fight the Germans. I don't mean my cat, German; but I mean those soreheads. I joined the Red Cross already. I had about 25 or 30 cousins and I lost some of their addresses, so if they didn't get any letters from me please write to me again and I'll surely send them a letter. My doctor's name is Dr. J. R. Collard. He is a very nice doctor. Please be waiting patiently for another letter from bushy top Sallie. I wish you all good luck.—Sallie Salina Garry, Day School 1, Miles, Wash.

**Belongs to Golden Rule Bird Club.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am going to tell you about what I have and what I do. I have four dolls and one is as big as a real baby. I have two cats, Martha Washington and Tom. I have a phonograph and 53 records to play on it. I got it for Christmas. I have read the Children's Corner for a long time and I have noticed that lots of the cousins ask if they have twins? Whatever that means, I will ask if I have one? I would like to correspond with Cousin Sally Garry, Fort Spokane hospital, Miles, Wash. My father owns a store. We have about two acres of land. We have about 70 pigeons and 12 chickens and two horses. Their names are Tony and Molly. I am 10 years old and I am in the fifth grade. My teacher's name is Mrs. Julian. Her name used to be Miss Waite the first part of the term. My birthday is the 14th of December. I am going to tell you some riddles: In what way is a school room and a Ford automobile alike? What is the difference between a woman and an umbrella? What is something that is black and white and read all over? What is full of holes and yet does hold water. I will give the answers to these riddles in my next letter. I take Little Folks. It has letters in it, too. I can knit. I belong to the Golden Rule Bird club, the Red Cross and the Chronicle Juniors. I have a Liberty bond and some thrift stamps. Well, I must say good night to all cousins.—Mildred Elizabeth Tormey, Nine Mile Falls, Wash.

**Going to Knit and Snip.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it will not be the last time. I enjoy reading the letters in the Corner. As quick as it comes home from town I open it and turn to the letters. I am 9 years old and I am in the fourth grade. My birthday is September 19. Have I a twin? If so, I wish they would write to me, for I like to get letters. I have two brothers and two sisters. My brothers' names are Warner and Edwin. Edwin is the baby. My sisters' names are Agnes and Alice. My teacher's name is Miss Castator. She is a good teacher. I like her. I like to go to school. There are 19 pupils in my school. We have four cows and three horses. We have two cats and about 100 chickens. We have two calves. I live on a 40-acre farm. I have about a half mile to go to school. I walk every morning. We have about two miles to go to town. I am a Red Cross member. I am going to knit and snip for the Red Cross. There is a creek that goes through our land. We go swimming and wading when summer comes. Last summer mama and papa and Edwin and I were to Seattle in our auto. I had a good time there. It took a day to get there. We were at Carbonado the same time, too. My sister is in Seattle now. She has been taking violin lessons. She is working now. I had a good time Christmas. I think I will have to stop writing now, as my letter is getting too long. I hope to see it in print. I can knit and crochet. I crocheted one yoke already and I am crocheting another one now.—Edith Gunell, Winlock, Wash.

**New Riddles to Guess.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I will be 11 the 21st of March. I am in the fifth grade. We have 40 children in our room. My teacher's name is Miss Burtch. I like her very much. I have a cow and a calf. Their names are Spot and Rose. We have four horses and a pony. We drive the pony to school every day. The horses' names are Pete, Rolly, Spud and Kurly and the pony's name is Betsy. I am taking music lessons now. I hope this war will quit pretty soon. We have two and one-half miles to drive to school. I can knit and I hope the cousins know how to. We are having lots of cases of diphtheria around here. We have seven pigs. We have a car and it is a Dodge. My sister belongs to the Red Cross and they are knitting shawls for the soldiers. I will give you some riddles to guess. What goes around the house and peeks in every crack? What goes around the house and drags a bunch of bushes behind her? As I was going over Brooklyn Bridge I met a Brooklyn scholar. He doffed his cap and drew his cane, can you tell me this scholar's name? I go to the Moxee Central school. We have not had any snow this winter to speak of. We had a Lincoln program on Lincoln's birthday. We take our milk to the Moxee cheese factory.—Lucile Turnley, Box 140, Moxee City, Wash.

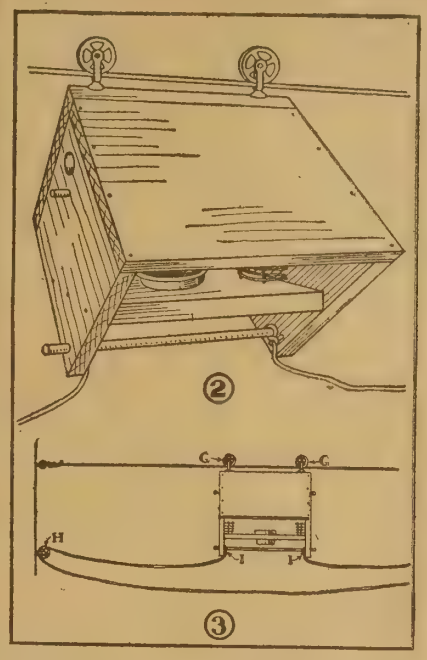
# Handicraft For Boys

**By A. Neely Hall**

(Copyright by A. Neely Hall.)

### A Birds' Dining Car.

If food were plentiful many birds would stay with us during the winter months. Also robin-redbreast and other early-arriving birds would brave

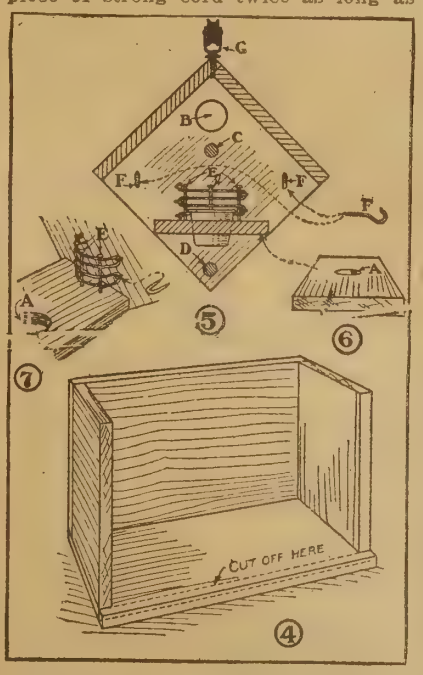


the late winter snows and the raw winds of early spring were it possible to obtain enough food to subsist upon. Here is a little problem which you boys can solve, and having witnessed the gratefulness with which the birds receive your offerings, I am confident that by next fall you will install a permanent bird restaurant with "meals served at all hours." This daily task of feeding birds will be one of the most interesting services you have ever performed.

Suet, scraps of fresh beef, bread crumbs, nuts and birdseed are the proper foods to supply. This may be scattered upon a walk or window sill, but a better plan is to provide a dining car to run along a wire far enough above the ground to afford protection from cats and other bird enemies.

### Made From Grocery Box.

Figure 1 shows the dining car and the arrangement for transporting it, and figure 2 shows a large detail of the completed car. If you can get a small grocery box of equal width and depth there will be but little work to convert it into a car. Remove one side of the box in addition to the cover (Fig. 4), and then saw off the projection of the bottom board as indicated



by the dotted line. The bottom and remaining side form the peaked roof of the car when the box is inverted. The board shown in figure 6, fastened between the box ends, forms the feeding shelf (Fig. 5). Bore the hole A (Fig. 6) large enough to hold a small crockery dish for drinking water.

Hole B (Fig. 5) bored through each end of the box near the peak, is not necessary, but will be used by the birds as frequently as the lower side entrance if provided. Bore a hole below B (C), and another below the shelf (D), for perch sticks, and cut the sticks long enough so the ends will project beyond the box ends as shown in figure 2.

Figures 5 and 7 show a food rack, one of which should be fastened to each end of the car, inside. It is made by driving three nails (E) into the shelf, and several double-pointed tacks into the box end, then running wire through the double-pointed tacks and around the nails. Screw a pair of hooks (F, Fig. 5) into the box ends to hang suet on.

### Heavy Wire for Cable.

A piece of heavy wire should be used for the cable. Fasten one end to a window frame and the other end to a tree or to something of the same height as the window. Screw a pair of clothesline pulleys into the peak of the car (G, Figs. 3 and 5), and as a means for pulling the car back and forth get a piece of strong cord twice as long as

the cable, run it over a clothesline pulley fastened 12 inches below each end of the cable and tie the ends to the lower perch stick at I (Fig. 3).

### Can Save Wet Corn.

Millions of bushels of soft and wet corn can be saved if farmers will promptly salt their stocks, says Assistant Secretary Vrooman of the department of agriculture, in advocating the remedy to prevent serious loss of grain, the saving of which as food and feed he said is extremely urgent.

There's Profit in HOME CANNING

The Safest, Quickest Method Is by Steam Pressure.

Steam pressure canning affords the only thorough sterilization, say authorities—**and is one-third the time of other methods.** Our Complete Sanitary Outfit is a **permanent canning equipment** for home or community use. Get the right outfit and you can be sure of the right results.

Our Sanitary Outfits include H. & A. retorts, cans, modern can-sealing machines, instructions—**everything you need,** including a $2 book of recipes that tells you about the great variety of fruits and vegetables you can put up with the right equipment.

Send a postal for free literature on how to can for profit.

# Trappers of the Ozarks

(Continued from page thirty.)

the columns had a whiteness as of marble; and because of that whiteness the one torch lighted up the cave better than it would otherwise have done.

Involuntarily the hunters stopped to gaze about them. Neither had ever been in a place like this till now. The two dogs, leaving their masters' heels, moved out cautiously among the white columns, and were soon out of sight. But a little later Bose, who had gone on into the dark part of the cavern, was heard to utter a fierce growl. Then suddenly, there burst forth an uproar of barking and growling, and back came both dogs with a rush. And after them rushed the bear, with his mouth open!

On reaching the men, the dogs turned to face their pursuer. But the bear, paying little attention to the dogs now, rushed straight at the two hunters!

Jodo, who had half believed that the bear had escaped from the cave by another outlet, was taken by surprise. Swinging round, he threw up his gun and fired. The bullet wounded the bear, but instead of killing him it only enraged him. Straight ahead he rushed, furiously bent on punishing these intruders into his private quarters.

Jodo leaped back, striking at the beast with his rifle-barrel. Ben, unable to manage his long rifle with one hand, and fearing to drop his torch, lest they should be left in the dark, but down his rifle, jerked the pistol from his belt and attempted to shoot. But the weapon missed fire. Dropping it, he tried to seize his rifle again; but the bear was so close that he had to run backwards and thrust the torch at his face to keep him from being attacked.

At the same time he snatched the tomahawk from his belt and stood ready to strike with that if the bear came within reach.

The dogs were now harassing the bear, but he brushed them aside and sprang at Jodo. That excited young hunter retreated, running backwards, and jerked out his pistol and fired as he ran. But just as he fired he stumbled over something and fell sprawling on his back. The bullet went wild, and the bear rushed at hime.

But at this time of danger Bose dashed in and "nailed" the bear by the hind leg. Tinker also began snapping at the other hind leg. The bear turned to defend himself, and the prostrate hunter scrambled to his feet.

"Climb! Climb a tree, Jodo! And use your tomahawk if he comes up after you! I'll finish him as quick as I can get hold of my rifle!"

By "tree," as Jodo understood, Ben meant one of the numerous tree-like, limestone columns. He had not time to think of the word stalagmite. Jodo, knowing that he could not shoot again, lost no time in acting upon the suggestion. Clamping the nearest column with arms and legs, he went up rapidly.

Ben was now trying to get hold of his rifle, but the bear and the dogs were over it. Soon the bear rushed at him again. He had his tomahawk, and believed he could finish the bear with it, but was afraid to engage in a hand-to-hand contest lest something should happen to their torch, and the hunters be left in the dark. So he retreated around one of the largest columns, pursued by the bear, and the bear by the dogs.

Seeing the way clear, Jodo slipped down from his stalagmite and tried to get Ben's rifle. But the bear saw him and made a furious rush. Hastily Jodo started up a column again. The bear reared up as if to follow him, and Jodo only saved himself from being seized by aiming a furious blow at the beast with his tomahawk. The bear dodged and the blow missed him.

But at this moment the dogs began barking at the brute fiercely, and biting his hind legs. The bear did not drop down, but turned a snarling nose toward the dogs. That was Jodo's opportunity.

Sliping down the column a few inches, he raised his tomahawk. The brute, snarling and growling at the dogs, had his eyes turned downward, and the back of his head was now exposed. Down fell the tomahawk, as hard as the desperate, excited young hunter could strike!

After admiring their game for a few minutes, the hunters explored the back end of the cave and found a bed. It was only some loose earth raked together, with a depression in the center where the bear had slept.

Soon, with their torch stuck in a hole in a stalagmite, the hunters were busy skinning the bear and cutting up the meat. When that task was finished, they divided the burden between them and started out. They reached the cave's mouth not a minute too soon; for by this time their torch had burnt so short that they could scarcely hold it.

A little later, with the bear-skin covering Spunky's pack-saddle, and the meat hanging across it, they were making their way toward camp. They went back as they had come, following their own trail and the bear's.

But before they had traveled 200 yards, Ben, who was in the lead, stopped suddenly and stood staring at the snow.

"What's the matter, Benoni? Have you discovered another bear's trail?

"Bear's trail—no; I only wish it were a bear's trail. Just look at those tracks, will you!"

Jodo hurried around from behind Spunky. Then he, too, stood staring at the trail in the snow that crossed their own trail. Finally he exclaimed:

"Moccasin-tracks, as sure as I'm alive!"

(To be continued.)

### New Inventions.

An Iowa inventor's scarecrow contains mechanism that makes it emit loud bellows at intervals.

A factory in which radium is being produced has been opened in Scotland by a Scotch chemist.

Burned but a few years ago as useless rubbish, there now is a wide demand for the waste from Spain's cork factories.

An electric egg candler has been invented for use in public places where the freshness of an egg can be demonstrated.

### Naturally So.

"That bargain offer the salesman made me this morning was only a blind."

"Why shouldn't it be? He's in the window shade department."—Exchange

## Complete Dispersion Sale
## 55--Head of Jerseys--55

**Tillamook, Ore., April 2, 1918**

Herd headed by POPPY'S GOLDEN ST. MAWES, son of Rosaire Olga Lad, sire of over 30 Register of Merit daughters and out of the great cow St. Mawes Poppy, R. of M. record, 1120.5 pounds butter in a year. This bull, a number of his daughters and heifers bred to him will be sold. Except a few not yet a year in milk.

## Every Cow in Register of Merit

Besides the St. Mawes and Rosaire Olga Lad blood, they include daughters of Rinda Lad of S. B., sire of 18 R. of M. daughters.

Sale comprises my entire herd of cows, heifers and a few young bulls, and is the GREATEST OFFERING EVER MADE IN THE NORTHWEST, OF HIGH PRODUCING Jersey blood lines.

Send for catalogue giving complete pedigrees and full information to

**H. H. CURTIS, Owner** — Pullman, Wash.

**J. W. HUGHES, Auctioneer** — Forest Grove, Ore.

# SAVE ALL YOUR WHEAT

The day of the grain sack has passed—they cost more than they are worth, even if you could get them. And wheat today is too valuable, in dollars and cents as well as for food, to lose any of it through improper handling.

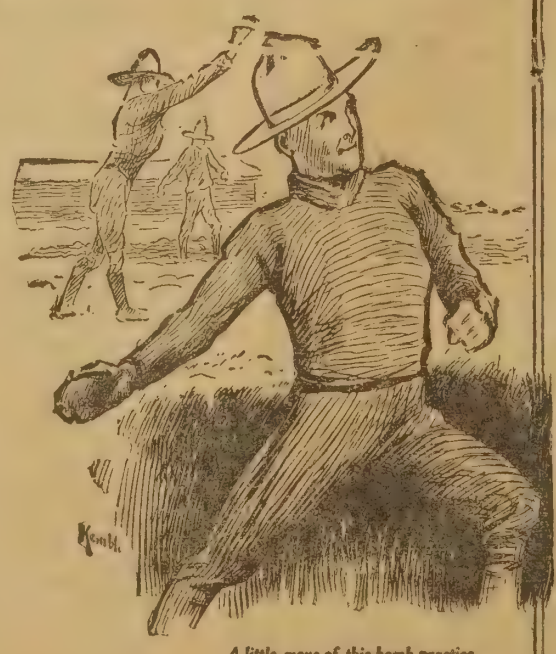
The way to save ALL your wheat, this year and in the years to come, is to build a

## Tung-Lok Elevator

**Home-Built, Singly or in Series.**

The TUNG-LOK Elevator provides **permanent** storage for **all** your wheat. It is quickly and easily erected without skilled labor and it lasts a lifetime. A group of Tung-Lok Elevators (see accompanying cut), built by community cooperation, cost so little they will pay for themselves in one year in grain saved from deterioration and loss.

Notify us NOW, and one of our agents will call on you and explain the Tung-Lok method to you and your neighbors. That costs you nothing. **Now is the time to act, if you would save all of this year's wheat!**



You realize, of course, that labor conditions have been extremely unsettled in all industries in the last year, and the future is uncertain. While conditions with us now are such that we can take care of all orders promptly, we ask that you act at once if you are planning to erect a Tung-Lok Elevator this year. Don't wait for the summer rush!

## UNION LUMBER COMPANY

Makers of the Famous Tung-Lok Silo.

Union Mills, Dept. B. — Washington.

*A little more of this bomb practice, and he'll be ready to sit down and enjoy a little chew of the Real Gravely the folks back home sent him.*

## Who is Going to Send Him another pouch of Real GRAVELY Chewing Plug

**Real Gravely Plug is the tobacco to send the Boy—not ordinary plug loaded up with sweetening, but *condensed quality*—with the good Gravely taste that satisfies and comforts and lasts a long while.**

Give any man a chew of Real Gravely Plug, and he will tell you *that's* the kind to send. Send the best!

Ordinary plug is false economy. It costs less per week to chew Real Gravely, because a small chew of it lasts a long while.

If you smoke a pipe, slice Gravely with your knife and add a little to your smoking tobacco. It will give flavor—improve your smoke.

**SEND YOUR FRIEND IN THE U. S. SERVICE A POUCH OF GRAVELY**

Dealers all around here carry it in 10c. pouches. A 3c. stamp will put it into his hands in any Training Camp or Seaport of the U. S. A. Even "over there" a 3c. stamp will take it to him. Your dealer will supply envelope and give you official directions how to address it.

**P. B. GRAVELY TOBACCO CO., Danville, Va.**

*The Patent Pouch keeps it Fresh and Clean and Good —it is not Real Gravely without this Protection Seal*

Established 1831

## News for Breeders

According to a recent census taken by the American Guernsey Cattle club there are in the United States 48,603 registered Guernsey cattle. Wisconsin has the largest number of any state, with 11,434. New York comes next, with 6311 and Pennsylvania is a close third. Washington has 377; Oregon, 329, and Idaho, 79, while California has 229; Utah, 72; Wyoming, 59, and Montana, 31.

---

Tilly Alcartra, a Holstein cow owned by A. W. Morris & Sons, Woodland, Cal., has, on official test, produced in seven days 32.45 pounds of fat, or 40.78 pounds of 80 per cent butter, giving her the honor of being the first cow west of the Rocky mountains to enter the 40-pound class. This great cow already had several creditable seven-day tests and five yearly tests, in which she is credited with the unparalleled amount of 123,251.3 pounds of milk and 4819.12 pounds of butter.

---

A most important sale of Jerseys and one that should interest Jersey breeders and dairymen all over the northwest is that of H. H. Curtis of Pullman, Wash. Mr. Curtis, who is a big Palouse wheat farmer, a few years ago started the building up of a purebred Jersey herd. He selected wisely and has a very satisfactory lot of cattle, but in the wheat region the securing of competent dairy hands has become increasingly difficult until Mr. Curtis has decided to entrely dispense his herd and devote his entire energies to raising wheat, as his most efficient means of helping to feed our own people and our allies. At the head of Mr. Curtis' herd is a son of Ed Cary's great cow, St. Mawes Poppy, with 1120 pounds of butter in a year, and a lot of the heifers to be sold are bred to him. Mr. Curtis' cows are from the Cary asd other best Jersey herds.

Because of the strong demand for Jerseys in Tillamook county, Oregon, it has been decided to sell the herd there, the date being set for April 2. It is expected that outside buyers will strongly compete with Tillamook Jersey fanciers for some of the good offerings, and the bull is expected to elicit especially lively bidding.

---

L. L. Guichon of Quilchana, B. C., recently purchased five young registered Shorthorn bulls from J. B. Cornett of Shedd, Ore., and five from A. Chalmers of Forest Grove, Ore. Mr. Guichon, who runs a big herd of grade cattle, selected well and took home with him a nice lot of bulls, with which he was well pleased. He reports that the Shorthorns of this region have a good reputation in his country.

---

The Shorthorn congress and sale at Chicago, February 19 to 22, was a great meeting and a great sale. Shorthorn breeders were present from nearly every state and all parts of Canada. At the sale, February 20 and 21, 102 bulls were sold for an average of $776 and 197 females for an average of $719. Forty-five hundred dollars was top price and the sale was remarkable rather for its uniform values and general high-class offerings than for single sensational values. On the 22d 55 head of milking Shorthorns were sold, the bulls averaging $335 and the females $517, so that the 354 animals brought $241,639. When the number of animals is considered it is one of the greatest sales of cattle ever held.

## BERKSHIRE SWINE

**Riverby Orchard Berkshires**

Riverby Orchard Berkshires won 12 out of 15 first prizes at the Washington state fair, 1916, also many prizes, including grand champion sow at the Panama-Pacific world's fair. We offer for sale a few good boars and young sows.

D. C. BUNN, Prosser, Wash.

## POULTRY

### TRAP-NESTED BARRED ROCKS

All hen-hatched and hen-raised. Every hen trap-nested. First pen has, I believe, for past two years highest Barred Rock av. egg record in the world. All other pens practically same blood lines.

Pen 1, 12 hens, av. over 240 eggs, crossed to yearling cock, parents av. 260 eggs, $5 setting of 15. Pen 2, 25 yearling hens, av. over 200, crossed to 2 sons of No. 44, 708 eggs in 3 yrs., $5 setting of 15. Pen 3, about 20 hens and pullets, with reserve cocks and cockerels, same breeding, $3.50 per 15. A few cocks and cockerels from $5 up. IRVINE P. GARDNER. Riddle, Ore.

### MY BARRED ROCKS

won this season at the Inter-State fair, 6 blues out of a possible 10; at Coeur d'Alene 1 and 2 cockerel; at Wenatchee, 1, 2 and 3 pullet, 1 and 2 cockerel and 2d cock. At Moscow, 1, 3 and 4 cockerels pullet bred. Eggs from exhibition pens $3 per 15; choice pens, $2 per 15.

J. E. HORTON, 2408 Altamont Blvd., Spokane.

### Mammoth Bronze Toms

Strong vitality, $6 to $9 each; no charge for crates. Barred Rock eggs for hatching, $10 per 100; $2 per setting.

S. M. WILSON, Carley, Wash.

**PRIZE WINNING W. ORPINGTONS.**

Kellerstrass strain. S. C. eggs, $10 per 100; $3 per 15. 1 hen scored best fowl at 1916 Wash. state fair; several others over 280 eggs. 1st prize cock, 1st hen, 1st pullet, 1st pen, cock and hens; 1st pen, ckl. and pullets, state fair, 1915.

MRS. E. B. WADE, R. 4, Yakima, Wash.

### S. C. White Leghorns

Heavy laying strain. Hatching eggs from hens averaging 245 eggs per year, $2 per 15.

E. C. FISK, Olalla, Wash.

### 15 EGGS $3.50

From show and laying strain of S. C. R. I. Reds.

N. S. FELTHOUSE, New Plymouth, Idaho.

**PARKS BRED-TO-LAY BARRED ROCKS.**

My pen, 5 Barred Rocks, at Pullman laying contest laid in Nov. 88, Dec. 100, Jan. 104 eggs. Eggs from this winter-laying strain, $1.50 15, $8 per 100.

F. J. WIETNER. Mica, Wn., R. 1.

**VIBERT STRAIN S. C. REDS.**

Eggs, $8 per hundred; $1.50 to $15 per sitting. Three special pens headed by cockerels from a 289-egg trapnested hen. One pen headed by magnificent cock bird that has kept his wonderful color through the moult and well into his second season. He is one great bird. If you need new Red Blood, you need Vibert blood from the largest pure Vibert flock on the Pacific coast.

MRS. ROMINGER. Underwood, Wash.

**RHODE ISLAND REDS AND WHITES**

both combs. Mammoth Bronze turkeys and Mammoth Touluse geese. My birds are true blue—winners and qualities. Have a few S. C. Red and R. C. White cockerels at $3 and $5 each. Have a limited number of Mammoth Bronze gobblers at $8 and $10 each. We are booking orders for eggs. Write for mating list. No baby chicks.

Highland Fruit and Poultry Ranch.
J. Nonnenmacher, R. F. D. 3, North Yakima, Wash.

### BABY CHICKS

Rhode Island Reds, White Leghorns. Don't wait until March or April to order and then be disappointed because you can't get them. But order now from our heavy-laying strain. Send card for price list.

MAPLEBROOK POULTRY FARM.
Box 3, Southworth, Wash.

**SINGLE COMB BROWN LEGHORN**

male birds, $3 and $5 each; mated breeding pens, $15. Eggs for hatching. Write for mating list. The Up-to-Date Poultry Farm.
ARTHUR W. WADE, Box 3, Marysville, Wn.

Eggs for hatching from heavy winter laying stock; $1.50 per 15, $7 per 100. Young Flemish Giant hares.

W. T. WILSON, R. 3, Weiser, Idaho.

### White, Buff and Blue Orpingtons

(Capt. De Bathe Strain.)

Speckled Sussex and Anconas. All single comb. Aldrich strain Orpingtons, Sheppard Anconas. My birds took first prizes at all leading shows of Pacific Coast. Prices for stock, eggs and chicks reasonable. All from best laying birds. Finest lot of cockerels I've ever raised. A few White Holland and bronze turkey toms for sale.

IRA N. DELINE, Olympia, Wash.

### 20 Head——Jacks and Jennets For Sale——20 Head

For forty years we have been breeding them. For twenty-eight years they have won every premium offered through Oregon and Washington, with one exception. They are native-bred, and all of them make good. We have mules to show from them, and we make prices that are lower than importers can meet. Come and see them, or write.

EASTERN OREGON JACK FARM.
B. F. Swaggart, Proprietor. Lexington, Ore.

ALEX MORRISON.
Owner.
Valley, Wash.

HARRY CRANKE
Auctioneer and Sales Manager.
Nez Perce, Idaho.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, March 11.—Liberal receipts did a good deal today to weaken the corn market, especially cash quotations, and so, too, did withdrawal of export bids. Futures closed steady at the same as Saturday's finish to 1-8c lower, with March $1.28 and May $1.27 1-4. Oats lost 1-4@3-8c to 3-8@1-2c net, and provisions 12c to 17c.

Arrivals of corn in Chicago alone aggregated 615 cars, and there was a general disposition to look for a continued movement far above the average for this time of the year. Meanwhile the United States visible supply total showed an increase of more than 2,300,000 bushels, making the amount in sight only 1,400,000 bushels less than a year ago. A general embargo on shipments to eastern domestic consumers counted as a bearish influence.

Notable progress of seeding made oats average lower. A little export business gave the market some stimulus, but the effect failed to last.

Lower quotations on hogs weakened provisions. Declines were checked somewhat though by export of lard and meats during the week.

### Cash Quotations.

CHICAGO, March 11.—Corn—No. 2 yellow, nominal; No. 3 yellow, $1.71@1.75; No. 4 yellow, $1.65@1.72.

## Portland Market.

PORTLAND, Ore., March 9.—The first shipments of 1918 clip of Yakima wool have reached Portland. The lot contained 64,000 pounds and the wool was pronounced better than the 1917 clip. There is still a considerable stock of old wool in warehouses here. The market is firm and unchanged.

The announcement at the close of the week that the grain corporation will allow a differential of 9 cents a bushel on sacked wheat over the government bulk price, grain men here believe will stop further building of elevators in the wheat sections. With the maximum sack price fixed at 25 cents each, the cost of sacking wheat, they declare, will be less than the building and operation of elevators.

The coarse grain markets continue very dull with practically no offerings, though the crop report issued Friday showed fairly large reserves of barley and oats in the northwest. At the local exchange bids on brewing barley have been raised to $77.50. On the basis of latest sales of northwestern barley in the east it is held that the cereal is worth about $85 here.

Eggs are ruling steady at 35 cents, case count, with moderate receipts and a good local but a poor shipping demand.

Butter is scarce and firmer. Shipments are being made back to some of the country creamery districts.

Dressed meats and poultry are holding firm at former prices.

Potatoes are very weak and shipments are falling off. Farmers, however, are not trying to sell, notwithstanding the slumps in practically all the markets of the country.

In the following list of quotations the grain, hay, mill feed, hops, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 2 white, $70 per ton.
Millstuffs—Bran, $30 per ton; shorts, $32.
Barley—No. 1 feed, $72; brewing, $77.50; rolled, $77@78.
Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $24.50; grain, $22.
Eggs—Oregon ranch, case count, 35c per dozen; candled, 36@38c.
Poultry — Ducks, 32@35c; turkeys, live, 26@27c; geese, 20@22c.
Butter—City creamery, prints, 52@53c per pound; cubes, extras, 50c.
Cheese — Tillamook triplets, 26c; Young Americas, 28c.
Dressed meats—Veal, 20@20 1-2c; pork, 21@21 1-2c.
Hops—1916, nominal; 1917 crop, 16@17c.
Potatoes—Oregon, buying price, 85c @$1 per hundred.
Wool—Eastern Oregon, 44@65c; valley, 50@55c.
Beans—Buying prices: Oregon white navy and Lady Washington, 10¼@10½c; white kidney, 10c; colored, 9c.

## Seattle Wheat.

SEATTLE, March 9.—Seattle millers are not so hopeful that the grain corporation intends to leave the visible supply of wheat of the three northwestern states in the original territory to be ground. M. H. Houser, agent of the corporation in this territory, reports thta he is receiving shipping orders and has no notice to turn any of them down.

It has developed that at a conference in Portland two weeks ago between the grain and flour administrators of the government and the millers that the visible supply of wheat was to remain here to be ground on condition that the mills refuse to ship out any of the flour excepting on orders from the government. While this reached no farther than a tacit understanding, the hopes of millers were built high on this basis, as they would then be able to keep in operation into the new crop year. If this deal falls through Seattle mills at least will have been ground out of wheat by April 15 and will be compelled to lie idle until new 1918 wheat is harvested.

The agreement if carried out would relieve the mill feed situation here immeasurably and solve the problem of poulterers as to how to get enough feed to mature their birds.

The special committee appointed by M. H. Houser to take a census of all wheat holdings in Washington, Oregon and Idaho has abandoned its work and has been discharged. L. P. Baumann, secretary of the committee and assistant general manager of the Centennial mills, said today that it was almost impossible to get at the facts. The best estimates of the holdings in the three states, however, are placed at 23,000,000 bushels.

In response to its request for regulation of barley, oats and corn prices in order to save the poultry flocks of western Washington the grain and feed committee of the merchants' exchange is in receipt of a wire from Herbert Hoover stating that the Washington delegation in congress was heartily in favor of the move and that the matter had been taken under advisement by the food administration.

## Seattle Market.

SEATTLE, March 9.—The apple market today is $1.75@2.50 per box, Winesap basis, with 25@50c higher in sight for April trade. Cheap fruit, which has acted as a check on upward tendencies of fancy and extra fancy, is so nearly cleaned up that it has ceased to be a factor. Puget sound producers are sending in but little of the secondary fruit, and jobbers infer that there is not much more to move.

### BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots, f. o. b. Seattle:

Eggs—Local, 37c per dozen.

Poultry—Spring roosters, live, fat, 2½ to 5 lbs., 26@27c; old roosters, 17c lb; squabs, large, $3.50 dozen; geese, fat, live, 20c lb.

Butterfat, 58c lb; dairy butter, 35@36c.

Beef—Buying prices: Prime beef, steers, 11@12c; cows, fat, 9@11c lb; heifers, 10@11c.

Hogs—Light, 18@20c; lb; heavy, 17@18c lb.

Veal—Fancy light, 17@18c lb; heavy, 9@16c lb.

Hides—Salted, 14c lb; flint-dry hides, 29c lb; salt kip, 16c lb; green hides, 11c lb; green calf, 23c lb; dry calf (under six pounds), 29c lb; bulls and dry salts, 4c lb less; green bulls, 9c lb; dry salts, 4c lb less; green bulls, 9c lb. Clean long wool, western Washington flint dry pelts, 39c per lb; heavy to clean eastern Washington flint dry pelts, 30@35c lb.

### SELLING PRICES.

Feed—Scratch, $79 per ton; all grain chop, $77 per ton; oats, $76 per ton; rolled oats, $77.50 per ton; bran, $34 per ton; shorts, $33.50 per ton; soy bean meal, $67 per ton; whole corn, $78 per ton; cracked corn, $79 per ton; alfalfa meal, $36; rolled barley, $77; sprouting oats, $78 per ton; Milo maize, $75 per ton; white gyp, $75 per ton.

Hay—Eastern Washington timothy, $35@36 per ton; alfalfa, $28@29 per ton; double compressed, $40@41 per ton; wheat hay, $28 per ton; Puget sound, $27@28 per ton; straw, $14.

Butter—Washington creamery extras, cubes, 52c lb; do bricks, 53c lb.

Eggs—Fresh ranch, 40@42c dozen.

Potatoes—Puget sound, $20@23 per ton; eastern Washington, $25@28 per ton.

## Spokane Market.

# Be Cold Blooded When You Choose Your Truck —and Choose Now!

**As a business farmer, you must have a truck. Don't postpone decision longer. Buy now while you still can get one. Don't wait until only the money-wasting makeshifts are left.**

Be just as coldblooded as a traffic expert is in selecting the right truck. Base your choice on the same considerations as he does and you will be right.

This is the way the traffic expert would look on your trucking problem:

1. **Horse Service**—Always unreliable, limiting your scope and delaying you unexpectedly. Under present conditions growing more costly than ever.
2. **Miniature Truck**—¾-ton; too small for practical conditions, or for your ever-increasing traffic. Costs just as much tc run as a good one-ton truck.
3. **Passenger Car**—Adapted into a truck by a makeshift attachment made by a firm that did not make the car. Sure to breed trouble. Hard to keep in condition. Hard to find and cure trouble. Divided responsibility.
4. **3-Ton Truck**—Over-heavy for everyday work. Wasteful unless always used at full load.
5. **Unproved 1-Ton Trucks**—Partly experimental. Not made of highest grade steel. Over-heavy. Uncertain as to service. Costly to operate.
6. **Standardized, Time-Tested Maxwell One-Ton Worm-Drive Truck.** Low first cost. Low operating cost. Complete truck designed wholly as a truck. Made of high-grade automobile steels. An engine which has proved its reliability in years of use on hundreds of thousands of cars under all possible conditions. Worm drive of the same type as on trucks costing $5,000. Completely enclosed drive, safe against derangement by the worst roads or worst weather.

**Get the facts. Write us a letter. The more coldblooded your judgment in choosing your truck, the better we will be pleased.**

**The new and coming conditions are changing the whole of the transportation experts' judgment as to what truck is most economical in operating costs as well as in first costs.**

**If you decide in time, you can still get one of these trucks of proved reliability and 100 per cent. efficiency; cash or easy terms.**

**There is a Maxwell dealer near you. But we have some new information that we want to send you direct. Send us a postal card today.**

# BRAINS

It ta re than mere material and equipm build a good automobile—it takes E . It takes an efficient plant, equipm trained workmen; but above all it n experienced executive—a guiding to co-ordinate and use these resourc e fullest extent, for

Back of the motors humming,
Back of the belts that sing,
Back of the hammers drumming,
Back of the cranes that swing
There is the eye that scans them
Watching through stress and strain,
There is the mind that plants them,
Back of the brawn—the BRAIN!

Might of the roaring boiler,
Force of the engine thrust,
Strength of the sweating toiler,
Greatly in these trust,
But back of them stands the schemer,
The THINKER who drives things through,
Back of the Job—the Dreamer
Who's making the dream come true!

(Dedicated to Mr. W. C. Durant by Berton Braley)

The Chevrolet is the brain-child of W. C. Durant, "the master mind of the automobile industry," and is the result of his dream to make a high-grade automobile at a price within the reach of all. His experience of years culminates in the Chevrolet.

Combining low first cost with small operating cost and maximum degree of performance, the possession of a Chevrolet will put you in a position to realize the best possible results from your time and efforts—something absolutely essential in these days calling for the utmost results from the individual.

## Farmers Are On the Battle Field

### *Production of Wheat Is as Essential as the Production of War Munitions*

"The farmer who can grow spring wheat is on the battle field right now just as surely as are the boys in the trenches and he must win his part of the battle in the wheat field before the boys in khaki can win theirs in the trenches."

This is the message brought to the farmers of the northwest by J. W. Shorthill of Nebraska, one of the directors of the grain buying corporation, a member of the food administration's committee which fixed the price of wheat, and secretary of the Farmers' Grain Dealers' association of Nebraska. Mr. Shorthill, now on a tour of the wheat producing sections of the country, reports that he finds no serious criticism on the part of the farmer of the price of wheat as it is now fixed, but that he does find a great deal of dissatisfaction among all classes of people because of the high price of substitutes for wheat flour. Although the consumers of this country are now paying a million dollars a day more for substitutes than they are paying for wheat products, says Mr. Shorthill, if it had not been for the fixing of wheat price there would now be little wheat flour to be had at any price. The food administration, he says, is doing all it can to solve the gigantic problems that confront it and he urges the people to bear whatever seeming burdens may come upon them without complaint, keeping their thoughts constantly on the one big issue of winning the war.

"I have been asked man times why it was that the local market was taken away from the farmer of the Inland Empire," said Mr. Shorthill when interviewed by a representative of this paper. "Why can he not now sell his wheat for Chicago prices the same as he formerly did in normal times? The federal government took charge of the farmers' wheat and fixed a price on it based on Chicago. The farmers of the northwest get the Chicago price less the freight charge from their farms to Chicago. It now moves east by rail at a high freight cost. Formerly it went for export by way of the Pacific at a low freight cost. The farmer got the difference in the freight cost which gave him practically the Chicago price or made his local Pacific market about the same as the Chicago market. But shipping has been taken from the Pacific. The Atlantic demanded it. Until the shipping can be restored to the Pacific it will not be possible to entirely restore that local Pacific market for the farmer. The proper question is not, why was this market taken away, but who took it way at a cost of 25 cents a bushel to the farmer? The answer is, it was the imperial kaiser with his ruthless submarine campaign; it wasn't Uncle Sam.

**Stick to Wheat.**

"An occasional suggestion has been made that it may be more profitable to raise some other crop than wheat—barley for instance. The present price of barley is attractive to the farmer who can raise barley. The fixed price of wheat is also highly remunerative and it has the added advantage of being sure; the future price of barley is not sure. The farmer who has a leaning toward barley instead of wheat should consider very carefully the situation and prospects and he should also consider past experience. It might be well for him to talk with the potato grower who saw such attractive profits in potatoes last fall, profits that did not come with the spring. In these uncertain times it will certainly be wise to stick to the sure thing and leave speculation alone. My suggestion is that the farmer continue to sow wheat. There is now no other crop so safe and sure. No matter how big the crop there will be no glutted market and no fears of getting caught because of car shortages.

"Our government has asked our farmers to grow wheat because it needs wheat as it never needed it before. It is needed not only to feed our domestic population, but it is needed to feed the soldiers of the allies—and our soldiers. It must be had to win the war. By July 1 we will be out of wheat. Even our little necessary 'carry over' will be almost wiped out. Should anything give us a short crop in 1918 there will be calamity indeed. Those farmers who can raise winter wheat have done what they could. The opportunity to help still more lies now only with those who can grow spring wheat. The government is asking them to do what they can by raising wheat for the 'boys' at the front. We are not only in this awful war, but the farmer who can grow spring wheat is on the battle field right now just as surely as are the 'boys' in the trenches, and he must win his part of the battle in the wheat field before the boys in khaki can win theirs in the trenches.

"And now, since I am a direct representative of the farmer, it may seem that I have been criticising him. That is not my purpose. I am attempting to give him information; information that he needs; information that he wants. I would not be true to myself, true to the farmer or true to the nation if I did not do this now. I have now been in every state of our Union that raises any considerable amount of wheat and I have found that when correct information has been given the farmer, he has been as ready to respond promptly to the real needs of the nation as has any other citizen and in his loyalty as a class he takes second place to none. This is true of the farmers of the northwest as I see them just as it is true of the farmers of any other part of our country.

**Must Realize Situation.**

"Just one great thing is lacking yet. It is a proper appreciation by all of us of the real gravity of our situation; of the need of our government for our assistance which we must give it; of the need for all of us as citizens to stand together as one man and help each other in order to best help the government. The farmers are rapidly acquiring this frame of mind. They are goinng to do their best. And if after the farmers have done their best to raise the wheat that we need so badly, then, if they "get up against it" in their efforts to save it it will be "up to" those who can do so to help save it, and the fellow who can then help the farmer and will not do it will be just as much of a slacker as the fellow who turns his back on the enemy in the trenches. Our patriotism in the present crisis is going to be measured pretty accurately by the degree in which we stand together. It is the wheat farmers' opportunity now. Later it will be the opportunity of other citizens to back up the farmer when he needs help. The whole situation is our supreme test and our patriotism will be measured by our response. The supreme need of our government now is for the farmers to grow wheat and for other citizens to back them up and help save it when the time comes.

"All of this may and no doubt will cause most of us some extra effort, some sacrifice and some inconvenience, but we must do it and in doing it we must remember that it is mighty inconvenient for the 'boys' at the front who are there to preserve the privileges the rest of us enjoy at home. For the sake of those 'boys' and for our own sake in the end we must all work together to grow and save wheat."

## That Income Tax!

### Must File Statement by April 1

Have you filed your income tax return? The time for making returns expires April 1 and severe penalties are provided for failure to report. The following are subject to the income tax:

**Every person not the head of a family receiving a net annual income of more than $1000.**

**Every married man or head of a family receiving a net income of more than $2000.**

**Every man and wife living together whose combined net income, together with that of their minor children, exceeds $2000.**

**Every mercantile, manufacturing or business corporation.**

Generally speaking, banks and postmasters understand the requirements of the law and will give free information to persons seeking it, or, if in doubt themselves can give the applicant the name and address of the collector of internal revenue in his district.

While April 1 is the last day for filing one's return, in case of sickness or absence of the person who is required to execute the return, the collector of internal revenue may grant one extension of not to exceed 30 days, upon written application therefor, made before the return is due.

The return may be mailed to the collector and will be considered as on time if place in the mails, properly addressed and postage paid, early enough so that it would, in due course of mail, reach the collector within the required time. The return is not filed in time merely because it is deposited in the mails on the day that it should be filed.

Where an individual refuses or neglects to file his return within the required time the amount of the tax is increased by a penalty of 50 per cent, and there is a further penalty of not less than $20 nor more than $1000. The 50 per cent will not be added where the return is later filed, voluntarily and before notice from the collector, and it appears that the delay was not wilful, but was due to a reasonable cause.

Still heavier penalties are provided for false or fraudulent returns.

## Discuss Grain Grades

### Meetings Being Held This Week

Beginning with the meeting held in Spokane Monday of this week where the matter of grain grading standards was taken up by the department of agriculture and northwestern persons directly interested, a number of meetings are being held this week throughout Washington and Oregon. Next week's issue of this paper will contain a report of the Spokane hearing at which a number of important questions were discussed.

At Portland on Saturday of this week another important meeting will be held, one of the features of which will be an address by Dr. H. H. Brown of the federal bureau of chemistry on the subject of smut explosions and how to prevent them. A similar meeting will be held at Corvallis March 27. In connection with the meetings H. M. Houser, northwestern representative of the food administration's grain buying corporation issued the following statement:

"The bureau of chemistry, department of agriculture, has devoted considerable time to the study of grain dust explosions and devising means for their prevention. The investigations of this department have developed the fact that the grain dust explosion problem has not been thoroughly understood by many millers, elevator operators and threshing machine men. As a result, certain practices are now being carried on which are felt to be dangerous and which may cause extensive grain damage by fire or explosions. A number of various disastrous fires and explosions have occurred during the last year, many if not all of which could have been prevented.

"A special emergency campaign of education is now being carried on by the department in conjunction with the food administration grain corporation. Dr. H. H. Brown of the bureau of chemistry has been detailed to present the smut dust explosion work in the Pacific northwest. A series of meetings has been arranged for millers, elevator operators and farmers.

"In the course of Dr. Brown's lecture graphic illustrations will be exhibited by means of lantern slides and motion picture reels; miniature grain dust explosions will also be shown.

"The vital and important nature of this exhibition is such that it is hoped every one interested will arrange to attend one of these meetings."

## Get Seed Wheat

### Government Announces Methods

Chairman R. A. Oakley of the U. S. seed stocks committee of the federal grain corporation is sending to market bureaus and agricultural heads throughout the country information of that committee's activities in securing seed wheat for the spring crop.

Communities should work together in securing seed under the conditions announced by the committee when there is insufficient seed of proper varieties available locally. The following three announcements are contained in the committee's statement, the second being of special importance to the people of Idaho, Oregon and Washington:

1. The food administration grain corporation has approved the plan of the U. S. seed stocks committee to accumulate large stocks of Marquis and Kubanka durum spring wheat for seed purposes. These will be made available throughout the spring wheat belt, from Montana, Wyoming and Colorado on the west to Illinois, Indiana, Ohio, New York and New England on the east. These stocks may be purchased in car lots through the zone agents of the grain corporation in Minneapolis, Chicago, Toledo (the zone agent in Philadelphia) and Buffalo.

2. Stocks of seed of adapted varieties of spring wheat for the districts west of the Rocky mountains have also been accumulated by the grain corporation. Early Baart and Pacific Bluestem have been especially recommended to their attention. Application for these seeds in car lots for use in Idaho, Oregon and Washington should be made to H. M. Houser, zone agent, grain corporation, Portland, Ore.

3. Permission to export Marquis wheat from Canada for seed purposes only has been granted by the board of grain supervisors of Canada. Applications for permission to import such Marquis wheat for seed purposes in the United States should be made to Frank L. Carey, zone agent, grain corporation, Board of Trade building, Minneapolis, Minn. These applications will then be subject to approval by a Minneapolis representative of the U. S. seed stocks committee. Orders so approved will be transmitted by Mr. Carey to the Canadian board of grain supervisors at Winnipeg. It is understood that the Canadian seed purchasing commission will cooperate in the selection of the Marquis wheat to be exported for seed.

# Horse Cultivation of Gardens Is Urged

## *Producers Give Plans for Increasing Food Supplies by Means of the Farm War Garden*

**The letters herewith constitute the second installment in the publication of those letters received from readers of this paper in the war garden contest which closed February 28. The decision has not been made yet as to the winner of the contest, but as stated last week, will be made in the near future. In reading these letters every one should bear in mind that difference in localities, climate, soil and the like, require the use of thoughtful judgment before the details of the plans given are put into practice. A plan that might be successful in the irrigation districts would not be successful on the heavy soils of the uplands or on the soils near the Coast. In many cases, therefore, the advice given in these letters must be accepted as suggestive rather than definite directions for the community in which the reader may live.**

It would be difficult to give a plan or specific arrangement for a garden that would suit all demands, and such a plan must be devised by each individual grower. Suggestive arrangements, however, are here presented. Provision is made so that all cultivation may be done by horse-drawn tools, no intricate companion croppings or successions being used but common rotations, following early crops.

**Garden Plan 50 Feet by 100 Feet.**

| Row. | | Between Rows. |
|---|---|---|
| 1. | Asparagus, rhubarb | 4 ft. |
| 2. | Winter squash, pumpkins, cucumbers | 8 ft. |
| 3. | Early sweet corn, late sweet corn | 6 ft. |
| 4. | Tomatoes, peppers, eggplant | 4 ft. |
| 5. | Late beets, late carrots, parsnips | 2½ ft. |
| 6. | Dry onions | 2½ ft. |
| 7. | Bush beans (followed by late cabbage), peas (followed by Scotch kale) | 2½ ft. |
| 8. | Bunch beans, kohl rabbi, bunch carrots (followed by by fall and winter cauliflower | 2½ ft. |
| 9. | Early cabbage, head lettuce, radishes (followed by early and late celery) | 2½ ft. |
| 10. | Muskmelons, watermelons, parsley, sage, mint, horseradish | 6 ft. |

In addition to the above plan and which can be modified to meet the demands of each individual or family, the following notes are added: Between rows 1 and 2 if asparagus and rhubarb be just now started, vegetables can be grown as lettuce, beans, beets, carrots, parsnips, etc. Between rows 2 and 3, early in the season dwarf peas may be grown. In row 3 after the early sweet corn is finished, beans or fall lettuce may be planted. In row 4 tomatoes may be of three varieties one early, one second early, and one main, or late. In row 7 bush beans should be planted in successive sowings.

In choosing a place for the garden consider all the factors that will cause the best growth of the vegetables. Sandy loam soil is the best, although any soil with a heavy coating of barnyard manure will do. The lay of the land has considerable influence upon the time that the soil can be worked and a gentle slope toward the south is most desirable for the production of early crops; good natural drainage of the garden area is also of prime importance. A good fence around the plot is almost indispensable, serving as a safeguard against all farm animals, including poultry, and proximity to the house or other buildings should be considered.

As to time of planting, garden peas are hardy and should be planted very early, in fact, even while frosts occur nightly. Early potatoes and spring-planted spinach follow, and if heavy frosts threaten after the potatoe tops are several inches high, they may be covered with earth for protection. Lettuce, beets, radishes, turnips, carrots, onions and parsnips may be planted early, too; and other crops like beans, cucumbers, melons, etc., should not be planted until the ground warms up and frosts have practically ceased. "Apple blossom time" is about right.

Quick germination of seed causes a vigorous growth of plants. The successful gardener knows that all time spent in putting the soil in fine physical condition, is time used to the greatest advantage. Vegetable seeds are small, and in order to have them germinate evenly in the seed bed, thereby producing a uniform stand of plants, the soil must be smooth, fine, loose, free from coarse material; such a soil condition can only be obtained by diligent work in pulverizing the ground thoroughly, and afterwards raking it well. The garden should be plowed or spaded deeply in the spring as soon as the soil is in good working condition.

Cultivation after the plants are up is to retain moisture, to kill weeds and to liberate plant food, and should be given at least every 10 days when rains do not interfere. Since rain packs the ground it should be cultivated as soon as dry enough.

The best method of fighting garden pests are as follows: For cut worms, use a bran mash consisting of coarse bran 16 pounds, paris green ¼ pound, salt ¼ pound, cheap syrup one quart, and add warm water to make a coarse, crumbly mash. Put a small amount around each plant. For green cabbage worms, which are usually found on members of the cabbage family, the easiest way is use hot water, up as high as 122 degrees, pouring it over plants in the field. A strong salt solution will also be effective. Twelve-spotted cucumber beetle is a serious pest, attacking the foliage of squash, cucumber, beans, etc. Dust the young plants with the following preparation: Powdered arsenic of lead to five parts of sifted wood ashes, sulphur or road dust. Mix material thoroughly and place in cheesecloth bag, dusting over plants in the early morning when dew is on. Repeat about every 10 days. This same preparation is also used for slugs.

Vegetables should be harvested as soon as ripe and before rains and frosts. Some fruits can be handled with straight water, rhubarb and gooseberries being frequently put up in this way. A good, sound fruit must be used. In drying vegetables gather, wash, grade or sort if necessary, prepare and blanch with steam or boiling water, sometimes salted, generally five to eight minutes, where blanching seems advisable. Spread on trays or drying surface, evaporate at proper temperature and store where there is no danger of spoiling.

In order to produce in variety and quality the largest amount of food for the farmer's family table with the least interference with other necessary farm production, the work is usually done in spare hours when other farm operations are not rushing, a certain portion of the garden could be allotted to each boy or girl in the family, and a prize given to the one who makes the best garden. FRED STADELI.

Silverton, Ore.

### MAKE ROWS STRAIGHT.

### Eliminate Hand Work if Possible.

We are very busy farmers, and haven't much time to waste, so have to hit on a plan of gardening to save as much time as possible.

We plant on an average of an acre each year. This includes our potatoes. Our garden is as near the house as possible, so no time may be lost in going and coming and the spare time may be used in hoeing. It is in two plots, one generally used for potatoes and the other for vegetables.

The rows should be as long as possible, and straight. With the exception of perhaps tomatoes, one can scarcely get the ground too rich for vegetables. Here, in our part of western Washington, the soil is mostly heavy clay, so we don't plan for extra early garden, as the ground is too wet to work early and too cold to plant in, but our late summer and winter garden is a thing of beauty, and we feel well paid for the little time used in caring for it.

Manure the ground very heavily with the cleanings from the horse barn and plow lengthwise of the patch as early as possible in spring. When we are ready to plant, which is about the middle of April or first of May, we first test the ground to see if it is dry enough. Dig up a spadeful of ground, take up a handful of earth and squeeze it firmly in the hand. If, when you open your hand, the dirt crumbles easily, it is dry enough to work, but if it forms a hard mud ball it is still too wet, and will only give a crop of large clods. By this time there will be plenty of weeds coming after the first warm days of spring, so John takes the disc harrow and put in all the "cuts" and goes over the ground lengthwise once or twice, then with the drag harrow, then the roller or clod masher, and our first crop of weeds are out of the war in good shape, with no back-breaking hoeing.

Now mark off your rows for carrots, parsnips, turnips, cabbage and all small seeds, the full length of your patch; take a hand rake and rake off at path straight through; down the middle of this drag or chop a little trench about as wide as the palm of the hand and an inch or two deep, put in your seeds and cover by reversing the rake and pulling the dirt in level or nearly so, and don't smooth down too firmly. Our best seeds we plant in drills, too, but prefer to put three or five seeds in a hill (as they are more easily thinned) and six or eight inches apart; also corn and beans we plant in this way. One takes the hoe and chops into the dirt, lifts it up, and another drops in the seed, then the hoe is pulled out and the hill stepped on, and so on down the row.

For peas we plant a double row about six inches apart. When they are tall enough for support drive down a number of strong stakes and stretch several rows of string on these stakes (between the rows).

Squash, cucumbers, pumpkins are made into hills, also in rows, and everything is then ready for the horse cultivator. When we can see the row or even just parts of it we hoe out the weeds just as close as possible, then when the little plants begin to be about a couple of inches high we thin and weed them. This is important, as no vegetable likes too near a neighbor. Leave them a little closer together than need be, and soon the largest are ready for table use and the others are left for winter use. You can have things in beds by planting the same thing in several rows for so far, then putting in something else in the rows for a way. We do this when we wish to plant more than one kind of corn.

Corn should be "bunched" or planted in a square, as the rows don't pollenate properly.

Make a solution of lime water and pour along your radish rows to kill worms; a solution of stock dip is also good for cabbage. When the cabbage is just heading sprinkle plentifully with table salt and pepper. Insect powder for tomato beetles, and they should be watched closely after planting out, and powder should be sprinkled over them after a rain or when the plant is wet with dew.

One half day is all now that is needed each week to keep your garden beautifully clean and growing prolifically. Use the horse cultivator thoroughly once a week until haying, and you can feel sure of plenty.

If you want beans to use as dry beans, use the bush kind; don't irrigate and don't use from these vines for green beans, as water and picking both tend to make the vines keep green and make new pods, which isn't to be desired as the frost will kill them. If allowed to set pods and mature they will ripen and be ready to gather before rains. Corn we can as it is nicer than when dried. Use all glass jars if possible. Use only the true Hubbard squash and small pie pumpkins. Store in a dry place in the attic or a room which has a flue passing through. My squash keep until July and August and pumpkins all winter, so I don't need to can or dry them and thereby save time and strength. Our carrots and parsnips we leave in the ground and they keep much finer than any stored ones. Cabbage should be stored with most of the outer leaves and all of the stem and root.

We plant our potatoes about the first of June for late crop and they keep green during the hot weather and mature with fall rains. We plow or furrow them in and then go over the patch lengthwise of the rows with the drag harrow once or twice just before they are up or after the first leaves begin to show; this loosens the ground and gets rid of the first heavy weed crop. Then the horse cultivator can be used. We generally go through once with the hand hoes to clean between the plants. By the time the summer rush is on our pumpkins, squash, potatoes and some other things meet across the rows and what weeds do come are very puny. We keep ahead of them and only have three or four mornings' work with the hoe. Try it.

I will add that as I am too busy for a flower garden my sweet peas, dahlias, asters, etc., go into spare places in the garden rows and in time delight the hearts of myself and friends with their cheery blooms.

Use fresh, clean garden seeds and grow them yourself if possible.

L. AUSTIN.

Oakville, Wash.

> To the Editor: I have read The Washington Farmer occasionally for several years, but it was not until lately that I felt a need for it. In making your paper the voice of the farmer, in recording incidents of farming interest from various parts of the state, and in championing progressive measures that are for the betterment of the farmer and the industry you are following a worthy policy.

> Agricultural Club Leader.
> Bellingham, Wash.

### Uses Ashes Freely.

I am enclosing a plan for a garden that I believe will meet all requirements for a farm garden in war times or at all times.

Garden is to be cultivated with a horse, rows being mostly three feet apart, except in the case of melons, cucumbers and squash, which are more, also late peas, which are sowed in double rows to enable them to withstand the drouth better. Radishes, lettuce, early beets, early turnips, China cabbage, potatoes, parsnips and onions should be sown as soon as the ground will permit in the spring, also include early peas. Tomatoes, celery and early cabbage and cauliflower set out as soon as danger of frost is over, usually about the 8th or 10th of May in our locality. Early corn and beans, carrots, cucumbers, melons, squash, vegetable oyster should be sown about the same time, while late cabbage, corn, beans and peas about the 20th of June.

I have found that wood ashes will keep off almost all insects that bother garden vegetables, and most of us have plenty of them at all times. Sprinkle the ashes over tomatoes, melons, squashes and cucumbers and it will keep those little insects off, and put around the stalks of beans and plants at the time of setting them out and it will keep the cut worms away. It is also beneficial sprinkled over cabbags to keep cabbage worms off, but in all cases it has to be applied after each rain until the pests are gone.

Peas and beans should always be gathered morning or evenings or on cool days, never in the heat of the day as it causes them to wilt, and this is true of cucumbers. Late beets, turnips, rutabagas, carrots, parsnips and oysters should be pulled when the day is bright and warm, allowed to dry and stored in a cool, dry place and are better if buried in sand. Squash should be picked carefully and stored in cool, dry place without bruising, and before they are frosted. Late cabbage should be pulled and hung up roots up, in a dry place. The best method of keeping peas, beans, corn, early beets and cauliflower and tomatoes is canning. Cucumbers should be put in a keg or stone crock and covered with a strong salt brine and a weight put on it to keep them from rising out of the brine. Melons may be kept a long time if picked a little under ripe and carefully buried in dry sand where they won't freeze.

I believe in using a horse to cultivate a garden as most farmers have more land than time, but one has to use the hoe to hill up vegetables and to loosen soil in center of double rows of peas, and to take the weeds out of the rows. MRS. JOHN LAWSON.

Daisy, Wash.

### Will Furlough Soldiers.

Reports from Washington tell of the passage of a bill permitting soldiers in this country who desire to be granted relief from duty for the purpose of performing farm labor to withdraw temporarily and return to the farms. The measure does not provide, however, for sending any soldier back to the farm if he does not wish such furlough.

# New Wrinkle in Forage Production

## *Benton County Producing Two Crops of Silage Same Year on Same Land*

By J. L. ASHLOCK

Thirty-five county agricultural agents now are employed in Washington, and State Leader R. B. Coglon is looking for three more. The 38 will serve 34 counties in the state. The counties of Spokane, King, Benton, Okanogan, Thurston and Walla Walla each have two country agents. According to plans now under consideration Garfield, Columbia and Asotin counties expect to share between them the services of a county agriculturist.

Seventeen eastern Washington counties now have established county agricultural offices, their areas including all of the east half of the state, with the exception of Lincoln, Kittitas and Ferry counties. San Juan and Skamania counties, in western Washington, have now employed county agriculturists. Of the five Washington counties now without agricultural offices Lincoln is the only large farming county, its property valuation amounting to 28 millions, against 19 millions for Kittitas, five millions and a little more for Skamania, less than three and a half millions for Ferry, and $1,480,000 for San Juan. In listed property valuation Lincoln is outranked by only eight counties in Washington.

Normally, that is, in times of peace, the county agriculturist works in his county for "good farming, attractive country homes and happy country people." Since this motto is alive in the mind of every county agriculturist and looks to a more productive agriculture, and since greater agricultural production is the preeminent war need of America, by the fortunes of war made the bread basket of the world, the entrance of America into the world war effected no drastic changes in the work of the county agriculturists. Such changes as were made naturally looked to immediate increases of production, all other county agricultural projects being held subsidiary and tributary to this.

Benton county established a county agricultural office four years ago, and the war last April found this county well organized in the work. There has been in Benton in the last year a persistent endeavor to increase live stock, which necessitated an increase in the forage for live stock. Many farmers there have adopted the expedient of sowing grain in their alfalfa when the latter was not thick enough to entirely cover the ground, and the acreage increases in forage secured by this practice run from a ton to a ton and a half.

Agent Lampson states that there is developing in this county a new system of crop rotation, such as planting potatoes or corn after alfalfa or some other legume. Many carloads of sheep manure have been shipped into the farming communities from adjacent lambing camps and range corrals and hauled out to the farms. At least 15 farms received a heavy application of sheep manure, which, in the experience of Benton county farmers, greatly increases the productivity of the soil. Leguminous cover crops are now being used in the orchards. Agent Lampson states that now less than 5 per cent of the orchards of Benton are "clean cultivated." In 1913, when the county agricultural office was established, about 80 per cent of the orchards were cultivated clean.

Reporting in to the state college a few weeks ago, Mr. Lampson stated that 35 silos were then under construction in the county or being planned. The past year has witnessed a considerable extension in dairying, marked by the saving from slaughter of many of the best heifer calves, the laying down of new sweet clover pastures and the distribution of about 150 milk record sheets, all of which are now in use on milk-producing farms of Benton county. A new wrinkle in forage crops which has come out of Benton county is the producing of two crops of silage in one year on the same land. It is done by fall planting to wheat or rye and about corn-planting time in the spring, when the fall wheat or rye is in rank, green growth, siloing it and replanting the ground to corn. The corn is siloed in the fall. The wheat or rye silage put down in the spring serves for summer succulence in lieu of soiling crops.

About one-third of the irrigated farms in Benton county now have from half a dozen to a hundred sheep. The sheep live for the most part on waste vegetation of the farm and in so doing help keep the ditch banks clear of grass and weeds. Last year for practically the first time the practice of "hogging off" crops of peas and various grains was taken up and over 100 farmers called on the county agricultural office for help in planning rations for hogs, indicating somewhat of a rise in the pork production of this section.

Early last year, preceding the canning season, Mr. Lampson planned a series of schools and institutes in different parts of the county, where food preservation was the burden of the work given. He says that stores throughout the county sold from twice to ten times the number of jars and cans sold previously, indicating a great increase in the county's work in this phase of food conservation and preservation.

Douglas county has about one-half of a million acres of wheat land, approximately a third of which is summer fallowed every year. Soil and climate make the county more adaptable to spring winter than to spring wheat. The annual precipitation is between 10 and 12 inches. All of this is quoted from the recent annual report of County Agriculturist A. M. Richardson, now succeeded by H. E. Lattig, and gives a birdseye view of the county's farming.

Since wheat is the main crop of Douglas county, Mr. Richardson during the several years of his work there took as a main project the working out of a system of soil management that would produce maximum returns; the idea that among the various farming practices in vogue in the county some one ought to be better than all the others. The idea was to devise or discover this best one and then let everybody know about it.

Since there was only 10 or 11 inches of moisture a year, holding to this moisture naturally was the prime consideration. Acting with the cooperation and advice of the wheat men, Richardson finally was able to give substantial proof of the merits in the following system of soil management:

Disk the land in the fall. Double disk again in the spring when the weeds begin to start. Follow the double disking with summer fallowing, reasonably early. Pack immediately after the plow. Harrow right after the packer with a spring-tooth. During the summer work the land often enough to keep down weeds, preserve the mulch and prevent the forming of a crust under the mulch. Sow the wheat in midfall or a little earlier.

Last year, one of the driest in the history of Douglas county, wheat land handled as above yielded 43 to 45 bushels per acre, with adjacent land handled otherwise yielding 15 bushels for spring and 25 for winter wheat. In the part of Douglas county where this cooperative work was done last year there was no rain from May until the 3d of November. Nevertheless, by the tillage system above outlined farmers were able to retain the soil moisture sufficiently close to the surface to bring up a good stand of fall-sown wheat in advance of the rain of November 3d.

### RETURN FLOUR
### People Asked to Aid Distribution

In order that all persons may be placed on an equal basis, and that flour supplies may be more evenly divided, Charles Hebberd, food administrator for Washington, is calling on all persons having in their possession more than a 30-day supply of flour to return it to their merchant by March 25.

This situation arises from the fact that it has been the custom for many persons to purchase enough flour in the fall to do them for a year, and the stock they now have on hand came to them in a perfectly proper manner. However, the administrator hopes they will return the flour which is not necessary for their immediate needs. Such returns will add considerable to the general supply in the channels of trade.

So far as possible citizens are asked to return the flour to the merchant from whom it was purchased. When this is not practical the food administrator in the county is asked to assist any who wish to return their surplus.

### Revive Jefferson County Fair.

The commissioners of Jefferson county, Wash., have taken steps to revive the county fair which once was a regular institution in that part of the Olympic peninsula.

Tentative arrangements entered into for the coming fair season contemplate the turning over to County Agent McWhorter $800 to be used to secure an exhibit which will be a credit to the county and to take it to the Washington State fair at Yakima in September.

Two hundred dollars has been set aside for boys' and girls' industrial work. The latter is playing no small part in fostering interest in agricultural pursuits in the county.

### Will Distribute Labor.

The Washington state council of defense announces that there are United States employment offices located in this state at the following points: Seattle, Spokane, Tacoma, Aberdeen, Everett, Bellingham, Yakima, Walla Walla and Wenatchee. These are permanent offices in charge of paid agents who will be in daily touch with the labor needs of sub-agencies throughout the state during the growing and harvesting seasons this year. They will also be in daily touch by wire with the larger centers of labor supply.

# Gave Up Law to Produce Pork

## *Grows Wheat and Alfalfa Together for Hog Feed*

By J. E. NESSLY.

One of the most successful hog farmers in eastern Washington is Milan Still, who gave up the law to raise hogs and is making a big success of the venture. Mr. Still had 1000 acres of land below the foot of Rock lake, in Whitman county, Wash., and he fitted the land for hog raising. He fenced it all hogtight and into fields of various sizes, managing to have water in each. He raises alfalfa and grain, but has no farming machinery. He sows wheat with his alfalfa, disking up the alfalfa land after the roots have become well established. The results have been highly satisfactory. The wheat does not produce very heavy straw, but there seems to be certain properties in the alfalfa or the soil that cause the wheat to head well and produce a fine quality of grain.

Mr. Still pastures the wheat and alfalfa when it is young and then takes the stock off it and cuts a good crop of hay. He feeds the alfalfa and wheat to hogs, using shorts, which he obtains at the Winona mills, to "finish" the hogs ready for market. He has no harvesting machinery at all and threshes no grain. A mowing machine and rake are all his harvesting machinery, and he has no threshing or sack bills to pay.

"I find the best hog house is an alfalfa hay stack," said Mr. Still. "I put posts in the haystack so that it can not fall over and smother the hogs when they root around the bottom of it. They eat the leaves and the heads of wheat, and I go out every morning and throw the loose stems and hay that they have pulled out but have not eaten over the fence to the cattle, and they clean it up, so there is no waste."

Mr. Still fences his haystacks so they hogs can get to them but the cattle can not. He has a capacity for raising and fattening about five carloads (500 head) of hogs a year, and at prices that have ranged for the past year he gets an average of more than $30 each, or about $15,000 for a year's output of hogs. Mr. Still claims to be the second largest pork producer in Whitman county, first place being held by Dan Kinsinger of near Almota. Discussing the question of whether the food administration or gain commission would prohibit the feeding of wheat to hogs under the rulings for saving wheat, Mr. Still says:

"I want to observe the regulations of the grain commission and food administrator, but I can not change my entire plant and raise wheat for market. I prefer wheat to barley, but if not permitted to feed wheat will plant barley this spring. I can not afford to buy expensive farm and harvest machinery to raise wheat for a few years. Prohobiting me from feeding wheat to my hogs will not increase the output of wheat one bushel, for I can not raise wheat and thresh it, but it will reduce the output of pork to some extent, and I take it that the government needs pork about as much as it needs wheat."

Mr. Still claims the championship carload of hogs, which he shipped to the Spokane Union Stock Yards recently. He got $18.35 per 100 pounds for them without a pound dock on the entire carload. They weighed between 250 and 300 pounds each.

Only a part of his land is tillable and part of it is irrigated, but it all furnishes feed for both cattle and hogs, and his income from his stock farm is much greater than his income from the law practice which he gave up to become a real "hayseed," as he terms himself, after practicing law in Colfax many years.

# Need Potato Storage

## Cooperative Warehouses Needed

Asher Hobson, state director of farm markets, is interesting potato growers in some sections of Washington in plans looking to the establishment of cooperative potato warehouses, following the adoption of a standard grade.

"In the first place," Mr. Hobson told a meeting of farmers in Clarke county recently. "I claim a field run potato will not sell during a slack season like this when there are graded potatoes to be had. But we must devise ways and means of grading and handling our potatoes in a manner that will call for a minimum of expense and trouble and at the same time give us the results we desire.

"In the east and middle west potato growers have gone together in many instances and established co-operative warehouses, equipped with mechanical graders. I believe such a move would be practical here, if your area is a commercial one. Establish a grade and stick to it, then build your warehouse, bring your potatoes to it, pool them and grade them.

"Ordinarily I am reluctant to recommend cooperative enterprises because so many of them are not practical and call for experience and an outlay of money not in keeping with the possibilities of the business to be operated. But a cooperative potato warehouse doesn't require high technical skill; neither does it require any great outlay of money. It does require that you sign up your potatoes—agreeing to deliver them to and market them through the warehouse association. If you are not willing to do that there is no longer any use of contemplating the idea.

"Small capital is required. A plan in common use in some districts provides that the grower give the association a collateral note on an acreage basis. This note is discounted at the bank and serves as a loan to the association, in proportion to the potato acreage he has. Two dollars an acre is a good amount to figure on. Care then should be exercised to keep out any person who is not actually a grower. The expense of operation can be handled in the same way. When you decide to discontinue business each will get out of what money there may be on hand, a sum in proportion to what he has shipped through the warehouse.

"In the meantime you have handled your crop from year to year in a more systematic manner than you possibly would have been able to had you tried to do it alone; your facilities have been improved so that you turn your potatoes off at less trouble and with less expense and you are at no time involved to any great extent."

At this same meeting M. J. Newhouse, agriculturist for Clarke county, reported, with others, on his trip to Beaverton, Ore., where a potato starch factory has been established and is in operation. The company operating the Beaverton plant desires to get a foothold in Washington and has offered to establish factories in Clarke county if the desired amount of acreage is guaranteed. One thousand acres for every factory is required. The growers must enter into a contract to grow this amount for a period of five years and to deliver one-third of all their cull potatoes to the factory. In return they are guaranteed a price of at least 50 cents a hundred and as much more as two-thirds of the returns from the starch manufactured therefrom, will bring.

Mr. Newhouse made his investigation in company with Mr. Hobson, Professor Morris of Washington State college, and others. All were inclined to look with favor on the plan. All the growers would have to take a chance on would be their cull potatoes for one season. If at the end of that time the factory was not a going proposition their contracts would automatically be abrogated.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Don't Waste a Grain

One thing that the war is doing—or will do—is the stimulating of the sense of economy on the part of practically all the people of earth. There is no place where this sense needs stimulus more than in the stock-feeding pens on the farm. Too often it is the practice of those feeding stock to do it not only with little reference to the balancing of rations, but with comparatively little care to prevent actual waste of valuable feeds. Feed troughs, feed racks and feed floors are a necessity today on the stock farm as they never were before, and any feeding system that permits the tramping of grain or hay into the mud of a feeding yard or pen is just to that extent uneconomical and unpatriotic. With corn or barley costing the unprecedented prices of today it takes but little loss from the pig troughs to more than pay for a platform or a floor that would prevent that loss. With hay at $25 and $30 a ton it takes comparatively little loss in the mud or cattle yards to pay for a good feed rack.

## Should Depend Upon Ourselves

The government of this country is designed to be one of, by and for the people. For this reason any citizen should feel free at any time to call upon the government for help to solve any problem that may confront him. But not until the individual or the community affected by the given problem has done his or its utmost to solve the problem at home should appeal be made to any department of government. Complaint is frequently heard against the government for doing things which individuals consider detrimental to their interests, and in practically the same breath come complaints against it for not doing things which the individual considers to his advantage. The government can't do everything, nor can it be faultless in all that it does do.

The labor situation throughout the country is a matter justifying appeal to the government of state or nation for aid in meeting, but not until the individual, the community, the county and the district have done their utmost to solve it for themselves. There is everywhere man power that is not being utilized. In some instances it is sufficient to completely relieve the labor shortage, could it be made effective. In such cases it is the unquestionable duty of those affected to strive to make available the labor that is within its reach, whatever may be the cause of its present inactivity. It is the height of folly to go beyond our own community or county border to secure help when that help could be obtained if proper measures were used right at home.

The solution of the labor problem is in one sense a real opportunity and not a calamity. In thousands of localities it will bind the various elements of the community together in effort for the common good and, in addition, it will teach the lesson of community efficiency as few situations heretofore experienced have done.

## Some Predict Low Interest Rates

Most American farmers have occasion from time to time to borrow money, either by mortgaging their farms for long-time loans, or by giving their notes at the bank for short-time advances. Farmers, therefore, like other business men, are wondering what the war's effect will be on future interest rates.

As an off-hand opinion most persons would say that money rates will be higher after the war, but the financial authorities are not agreed on that forecast. A London cablegram reports a remarkable divergence of opinion there. It is held by a majority of British monetary experts that rates will be high because capital will be in large demand for trade and reparation of the damage done by war.

A minority, however, which commands respect owing to the recognized prominence of many of its members, declares that after the establishment of peace capital will be unlendable except on very low rates of interest.

One London millionaire is telling his friends that he is putting his money in investment securities for the first time in his life, because he believes he will be unable to loan it as he has always done hitherto. Others who are identified with international interests express similar opinions. They do not explain their theory, but sense a period of cheap money.

There is a thought here worth tucking away for future consideration. Public opinion has a great deal to do with the fixing of prices of any commodity. If public belief becomes general that money rates will be high after the war, it will be easier for capital to ask and get the expected higher rates. Conversely, if the borrowing public "has its mouth fixed," as the saying goes, for cheaper money, capital will find it necessary to make considerable concessions.

## Signs of the Times

The complaint that we are not awake to our perils and needs is true, doubtless, and yet we imagine that more people realize these things than is manifest yet. The temper of the people is being tried; we believe it will be found to ring true and firm and strong.

The I. W. W. or anybody else, who tempts the patience of a roused people, fails to estimate the significance of the times. Because we have put up with unbridled language and failed to resent violence sometimes in the past has tempted some to regard us as easy of habit and sluggish of mind.

Already some have found to their cost that there has arisen a spirit that will brook no unpatriotic acts any more. Those who are wise will not strain the taut string of public endurance to the breaking point. Perhaps we are slow in waking, but more people have their eyes open than we seem to realize.

## The Farmer's Duty

With the officers of state and nation urging city dwellers to grow food on vacant lots and in back yards, the farmer must keep his sense of proportion clear. With a famine threatening, whatever the city man and his family can raise will be good, and it will help some, but we must not forget that city people are not experts in production. A great increase of production will come only if the farmers themselves—the men whose business it is to make grain and vegetables and animals grow—make a determined effort to increase production.

Two things are needed—a patriotic desire to serve our nation and help the world, and the knowledge and ability to make the desire a reality. Nobody can do this but the farmer; the work of the rest is subsidiary to his.

## Washington Gleanings

A 70,000-bushel grain elevator will be built in Macbeth to handle the 1918 crop.

Oroville citizens have subscribed for half the stock in a $15,000 venture for their town.

William Bangs, a former Washington State college student, has been appointed agriculturist for Skagit county.

The Okanogan County Live Stock association has set April 4 and 5 as the dates for the annual sessions at Okanogan.

The contract for a 50,000-bushel elevator at Sokulk, Whitman county, has been secured by Jonah C. Lewis of Oakesdale.

On a unanimous vote, the Grays Harbor county commissioners agreed to take over the Grays Harbor Fair association, and will back the fair hereafter.

The Eagle Rock Box and Lumber company has been formed by Cashmere men, with the object of erecting and operating a box factory and sawmill on Birch mountain.

The fathers' and mothers' clubs of Bellingham are asking congress to establish a new national memorial day in honor of those American soldiers and sailors killed in the present war.

The Arlington Cooperative Agreement Bull club has been formed by eight men with 65 cows in the district near Arlington. It is hoped by this means to increase the well-bred cattle in the county.

County Organizer George Meyers of Connell organized a local of the Farmers' Educational and Cooperative union at Eltopia recently, with Walter Lebbs president, H. J. Rozensweig secretary and treasurer.

The first of a series of elevators to be erected by the Whetstone-Turner company in Columbia county has been started at Longs, near Dayton. The elevator is to have a capacity of 75,000 bushels, and will cost about $15,000.

The Farmers' Union Warehouse company at Palouse has purchased the Electric flour mill property in order to secure more elevator room. It is planned to increase the space to 100,000 bushels. The consideration was $10,000.

The Snohomish Dairy Products company for the time being has stopped making butter and will turn over its cream to the Holcomb Dairy company. All attention will be given to the manufacture of condensed milk.

The county commissioners of Snohomish county and the Automobile Club of Western Washington have entered into arrangement whereby the important roads in Snohomish county will be marked by signboards for the benefit of tourists.

At the auction sale held recently on the R. Hogan farm, near Chehalis, good prices were given for 20 grade Holstein cows. An average of $121 each was paid, one registered Holstein cow sold for $275, and 17 grade Holstein heifers sold for an average price of $51 each.

Agricultural Agent Walter A. Holt recently received four Duroc-Jersey gilts for Okanogan ranchers, who are going into the hog raising business on a proper scale. The purchasers are Frank Garber, E. W. King and Joe Iddings of Okanogan, and Hugh Miller of Pine Creek.

Farmers from the Burbank and Pasco districts recently met in Pasco to form a melon growers' union in order to interest a sufficient number of growers to devote 40 acres or more to the production of cantaloups this summer, that being the minimum requirement necessary to assure carload shipments. The following directors were elected: F. E. Hood, J. S. Riley of Burbank; George M. Reasoner, W. S. Kirk and J. B. Conroy of Pasco.

## What Others Say

Farmers' Review: We are a long, long way from being far enough along in the war to slow up in our efforts the tiniest bit.

Farmer and Stockman: Much has been said about food winning the war, but the full significance of this has not yet been driven home with sufficient force to make us all realize just what it means.

Farm and Home: By each of us doing well our pur part, also in cooperation with our neighbors, 1918 can be made the banner year for the American farmer, as we all trust it will be a victorious year in the great war.

Farm and Fireside: In times of national crisis when food is scarce a natural tendency is to encourage intensive cultivation too far. It is well to remember that while the war has taken hundreds of thousands of our workers it has not taken one acre of our land. The land is all here, but the problem is to crop it.

# Pasture Mixture
## *for* Logged-Off Land

**$15.00 per 100 pounds**

*"Keep the Nation's Food Basket Full"*

¶ This mixture, consisting of alsike, red clover, timothy, rye grass, orchard grass and red top, contains the correct proportions of these early, medium and late grasses necessary to supply pasture continuously through the long season.

LILLY'S SEEDS

*Established 1885*

*"Best for the West"*

LILLY'S Pasture Mixture also contains deep rooting and creeping grasses to form long and lasting turf.

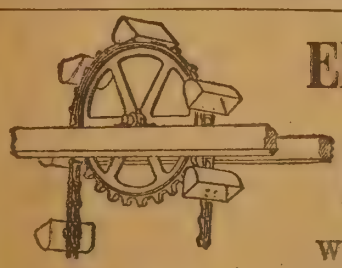
¶ Send your orders early to LILLY'S Seattle, Wash.

# VEGETABLES

## Raise More During 1918

### Our Seed Annual

No. 77 Mailed Free.



Lists Roots, Strawberries and Small Fruits.

Also contains description and prices on our full line of pruning knives, shears, saws and sprayer outfits.

# Janssen Cuts ONE THIRD OFF THE PRICE OF COFFEE

"Serve the best coffee on your table. I'll see that the price doesn't hinder you."
—John F. Janssen.

## You Save One-Third When Uncle Sam Makes the Delivery From Importer to Consumer

I know how the housewife has been called on to meet constantly climbing prices on nearly everything that she serves on her table. She has had either to accept these higher prices or sacrifice the quality of her meals, for which she has such an enviable reputation.

To help the housewife fight this advance I have spent a great deal of time and money in perfecting a system that has already proven a power in cutting the average cost of foods.

I want every family to have the best coffee. And I have made that possible through the Janssen system of direct importation and direct distribution. I import my own coffee, pack it in a way that eliminates the usual expensive container, and send it directly to you through Uncle Sam's delivery system, paying the postage myself. This saves you a third on your coffee.

## HERE IS MY OFFER ON COFFEE
### A Weapon to Fight Advancing Prices

**10** Pounds "Extra Choice" perfectly delicious blend of high-grown coffees—better than the most and as good as the best 45-cent coffee on the market..... **$3.30**

For two years I have unreservedly guaranteed the quality and safe delivery of this coffee and have never received a single order back.

This price is guaranteed subject to the government tax.

## I PAY THE POSTAGE

The foregoing price of only $3.30 for 10 pounds of 45-cent coffee includes parcel post to any place within 300 miles of Seattle.

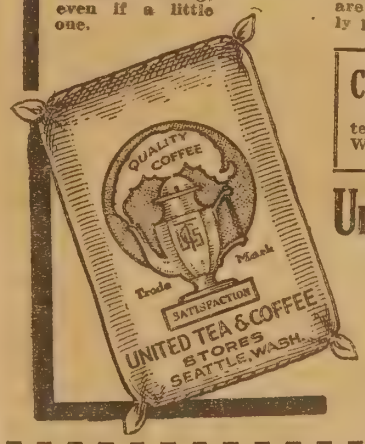
GUARANTEE—Your money will be refunded if you are not satisfied with the coffee. The goods are securely packed, and safe delivery is guaranteed.

### Hundreds of Enthusiastic Users

What a few of them say:

"Delicious."

"Very pleased with the coffee I have been buying from you the past year."



"Every guest is complimenting us."

"Always arrives here in best condition.

"Please send same good quality as before." (Note: The quality of our coffee never varies.)

"Coffee I bought in your store last month was so fine, send me another order."

Note the heavy cloth bag in which the coffee is packed. The material may be used for toweling—another saving, even if a little one.

### COMPLETE STOCK OF TEAS and COFFEES

No matter what your preference in the line of tea or coffee, I am sure that I can satisfy you. Write for free price list showing our complete line.

# Work Cows Harder

## Dairyman Urges Intensive Method

Ira P. Whitney, one of the prominent dairymen of the Inland Empire, is not optimistic over the dairy outlook, but is bending every effort to make good in what apears to him, as to many other men in the industry, a critical period. Mr. Whitney believes that a system of intensive dairying in which the cows should be worked to capacity, as he puts it, is about the only salvation for the industry. He recommends that the number of cows on the average dairy farm be reduced by about one-third, the less productive one-third being eliminated and the remaining two-thirds being fed practically the same amount of feed as previously given to the entire herd. He believes that this system will produce more economic milk and butter than the system now in vogue.

"We are keeping more cows than we need and working them at only half capacity," says Mr. Whitney. "We haven't made the feeding and care of dairy stock the science that it should be. We must become feeders in the real sense of that word."

Mr. Whitney says that the Waikiki dairy farm, near Spokane, Wash., of which he is manager, is trying the experiment which he recommends, and is finding that it can produce more economically than under their former systems. The system includes not only feeding more intensively but milking more intensively, as milking is done during the experiment three times a day instead of twice.

Mr. Whitney says that it is a grave mistake commonly made among dairymen to reduce the feed of the dairy cows during their non-milking period. He believes that it is vitally essential that a cow be fed so as to be kept in perfect condition during this period so that when she freshens she will be in ideal condition to produce a maximum of milk and butter fat.

# Dairy Questions

## Are Answered by A. B. Nystrom

To the Editor: I have a young Jersey cow that was mated for her second calf on July 29, and aborted January 16. She seemed otherwise well, eats heartily, but gives only six quarts of milk per day. I shall mention a few incidents that I know occurred and would like to know if any of these would be a cause for abortion or whether it is the result of disease. The day before she aborted my neighbor's young heifer broke into my pasture, wanting a mate and I suppose my cow was riding the heifer before I discovered it. Still another cause: When I open the stable door of evenings she goes almost on a run for her feed, and sometimes she slips on the planks. I know of nothing else that might be a cause and I would like to have your opinion as to whether she is probably diseased and whether it would be advisable to try to breed her again. Thanking you in advance for your opinion and advice, I am, S. B. H.

Answer—Every case of abortion should be treated as contagious abortion. It is not possible to determine definitely what the cause is until you find most of the herd aborting, one after another. Then it is too late. It is possible that the cow has injured herself by a fall or otherwise, but I would not be content with accepting this as a fact, but would treat the case as contagious abortion.

The foetus and membrane should be burned or deeply buried. The hind parts of the cow must be washed with a coal tar disinfectant. The stall or premises where the aborting occurred must likewise be disinfected. The uterus must be irrigated with a weak disinfecting solution as long as there is a discharge. Do not breed the cow until all discharge has disappeared.

### Difficult Churning.

To the Editor: Can you inform us on butter making? We have trouble to get butter to come at times; would like to know if there is a difference in cows about making butter. We have a Jersey four years old, her cream does not seem to come to butter without a great amount of work and time. We try for two or three days at times to bring it to butter. We have the temperature all the way from 65 to 80 churning at different temperatures up and back, churning all the time. The cream is five to six days old. Have owned my cow for six months. It very rarely ever comes without considerable time and work. J. W. M.

Answer—When cows are in an advanced stage of lactation and at the same time are getting dry feeds they often produce fat with extremely hard fat globules. Usually this can be remedied by ripening the cream well before churning, but sometimes a change in the ration is necessary. I would suggest that you write to the state college for their bulletin on butter-making on the farm and follow the instructions carefully. If your cow is not getting succulent feed I would suggest that you add some roots, silage or green feed of some sort.

### Cheese a Valuable Food.

A more extensive use of cheese, which is a most valuable and wholesome food, would help conserve meat. And there is no cheese more valuable as food or better to the taste than American whole milk cheese. Many people have cultivated an appetite for foreign, imported cheese, which is not half as rich in nutriment as our own. As a cheesemaker said to the writer not long ago, referring to an imported chese, "It hasn't enough grease in it to oil a gimlet."

### A Bed Device.

The spring of a new bed can be folded to form a chair so that a sick person can sit erect.

# Stock Winter Well

## Spend Winter on the Open Range

It is probable that no spring in 25 years has found the live stock of the northwest in such good condition. This is due perhaps to two conditions, the principal one of which is the unusually open winter that has prevailed in nearly all sections of the northwest.

The two previous winters have been unusually severe, causing heavy losses and excessive feeding costs. The winter of 1916 and 1917 was especially bad, but the winter of 1917-18 in almost all districts has been open to such a degree that thousands of head of sheep and cattle have been enabled to secure from 25 per cent to 75 per cent of their food on the open range.

As a result, the hay producing districts, as a rule, have an unusually large amount of hay on hand or have recently placed it on the market. While this condition has caused considerable reduction in the incomes of hay producers this reduction has been less marked than might have been expected owing to excellent hay markets in other states. In Texas and California the most damaging drouths in history were experienced last summer and resulted in the absolute necessity of shipping in large quantities of feed to save the lives of cattle and sheep. As a result thousands of tons of northwestern grown hay have been shipped to these and other states.

With the coming of an early spring it would seem that there will be much live stock ready for market earlier than usual. This may not be the case in some districts however owing to the fact that cattle have refused to eat fattening feeds during the period when they otherwise would have been on fattening rations choosing rather to wander over the pastures and ranges in pursuit of green grass.

## MAY GET CONVENTION

### Northwest Pulls for 1920 Meet

The cities of Portland, Ore., and Spokane, Wash., were contenders for the 1919 convention of the American National Live Stock association at the recent meeting in Salt Lake City. Neither of them got it, owing to too strong a sentiment in favor of other cities. The 1919 convention goes to Denver, but the northwestern interests are apparently united on Spokane, Wash., for the 1920 gathering.

This is what E. F. Benson of the Washington state department of agriculture, told the live stock conference in Spokane recently. Mr. Benson added that the national wool growers' association should meet in the northwest at the same time, and that if the two did accept the invitation it would put this territory strongly on the live stock map.

# Veterinary

Dr. S. B. Nelson

**Wire Cut**—Please advise me what to do for a horse that has a wire cut on right hind foot just above the hoof. The leg is swollen some and looks as if there was proud flesh. Now it looks to me as if the flesh is growing out in place of growing down as there is a large lump and the full length of the cut. J. C. H.

Freewater, Ore.

You really should have the services of a veterinarian because it is quite possible that the only treatment which will really give you good results will be to cauterize the foreign growth at certain intervals, and give the skin a chance to grow over the wound. In the meantime you might try dusting out the wound morning and evening with a powder composed as follows: Tannic acid, one part; burnt alum, one part; boracic acid, two parts. Whenever the scab forms hard give it a rest for several days.

**Cow Is Lame**—I have a cow that was sick and now she is over that, but she is lame in both of her hind feet. They seem to be swollen between her hoofs and duclaws. The cow when first turned out of a morning will shake her feet as though she was in deep snow and she has run down in flesh, but her appetite is good. Will you please tell me, if you can, what it is and what to do for it?

A SUBSCRIBER.

Yakima, Wash.

You should cast your cow, preferably by the triple half-hitch around the neck and two about the body and then wash the feet very carefully and see just where the trouble is. If there is a swelling between the duclaws back and a slight growth there it may be that rubbing the right size rope which can pass between the duclaws back and forth will burn it sufficiently to cause the destruction of the growth, after which apply tar daily to the part. If, however, the infection is up in under the skin the treatment is very difficult, and I think you will need the services of a veterinarian. In the meantime, however, you can see if you can arrange to have her stand in an antiseptic solution composed of one part of copper sulphate to 500 parts of water.

**SELDOM SEE**

a big knee like this, but your horse may have a bunch or bruise on his ankle, hock, stifle, knee or throat.

**Jerseys Win Economy Test**

In a recent test at the Ohio State University, 157 Jerseys and 131 members of another dairy breed were entered. The Jerseys required only 75.3 per cent as much digestible nutrients per lb. of fat produced as did the other breed. Further, they produced 1.2 per cent more milk, 25.6 per cent more solids and 59.3 per cent more fat per 1000 lbs. live weight. Jerseys produce the largest *net profits* from every pound of feed. Build a Jersey herd. Write to breeders for prices.

*Send today for free book, "The Jersey Cow in America."*

The American Jersey Cattle Club, 314 West 23rd Street, New York City

**Jersey Isle Stock Ranch**

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (713.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.
C. E. LONG, Buhl, Idaho.

BREEDER OF GOLDEN GLOW'S CHIEF 61460.

35 daughters average 533.9 lbs. fat. Sire of world record Junior three-year-old. Two of his sons heading our herd. Some choice bull calves out of cows with records up to 856 pounds for sale. Sold out of bulls over six months old.
LADD FARM, Oswego, Ore.

**All High Record Blood**

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.
ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

**Buy a Real Sire**

We are offering a choice bull calf by St. Mawes of Ashwood and out of a daughter of the great Holger. This youngster carries the best blood in Jerseydom and is fit to lead any herd. Price on application, but don't delay, as he will cost more after his dam completes her present register of merit test.
M'ARTHUR & STAUFF, Rickreall, Ore.

**We Have a Herd Average of 700 Lbs.**

85 per cent BUTTER for 11 head. Sold six bull calves in the past 4 mos.; 3 of the last ones brought $250 each. These were sons of our herd bull, G. P. St. Mawes; just one bull calf left.
F. A. DOERFLER, Silverton, Ore.

OAK RIDGE JERSEY FARM.

Thirty years breeding Jersey cattle. Young bulls from Register of Merit dams. Also a few choice females.
RILEY E. HULBURT. Albany, Ore.

**763 Pounds Butter**

and 11,501 lbs. milk is the average of the Register of Merit records of the three nearest dams of this handsome bull dropped Aug. 28, 1917. Dam Stockwells Dahlia, 619 lbs. butter and grand champion Oregon State Fair twice. Sire Dominus, who is out of an 817-lb. cow and a son of an 853 lb. cow. Price $150.

## POULTRY

Write to the Editor.

JAMES DRYDEN,
Editorial Contributor.

Hatch early. March and April chicks are best. If you can not get them in March and April, hatch some war chickens in May.

Talking about organization, let us get busy and organize a chicken flock and they will work and scratch for the soldiers.

If you haven't an incubator, use the broody hen. Give her good care and she will do the job well. She hatches millions every year.

If you haven't an incubator or broody hen, buy day-old chicks, but don't send too far for them. There are chicks to be had from as good laying strains in the northwest as in any part of the Union.

The hatching season has begun. Now for a big chicken crop!

Get the best information you can on the subject and help win the war by raising some good meat chickens and some egg producers.

Talking about talking, raise a flock of pullets, and they will talk the lunch basket full quicker than some human talkfests. J. D.

## Small Chicks

### Methods of Feeding in England

Many will no doubt be interested in the method followed by Tom Barron of England in feeding small chicks. His method as outlined herein was under conditions of two or three years ago, and since then, owing to the shortage of grains and the restrictions put upon feeding good grain to chickens, this method has probably been modified. It will be noted that he feeds the chicks first at 24 hours of age. Many of our good poultrymen will take exception to feeding them so early after hatching. It is also noted that he feeds dry, hard cracked grain or chick feed for the first two weeks, and after that he begins with a moist feed. Some of our poultrymen will also question this, but it will show at least that there is more than one way of successfully raising chickens, and Barron, all will admit, has been a successful poultryman, especially those who have contended with him in the laying contests. His method follows:

"The first 24 hours the chicks are left entirely unfed. After that we give them a dry chickfeed, as bought at any of the corn dealers' shops—these are often advertised. This is given for the first fortnight only. The feed is put onto bits of bread or slate, until the chicks are used to picking. It is then thrown into the scratching litter. We make a point of keeping them nice and active—feeding often and a little at a time. We feed five times a day in the litter of chaff or peat moss, this being clean and useful for the purpose. When the chicks are a fortnight old, we cook them a rice pudding each day. We keep eight or nine cows and run the milk through a separator, and it is the separated milk with which the pudding is made. A bucketful of rice is put into a tin in the boiler in the morning, and this is steamed until it is quite swollen and the milk is practically dried up in the rice. The pudding is then taken out and mixed with biscuit dust, thirds, a few ground oats and a little bran—drying off well the meal until crumbly—never on the wet side. This is the soft feed given until the chicks are about five months old. They never have more than one soft feed per day, and that is given at dinner time. After this they are put on the adult stock ration." J. D.

## Lice on Setting Hen

The pestiferous insect makes the job of the setting hen a strenuous one. Many a good, well-meaning hen is found dead on the nest because she stayed at her post while the enemy suched her life blood out of her. That is the mite that sucks the blood of the hen and breeds in the nest and cracks of the wall. If the nest is thoroughly painted with a good sheep dip, or coal oil and crude carbolic acid, two to one, before the hen is set, there should be no trouble with the mites and the hen will enjoy her job. There is another insect, however, that does great damage, but that needs different treatment; it is the body louse. This insect stays on the hen all the time, but does not suck the blood like the mite. But the lice make the hen uncomfortable, and when the chicks hatch the lice kill them. When the hen is set she should be thoroughly dusted with a good insect powder. Use sodium fluorid if it can be secured. Give a second application two or three days before hatching time. If this is thoroughly done there will be little trouble with lice on the chicks. But watch the chicks for lice on the head. If found, rub a little lard on the head, or use sodium fluorid. J. D.

### Cheapest Horse Feed.

Dr. S. B. Nelson of the State College of Washington says that experiments seem to prove that alfalfa, oats and a little corn in proper proportions comprise the cheapest feed for horses in war service. Dr. Nelson says that it is a common fault with farmers to feed their horses too heavily though this, of course, does not mean that feeders should be skimpy.

**Tells why chicks die**

E. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every batch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

GRANVILLE LOWTHER,
Editorial Contributor.

# Swat the Pest

## If You Don't, He Will Swat You

W. T. Ham, a representative of the United States department of agriculture, who has been participating in farmers' meetings in the northwest this spring, recommends a vigorous warfare on the common pests of the garden, orchard and potato. There are two kinds of insect pests, he points out, the kind that bite and eat and the kind that simply suck the juice from the plant on which they feed. Those that eat may be poisoned, the same as a squirrel may be poisoned. Those that suck must be suffocated, as it is difficult to get the poison in such form as to be taken by them. Those that eat can in some cases be repelled by spraying the plant on which they feed with a substance distasteful to them.

Owing to the high cost of paris green, Mr. Ham recommends the use of arsenate of lead in most cases for poisoning the biting insects. Most insects, he says, will be killed by a mixture of two pounds of arsenate of lead paste or one pound of arsenate of lead powder to 50 gallons of water, this to be used as a spray.

For suffocating the sucking insects it is necessary to use something in the form of an oil or a dust spray. Tobacco sprays are perhaps the most successful. The most common one in use is the black leaf 40, which Mr. Ham says should be mixed at the rate of four or five ounces to 40 or 50 gallons of water. It is well to mix with this also one or two pounds of soap.

For repelling insect pests, Bordeaux mixture is used successfully, Mr. Ham says. This spray is used largely to combat fungus diseases also. To combat the potato beetle, Mr. Ham recommends the use of arsenate of lead.

Many insects live over the winter usually in the soil to a depth of from 2 to 10 inches, and it is therefore advisable to plow in the fall, with a view to disturbing their winter beds and allowing them to die. Many insects live in old trash, such as cabbage stalks, corn stalks, potato vines, etc., and it is advisable, therefore, to keep the field clean of all such matter as this.

To combat the red spider, Mr. Ham recommends to spray with sulphur or nicotine in some form.

For wire worms he says to plow in the fall. In the spring, before planting, a great many of the wire worms that are in the ground can be killed if the following method is used: Plant potatoes throughout the area infested, marking the place where each potato is buried. After a day or so, or possibly a few days, go to each potato and inject a little carbon bisulphide into the ground. This will destroy all the worms in the immediate vicinity of the potato.

To eradicate cut worms take a mixture in the proportion of 30 pounds of bran, shorts, alfalfa meal, or something of this nature, to one pound of arsenate of lead or paris green. Scatter this mixture around where the cut worms feed. The same can be used successfully to combat grasshoppers.

The tuber moth, which has done great damage to potatoes in some sections, though the northwest is comparatively free of the pest, can be combated with reasonable success by fumigation with carbon bisulphide.

The corn and tomato worm will yield to the arsenical sprays lead arsenate dust in meal of some kind, at the rate of one pound of lead to 30 pounds of meal, being a satisfactory mixture.

The root maggots that wreak so much havoc with cabbage growers and radish growers are hard to combat. For the cabbage maggot use paper disks two or three inches wide when the plants are set out. Cut a slit in the disk and place it around the stem of the plant, so that it will lie flat on the ground. This will prevent the placing of the egg from which the root maggot comes. This applies to cauliflower, kale, brussels sprouts, and the like, as well as to the cabbage.

Mr. Ham says that the radish maggot is one for which no infallible remedy has been found.

In treating beans in the field, great care should be used not to burn the leaves with the arsenate of lead spray. The solution should be no stronger than one pound of paste to 50 gallons of water. If there is any possibility at all of pea or bean weevils, the seeds should be thoroughly fumigated before planting, with carbon bisulphide. This can be accomplished by the use of from one half to one pound of the carbon bisulphide to 100 cubic feet of space in which the seed is stored, the storeroom then being closed tightly for 36 or more hours.

## Plan Stock Company.

The Yakima Valley Fruitgrowers' association, in central Washington, after nine years' experience in attempting to succeed as a fruit-selling agency on a strictly cooperative basis, without capital stock, is now completing plans to become a stock corporation. The plan proposed contemplates exchanging of membership certificates valued at $100, for common stock with the voting privilege, and issuing preferred stock in exchange for sinking fund notes and equities in district warehouses and other physical property. As reorganized the association would not only handle the fruit of its members, but buy and sell fruit.

### Uses Fins, Not Wings.

The flying fish does not really fly, but raises itself from the water by means of its long fins. It can support itself in the air until they become dry, when it drops back into the sea.

# Sheep Will Shear Pound More

## Grant County Flocks Come Out of Winter in Excellent Condition and Without Having Eaten Their Value of Winter Feedstuffs

WILSON CREEK, Grant County, Wash., March 3.—The market conditions in this vicinity seem to be satisfactory, excepting beef, cattle and hides. Average price received for wheat was about $1.85 per bushel, according to quality. Oats from $50 per ton up, and is about $73 per ton now. Hay, $20 to $35 per ton, baled, dropped in the last few weeks to $20; hogs, on foot, $15 per 100 pounds; dressed, 18 cents per pound. Potatoes are $1.50 to $2.50 per 100 pounds, according to quality; eggs and butter about 5 cents under Spokane markets. The dealers selling groceries, produce, flour and cereals are very fair. Some of our produce is shipped out, what can not be consumed at home, such as wheat, oats, hay, hogs, chickens or other poultry, beef, hides, horses, mules, eggs, butter or cream. It is almost impossible to say what it costs to produce 100 pounds of pork, as prices of feed vary and the almost impossibility of getting shorts, which is the cheapest feed that we can feed hogs, especially stock hogs. As spring approaches the weather conditions, as far as moisture is concerner, are very favorable. Very little winter wheat was sown last fall, but what was sown is up and looking fine. There will be a very large acreage sown to spring wheat, so wheat seems to be the staple crop. Sheep have come out of the winter in first class condition without feeding any hay, and will shear about one pound of wool more to the head than last year. J. P. SCHROEDER.

### Ensilage Claims Interest.

SOUTH BEND, Pacific County, Wash., March 9.—This is the coldest winter month that we have had this year. Very little planting has been done. As this is not a grain raising section our farmers do not require the machinery that other sections do. The larger farms have lots of the acreage in pasture land; diked tideland is the best pasture land. Gradually there will be more power and machinery added to the farms to supply the shortage in labor. Silos and ensilage have claimed the attention here. One farmer experimented with different kinds of ensilage and found that his cows did the best on corn ensilage. Quite a few animals have been put upon the market because the cost of feeding is so high that stockmen have watched their herds for "boarders" very closely this winter. There will be an increase in poultry this spring if "sitting hens" are an indication. One of our Lebam residents is going to experiment with sugar beets. His object will be to supply his own sugar or at least syrup, for he feels confident that he can raise the beets and get the product to the syrup stage.

There are more questions facing us than ever before. Here are a few: How are we going to supply shortage in labor? How can we establish a good market price for eggs? How can we make sugar from beets? How can we raise the best ensilage?

MRS. WINNIFRED BUCKINGHAM.

### Fall Grain Looks Good.

BOSSBURG, Stevens County, Wash., March 3.—About all the farm produce has been sold except a little hay and some potatoes. Hay is now selling at $30 per ton for both timothy and alfalfa, which has been shipped out to the north. We believe our local merchant gives all a square deal as he sells eggs and butter and other farm products for the same price in cash that he pays the farmer in trade. Our local market is small and most of the farm products are shipped to other markets by the farmer. We have had but little pork to sell this year, as most farmers kept fewer hogs than usual on account of the high price of feed. But at the present prices of 15 to 16 cents for hogs there is some profit to the man who has some pasture and is careful how he handles them.

The snow is beginning to go and what grain was sown last fall is looking fine, but there was less seeded than usual. The land is in fine condition for spring crops, as last fall was very dry and frost came early, killing out most of the weeds. We have had a good snow and rainfall the past winter and but little frost in the ground, so we have plenty of moisture and every acre will be put in this spring. We believe there will be more wheat, oats and barley and less potatoes and beans, and very little land will be seeded to alfalfa and other forage crops. W. W. PALMER.

### Push Orchard Work.

OMAK, Okanogan County, Wash., Feb. 27.—Apples are the main crop here. There is very little difference in the market conditions here and elsewhere. The general market conditions would apply to this section. Apples from this district are sold in east and middle west, hence the dealer buys very little from the farmer. As spring approaches crop conditions seem to be about the best that could be expected at this time. There being a light fall of snow in the mountains there is some alarm that there will not be a sufficient amount of water for irrigation purposes, unless there should be a heavy rainfall in the spring or early summer. Pruning is being pushed as fast as possible, and most of the orchardists will be through in time to take up their regular spring work. A great many farmers have put up a large quantity of ice for the coming summer; also some hay is being baled. J. O. WOODS.

### Snow Still on Ground.

METHOW, Okanogan County, Wash., Feb. 27.—The average price received by the farmer for his product here is as follows: Beef, on foot, 8 to 9 cents per pound; pork, on foot, 13 1-2 to 14 cents; dressed, 16 1-2 cents; wheat, $1.94 per bushel; oats, 8 cents per pound; eggs, 40 cents per dozen; butter, 45 cents per pound. He pays $2.85 for 50-pound sack of flour, 75 cents for a nine-pound sack of oatmeal, $10 for a sack of sugar, 100 pounds; beans, 10 cents per pound; eggs and butter are generally traded out at the store and sold at the same price, while grain of all kinds are sold at a 25 per cent profit. Our community markets mostly at distant points. Ninety per cent of the cream is shipped out, the auto stage taking the full cans and returning the empty ones for 25 cents. Nearly all the beef and hogs are shipped to Seattle and Spokane markets. I think it costs about $15 or $16 to produce 100 pounds of pork. The farmers are not making any more profit than they did when pork was $10 per hundredweight, owing to the high price of everything. While the land is still covered with snow, conditions are fairly good for a crop, but it is all owing to the amount of rain if we have a big crop or not.

CHARLES GRANT.

### Grass Green All Winter.

STEVENSON, Skamania County, Wash., March 4.—The season has been very fine and unusually mild, which has been a great boon to the stock, as nearly all forage is shipped in and the grass has been green all winter, thereby enabling us to get along with much less feed than usual. Market conditions continue about the same, with the exception of pork, which is higher. Potatoes are lower—are now $1 per sack; eggs, from 40 to 50 cents per dozen; hogs are $16.85 to $17; cattle, $10.35 to $11. Apples are from $1 to $2 per box; lard, 30 cents a pound, and cordwood $5 to $5.50 a cord. Our market is strictly local. It costs about $12 per 100 pounds to produce pork. General crop conditions are excellent for what grain is grown in this locality, but very little fall-sown grain is grown here. W. T. JACKSON.

### Anxious for Spring.

RITZVILLE, Adams County, Wash., March 5.—Spring is rather slow in coming, and it keeps the farmer from working in the soil. The market conditions on products sold by the farmer have changed very little, but nearly everything else is going up in price, including machinery. The market on potatoes, fruits and the like is purely local, but the grain is mostly shipped to distant points. Under present conditions it will cost pretty close to $20 to raise 100 pounds of pork, the same being true of cattle. It costs as much or more to raise them as we can get for them on the market. The frosty weather increases the board bill on stock. JACOB HARDER.

### His Favorite Dish.

"No wonder women go into politics," ventured Mistress Malloch; "men are such brutes and devoid of sentiment. The other night I asked Will, in my sweetest way, what his favorite dish was, and he said, 'The ash-tray.'"

New Harvest Economy and Profit
WESTERN farmers, always on the watch for improved equipment to save time and money in getting the crops off the fields, are paying a lot of attention to **Deering Harvester-Threshers** these days. Many of them have bought and are using these efficient machines. Their success and enthusiasm means a big advance in rapid harvesting this fall.
Modern grain handling means harvesting and threshing in one operation, turning the threshing expense into clear profit, doing away with the big threshing bill and burden, saving time and long-drawn-out labor.
The **Deering Harvester-Thresher** is a Western necessity. Get acquainted with it. The **Deering** cuts a 9-foot swath, harvests 15 to 18 acres per day, and threshes clean as any thresher. Requires 8, 10, or 12 horses, and one or two men, depending on attachment used. In most cases, an International kerosene tractor can be used to best advantage.
The **Deering** has proved that it is designed and built right in every particular—strong and lasting, simple, of light draft. It can be used as a stationary thresher, too, by adding cylinder and beater pulleys, which are supplied at extra cost. A 10-h. p. engine does the work. Capacity 30 to 50 bushels of wheat per hour. Write us for an interesting folder on the **Deering Harvester-Thresher.**

# LET SOMEONE ELSE ENJOY IT

*SCORES OF OUR FRIENDS ACTED ON OUR SUGGESTION TO PASS THEIR PAPER ON TO A NEIGHBOR WHEN THROUGH READING IT. WE TRUST THAT MANY MORE WILL DO THE SAME WITH THIS ISSUE; AND CALL ATTENTION TO OUR MONEY-SAVING OFFER*

**As a war measure, we introduced the "direct-to-the-consumer" idea in our subscription business. Our plan was ultimately to do away with the subscription agent and to secure new and renewal subscriptions by dealing with our readers direct. We are glad to report that the new system is working splendidly. Already, thousands of our friends have taken advantage of the big saving which our offer makes possible.**

Much of this success is due to the efforts of our friends. They have aided us by telling their neighbors about our offer and by passing along copies of the paper to those who they feel will be interested in a high grade family publication. If you are a supporter of the cooperative principle, we hope you will help us make the new subscription plan an even greater success. When convenient drop a word regarding it in your neighbor's hearing, or better still, pass along some of our many interesting issues when you are through reading them. We will appreciate this assistance very much and we feel sure that if your neighbor does not know about his state farm paper he will be glad to make its acquaintance. Your cooperation helps eliminate the middleman, with all the attendant expenses of the subscription agency system. The reader gets the benefit of every dollar saved, as you will note from the schedule of prices below.

## *A PAPER FOR THE ENTIRE FAMILY CIRCLE*

Our old friends know that this is a far better paper than it was a year ago or even a few months ago. The lowering of price does not mean a lowering of quality. Your state farm paper is now printed on a big new magazine press equipped with every modern appliance which makes for better and more rapid printing. Our organization has been strengthened in order to cover the activities in this state more thoroughly. The most popular type of fiction has been secured for our pages. The household department has been made more interesting and helpful. In fact there have been improvements all along the line. Through our cooperative plan you actually get this superior paper for a mere fraction of what it has cost in the past.

## A Real Saving

*Following Rates Now in Effect for Subscriptions to The Washington Farmer*

**25c** *FOR ONE YEAR*

**50c** *FOR THREE YEARS*

**$1** *FOR FIVE YEARS*

## *Act Now!*

YOUR REMITTANCE MAY BE IN ANY FORM MOST CONVENIENT—SILVER, STAMPS, PERSONAL CHECK, POSTAL MONEY ORDER, EXPRESS MONEY ORDER OR BANK DRAFT.

March 21.

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription. In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Tractors Making Good

It is doubtful whether any piece of present-day farm equipment is as universally under discussion as the tractor. As a practical solution to the "greater production per man" that confronts a world at war, the tractor is unquestionaly making good. It has taken its place as one of the important factors in present-day farming.

What the tractor is doing on farms in the Pacific northwest is of especial interest. So for some weeks past we have been interviewing and writing to scores of those who are tractor farming in this section of the country. Some have been using their tractors for several seasons; some only a single season; but we have not yet heard from a tractor owner who is not well pleased with his machine.

It is quite possible that some individual mistakes have been made in the selection of a tractor. This could hardly be otherwise with so many types of tractors now being offered. It is also certain that some who are satisfied now will find cause for dissatisfaction

with their machines later on. But it must be remembered that the tractor is in a process of evolution just as the motor car has been for a good many years.

On his 400-acre farm near Grangeville, Idaho, C. C. Sherwin has been using a tractor for two years. "My machine pulls three 14-inch bottoms," he tells us, "and I also use it for pulling a combine, for roadmaking, for sawing wood, for stretching fence, for ditching and for grinding feed. I have also used it for moving buildings.

"My tractor is a 'one-man rig,' burns distillate and has made it possible to dispense with eight head of horses. It has solved the hired-help problem to a great extent, as it can run long hours and requires but one man for plowing where formerly two were required. I find the tractor cheaper in every way than farming with horses, and we can get our work done in season, besides being able to plow both deep and fast—a thing impossible with horses. We plowed 100 acres last fall at a cost of $65."

L. C. Bishop of Greenacres, Wash., used a tractor on his 600-acre farm last season. "I have a 20-35 machine," says Mr. Bishop, "which I operate on distillate. We draw six 12-inch plows and I do a variety of other things with it besides. One man is all that is required to run it and it has enabled me to dispose of 15 head of horses. With one man my tractor does what it would require three men to do with horses."

Further comparing horse and tractor, Mr. Bishop says: "A good tractor has every advantage over the horse. It saves on hired help, works untiringly and it does not have to take into account heat or drouth."

However, he sounds this note of warning: "The farmer who anticipates the purchase of a tractor should investigate the various types of machines and weigh thoroughly the requirements of his farm and the ability of the makes and models he inspects, to do his work. Then get a tractor with more rather than less power than he feels he actually needs and know, or have some member of his family know, personally, how to operate it."

## Would Fix Labor Wage.

For the purpose of agreeing upon a farm wage scale, if possible, farmers met at Connell recently at the call of the Franklin County Agricultural Preparedness league and agreed that $60 a month, with board and lodging, was an equitable wags to be paid up to harvest time. An effort is being made to have all the farmers of Franklin county agree to this wage and pledge themselves not to compete with each other for farm hands. A number of employment bureaus were established, among them being the following, the men in charge being as indicated: Kahlotus, Logan Perry; Mesa, P. M. Edes; Eltopia, W. T. Anderson; Connell, Otto Ulrich; Pasco, A. F. Wehe.

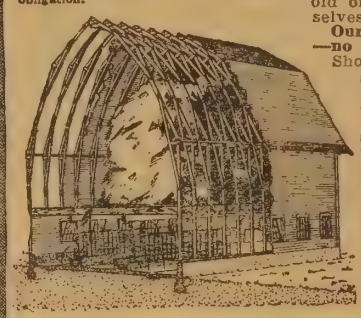
### Much Demand for Dogwood.

Shuttle factories and other manufacturing plants use more than 7,500,000 feet of dogwood annually in this country.

# LOUDEN

WM. LOUDEN Barn Specialist

**The LOUDEN Architectural Department**



Is the greatest organization of barn specialists in America. At your service free of charge for suggestions and preliminary sketches in which your own ideas and special needs are carried out in the most economical manner. Write us what kind of barn you have in mind, number and kind of stock you wish to house.

**Get This Book**

**LOUDEN Barn Plans**

Not a catalog, but a 112-page book devoted entirely to barn building problems. Shows 74 barns of all styles and sizes, and other farm buildings, with estimated cost of each. A post card brings it to you. No charge—no obligation.

## Helps to Solve Your War-time Labor Problem

American farmers and dairymen are now confronted with the most difficult problem ever presented to them. They are striving to meet the nation's urgent demand for increased production, in face of the fact that thousands of young patriots have been withdrawn from the farms to fight the nation's battles. In this great emergency

## LOUDEN Labor Saving Barn Equipments Come to Your Rescue

They cut overhead expense, do away with a large part of the barn work and make what is left of it easier—enable a boy to do a man's work, or one man to perform the tasks of two or three men.

Easily installed in any size or style of barn, old or new. Cost little—always pay for themselves in a short time.

**Our new 224-page illustrated catalog postpaid—no charge—no obligation.**

Shows the complete Louden line, including stalls and stanchions, feed and litter carriers, animal pens of all kinds, horse barn equipment, hay unloading tools, cupolas, ventilators, automatic water bowls, barn and garage door hangers—"everything for the barn."

There is a Louden distributor near you. Call on or address
